"We give you forty dollars," she said, "and you pay back five dollars a week for twenty weeks."

"But, Miss Blank," I protested, "that makes one hundred dollars for forty!"

"It's the best we can do," she answered. "There's risk in this business. We lose a good deal of money through dishonest men who borrow and skip out. With your salary of twenty a week, you can easily pay five; and in a few months the debt will be cleared up."

I had to have the money and Miss Blank knew it; but still I hesitated.

"What will happen," I asked, "if, sometime, I can't pay on the day? Suppose I'm sick. Will you show leniency?"

"Why, most assuredly. You'll find us square and upright. We'll treat you right."

She handed me the papers to sign. One was a promise to pay five dollars a week for twenty weeks—my wages to be attached if I failed to pay. The other seemed to be a power of attorney. I did not get a chance to read the papers through, but I did notice that there was no mention of the forty dollars.

"How's this?" I asked.

"You'll get your money as soon as you sign."

Borrowing Forty and Paying One Hundred

I WROTE my name at the bottom of both papers. The girl drew four crisp ten-dollar bills from the drawer of her desk. I put the four ten-dollar bills into my pocket. I was in the jaws of the shark!

. . . . . .

I had never thought that I should have to go to a money-lender. Things had been going well. I was working in the city as a clerk in a large wholesale store. There were six of us in all—Anna, myself and the four children—the oldest seven and the youngest one; but my twenty dollars a week were enough. We lived in two stories of a nice little house. We had six rooms and a bath, for which we paid nineteen dollars a month. My wife, you see, was a farmer's daughter, and she had been trained to save.

Then, one day, five years ago, my wife and all four children came down with diphtheria. Those were the six worst weeks of my life. My little girl died; and I buried her—the minister and I—without even a neighbor to help. When we came out of it I owed the landlord, the grocer, the butcher, the doctor, the druggist, the undertaker. I had not been to the office for six weeks, for it was up to me to cook, wash, and nurse Anna and the young ones night and day. My savings were gone. There was not a penny in the house and I was left with four invalids and—bills. I thought I should go crazy.

An advertisement in my morning's newspaper seemed like a message of hope. This is how it read:

MONEY! MONEY! MONEY!

Honest people can secure money through me in a few hours' time; no red tape or delay about it. It cuts no figure to me who you owe or what you are going to do with the money; all you have to do is to prove to me that you are a trustworthy man or woman. Don't injure your credit by giving a chattel mortgage on your household furniture and have it go on public records. If you are being worried by a number of small bills get enough money through me to pay up. Come in and talk it over with me today. JOHN DOE—Broker.

Do you blame me for going? The newspaper was a respectable paper. It had always stood for honesty and reform. I had always believed in it. On entering the little office, I asked for Mr. Doe. That showed right off that I was a greener. All loan offices that I know of are managed by women. The man never appears and the name in the advertisement is not his real name. Most loan sharks use fake names.

The girl with the gray eyes smiled. "Mr. Doe," she said, "is out of town today. Did you come about money?"

I had been wondering how I could begin the subject. The ice once broken, I answered all her questions. She asked me my name—and the names of my wife, my children, my father and my sister, my employer and my former employers, my landlord and my former landlords. I told my salary and the day it was due; and I gave her the names of several men who worked at the office and the addresses of the tradespeople I dealt with. Then I was told to call the next day. What stuck in my memory afterward was not these questions but the smiling way in which the girl had asked: "Did you come about money?"

"That's All This Week," I Said

. . . . . .

That Saturday night I gave my wife ten dollars instead of the usual twelve. "There are only five of us now," I told her, "and we've got to pay off our bills." I did not tell her about the loan company. I did not want to worry her. For fifteen Saturdays I went to that office to pay my five dollars. I never got a receipt. "We don't give them," said Miss Blank.

I soon began to see what a bad bargain I had made. I was paying sixty dollars interest on forty dollars for two months! A bargain was a bargain however. I had made my bed and must lie on it; but this was to be the end. When I had paid this off I was through with loan sharks. Was I through with them? The sixteenth Saturday came round and I didn't have five dollars. I simply couldn't get the money.

I telephoned to Miss Blank:

"I'll have to ask you for an extension. I'm sorry, but the landlord wouldn't wait."

I Cannot Write Down the Blasphemous Words That Woman Hurled at Me

Then the shark showed her teeth. "No, sir'ee," came the answer. "We don't stand for that sort of business. If you don't pay up we'll send a collector to your office."

"But I haven't got the money!" I pleaded. "I haven't got it, I tell you. You'll simply have to wait."

"You've another guess coming," she answered. Then, after a pause, she added sternly: "Why don't you come to the office instead of 'phoning like a coward?"

I did go to the office.

"You've no right to charge such interest," I protested. "I only borrowed forty dollars. I've paid you seventy-five already. It's usury! I'll see a lawyer."

She laughed.

"You'll cut a pretty figure in court! Suppose we swear we advanced you a hundred! You have to prove. Suppose we swear you've paid nothing back! You've got no receipts. It's not usury, because we don't lend money—we buy wages! Take it to a lawyer."

"Anyhow," I replied, "lawyer or no lawyer, I won't be cheated. I have paid you seventy-five dollars and you get the rest when I'm ready."

"Oh, all right," she answered. "We'll attach your wages Monday. If you lose your job don't blame us."

"What do you mean? You promised secrecy."

"That was for honest men," she answered. "We treat people square who treat us square; but when we catch a scoundrel who wants to get out of an honest debt we make it hot for him. We make an example of him."

How the Usury Piled Up

THAT was the beginning. There followed a torrent of awful language. I was ashamed at being forced to listen. Suddenly her manner changed.

"Listen, Mr. Luce," she said. "We lenders are not as black as we're painted. And, to prove it, I'll make an exception in your case. Here's my proposition," she went on. "You still owe us twenty-five dollars. We'll lend you forty more. That will clean off the twenty-five and leave you fifteen cash. Christmas is coming and you'll need it."

"Well," I answered, "that seems very square. I'm sorry for what I said. I was worried."

She made out some papers and handed them over to sign.

"Sixty-five dollars!" I gasped. "I thought it was forty."

"The forty costs you sixty-five. That's our price."

At last I understood. I had been a fool to the end. Because I did not have five dollars I had to take a new loan and be charged twenty-five for the privilege. But what could I do?

That evening I could not touch a mouthful. All through supper I thought and thought, going over

Digitized by Google

mind the humiliating experiences of the afternoon. I *remembered* words and looks that I had not at first noticed. Then, as soon as the dishes were cleared away, *I went* to the parlor, locked myself in and worked out my account with Miss Blank. This is how it looked on paper:

	RECEIVED	PAY BACK	MY LOSS
First loan	$40	$100	$60
Second loan	40	65	25
			$85

For fifty-five dollars in cash I had paid back seventy-five and still owed sixty-five. Thirteen more weeks, and then—Heaven help me!—I would never go near a money-lender again.

. . . . . .

It seems to me, as I look back on it now, that I was always just about to get clear, when something—usually a little thing—pulled me back. This time it was the grippe. I was in bed a week. There was little enough money in the house, but Miss Blank got what there was. I did not dare put her off. I gave the letter, inclosing the five dollars, to my little girl to mail.

"Who is Miss Blank?" asked my wife that evening.

"It's a woman at the office," I answered. "I had to send her directions." My wife said nothing, but a troubled look came into her eyes.

When I returned to work I was more in debt than ever. There was no hope for it. I looked in my newspaper for the name of a new money-lender, scanning the four columns of such advertisements for one that seemed honest. There was no choice.

At last I picked out a company located as far away from the first one as I could find. Again I borrowed forty dollars, promising to pay five dollars a week for fourteen weeks. I had now ten dollars to pay. I worked overtime. I saved. I scrimped. I let the children go about in rags. My home became shabby. Another baby came—and we had to move into a smaller flat.

The more I struggled, the deeper I got in. I was like a man in a quicksand. Soon I went to a third lender; then to a fourth; then to a fifth.

A year rolled round and Christmas came. I shall never forget my walk home that Christmas Eve. I had only five dollars in my pocket. Out of my week's wages I had paid sixteen dollars to money-lenders.

As I came into the room, Anna wished me a "Merry Christmas!" It suddenly came to me that she had grown old during this last year. Did she suspect?

I laid the five dollars on the kitchen table.

"That's all this week," I said. My voice was gruff, though God knows I did not wish it to be.

Deeper and Deeper

"We'll make it do somehow," she answered. Then, looking at me wistfully: "No little presents for the babies?"

"No."

I did not speak harshly that time; but she began to cry. A great pity swept over me. It was she who was bearing the burden. I longed to take her in my arms and explain; but I could not. I could not tell any one.

"I'll not take supper tonight," I said; and again the harsh tone crept into my voice.

All that night I sat alone in the dark, planning. I found myself staring at nothing, thinking out foolish schemes that I had thought of a hundred times before. I had been with the money-lenders fifteen months. I had borrowed forty dollars and had got other sums—perhaps a hundred dollars in all. I had paid back four hundred or five hundred dollars—I did not know which. I still owed three hundred. Would it go on forever? Should I always slave and scrape and borrow to pay? Was there no escape?

. . . . . .

For three years more I struggled. Again and again I borrowed to pay. I hated the weary round of weekly visits to half a dozen offices. I hated the elevators that took me up; I hated the green carpet in Miss Blank's room, and the blue-and-yellow rug in Miss Ward's; I hated the women that I saw—but I feared them even more than I hated them.

During those years not a Saturday afternoon passed that I did not go from office to office paying my notes. Every hour of the day—on the walk to my work, in the office over my ledger, at lunch with my comrades—I thought, thought, thought of how I could gather together the money I had to have by Saturday. My work suffered. My health gave way. I could not eat. I could not sleep. I could not think when I was with others. I could not think when I was alone.

I soon learned there was no pity to the shark. Only one of the women ever treated me kindly. She drove a hard bargain; but once she let me run three weeks and did not charge me extra. She was a hard woman, with a sharp tongue; but I am grateful to her.

I had always tried to keep the collectors from the office by borrowing to pay; but one day I could not pay. They threatened to send a "bawler-out" on Monday. And still I could not pay.

All that Monday I thought with dread of the woman who was to come; but, as hour after hour passed, I picked up hope. For once the shark had relented! Then, as it drew near four o'clock, a large, slatternly, painted woman appeared at the railing and in a bellowing voice asked for Mr. Luce. I am sure every eye in the office was turned upon me—but I did not see. My face was deep in my books.

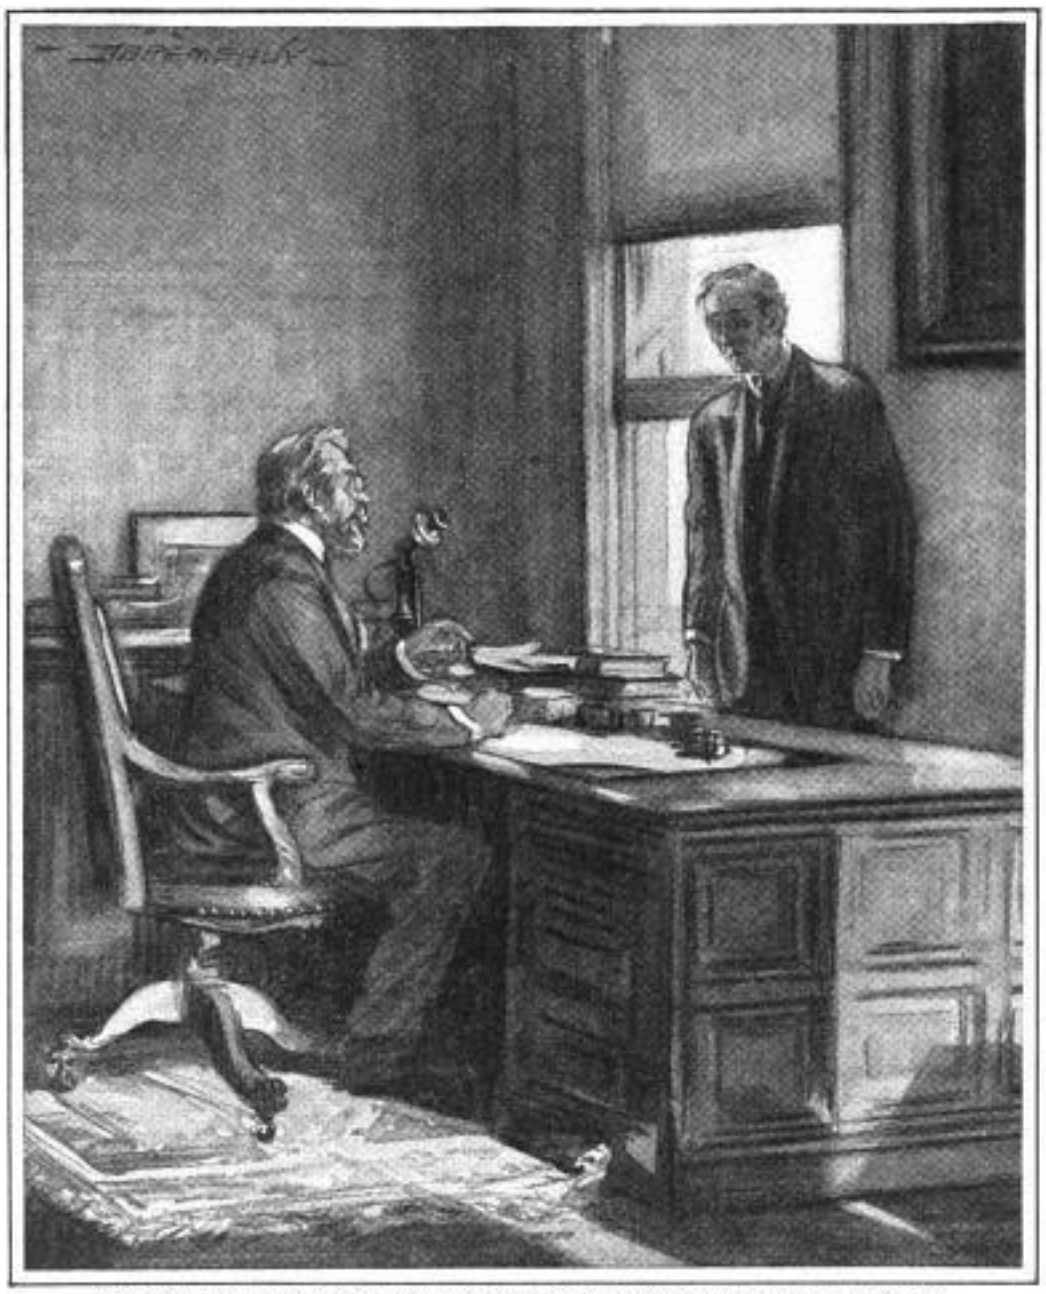
Have you ever thought how the condemned man feels as he walks from his cell to the electric chair? I did not glance aside at the forty faces turned toward me. I did not know whether pity or contempt was in those faces. I thought only of one thing—how to quiet this woman.

Is there anything worse than the cruelty of the shark? I cannot write down the blasphemous words that woman shrieked at me. They would not be printed if I did.

I do not know how long I stood there. It might have been a minute or an hour. All I know is that one of the men—to this day I do not know which—thrust a bill into my hand, which I turned over to the painted woman. I do not remember walking back to my desk, but I do remember the years of waiting before the bell rang for the end of the day's work!

. . . . . .

I had learned my lesson. I had been taught that it was up to me to pay and, if I could not, to borrow to pay—to borrow on any terms. I knew now that the men at the office knew; but I did not speak of it and they did not speak of it. The boss did not know. I could hold my place as long as the boss did not know.



"What is the use?" I sometimes asked myself. Here I was working year after year, not for my wife and the dear little children but for the loan shark. Would it not be better to throw up my job and find another? But what good would that do? They would attach my wages in the new job. They would send a "bawler-out" to the new office. I had heard of a promising young clerk in a department store who left his job to escape a shark, and got a new place under another name; but the shark put his tracers at work and the man was found and discharged. Four times he changed his name; four times he got a new place, and—four times the shark found him! At last he left for Cuba; but even there the shark followed him. A file was placed against his wages; the man was dismissed again. And that was the last of him!

. . . . . .

I thought I had seen the worst of the shark, but I was mistaken. In the last year of my slavery I went to a new company. Again the same questions, the same promise of secrecy, the same woman manager—polite, businesslike, but with cruelty in her eyes. Only one thing was different—to evade the laws in the state in which they did business this company had become the agents of a firm in another state. When you signed the papers, which they never let you see—and what would have been the use anyway?—you were really giving them the right to sign your name to any papers in that state.

To this firm I went every Saturday, put my five dollars in an envelope and mailed it to this other company. If my letter was delayed even a single day a company—called a collection company, though it was one and the same firm—sent me a protest, and I had to pay the five dollars and a dollar and a half extra. They were always running in new charges on you. Once I forgot to put a stamp on the letter. That cost me a dollar and a half. Often, I am sure, they received the money on time, but wanted the extra dollar and a half. I had no proof. I had no receipts. I had no rights. When I complained to the usual woman manager—she shrugged her shoulders.

"I don't know anything about it," she said. "We sell your notes and have no control over them."

"You've Been a Faithful Employee for Eight Years; But You're a Blamed Fool!"

Gouged Again

Again and again I got protests from this company and had to pay six dollars and a half instead of five. Then, two years ago, my little baby died. I wrote to the company, telling them of the expense it would put me to, and begging an extension of a week. There was no answer; but when I came to work on Monday there was the protest lying on the table!

To meet this payment of six dollars and a half I had to make a new loan. That is the hellish part of it—to pay one you must borrow from a second; to pay a second you must borrow from a third. Again I went to my newspaper and picked out a new money-lender.

It was a modest little office, with no carpet on the floor and much dingier than those I had been used to. The manager was busy, so I waited my turn. A young girl cashier was seated at a high desk, and near the window stood a young, light-haired fellow—he looked like a carpenter. His blunt fingers nervously drummed on the panel. His eyes wandered from the church across the street to the closed door of the inner office. There was a haggard look on his face and his lips moved tremblingly. Suddenly the door of the inner office opened and a big, black-bearded man with huge, gnarled hands stumbled out.

The man in the office sprang forward. "Don't, Jack!" he cried. He put his arm round his friend and led him to the outer door; and, even as he did so, I saw the big fellow break down and begin to sob. As I turned, sick at heart, a dark-eyed little woman stood before me, a smile upon her lips.

The Thirty-Thousand-Dollar Slap

By Richard Washburn Child

ILLUSTRATED BY M. LEONE BRACKER

AT NINE o'clock in the evening of February second, a tall, spare figure of a woman whose face was heavily veiled stalked into the vaulted and domed waiting room of the New Terminal Station.

This woman carried in her hand a small leather bag apparently brand-new and also apparently the object of her nervous concern. The brass lock on the bag was sealed by a piece of steel wire, the two ends of which were fastened by a lozenge of pressed lead.

The woman, having seated herself on one of the benches, felt the leather sides of the neat receptacle several times, as if she either wished to be sure that its contents were still intact or, not knowing what was in the bag, desired to determine what it contained.

The hour was not a busy one for the great station, but nevertheless people of all types came and went continually, some strolling lazily about as if time were passing painfully, others waiting as if to meet the other half of an appointment; and occasionally some brisk click-clack of running feet spoke of haste. Large railroad stations at all hours are places of both panting and sighs; in this one at the moment there was also the sound of a cleaner's broom and the rattle of dish-washing reverberating from far away in the restaurant. Occasionally, too, there came the faint roar from the streets and with it the tail ends of drafts of the cold night outside.

With one of these drafts arrived a spare and sinewy young man who put forth a good first appearance in his dress, but who, a close observer would have remarked, was clothed for summer rather than for winter. He blew upon his cold, red fingers and, without showing any interest in his surroundings, slouched into a corner of a bench opposite the woman, stared up at the haze that seemed to sway in the station's dome, and, stretching his arms, yawned audibly.

No one—least of all, perhaps, the woman—would have suspected this bored newcomer of having any interest in anything particular in the whole waiting room. Yet when the telephonic contrivance on the wall had announced "Train 49, local to the north, on track 32," he must have noticed the almost imperceptible start in the woman's angular body. He arose, yawned again, went to the ticket office and smiled through the polished brass grating at the half-automaton, half-human who frowned there.

"Does 49 go as far as the capital?" he asked out of the side of his mouth.

"Last stop," sang the man. "Two eighty-five one way."

"I'll try anything once," the young man said, pushing his hat back on his head. "That's me! Here's the kale."

As he walked across the waiting room toward the big elevators he did not seem to be watching the woman with the locked and sealed bag, who walked before him; he even stopped to buy some chewing gum and a newspaper, as if he did not care very much whether he lost sight of her or not, and he even felt his chin to see whether he was in fit condition to make himself attractive to the feminine world. Yet it was a fact that he had first seen this particular woman and her mysterious bag long before she had reached the station. He had followed her, sticking closely to her trail. And, following, he had sensed a night of good luck.

He was delighted to find that fortune stayed by him; the woman had not bought parlor-car accommodations. Therefore he could sit in a seat behind her and across the aisle, read up and down the sporting page with one eye, and with the other watch her every movement and reflect on and enjoy his catlike pursuit of quarry without any additional expense that might in the end be thrown away to no purpose. From his place of vantage, like a shadow that falls behind rather than before, he was in no danger of being observed; yet when the conductor had come through and tucked the woman's ticket into the binding on the top of a plush seat he could see that his surmise that the woman was going to the last stop had been correct.

"Is it Blackmail, Eh?"

"I have luck with women," he said to himself, smiling at a newspaper cut of a beautiful dancer who had just declared for anti-vivisection. "Especially when I'm alone with 'em," he added, looking about as if to count the five or six other passengers in the car.

Though almost empty this interior was warm—so comfortably and sleepily warm that, after a day spent in the cold wind, he wished that his business there did not make it necessary for him to sit up straight and resist the soporific effect of the rocking of the coach on its springs and the hum and click of the wheels on their tracks.

The woman and her actions had begun to be an interesting study. With timid, covert motions she had drawn the fascinating sealed bag into her lap and again was feeling of its bright new leather sides. Once, without lifting her veil, she looked about as if she felt eyes fixed upon her, but all she saw of the observer was a widespread sheet of want advertisements, and she returned to her strange occupation of turning the bag round and round, studying its contour, testing its weight, inspecting its seams, trying to pry open a corner of its mouth to achieve a peek through a narrow crack. Whether or not she was doubtful of the safety of that which the bag contained, or was suffering from curiosity, doubly sharp because that of a woman, the young man could not determine. He found himself, none the less, as eager as she to have a single look within the leather receptacle. The leaden seal was not a usual decoration for a commonplace bag carrying a change of clothes and a bottle of tooth-powder; small, new traveling bags were not ordinarily the objects of so much care or curiosity.

This reflection passed many times through the mind of the shrewd, crafty-faced young man, without leading to any firm conclusion as to the nature of what was hidden within the mysterious satchel. He wished that he might for once see the woman's countenance so that he could tell whether any emotion was written upon it, and perhaps read from an expression of fear or one of guilt an indication of what he desired to know.

It was several minutes before she took from her purse a small jackknife and, believing herself unwatched, deliberately began to rip the stitches in one of the bag's corners. She worked with care, as if she planned to sew up the opening again and avoid detection when once her object had been satisfied.

"She dresses pretty plain," said the watcher to himself. "I wish I could see her face."

It was not necessary, however, to see her expression to know, when she had made the aperture and had peeked into it with one eye, that she had been shocked by what she had seen.

She dropped the bag as if it were red-hot. Her body stiffened. For several minutes she sat staring vacantly ahead of her, apparently trying to realize the truth of some awful thing upon which her peeking vision had rested.

"I'd like to see her face!" whispered the other to himself again. His palms felt the digging pressure of his nails. "I wonder what she saw. I'll see this to the finish anyway!"

The train rocked along. The woman folded her gloved hands and thrust them forward on her knees, as one of her sex does when in distress of mind. She seemed to be fighting a battle with her judgment. Once she lifted the bag and looked within once more as if to be sure her eyes had not deceived her. Again she uttered a soft exclamation and then leaned back to stare at the ceiling of the car. At last she sat up and buttoned her raincoat. It gave the impression that she had made a decision.

This impression was verified when at the first stop a brakeman opened the door and bawled through the rush of cold air and smoke that he allowed to enter, "Foxburg! Foxburg!"

The woman arose at once.

"She ain't going up the state," exclaimed her shadower under his breath. "I'll take a chance on this."

He, too, got up and, brazenly whistling a popular melody, slouched after the woman and found himself on the platform of the station, waiting to see what action she would take next.

Foxburg, as all know, is a smoky but prosperous manufacturing place not ten miles from the metropolis. Its hotels have not yet outgrown the custom of sending a bus and clamorous porters to the trains.

"Imperial Hotel, ma'am," called a hotel runner up.

For a moment she appeared undecided; then, clasping the bag tightly, she stepped into the bus.

"What sort of a shack have you got?" asked the young man in a loud voice.

"It's all right. If I said it wasn't I'd lose my job," said the Imperial representative. "Step in."

"I'll try anything once," the young man answered. He had spoken with such well-simulated doubt that he had successfully concealed his desire to ride in that particular conveyance with its single feminine passenger. "Drive on. It's beginning to snow."

The hotel was not far from the station. The woman, without lifting her veil, registered first. Her writing was not preceded by the slightest hesitancy and the man behind her believed she had inscribed her own name.

"Miss Mary Inness," read the clerk. "Front! Room 42. See if those gas-fitters have cleaned up in the bath."

"Ice water," said Miss Inness in a sweet but firm voice. "And are there telephones in the rooms?"

"No," answered the clerk. "You'll have to come down and use that booth over by the cigar-case for long distance."

"Room 42," said the young man to himself, still slouching in the background.

"Just the night?" asked the clerk after Miss Inness left.

"Yep," answered the other.

"Front! 31. Two dollars, please."

"You win," replied the guest, tossing over a bill. "What about fire-escapes?"

Digitized by Google

"There's one just outside your window, my friend," answered the clerk, sticking the pen into the potato.

The newcomer, who nodded, waited for the elevator, sharpening a match with a jackknife. He still whistled the popular melody. When he had reached his room and the boy had closed the door after him he quickly slipped off his shoes, kicked them under the bed, drew a little leather pouch filled with fine lead shot—which is commonly called a life-preserver or blackjack or persuader—from his coat pocket, and, opening a hairwide crack in his door, listened for sounds in the hall.

He did not have to wait long. After one hundred and twenty seconds, during which he puffed on a cigarette, his ears caught the sound of a door down the corridor. He heard the lock turned from the outside and the rustle of a woman's dress going toward the stairs.

"She wants to telephone," he breathed softly. "I'm lucky with women!"

A moment later he had crept down the hall as stealthily as a feline. The corridor was dimly lighted. He felt the raised numbers on a door or two until he was sure he had come to the right one.

It did not yield to a cautious manipulation of its knob. He tried without result a key of his own that he carried as a convenience and that is known as a skeleton. Trained in quick observation and action, he glanced above him, saw a half-closed transom, looked up and down the hall, then, placing his fingers on the dusty ledge, drew himself up and peered through the opening.

The room was lighted. The girl's raincoat hung over a chair. Two hatpins stuck up in the pincushion on the bureau. The bag was not visible.

Few men are as graceful in their motions as this one in reaching for the ledge, first with one stockinged foot and then with one knee, and drawing himself through the frame of the transom. Indeed the easy, noiseless invasion of this chamber was so well executed that even the man himself, standing on the floor inside, congratulated himself on the perfection of the performance that had been accomplished without disturbing the adjustable glass window or the rod that fastened it in place.

He knew, however, that every watch-tick counted. He surveyed the room and noted five possible hiding-places for the bag—under the bed or bedding, in or under a bureau drawer, on top of the old-fashioned wardrobe, behind the tarnished radiator or in the closet. When he had finished his whirlwind search the closet door stood open, some of the bureau drawers were resting on the floor, the bedding was thrown in a heap against the baseboard and he himself had just stepped into the bathroom.

The bag itself was sitting there on the washstand! A piece of gaspipe left by the fitters was beside it. It suggested that the woman had thought of it as a possible weapon.

There was no time for an inspection of the bag's contents by peeking. He thrust his fingers through the opening that the woman had made and found them in contact with a folded piece of paper. This he drew forth.

The bathroom was dark; he had brought no matches. Something was written on this sheet. With quick motions he returned to the light of the chandelier in the chamber.

The paper was a plain sheet, bearing on its face these typewritten words:

A woman will hand you this. Didn't dare to send agent number 3, fear of being watched. There is thirty thousand here, all bills from Boston bank and can't be traced. Ten thousand to Gloomy for upstate votes. Five to Happy for his crowd. They are acting together. Fifteen to double up after rollcall nay votes on House Bill 42,110. Depend on you not let city reps know what farmers got per vote.

"It's the anti-gambling bill!" exclaimed the intruder, being somewhat more familiar with the legislation than most citizens. "Thirty thousand! And goes to vote tomorrow afternoon. Mary, whoever she is, is going to play the double-cross on the gang. No wonder she threw a fit when she seen what was in the bag. I certainly have luck with women!"

He dropped the sheet on the towel that served as a cover for the marble-topped table. As if echoing its soft rustle there came a slight sound from the door. Some one had inserted a key.

The man's first instinct, as it would have been had he been invading a private home in the nighttime, was to put out the lights. Here in a hotel, however, it would probably mean a scream or shout, followed by many pairs of running feet and no hope of escape. His second instinct was to draw the life-preserver from his back pocket and deal the person at the door a sleep-inducing blow from behind as he or she entered. It was too late! His third instinct was to slide down on to the floor and wriggle under the bed. But the disordered room would be enough to discover his presence! His fourth inspiration was a good one.

The woman, who was probably now at the door, intended to misappropriate thirty thousand dollars of a corruption fund. Had she meant to deliver the bag as directed she would now be on the train on the way to the capital. The money was now hers. She and he were in the same difficulty. Both were thieves. He lit a cigarette, and, sitting down in the wicker rocking-chair, crossed his legs. The door opened. The woman stepped in.

"Don't scream, Mary," said the man almost nonchalantly. "Perhaps you and I can fix this up between us."

He had an opportunity to study her unveiled countenance in the moment that followed his words. He had expected her to show her emotions in a change of expression, but was astounded to see how quickly she recovered from her astonishment and how little she disclosed of fear.

She was thirty-two, perhaps, tall and not unattractively angular, and, though her face was marked as if by routine office work of some kind and appeared tired, she was not lacking in a certain reminiscence of beauty. She had gray eyes. Her hair was parted severely in the middle, as if to indicate that she was some sort of a feminine sacrifice dedicated to the machinery of the business world.

"Come in and shut the door," cajoled the man. "I'm not in love with you. And you aren't going to call help to get me into trouble, because that would mean trouble for you. We're in the same fix. Come in!"

He was playing a dangerous game. He knew it. He pointed to the paper on the table to indicate he had read it. With the greatest satisfaction he saw her close the door after her.

"Who are you?" she asked in a tense whisper.

"My name's Paymaster," he replied good-naturedly. "I bet on a horse by that name once and won a pot of money. I'm going to tell you the truth. I'm a crook."

Miss Inness gathered herself.

"You interest me," she said.

Paymaster smiled with admiration.

"I have no specialty," he went on; "I do the thing that comes along. That's why the police haven't got me classed. I'd have had your thirty thousand if you hadn't come back at the wrong time, but even then I usually have luck with women. I've got a proposition. After all, it's your wit against mine—ain't it?"

"I suppose so," replied the woman coldly.

"You were sent up by somebody, probably a lawyer, with this here bag of vote-getters. Here is a piece of typewriting that goes with it. It looks as if the man wouldn't trust to dictation and rapped this out himself. But he knows that typewriting can be traced to the machine that did it. I know it can and so do the police. With this paper you've got the man who sent this dough and the whole gang, too, right by the throat. They can't holler for their money back or they'd call the district attorney."

"I realized that," said Miss Inness, leaning against the foot of the bed. "But I suggest you do not talk so loud."

The Man Ahead Did Not Hear Any Sound Other Than the Wail of the Wind

He Received the Impression That the Stenographer Was Laughing at Him

"Right-o," said Paymaster. "Well, now, I've come into this. The worst thing you've got on me is that I'm in your room, being as I climbed over the transom. But I've got something worse on you. You started off with the thirty. And we've both got something worse yet on your boss. He sent the money and wrote the letter. How do we divide?"

Mary Inness smiled, with a trace of sadness.

"You don't quite understand," she said quietly. "You see, I've just telephoned Mr. Valingworth, who employs me, that I am here. He is on his way by automobile now. He asked for a conference. That changes the thing somewhat, doesn't it?"

Paymaster's face indicated by a little flash of anxiety and fear that it did.

"Who are you anyway?" he said, leaning forward.

"I'm the woman with whom you say you are going to have luck. There is no reason for concealing what you can find out. I'm a stenographer. I'm the personal stenographer and secretary and recipient of abuse of Mr. Colon D. Valingworth, of Valingworth & Dowse, Pine Street. I've had the position for fifteen years. I am not exactly a thief. I have the thirty thousand dollars, to be sure, but I intend to give it to the Clinton Home for Women. It will be better there than in the legislature. I made up my mind to that when I had confirmed my suspicions on the train. I'm not a fool. Mr. V. had no one else he could trust as he did me. He believed I'd carry out any orders faithfully, like a piece of machinery with nothing human in it. He told me to go to a hotel up there in the capital and at eight tomorrow to put the bag outside room 89 and rap twice on the door and go away. But I am human after all. So the money goes to the Clinton Home unless Mr. V., when he comes, is willing to win back the thirty thousand dollars by fulfilling a certain condition."

"What?" asked the astonished Paymaster. "What condition? Unless what?"

"Unless Mr. V. allows me to tell him how I came to him a fresh and hopeful girl, fifteen years ago, tender of heart and spirit, and how he has played upon my necessity to earn a living to keep me working year after year and giving two dollars of labor for every dollar he paid me. And unless he allows me to tell him how he has taken advantage of my necessity to live by swearing at me, abusing me, bullying me, and of how in his pleasanter moods he has preached all the woman in me out of me by his cynical talk and his poking fun at all that's good and beautiful. He's squeezed me dry! I've been a cringing, spiritless machine. And now he wants to use me in this dirty, dirty business, as if he owned my soul. And I won't give him back the money, unless ——"

"You're joking!" he exclaimed.

"I said unless ——" she answered firmly.

"Unless ——?" Paymaster repeated.

"Unless he lets me slap his face!"

The thief sat silent a moment. Then he laughed and snorted.

Drama a League From Broadway

By IRVIN S. COBB

THERE were lately given at a theater in New York, on a Saturday, a matinée and a night performance of a new play by a new author. The theater, which was brand-new, had a seating capacity of about eighteen hundred and fifty. There had been no considerable advance sale, since the play itself had its first performance only a night or two before. Yet, long before the rise of the curtain in the afternoon, and again in the evening, the building was crowded until it could not hold another person without violation of the law. The man in the box office was under instructions from the management to keep account of those who came after the capacity had been exhausted; but these disappointed patrons came so fast and in such numbers that he speedily abandoned his attempt to keep the record with a pencil and a sheet of paper. He sat alongside his empty ticket-rack with a ticket-clip in his hand and for every person who passed his wicket he made a punch-mark in a long strip of cardboard. The tally showed that nearly six thousand applicants had been turned away.

If this had happened on Broadway in the so-called theatrical zone there would have been long stories in the next morning's papers about it. It would have furnished material for conversation up and down Broadway for a fortnight. It would have been a nine days' wonder of the theatrical district. Properly advertised and exploited—as it would have been—it might have stretched into a nine months' wonder. It happened, however, three miles or more from Forty-second Street, in the midriff of the East Side; and to the best of the writer's knowledge and belief it has never been mentioned in a single English-speaking newspaper of New York or any other city.

The theater in question stands at Second Avenue and Second Street. There are tall tenements all round it and elevated lines passing it—one a block to the east, the other a block to the west. Behind it are forests of clothespoles laden with frankly fluttering garments of red and blue and white, like the flag-dressed masts of domestic arks. It is as handsome a theater and as well-appointed and ornate as almost any of the newer theaters along Broadway; yet few persons along Broadway ever heard of it. It is called Kessler's Theater, and the plays that are seen there are all written in Yiddish or translated into Yiddish by Yiddish playwrights, and are interpreted by actors who speak Yiddish to audiences that understand it. The manager rarely or never advertises in the big New York newspapers, and for his patronage he depends upon a clientèle living entirely outside the districts from which New York theater audiences are supposed to be drawn.

The Playwright of the Cloak Trade

THE name of this play that created such a furor was The Reigning Slaves—signifying women who rule and yet are ruled. One day last August, as he tells the story to me, the man who is part owner and manager and chief star was just leaving the building—then unfinished—in an automobile for his summer home on one of the beaches near the city. A young Russian Jew, shabby and thin, and in no way different from any number of other young Russian Jews in that same neighborhood, hurried across the sidewalk to the curb and, hailing Kessler, told him he had a play he wanted him to read. It is not highly probable that a Broadway manager could have been successfully approached in the same fashion, but on the East Side they seem to have a way of doing these things differently. Kessler gave the eager stranger the address of his cottage and told him to come there at noon of the following day.

At noon of the following day he was there, still shabby and more nervous than ever, with a roll of manuscript in his hands. In a bathing suit, sitting in the shadow of a pier, Kessler listened while the youth walked up and down, reading his play, oblivious of other bathers who were looking on curiously. By the time he finished reading the first act Kessler had heard enough.

"I will take your play," he said, "and produce it as soon as I can get my theater finished and my company into rehearsals. How many other plays have you written?"

"I never wrote any before this one," said the overjoyed author.

"What is your business?" asked Kessler.

"I am a designer by cloaks," said the other, meaning that he modeled garments in a loft factory somewhere.

This is not a press-agent yarn. I am reliably informed that it happened substantially as I have told it here. The young cloak-designer dramatist—his name is Jacob Jacobson—speaks little or no English; and when he wrote The Reigning Slaves he had probably never seen the inside of an English-speaking theater. He knew no actors or writers, and he knew nothing of the thing called stage technic except what he could gather from the far side of the footlights. Working ten hours a day in a sweatshop, he went at night to one or another of the Yiddish theaters, watching the performances from the cheapest seats in the top balcony. Sundays and holidays and at odd moments he wrote his play. It dealt with the life of the people he knew; the scenes were laid in a tenement in Norfolk Street, within ten minutes' walk of the theater; his hero was a motorman of the Third Avenue carline, out of work; and his heavy man was a sweatshop operator who, becoming prosperous, had moved uptown—out of the Ghetto. The motorman's wife, who had once been the sweetheart of the clothing manufacturer, was the axis of the play—and about her its action revolved. Naturally all the characters in the play were East Side Jews—immigrants or native-born; it is probable that among all the author's acquaintances there was not one who was not a Jew.

Jacob Adler and His Little Daughter Who Plays the Juvenile Roles in His Productions

Jacob Jacobson was so overjoyed to find a manager who would produce his first brain-child that he offered to turn the play over to Kessler without a cent being paid down. To see and hear his lines spoken would be reward enough for him, he said; but Kessler cannily paid him the customary binder on the spot and got his signature to a contract for all his output for three consecutive years. The Reigning Slaves was played for the first time in the middle of last fall. As in the case of a new play by an unknown author, the audience was not overly large and it was overly critical—as all East Side audiences are said to be. Next day, though, the East Side read the criticisms of the piece that were printed in the Yiddish newspapers—and that night the East Side was storming Kessler's.

The writer saw an act of The Reigning Slaves. Knowing no Yiddish, he was yet able to follow the action closely. Any person with eyes to see could have followed it. It seemed a great big play with a great big story to it, acted with realism and repression by a capable company. The house was packed to the doors by an audience that alternately laughed aloud and wept aloud—not weeping with the restrained and decorous emotion of a fashionable audience, but with full-voiced sobbing and sometimes with ejaculations. In the front row of gallery seats sat, side by side, an old bearded Jew—he looked like a pushcart pedler—and an old Jewish woman with the wig of the orthodox over her own hair and a shawl about her shoulders; and both of them were crying until the tears streamed down their wrinkled old faces. About them were well-dressed young Jews of the second generation, also weeping when they did not laugh or applaud. The applause seemed to be directed not so much at the climaxes and the big scenes as at certain well-turned passages of speech or quick shifts of reasoning occurring in the quieter moments of the act. This I was told is a characteristic of these audiences—their best approval is for the line and for the thought that is behind the line rather than for the palpable stage business.

The Reigning Slaves will be played at frequent intervals all this winter or until the acute interest in it begins to abate. Thereafter it will be played occasionally for years to come; and people who have seen it will go back again and again and again to see it, this also being a point wherein Second Avenue differs most radically from Broadway. Yiddish plays which were written ten or fifteen years ago, and which have been played hundreds—perhaps thousands—of times in this same locality, will be played this week and next week, and every week thereafter during the season, with the certainty of large audiences and appreciative ones to see them.

Jacobson's success, though notable, is not unprecedented in the great American Ghetto. There have been plenty of others who came up as he has come up. Jacob Gordin, who has been called the father of the Yiddish drama in America, which means the world, was past forty when he wrote his first play. He wrote about thirty others before he died, many of them treating of the Jew in his new life in America as contrasted with his old life in Europe, and all or nearly all were successes. It is safe to assume that the East Side will still be applauding some of Gordin's plays twenty years hence.

The Upgrowth of the Yiddish Drama

THAT section of old New York of which the Bowery is the middle and the main thoroughfare has always been somehow a forcing-bed for the production of actors and acting. It is the crucible into which all the races are poured to be fused into the conglomerate mass of New World life and to work out their several destinies. The first influx of immigration which provided what you may call the original settlers of the East Side brought mainly Irish and German stocks. Years later came the floods from Eastern and Northern Europe and from Latin Europe—Italians, Roumanians, Russians, Hungarians—but, most of all, Jews. Today the biggest Jewish community on earth is to be found in the lower East Side, with outcropping colonies in Brooklyn, in the Bronx and in upper Harlem. There are, roughly speaking, a million people in what is known as the East Side of New York, and of these million probably eighty per cent are Jews and speak Yiddish.

Years and years ago the leading theaters of New York were along the Bowery, and in them the reigning stars of past generations—the Booths and the Barretts and all the rest—played. With their passing came burlesque houses and variety houses—early nurseries for modern vaudeville these last were. Amateur night, that institution whereby unknown beginners might display talent or the lack of it before audiences that were at once the most appreciative and the most hostile, originated on the Bowery; and so out of the East Side there trickled a steady stream of actors and actresses, mainly of the comedy type, who were destined to become fixtures of the larger theatrical world. Weber and Fields, Lillian Russell, Blanche Walsh, Sam Bernard, Joe Welch and twenty others who might be listed sprang out of this environment. They were of Irish and German parentage mainly, as was to be expected, and a good many of the Germans were Hebrews.

Eventually the cheap vaudeville houses killed off the variety theater, and the moving-picture show came and took the places of the dime museum and the melodrama house. The older theaters that had made the Bowery blaze with light were torn down to make way for business houses, or else they degenerated into shabby moving-picture places. There were some notable exceptions, to be sure; I am speaking of the run of them. Except for vaudeville performers the East Side ceased almost altogether to give to the stage at large any notable recruits. This altered condition might be said to date back seven or eight years, though it is hard, in a district that has changed so fast, and into which one overlapping tide of immigration after another has poured like surf upon a shore, to fix with any degree of definiteness the time of transition.

While this was going on, however, another thing developed. On the East Side, now practically populated by Jewish peoples from Eastern and Southern Europe, a new school of drama was growing up—the Yiddish school, forcing, producing, creating, imitating, bringing to life a school of actors, a school of dramatists, a school of criticism, a class of patrons; yes, even evolving a language, since Yiddish, originally a jargon of Hebrew, Polish and Russian words based on a German foundation, was made more flexible and better adapted to the environment by the

Digitized by Google

addition of English words and of Americanisms—slang, some of it; vernacular, much of it; but all of it graphic and expressive and forcible.

So long ago as twenty-five years, small itinerant bands of strollers, Russian Jews, were giving plays in Russian and Yiddish in makeshift theaters and at assembly halls in the lower East Side where their fellow countrymen and co-religionists were already colonizing; but the active, formulative period of this new drama dates back, as well-informed East Siders tell me, not more than twelve years or fifteen years at the outside. Though its real history is spanned in that short stretch, the Yiddish drama caters today to the largest resident clientèle in America. There are more strictly Yiddish theaters in New York, within a space a mile long and half a mile wide, than there are in all the rest of the world put together. In proportion to the invested risks, more money is being made by the owners and managers of Yiddish theaters than any other owners and managers in this country make, except in certain isolated and extraordinary instances. And some who are qualified to judge declare that the best acting to be seen today in America may be seen in these Yiddish theaters of the East Side, and with the most keenly alive and alert audiences looking on.

Yet, so far as New York is concerned—and that means the country at large—Broadway and Forty-second Street is the geographical center of the dramatic output of this continent. There are about five million people in Greater New York, and of these it is safe to say four million know the Yiddish drama only by the vaguest of hearsay. This applies even to a considerable proportion of Americans of Jewish antecedents. Occasionally, when a Bertha Kalisch or an Alla Nazimova is drafted out of some East Side theater to make a sensation on Broadway, the mind of the populace is directed in a moment to that close-packed, swarming jungle of tenements stretching along the lower eastern shore of Manhattan Island, and people have been known to express wonder that an actress of such merit ever came to be playing anywhere except on Broadway in the first instance. A good many readers of the English-speaking newspapers know there is somewhere in that unknown and hiving district an actor named Adler, whose Shylock has been commended, and that a man named Gordin once turned out a tremendous number of plays in an alien tongue down there somewhere—a general wave of the arm to the eastward and southward; but with this knowledge the four million rest content. The remaining one million feed the Yiddish drama and are fed by it.

The Business Methods of the Yiddish Theater

THIS million of people is a polyglot mass representing almost every main division and every small principality of Europe; but in the Yiddish they find a language they all can speak, and in the Yiddish drama they are finding, it would appear, a form of education that has the most direct of appeals for a highly organized, highly emotional, sentimental and poetic race. Be that as it may, they accord to this new drama a support that would, everything considered, be an abiding marvel to the managers of Broadway houses—if they only knew about it; but they don't know. Between uptown and downtown there is a thick curtain of mutual indifference and mutual ignorance, through which few pass or beyond which few care to peer.

On the East Side, properly speaking, there is now just one theater of large size where English is spoken exclusively. It is a burlesque house. In the district, in addition to hundreds of minor amusement places—moving-picture shows and Yiddish vaudeville shows mainly—there are four Yiddish theaters of the first importance. They are: Adler's Theater, on the Bowery, which is the oldest and best known; David Kessler's, which is the newest and largest; Boris Thomasheffsky's People's Theater, and Madame Lipzin's Theater—the smallest, but one of the best and known simply as Lipzin's. These four have a joint seating capacity of about six thousand. Each one of them is open every night in the week, Sunday included, with matinées on Saturday afternoon and on Sunday afternoon—or a total of nine performances for each theater week; and, speaking by and large, each theater is crowded at each performance.

PHOTO. BY FALEY, NEW YORK
Mme. K. Lipzin as "The Orphan"

Here, though, is a condition which probably obtains nowhere else. For the four nights of the week listed as the poorest for theatrical purposes—Monday, Tuesday, Wednesday and Thursday—the manager sells his house outright for a lump sum—say, four hundred dollars—to one of the benevolent societies or lodges that are so bewilderingly numerous on the East Side. For that money he provides a house staff and a company, light, heat and attendants. The members of the lodge take over all the tickets and peddle them out among their friends for what they can get, usually an advance over the house price; they also select the bill for the evening, generally a popular Yiddish comedy which has already been played hundreds of times, or an operetta full of bright and splashy music. This arrangement provides a certain income sufficient to pay the running expenses of the theater and it leaves the producing manager free, during the remaining five performances in the week, to mount his new plays and to play in them himself, which is something he does not do on the four so-called benefit nights unless he is specially paid for it. It likewise makes him in a measure independent of the popular whim; so that, with an assured exchequer behind him, he can do and often does do what no Broadway manager would dare to do, and that is to force the run of a play which is not popular among his patrons because of his own belief in its intellectual or artistic value. In the main, however, he may safely count upon good business right along.

For the regular performances the scale of prices runs from one dollar for the best seats to twenty-five cents for the poorest, with box seats selling at two dollars each, or about half of what a Broadway theater gets. Yet, when the difference in worldly wealth of the contrasting audiences is taken into consideration, it is apparent that the East Side audience is infinitely more generous in its support than the Broadway audience is. A dollar for a seat probably means five times as much to an East Side artisan or shopkeeper as two dollars means to the type which furnishes the backbone of support for Broadway theaters. Yet there is never any complaint of the price if the piece and the players are deemed to be worthy.

"In my own experience," said the critic of one of the leading Yiddish papers to me when I was getting material for this article, "I have known not one case, but dozens of cases, where an underpaid, underfed sweatshop worker has stinted himself of food all week, saving his pennies one at a time in order, on Saturday, to be able to go to the theater and see for perhaps the tenth time a play which appeals to him as worth while. The avid hunger of our people for education manifests itself no less in the theater than in the public schools and in the free colleges. They want to learn and they will learn, even at the cost of ragged garments and famished stomachs; and this insatiable demand has molded our drama into certain uplifting forms by the sheer outward pressure of its weight. That is why our new Yiddish drama, though crude in spots and finished in spots, is always growing and always expanding."

PHOTO. BY HALLEN, NEW YORK
Alla Nazimova

For the dramatic season of 1910-1911 each of the big Yiddish theaters closed its books with a really impressive amount on the profit side of the ledger. After paying all expenses, including a big salary to the manager and good salaries to the players, the stock company of East Side business men which owns and controls one of these theaters had for division at the end of the year nearly seventy thousand dollars in clear dividends, or a sum equal to about thirty per cent on the actual investment. I wonder what big, pretentious uptown theater did as well!

The Yiddish drama of the East Side is circumscribed by limitations that do not apply anywhere else in this country or, indeed, in any country. The star system is invariably in vogue; the producing manager is always the leading performer in his own pieces. Moreover, every actor in the troupe, big or little, with the exception of the star, belongs to a closely organized labor union. The theatrical critics of the East Side newspapers complain that this thing militates against uniform excellence in a supporting cast, since the producer may not hire his performers where he pleases, but must secure them through the union and must take what the union pleases to send him, paying never less than a specified minimum wage scale. Moreover, without the union's consent, he cannot discharge a member of his company, no matter how incompetent or unwilling the member may seem to be. Trade-unionism, however, is the breath in the nostrils of the Ghetto industrial system; it, more than any other one thing or all other things combined, has given a measure of independence to the work-people in the crowded labor fields of the East Side. And even if, as the critics claim, art suffers sometimes, the actors' union will probably be as powerful for years to come as it is today.

Finally, as an added offset to the abilities and the ambitions of the company, there is the paucity of the mechanical and scenic equipment which has come to be so essential a factor of the stage among English-speaking Americans. With the exception of Kessler's, the Yiddish theaters are old-time theaters, still provided with the meager stage properties that satisfied an audience twenty years ago. Oftentimes the stage-setting is almost Elizabethan in its simplicity—one crumbly and dauby back drop serves indifferently for a mansion and a tenement interior; and the same old set of stage properties is lugged out time after time until every battered piece becomes as familiar to the audience as to the actors. Even Kessler's stage has, rising from its center like a misshapen wooden toadstool, the prompter's box that is a legacy from Old World drama of a bygone century; and the actors must keep behind it, often stepping over it when the action of the piece requires rapid movement. And yet, among such limitations these actors are able to give to their work a fire and a force that often lift an audience off its feet and sweep it like a storm. It is drama in the making, but drama that is striding forward with the league-long steps of a giant.

The Belasco of the East Side

HOWEVER, in the matter of investiture, there has lately been considerable and notable improvement. There is manifest a general effort to present more adequately the unities of the drama in lighting and scenery and stage equipment. Curiously enough, it was Thomasheffsky, who long catered most steadily to the popular fancy of the Ghetto, that took the lead in this direction. His followers are beginning to call him the Belasco of the East Side; and the critics and scholars there take this as a hopeful sign, saying that, with the coming of proper stage mountings, the actors will not have to pile on the contrasts in such heavy colors in order to create by their individual skill the illusion that is lacking from the physical surroundings.

Just as the East Side has its own drama differing from any other, so it has its own school of dramatists and its own school of criticism. Jacob Gordin has been dead and gone several years; but those who followed in his footsteps have followed literally, finding in his plays models for theirs, even though none of them has yet been able to approach his work in its literary excellence. Gordin nearly always undertook to compare the patriarchal system of Jewish family life of the Old World with the freer family life of the younger generations; and he did it with a deftness and a sympathy and an understanding that made his name and his works live after him. Originally exiled from Russia because of his ethical teachings, which had resulted in the founding of a new religion of which he was the leader, with over a million followers, in his years of activity as a dramatist he continued to bear his ethical message to his people—only changing its form.

Attached to the staff of each Yiddish theater is at least one dramatist who, in addition to furnishing original plays, also acts as translator and adapter of plays in other languages. Among these may be listed Libin, Kobrin, Shomer, Zolotarefsky, and the newest recruit of all, Jacob Jacobson, the designer of cloaks who wrote the season's biggest success. Each of these men counts upon turning out at least one play of his own a year—comedy, tragedy

WORK AND PLAY

By Brander Matthews

DECORATIONS BY JAMES M. PRESTON

BEFORE Matthew Arnold paid his first visit to the United States he published a paper about America in which he made the very natural mistake of assuming substantial identity of characteristics between the Americans and the British. Here in the United States we speak the English language; we have inherited English literature; we have retained the English law; and we cherish the ancient ideals of the English stock—but our social organization is no longer feudal; we have no hereditary aristocracy; and we have no native proletariat. From our lack of an upper class and of a lower class—in the British sense—Arnold came to the conclusion that the American people as a whole must resemble the British middle class. After he had visited the United States he saw reason to modify his opinion, which every American had at once recognized as absurd.

The British middle class is what it is partly because of the survival of the feudal organization, and partly because of the pressure of the upper class down and of the lower class up. This feudal organization is acceptable to the majority of the British people—at least we may assume this, since they could alter it at will. In the United States, however, there never has been any feudal organization, and to us such a thing is simply unthinkable. As Mr. Howells once put it, with his pithy common-sense, the British upper class looks down and the British lower class looks up; whereas, even if any self-styled upper class in America might look down, there is no self-confessed lower class here to look up.

What is a Gentleman?

IN NOTHING is the difference between the British and the Americans more sharply shown than in their respective attitudes toward work. This is illustrated by the retort of the American girl to the Englishman who complained that there were so few gentlemen in the United States. "What do you call a gentleman?" she asked, and he explained that a gentleman was a man who did not work. "Oh," she returned at once, "we have them in America—but we call them tramps!" And it is a fact that we are inclined to consider any man a loafer if he does not work, no matter whether he is a poverty-stricken dependent or the inheritor of an immense fortune. And this attitude of ours is obviously one of the reasons why the idle descendants of rich parents are so often tempted to reside abroad, especially in the British Islands, where they can find other wealthy idlers to play with and where they do not feel the pressure of any public opinion mutely protesting against their willingness to contribute nothing to the public welfare.

The British attitude is illustrated in an anecdote told by the late Colonel Higginson about an American trained nurse who went into a shop in Edinburgh to get a raincoat. Those which were shown to her were rather expensive and she explained to the shopman that she could not afford them as she had to work for her living. The shopman went back to the office of the proprietor. "There's a young person looking at raincoats and they are too dear. She says she's not a lady and she wants something cheaper!" And that happened in Scotland, where the feudal organization might be supposed to be modified, partly by the clan system and partly by the habitual willingness of the Scot himself to work with his hands as well as with his head. Possibly the Scotsman who thus denied that any woman who worked could be a lady had been contaminated by the London trippers whom he was in the habit of serving.

It cannot be denied, of course, first, that certain kinds of labor are exhausting and, second, that any excessive labor is demoralizing. Nor can it be denied that we all enjoy an occasional relief from regular work. Here, indeed, is where we are prone to make our mistake. We are inclined to argue that, as we enjoy the intermissions between the intervals of labor, we should enjoy still more the absolute freedom from all obligation to work; but we all know this is not true, and that the enjoyment of the intermissions is in reality due to the relief from the regular duties that have preceded this cessation from toil. One day's rest in the week, or even two, may be delightful; but seven days of idleness soon become intolerable. Because we find pleasure from time to time in not working, we are not to assume that to double the intervals would double our pleasure and that to abolish all labor would bestow upon us unlimited delight.

As a matter of fact, experience teaches us that pleasure is closely allied to work—indeed, that the highest pleasure is probably inherent in the work itself, in the task done for its own sake, for the sheer joy of the doing, for the exhilaration inherent in a good job well done. Stevenson found his deepest delight in writing, and he expressed his wonder that he should be paid for what it had given him so much pleasure to do. And Kipling voiced the same opinion in his forecast of the millennium of the artist, when he said:

And only the Master shall praise us, and only the Master shall blame;
And no one shall work for money, and no one shall work for fame;
But each for the joy of the working, and each, in his separate star,
Shall draw the Thing as he sees It for the God of Things as They Are.

"Each for the joy of working"—that puts the matter in a nutshell. And it helps us to see that the highest form of pleasure comes from the work itself, even if the next highest may come from the necessary intervals between periods of work. Certainly the lowest form of pleasure is that wholly detached from work—pleasure sought for its own sake and as a relief from idleness. That man is happiest who has a job that he loves, that he can do in a fashion fairly satisfactory to himself, and that provides him with a living wage. It does not matter very much what the job is—lofty or humble—so long as it is not altogether uncongenial. And even uncongenial labor can be elevated by the temper in which it is undertaken. When a maid-servant, after a series of revival meetings in her town, was asked how she knew that she had religion she answered: "Because I sweep under the mats now." She had discovered the great secret—that all work is honorable if we honor ourselves in doing it.

The idea that there is anything unworthy in manual labor is not only feudal but also false in itself; and it is absolutely un-American. Franklin was a journeyman printer and Lincoln was a flatboatman. Whittier made slippers as Thoreau made pencils; and Emerson helped himself through Harvard by waiting at table and by serving as the president's messenger boy.

When Adam dolve, and Eve span,
Who was then the gentleman?

In fact, most of the men who have been prominent in public life in the United States have been ready to turn their hands to any honest task, whether manual labor or not. Of the Revolutionary worthies Washington was almost the only one who was by birth and by breeding a gentleman in the narrow British limitation of the word; and in his strenuous youth Washington served as a surveyor, whose work is but little removed from manual labor. This British limitation of the word does not preclude a gentleman from going into the church or the public service, into the army or the navy, or from practicing at the bar—or even from art and literature; but it does debar him not only from manual labor but also from trade—except, oddly enough, from the highly lucrative businesses of banking and brewing. So many brewers have been ennobled of late that a cynical wit once proposed to call the House of Lords the "Beerage."

Frequenters of Satan's Employment Office

THE acceptance of the theory that a gentleman should not work—except in a few restricted callings—has condemned thousands of the British to lives of unprofitable idleness. It has deprived them of the joy of actual labor. It has driven them to seek an empty substitute in so-called sport. It has made them willing to be supported by the labor of others, dead or alive. It has reduced them to the condition of social parasites, mere cumberers of the soil, performing no function useful to society, rendering no service for their board and lodging. What is true of Great Britain is true also of all the other nations where the same feudal ideal obtains; and the members of the aristocracy in France, for example, are victims of a similar foolish and false view of life. An aristocracy comes into being only in consequence of its leadership—that is to say, as a reward for honorable service to the country; and when its members withdraw and refuse to do their share of the work of the world they are really traitors to their ancestors. We can see signs that a similar class is in progress of creation now in the United States, opposed as it is to all our traditions.

The lives of these social parasites, whether in Europe or America, are pitifully empty. They are forbidden to have any fun, since they are debarred from the only true source of pleasure. They are sentenced to noxious desuetude—most noxious to themselves, of course, but injurious also to others. They have nothing to do but to try vainly to amuse themselves. Men who go in search of pleasure never find the object of their quest; they have to come back emptyhanded, and in time their souls are likely to be as void as their hands are vacant. They are the most unfortunate of God's creatures, since they are under the curse of idleness. Even when they are well-meaning they are likely to be corrupted, "For Satan finds some mischief still for idle hands to do"; and it is in this class that the flagrant scandals that disfigure our newspapers most often occur.

XVI

ARNOLD for a moment or two felt himself incapable of speech or movement. Fenella was hanging a dead weight upon his arm. The eyes of both of them were riveted upon the hand that stretched into the room.

"There is some one under the couch!" Fenella faltered at last.

He took a step forward.

"Wait," he begged—"or perhaps you had better go away. I will see who it is."

He moved toward the couch. She strove to hold him back.

"Arnold," she cried hoarsely, "this is no business of yours! You had better leave me! Groves is here, and the servants. Slip away now while you have the chance."

He looked at her in amazement.

"Why, Fenella," he exclaimed, "how can you suggest such a thing! Besides," he added, "Groves saw me climb in at the window. He was with me outside."

Fenella wrung her hands.

"I forgot!" she moaned. "Don't move the sofa while I am looking!"

There was a knock at the door. They both turned round. It was Groves' voice speaking. He had returned to the house and was waiting outside.

"Can I come in, madam?"

Fenella moved slowly toward the door and admitted him. Then Arnold, setting his teeth, rolled back the couch. A man was lying there stretched at full length. His face was colorless except for a great blue bruise near his temple. Arnold stared at him for a moment with horrified eyes.

"Good Lord!" he muttered.

There was a brief silence. Fenella looked at Arnold.

"You know him!"

Arnold's first attempt at speech failed. When the words came they sounded choked. There was a horrible dry feeling in his throat.

"It is the man who looked in at the window that night!" he whispered. "I saw him only a few hours ago. It is the same man!"

Fenella came slowly to his side. She leaned over his shoulder.

"Is he dead?" she asked.

Her tone was cold and unnatural. Her paroxysm of fear seemed to have passed.

"I don't know," Arnold answered. "Let Groves telephone for a doctor."

The man half turned away, yet hesitated. Fenella fell on her knees and bent over the prostrate body.

"He is not dead," she declared. "Groves, tell me exactly who is in the house."

"There is no one here at all, madam," the man answered, "except the servants, and they are all in the other wing. We have had no callers whatever this evening."

"And Mr. Weatherley?"

"Mr. Weatherley arrived home about seven o'clock," Groves replied, "dined early and went to bed immediately afterward. He complained of a headache and looked very unwell."

Fenella rose slowly to her feet. She looked from Arnold to the prostrate figure upon the carpet.

"Who has done this?" she asked, pointing downward.

"It may have been an accident," Arnold suggested.

"An accident!" she repeated. "What was he doing in my sitting room? Besides, he could not have crept underneath the couch of his own accord."

"Do you know who he is?" Arnold asked.

"Why should I know?" Fenella demanded.

Arnold hesitated before replying.

"You remember the night of my first visit here—the face at the window?"

She nodded. Arnold pointed downward to the outstretched hand.

"That is the man," he declared. "He is wearing the same ring—the red signet ring. I saw it upon his hand the night you and I were in this room alone together and he was watching the house. I saw it again through the window of the swing-doors on the hand of the man who killed Rosario. What does it mean, Fenella?"

"I do not know," she faltered.

"You must have some idea," he persisted, "as to who he is. You seemed to expect his coming that night. You would not let me give an alarm or send for the police. It was the same man who killed Rosario."

She shook her head.

"I do not believe that," she declared.

"If it was not the same man," Arnold continued, "it was at least some one who was wearing the same ring. Tell me the truth, Fenella."

She turned her head. Groves had come once more within hearing.

"I know nothing," she replied hardly. "Groves, go and knock at the door of your master's room," she added. "Ask him to put on his dressing gown and come down at once. Mr. Chetwode, come with me into the library while I telephone for the doctor."

Arnold hesitated for a moment.

"Don't you think that I had better stay by him?" he suggested.

She shook her head.

"I will not be left alone," she replied. "I told you on the way here that I was afraid. All night I knew that something would happen."

They made their way to the front of the house and into the library. Mrs. Weatherley turned up the electric lights and fetched a telephone-book. Arnold rang up the number she showed him.

"What about the police station?" he asked, turning toward her with the receiver still in his hand. "Oughtn't I to send for some one?"

"Not yet," she replied. "We are not supposed to know. The man may have come upon some business. Let us wait and see what the doctor says."

He laid down the receiver. She had thrown herself into an easy-chair and with a little impulsive gesture she held out one hand toward him.

"Poor Arnold!" she murmured. "I am afraid that this is all very bewildering to you, and your life was so peaceful until a week ago."

He held her fingers tightly. Notwithstanding the shadows under her eyes and the gleam of terror that still lingered there Fenella was beautiful.

"I don't care about that," he answered. "I don't care about anything except that I should like to understand a little more clearly what it all means. I hate mysteries. I don't see why you can't tell me. I am your friend. If it is necessary for me to say nothing I shall say nothing, but I hate the thoughts that come to me sometimes. Tell me why that man should have been haunting your house the other evening. What did he want? And to-night—what made him break into your room?"

She sighed.

"If it were only as simple as all that," she answered, "oh, I should tell you so willingly! But it is not. There is so much that I do not understand myself."

He leaned a little closer toward her. The silence of the room and the house was unbroken.

"The man will die!" he said. "Who do you believe could have struck him that blow in your room?"

"I do not know," she answered; "indeed I do not."

"You heard what Groves said," Arnold continued. "There is no one in the house except the servants."

"That man was here," she answered. "Why not others? Listen."

There was the sound of shuffling footsteps in the hall. Mrs. Weatherley held up her finger cautiously.

"Be very careful before Mr. Weatherley," she begged. "It is an ordinary burglary this—no more."

The door was opened. Mr. Weatherley, in hasty and most unbecoming dishabille, bustled in. His scanty gray hair was sticking out in patches all over his head. He seemed, as yet, scarcely awake. With one hand he clutched at the dressing gown, the girdle of which was trailing behind him.

"What is the meaning of this, Fenella?" he demanded. "Why am I fetched from my room in this manner? You, Chetwode? What are you doing here?"

"I have brought Mrs. Weatherley home, sir," Arnold answered. "We noticed a light in her room and we made a discovery there. It looks as though there has been an attempted burglary within the last hour or so."

"Which room?" Mr. Weatherley asked. "Which room? Is anything missing?"

"Nothing, fortunately," Arnold replied. "The man, by some means or other, seems to have been hurt."

"Where is he?" Mr. Weatherley demanded.

"In my boudoir," Fenella replied. "We will all go. I have telephoned for a doctor."

"A doctor? What for?" Mr. Weatherley inquired.

"The burglar, if he is a burglar," she explained gently. "Don't you understand that all we found was a man lying in the center of the room? He has had a fall of some sort."

"God bless my soul!" Mr. Weatherley said. "Well, come along, let's have a look at him."

They trooped down the passage. Groves, who was waiting for them outside, opened the door. Mr. Weatherley, who was first, looked all round the apartment.

"Where is this man?" he demanded. "Where is he?"

Arnold, who followed, was stricken speechless. Fenella gave a little cry. The couch had been wheeled back to its place. The body of the man had disappeared!

"Where is the burglar?" Mr. Weatherley repeated irritably. "Was there ever any one here? Who in the name of mischief left that window open?"

Digitized by Google

The window through which Arnold had entered the room was now wide open. They hurried toward it. Outside all was darkness. There was no sound of footsteps, no sign of any person about. Mr. Weatherley was distinctly annoyed.

"I should have thought you would have had more sense, Chetwode," he said testily. "You found a burglar here, and instead of securing him properly you send up to me and go ringing up for doctors, and in the mean time the man calmly slips off through the window."

Arnold made no reply. Mr. Weatherley's words seemed to come from a long way off. He was looking at Fenella.

"The man was dead!" he muttered.

She, too, was white, but she shook her head.

"We thought so," she answered. "We were wrong."

Mr. Weatherley led the way to the front door.

"As the dead man seems to have cleared off," he said, "without taking very much with him, I suggest that we go to bed. Groves had better ring up the doctor and stop him if he can; if not he must explain that he was sent for in error. Good night, Chetwode!" he added pointedly.

Arnold scarcely remembered his farewells. He passed out into the street and stood for several moments upon the pavement. He looked back at the house.

"The man was dead or dying!" he muttered to himself. "What does it all mean?"

He walked slowly away. There was a policeman on the other side of the road, taxicabs and carriages coming and going. He passed the gate of Pelham Lodge and looked back toward the window of the sitting room. Within five minutes the man must have left that room by the window. That he could have left it unaided, even if alive, was impossible. Yet there was not anything in the avenue or thereabouts to denote that anything unusual had occurred. He was on the point of turning away when a sudden thought struck him. He reëntered the gate softly and walked up the drive. Arrived at within a few feet of the window he paused and turned to the right. A narrow path led him into a shrubbery. A few more yards and he reached a wire fence. Stepping across it, he found himself in the next garden. Here he paused for a moment and listened. The house before which he stood was smaller than Pelham Lodge and woefully out of repair. The grass on the lawn was long and dank—even the board containing the notice "To Let" had fallen flat and lay amidst it as in a jungle. The paths were choked with weeds, the windows were black and curtainless. He made his way to the back of the house and suddenly stopped short. This was a night of adventures indeed! On a level with the ground the windows of one of the back rooms were boarded up. Through the chinks he could distinctly see gleams of light. Standing there, holding his breath, he could even hear the murmur of voices. There were men there—several of them, to judge by the sound. He drew nearer and nearer until he found a chink through which he could see. Then for the first time he hesitated. It was not his affair, this. There were mysteries connected with Pelham Lodge and its occupants that were surely no concern of his. Why interfere? Danger might come of it—danger and other troubles. Fenella would have told him if she had wished him to know. She herself must have some idea as to the reason of this attempt upon her house. Why not slip away quietly and forget it? It was at least the most prudent course. Then, as he hesitated, the memory of Sabatini's words so recently spoken came into his mind. Almost he could see him leaning back in his chair with the faint smile upon his thin lips. "You have not the spirit for adventure!" Arnold hesitated then no longer. Choosing every footstep carefully, he crept to the window until he could press his face close to the chink through which the light gleamed out into the garden.

XVII

TO SEE into the room at all, Arnold had been compelled to step down from the grass on to a narrow, tiled path about half a yard wide, which led to the back door. Standing on this and peering through the chink in the boards, he gained at last a view of the interior of the house. From the first he had entered upon this search with a certain presentiment. He looked into the room and shivered. It was apparently the kitchen, and was unfurnished save for half a dozen rickety chairs and a deal table in the middle of the room. Upon this was stretched the motionless body of a man. There were three others in the room. One, who appeared to have some knowledge of medicine, had taken off his coat and was listening with his ear against the senseless man's heart. A brandy bottle stood upon the table. They had evidently been doing what they could to restore him to consciousness. Terrible though the sight was, Arnold found something else in that little room to kindle his emotion. Two of the men were unknown to him—dark-complexioned, ordinary people—but the third he recognized with a start. It was Isaac who stood there, a little aloof, waiting somberly for what his companion's verdict might be.

Apparently after a time they gave up all hope of the still motionless man. They talked together, glancing now and then toward his body. The window was open at the top and Arnold could sometimes hear a word. With great difficulty he gathered that they were proposing to remove him and that they were taking the back way. Presently he saw them lift the body down and wrap it in an overcoat. Then Arnold stole away across the lawn toward a gate in the wall. It was locked, but it was easy for him to climb over. He had barely done so when he saw the three men come out of the back of the house, carrying their wounded comrade. He waited till he was sure they were coming and then looked round for a hiding-place. He was now in a sort of lane, ending in a cul-de-sac at the back of Mr. Weatherley's house. There were gardens on one side, parallel with the one through which he had just passed, and opposite were stables, motor sheds and tool houses. He slipped a little way down the lane and concealed himself behind a load of wood. About forty yards away was a street for which he imagined that they would probably make. He held his breath and waited.

In a few minutes he saw the door in the wall open. One of the men slipped out and looked up and down. He apparently signaled that the coast was clear, and soon the others followed him. They came down the lane, walking very slowly—a weird and uncanny little procession. Arnold caught a glimpse of them as they passed. The two larger men were supporting their fallen companion between them, each with an arm under his armpit, so that the fact that he was really being carried was barely noticeable. Isaac came behind, his hands thrust deep into his overcoat pockets, a cloth cap drawn over his features. So they went on to the end of the lane. As soon as they had reached it Arnold followed them swiftly. When he gained the street they were about twenty yards to the right, looking round them. It was a fairly populous neighborhood, with a row of villas on the other side of the road and a few shops lower down. They stood there, having carefully chosen a place remote from the gas-lamps, until at last a taxicab came crawling by. They hailed it, and Isaac engaged the driver's attention apparently with some complicated direction, while the others lifted their burden into the taxicab. One man got in with him. Isaac and the other, with ordinary good nights, strode away. The taxicab turned round and headed westward. Arnold, with a long breath, watched them all disappear. Then he, too, turned homeward.

It was almost midnight when Arnold was shown once more into the presence of Sabatini. Sabatini, in a black velvet smoking jacket, was lying upon a sofa in his library, with a recently published edition *de luxe* of Alfred de Musset's poems upon his knee. He looked up with some surprise at Arnold's entrance.

"Why, it is my strenuous young friend again!" he declared. "Have you brought me a message from Fenella?"

Arnold shook his head.

"She does not know that I have come."

"You have brought me some news on your own account then?"

"I have brought you some news," Arnold admitted.

Sabatini looked at him critically.

"You look terrified," he remarked. "What have you been doing? Help yourself to a drink. You'll find everything on the sideboard there."

Arnold laid down his hat and mixed himself a whisky and soda. He drank it off before he spoke.

"Count Sabatini," he said, turning round, "I suppose you are used to all this excitement. A man's life or death is little to you. I have never seen a dead man before tonight. It has upset me."

"Naturally, naturally," Sabatini said tolerantly. "I remember the first man I killed—it was in a fair fight, too, but it sickened me. But what have you been doing, my young friend, to see dead men? Have you, too, been joining the army of plunderers?"

Arnold shook his head.

"I took your sister home," he announced. "We found a light in her sitting room and the door locked. I got in through the window."

"This is most interesting," Sabatini declared, carefully marking the place in his book and laying it aside. "What did you find there?"

"A dead man," Arnold answered—"a murdered man!"

"You are joking!" Sabatini protested.

"He had been struck on the forehead," Arnold continued, "and dragged half under the couch. Only his arm was visible at first. We had to move the couch to discover him."

"Do you know who he was?" Sabatini asked.

"No one had any idea," Arnold answered. "I think that I was the only one who had ever seen him before. The night I dined at Mr. Weatherley's for the first time and met you I was with Mrs. Weatherley in her room, and I saw that man steal up to the window as though he were going to break in."

"This is most interesting," Sabatini declared. "Evidently a dangerous customer. But you say that you found him dead. Who killed him?"

"There was no one there who could say," Arnold declared. "There were no servants in that part of the house, there had been no visitors, and Mr. Weatherley had been in bed since half past nine. We telephoned for a doctor and we fetched Mr. Weatherley out of bed. Then a strange thing happened. We took Mr. Weatherley to the room which we had left for less than five minutes, and there was no one there. The man had been carried away."

"Really," Sabatini protested, "your story gets more interesting every moment. Don't tell me that this is the end?"

"It is not," Arnold replied. "It seemed then as though there were nothing more to be done. Evidently he had either been only stunned and had got up and left the room by the window, or he had accomplices who had fetched him away. Mr. Weatherley was very annoyed with us and we had to make excuses to the doctor. Then I left."

"Well?" Sabatini said. "You left. You didn't come straight here?"

Arnold shook his head.

"When I got into the road I could see that there was a policeman on duty on the other side of the way, and quite a number of people moving backward and forward all the time. It seemed impossible that they could have brought him out there if he had been fetched away. Something made me remember what I had noticed on the evening I had dined there, that there was a small empty house next door. I walked back up the drive of Pelham Lodge, turned into the shrubbery, and there I found that there was an easy way into the next garden. I made my way to the back of the house. I saw lights in the kitchen. There were three of his companions there, and the dead man. They were trying to see if they could revive him. I looked through a chink in the boarded window and I saw everything."

"Trying to revive him," Sabatini remarked. "Evidently there was some doubt as to his being dead then?"

"I think they had to come to the conclusion that he was dead," Arnold replied, "for after a time they put on his overcoat and dragged him out by the back entrance, down some mews and into another street. I followed them at a distance. They hailed a taxi. One man got in with him and drove away, the others disappeared. I came here."

Sabatini reached out his hand for a cigarette.

"I have seldom," he declared, "listened to a more interesting episode. You didn't happen to hear the direction given to the driver of the taxicab?"

"I did not."

"You have no idea, I suppose," Sabatini asked with a sudden keen glance, "as to the identity of the man whom you believe to be dead?"

"None whatever," Arnold replied, "except that it was the same man who was watching the house on the night when I dined there. He told me then that he wanted Rosario. There was something evil in his face when he mentioned the name. I saw his hand grasping the window-sill. He was wearing a ring—a signet ring with a blood-red stone."

"This is most engrossing," Sabatini murmured. "A signet ring with a blood-red stone! Wasn't there a ring answering to that description upon the finger of the man who stabbed Rosario?"

"There was," Arnold answered.

Sabatini knocked the ash from his cigarette.

"The coincidence," he remarked, "if it is a coincidence, is a little extraordinary. By-the-by, though, you have as yet given me no explanation as to your visit here. Why do you connect me with this adventure of yours?"

"I do not connect you with it at all," Arnold answered, "yet, for some reason or other, I am sure that your sister knew more about this man and his presence in her sitting room than she cared to confess. When I left there everything was in confusion. I have come to tell you the final result, so far as I know it. You will tell her what you choose. What she knows I suppose you know. I don't ask for your confidence. I have had enough of these horrors. Tooley Street is bad enough, but I think I would rather sit in my office and add up figures all day long than go through another such a night."

Sabatini smiled.

"You are young as yet," he said. "Life and death seem such terrible things to you, such tragedies, such enormous happenings. In youth one loses one's sense of proportion. Life seems so vital, the universe so empty, without one's own personality. Take a pocketful of cigarettes, my dear Mr. Chetwode, and make your way homeward. We shall meet again in a day or two, I dare say, and by that time your little nightmare will not seem so terrible."

"You will let your sister know?" Arnold begged.

"She shall know all that you have told me," Sabatini promised. "I do not say that it will interest her—it may or it may not. In any case I thank you for coming."

Arnold was dismissed with a pleasant nod, and passed out into the streets, now emptying fast. He walked slowly back to his rooms. Already the sense of unwonted excitement was passing. Sabatini's strong, calm personality was like a wonderful antidote. After all it was not his affair. It was possible, indeed, that the man was an ordinary burglar. And yet, if so, what was Isaac doing with him? He glanced in front of him to where the lights of the two great hotels flared up to the sky. Somewhere

Digitized by Google

just short of them, before the window of her room, Ruth would *be sitting* watching. He quickened his steps. Perhaps he should find her before he went to bed. Perhaps he *might* even see Isaac come in!

Big Ben was striking the half hour past midnight as Arnold stood on the top landing of the house at the corner of *Adam* Street and listened. To the right was his own bare apartment; on the left the rooms where Isaac and Ruth lived. He struck a match and looked into his own apartment. There was a note twisted up for him on his table, scribbled in pencil on a half sheet of paper. He opened it and read:

If you are not too late will you knock at the door and wish me good night? Isaac will be late. Perhaps he will not be home at all.

He stepped back and knocked softly at the opposite door. In a moment or two he heard the sound of Ruth's stick. She opened the door and came out. Her eyes shone through the darkness at him, but her face was white and strained. He shook his head.

"Ruth," he said, "you heard the time? And you promised to go to bed at ten o'clock!"

She smiled.

"Tonight I was afraid," she whispered. "I do not know what it was, but there seemed to be strange voices about everywhere. I was afraid for Isaac and afraid for you."

"My dear girl," he laughed, "what was there to fear for me? I had a very good dinner with a very charming man. Afterward we went to a music hall for a short time; I went back to his rooms, and here I am, just in time to wish you good night. What could the voices have to tell you about that?"

She shook her head.

"Sometimes," she said, "there is danger in the simplest things one does. I don't understand what it is," she went on a little wearily, "but I feel that I am losing you, that you are slipping away, and day by day Isaac gets more mysterious. When he comes home sometimes his face is like the face of a wolf. There is a new desire born in him, and I am afraid. I think that if I am left alone here many more nights like this I shall go mad. Oh, if you could hear those voices! If you could understand the fears that are nameless, how terrible they are!"

Arnold passed his arm round her.

"Come and sit with me in my room for a little time," he said. "I will carry you back presently."

"Dear Arnold!" she whispered. "For a few minutes then—not too long. Tonight I am afraid. I feel that something will happen. Tell me this?"

"What is it, dear?"

"Why should Isaac press me so hard to tell him where you were going tonight? You passed him on the stairs, didn't you?"

Arnold nodded.

"He was with another man," he said with a little shiver. "Did that man come up to his rooms?"

"They both came in together," Ruth said. "They talked in a corner for some time. The man who was with Isaac seemed terrified about something. Then Isaac asked me about you."

"What did you tell him?" Arnold asked.

"I thought it best to know nothing at all," she replied. "I simply said that you were going to have dinner with some of your new friends."

"Does he know who they are?"

Ruth nodded.

"Yes, we have spoken of that together," she admitted. "I had to tell him of your good fortune. He knows how well you have been getting on with Mr. and Mrs. Weatherley. Listen—is that some one coming?"

Within a few feet of them was Isaac. He had come up those five flights of stone steps without making a sound. Even in that first second or two of amazement Arnold noticed that he was wearing canvas shoes with rubber soles. He stood with his long fingers gripping the worn balustrade only two steps below them, and his face was like the face of some snarling animal.

"Ruth," he demanded hoarsely, "what are you doing out here at this time of night—with him?"

Ruth was the least discomposed of the three.

"Isaac," she answered, "Uncle Isaac, I was lonely—lonely and terrified. You left me so strangely and it is so silent up here. I left a little note and asked Arnold, when he came home, to bid me good night. He knocked at my door two minutes ago."

Isaac threw open the door of their apartments.

"Get in," he ordered. "I'll have an end put to it, Ruth. Look at him!" he cried mockingly, pointing to Arnold's evening clothes. "What sort of a friend is that, do you think, for us? He wears the fetters of his class. He is a hanger-on at the tables of our enemies."

"You can abuse me," Arnold replied calmly, "and I shall still believe that I am an honest man. Are you, Isaac?"

Isaac's eyes flashed venom.

"Honesty! What is honesty?" he snarled. "What is it, I ask you? Is the man honest who keeps the laws because he has no call to break them? Is that honesty? Is he a better man than the father who steals to feed his hungry children? Is the one honest and the other a thief? You smug hypocrite!"

Arnold was silent for a moment. It flashed into his mind that here, from the other side, came very nearly the same doctrine that Sabatini had preached to him.

"It is too late to argue with you, Isaac," he said pleasantly. "Besides, I think that you and I are too far apart, But you must leave me Ruth for my little friend. She would be lonely without me and I can do her no harm."

Isaac opened his lips—lips that were set in an ugly sneer; but he met the steady fire of Arnold's eyes and the words he would have spoken remained unsaid.

"Get to your room then," he ordered.

Isaac passed on as though to enter his own apartments. Then suddenly he stopped and listened. There was the sound of a footstep, a heavy, marching footstep, coming along the terrace below. With another expression now upon his face he slunk to the window and peered down. The footsteps came nearer and nearer, and Arnold could hear him breathing like a hunted animal. Then they passed and he stood up, wiping the sweat from his forehead.

"I have been hurrying," he muttered half apologetically. "We had a crowded meeting. Good night!"

XVIII

PRECISELY at half past nine the next morning Mr. Weatherley entered his office in Tooley Street. His appearance gave rise to some comment in the office.

"The governor looks quite himself again," young Tidey remarked, turning round on his stool.

Mr. Jarvis, who was collecting the letters, nodded.

"It's many months since I've heard him come in whistling," he declared.

Arnold, in the outer office, received his chief's morning salutation with some surprise. Mr. Weatherley was certainly, to all appearance, in excellent spirits.

"Glad to see your late hours don't make any difference in the morning, Chetwode," he said pleasantly. "You seem to be seeing quite a good deal of the wife, eh?"

Arnold was almost dumfounded. Any reference to the events of the preceding evening was, for the moment, beyond him. Mr. Weatherley calmly hung up his silk hat, took out the violets from the buttonhole of his overcoat and carried them to his desk.

"Come along, Jarvis," he invited as the latter entered with a rustling heap of correspondence. "We'll sort the letters as quickly as possible this morning. You come on the other side, Chetwode, and catch hold of the ones we keep to deal with together. Those Mr. Jarvis can handle I'll just initial. Let me see—you're sure those bills of lading are in order, Jarvis?"

Mr. Jarvis plunged into a few particulars, to which his chief listened with keen attention. For half an hour or so they worked without a pause. Mr. Weatherley was quite at his best. His instructions were sage, and his grasp of every detail referred to in the various letters was lucid and complete. When at last Mr. Jarvis left with his pile he did not hesitate to spread the good news. Mr. Weatherley had got over his fit of depression, whatever the

An Old Woman in the Old World

By CORRA HARRIS

ILLUSTRATED BY HENRY RALEIGH

YOU observe the change in the title of this chapter. When Philip and Peggy started upon their wedding journey through Italy they invited me very cordially to accompany them.

"No," I said. "I shall stay here in Rome with the other relics till I recover some of the peace and composure that belong to such ruins. Then I'll sail and meet you at home by the Christmas fire in the living room."

"But you cannot go alone," objected my niece.

"Ah, yes, I can, Peggy, and with more peace and quietness than I have trotted across seas and over Europe with a militant young suffragette who taxed every bone in my body and every faculty of my mind trying to keep up with her, only to see her abandon her colors in the end for the sake of a romantic formula. I believe I've been the only really faithful woman's woman in this pilgrimage!"

She listened without compunction, smiling roguishly as if she had found something infinitely more pleasant to think about and live for than all the women in the world. A bride is a shameless creature. For the time being she relinquishes her most cherished ideals concerning society and for the reforming of the world, and concentrates her whole attention upon love and its fulfillments, which is, after all, an older duty, more honorable and necessary in society than all the systems of economics and philosophies ever conceived.

Upon this occasion she had the hardihood to present me with that voluminous package of notes she had made upon the women of the Old World "as a souvenir of our travels," she said, as finally as if she had no further interest in them.

It was in the weeks that followed their departure that I settled myself comfortably in Rome and put together and wrote the preceding chapters of this series. And now in a few days I shall sail to meet Peggy and her husband in time to fill their Christmas stockings with beads and bogus antiquities. The work for which we came is finished, although not by Peggy. And it is not so valuable as it would have been if she had kept faith and written these pages herself. But at least the reader has escaped many columns of snaggle-toothed statistics. For Peggy was at one time a firm believer in the census reports of the various countries we visited.

On the Continental Trains

AND now at the very end, with the garrulousness that may be pardoned a woman of my years, I purpose to set down a few reflections about men and women and things in general, and to exercise the right of age by giving some advice to those American readers who have had the patience to follow me thus far, and who may themselves make a journey sometime into this Old World. Of course you will not take the advice. But I have this consolation: if you do not, and are a person of decent sensibilities, you will regret that you did not. We always do.

The Husband Was Always Pacifying Her

I observed that wherever we saw American women traveling alone or together they were active and always in a good humor. But every time we came upon a husband and wife making the tour by themselves the wife was pettish, exacting and unreasonable, and the husband was always pacifying her, changing his plans to accommodate her whims. Still it is better to travel with your husband if you have got one. The number of unattached, nomadic, maverick American women to be seen gadding about Europe does not produce a happy impression. We do not see them at home, and when we do we are slow to receive them. I reckon that is why so many of them come over here, where getting acquainted is much easier. So, I say, if you have divorced your husband—and that is always the inference over here, where America is chiefly distinguished for its wealth, its lynchings and its easy divorces—and still retain the honorable title of the married woman—"Mistress"—borrow your good old grandmother's wedding ring to wear till you get back home. I was ashamed of the number of Mrs. So-and-So's we saw frisking about, with nothing on their wedding-ring fingers to correspond to the titles.

When a woman is alone she should never go into a compartment in the trains reserved for "women only." She may escape the tobacco smoke, but she is apt to encounter things still more disagreeable. In the first place, you will find that an English woman has already taken the best seat, that she has filled with her "luggage" the whole length of the rack which should be divided among three passengers, that she has stuffed her rugs and wraps round her to keep you from getting too close. And there she sits like an angry old hen trying to hatch addled eggs, glaring at you with every neck feather on end, as much as to say, "I was here first!" And when you stumble over the suitcase she keeps in the aisle she bristles up even more and pecks you with an expression that leaves you black and blue with rage. Then three or four more women get in. As soon as the train starts they loosen their belts and shamelessly pull out the tails of their shirtwaists in order to be perfectly comfortable while they nod and sleep away the journey. If there is a man in the compartment, even the poorest specimen of that great and controlling sex, the English woman will paw her face all day long to keep the cinders and dust off and her complexion looking rosy, and the other women will sit up, spruce and wide awake, even if the journey lasts till twelve o'clock at night. Always choose a compartment where men are or can come. The effect is civilizing upon women. And European men are willing to behave if you are.

Peggy and I heard much, especially from homely old maids, of the dangers from their rudeness; but we had little experience of it. Once in France, where we had some difficulty in determining which station we had to get out at for the customs, a Frenchman came out of the next compartment, volunteered the information, then sat down in front of Peggy, covering her mildly with his fine eyes.

"Young man," I said, when this stare had lasted about ten seconds, "have you told us all we need to know about getting through the next frontier?"

"*Oui, madame.*"

"Well, I am much obliged. Get up now and go back into your own compartment." He went.

And once in Germany a pale, fat young fellow came and stood in the door of our compartment, watching Peggy, who was playing Patience on a vacant seat with a deck of miniature cards. I began to fumble at my bonnet.

"What are you doing?" whispered Peggy, without looking up.

"I'm getting out my hatpins!"

"What for?"

"I am going to stick them into the eyes of this ruffian standing in the door!" The young ruffian immediately withdrew. If you speak American with sufficient force and emphasis any European will understand you and act accordingly. It has a vibrant, moral quality that I miss in other tongues. It is a decided improvement upon the British English, not perhaps in prosaic elegance, but in eloquence, in verve and in idiomatic strength.

You Will Find That an English Woman Has Already Taken the Best Seat

It is young. It has not yet been devastated by the grammarian or toned down to innocuousness by passive-participle women.

I do not think much of the American tourist conversation however. It consists usually of cheap, one-sentence postcard descriptions of museums, art galleries and ruins.

"Have you seen the Abbey?"

"Yes, isn't it grand!"

"Have you been to the Louvre yet?"

"Yes, isn't it wonderful!"

"Did you see the Velasquez painting in the old gallery at Madrid?"

"Yes, and I just love his things!" clasping the hands to give foolish emphasis to her paucity of ideas.

Still I am setting down some general rules of conversation, which will at least insure continued companionship.

How to Behave in the Galleries

FIRST, never say anything original. This is the greatest temptation Americans have to resist. The oldest one of us is younger than the youngest infant born in Great Britain, for example, and we still retain the happy, youthful freshness of observation that belongs to children. We have not developed yet the snarling, conceited culture of being universally critical. With us appreciation is as instinctive as delight in a child at some new sight. That is why Americans prefer to travel in the Old World instead of in their own much more wonderful country—everything has the novelty of immemorial age.

Be especially careful what you say about pictures. Everybody in Europe is secretly mad with us now because we can afford to buy so many of them—and they vent their spite by sneering at our ignorance in such matters. It is best not to say anything about the Old Masters. And whatever you do, do not come back with a rapt, prayer-meeting look upon your face from some gallery, and say that you spent three hours just sitting before such and such a Madonna, "drinking it in!" Only Americans do that. And they do it because they think they are imitating somebody who feels and knows. I did not see a single almond-eyed Virgin Mary picture in Europe that I could not get through staring at in ten minutes. It is my opinion that the old painters owe more to the tones of time and to our imagination than to their own genius. The only thing that engaged my attention for one whole blissful hour was the statue of David in the Borghese Palace Museum at Rome. In this figure the sculptor has memorialized forever the spiritual strength of immortal courage that is in youth. If David had not been a boy, with the clear, passionate faith of a boy in himself and his particular God, he would never have dared risk slinging that stone at Goliath. As long as men live in the world and this one statue exists, they can go back and look at it and understand the miracle of courage and faith as sculptured in that young face, in those young limbs mightily sprung to test the fidelity of God to His people, not merely to prove the skill of David's sling. But, I say, you had best not say such things about this statue in Europe. Comment rather upon the art of the sculptor who brought out every vein, every little gray hollow in the lithe body. And when you see a Louis XV sideboard worth about sixty dollars do not ask why the thing sells for a million francs. They

Digitized by Google

cannot *tell* you, and they only think: "Oh, *Heaven*! these egregious Americans!" In fact we are egregious, *impudently* so. I saw a whole room that a rich young Texan had bought, carved weather-boarding, pictures and all.

"He said he wanted it for his bathroom!" somebody snickered.

Bless the boy! It will do very well for a bathroom, look quite as proper as some of the old Roman baths look in the museum drawing rooms of European noblemen! Now that there is no tariff to pay on things over a hundred years old that we bring home, it is only a question of time when all the oldest pictures, statues and castles in Europe will be shipped home by us. There is something ruthless in an American when it comes to an antiquity. He just cannot bear to leave one behind him in the "dust of centuries dark and deep" where it belongs. He'll be sure to buy it and exhibit it on Broadway. He is as famished for ancient draperies as a cow in a fresh green pasture is for salt.

The French Themselves Cannot Use Their Own 'Phones With Any Satisfaction

But to come back to the art of conversation, which is important unless you are willing to go through Europe like a dumb animal. Much depends upon the nationality of the person with whom you are speaking. If it is an Englishman always discuss the weather. Do not attempt anything else, because this topic is easy, and it is the only touch of Nature that makes him kin to everybody. He never gets tired of it. And the more you know about it the more he will respect you. The next day he will seek you out of his own accord to renew it, which is a sort of triumph, because as a rule an Englishman waits to be spoken to, and when you do address him he is apt to throw up his ghastly monocle and stare at you as if you were an intruding insect. But if at luncheon he remarks that he thinks there will be rain answer that you have just consulted the barometer and do not agree with him. Recall the circumstance of yesterday morning's clouds. Mention a slight variation of the temperature during the night. By this time you have his undivided attention. Keep it. Go on cataloguing the weather day by day backward. Do it passionately, as if the fate of nations lived upon the mist of last Friday morning. By this time he is thrilled to the very center of his being. He has laid down his knife and fork, turned sidewise in his chair, and is regarding you with open admiration.

English Respect for Weather-Lore

ONE evening when the weather had been the subject of long and ardent discussion at a dinner table where Peggy and I happened to be seated between two English women, I lost my patience.

"Yes," I added solemnly, "the weather today reminded me very much of the freshet you had here in August, 1769."

"I beg pardon?" said my lady Briton, regarding me seriously. Peggy kicked me softly under the table, but I was determined to risk seeing how far this mania of the English can be stretched.

"I thought everybody in England remembered how it rained torrents all day, August the twenty-third, in 1769," I answered.

My lady was silent, being too deeply impressed for words at my superior information upon a subject she had introduced herself. The remainder of the time we were in that place she sought me upon every possible occasion, introduced me to her friends, showed me particular and reverent attention.

But, as I have indicated in the first chapter of this series, it is wise to avoid the English socially as much as possible. They have been puffed up and rendered insufferable by that class of Americans whom we call Anglomaniacs, who have flattered and admired them until they have lost every modest, veracious sense of their relative importance in the order of things. Their provincialism persists, not because they do not travel but because they usually travel in the Old World, rarely in our new one. One may, of course, come upon Englishmen who have worked hard, earned their own money, bought their own titles, or received them as a reward for their achievements, who have the manners of gentlemen. But as a rule the courtesy of one of the better class is limited to his own kind. He is not a thorough gentleman, only partially gentle. For this is certain, the real gentleman and gentlewoman are not only courteous to their own kind but to the other kinds. The next foreign missionaries we send out should be well-bred American women to teach manners in England.

Above everything, avoid English slang. It is puerile, lacking in those graphic and virile qualities that characterize American idiomatic speech. When an Englishwoman says "Fancy!" she does not mean anything. It is simply a red and white wool word with which she interrupts conversation. If she ejaculates "How extraordinary!" she does not mean anything either. It is an exaggerated term by which she raises the eyebrows of her dumb mind when she does not know what she ought to say. If she exclaims that the cakes are "jolly," she means, poor thing, that they are made by an English recipe and have currants in them.

There is only one other class to shun, and you should shun them first; if you do not they will shun you. These are certain Americans from Boston, philological aristocrats with catacomb intelligences, who in the dining room of a hotel carry on snuffling, digging discussions after the poor little obscure root of an obsolescent word, while everybody else listens reverently, but no one dares interrupt the conversation unless he can show a Harvard coat-of-arms. I do not know why any American should look for antiquities in the Old World so long as these people exist, unless it is because they are bogus relics in a new and vigorous civilization. Nobody at home knows how funny, how absurdly artificial and out of drawing such people are, unless they could be seen, say, in Rome. Here they are very clannish, and spend their time studying the past that is no longer time at all. They give themselves up to the most exaggerated toadying of the old moose buck archeologist among themselves who has discovered, maybe, the doubtful heel of Achilles, by spending his life digging in decayed places. The only pleasure I had in observing them was in watching how the snorty old fellow snubbed them—snubs which they endured with grimacing delight.

The significance of the points or places or streets from which directions are given to strangers in the famous cities will not be lost upon a close observer. In New York everything you want to see is on Broadway, or so far this way or that way from Broadway. In Berlin you take your bearings from Unter den Linden, which is the great thoroughfare of that city, or else you are told that what you are looking for is so far this side or the other side of such and such a beer garden. In Paris you are always directed from the Bon Marché, or from the Galerie Lafayette, or from the Opéra House. You are supposed to know by instinct where these stores are, also where the Opéra is. In London Westminster Abbey is your pillar of cloud by day and of fire by night. You go there first, then turn to the right or to the left. Afterward you always find yourself turned completely round in Piccadilly Circus. But remember this. If an English man or woman tells you it is about five minutes' walk to the place you want to go, take a taxi-cab. He means that it is two miles and a half. This is the only kind of exaggeration of which I found the people there capable.

When all is said I have to admit this—their faults are the faults of bad manners generally. They are truthful and honest to a degree that is beautiful and inspiring. And they are undoubtedly the most sentimental people in the world. I quote this from among the advertisements on the front page of The Times.

_____ _____. In loving memory of my dear friend called away November 15th, 1910.

"Nearer to Thee, my God, nearer to Thee!"

Just below was another advertisement of a gentleman who had died in 1907! The friends did not sign their names. It was simply a triumphant announcement of the fact that Englishmen remember their dead and want the world to know it.

When you reach Paris do not be alarmed because the police send you a printed form that you must fill out. It will contain the most intimate questions, such as:

"How old are you?"

"Light or dark?"

"Blue eyes or brown?"

"Where were you born?"

"Male or female?"

"What is your occupation?"

This is a kind of Bertillon system they have for keeping up with you and finding out how many times you change your *pension*.

If you decide to keep house there never buy meat from a butcher's shop that has a gilded horse's head over the door. A great many Frenchmen are fond of horseflesh, but as a rule Americans are not. Never pass any one on the stairs. This is very rude. If you are at the bottom wait till the Frenchman comes down. If you are at the top wait till he comes up and passes you. You may use any telephone in Paris, provided you speak your own language. In that case you will be understood if the other person speaks it. But if you attempt French you will not be understood. The French themselves cannot use their own 'phones with any satisfaction. One of them told us that the government had sent committees all over the world, trying to find out what was the trouble with the telephone system in France, which was so defective. No remedy had ever been found. I laughed.

In the Land of Politeness

"BUT, monsieur, it is not the fault of the 'phones at all. No electrified wire has ever been invented with enough electric elasticity to convey your singularly emotional, your passionately dramatic language."

"I had never thought of that!" He went off with a bee in his bonnet, no doubt resolved upon devising a telephone with more temperament.

In England, Germany, France or Italy one may offer a tip to any person who serves the public, and it will be accepted. But it is not always safe to do so in Spain. They have more beggars and more self-respect there than in any other country we visited—and more courtesy. At my time of life such another trip across is not likely, but if I should ever go abroad again I shall go to Spain and stay there. It is the most interesting country in the world and has now the most gentle people in it, though much may happen after it is better advertised to tourists. There is no affectation; the life of it is really pastoral and medieval. One has the feeling of having wandered back into the age of poetry and shepherds when, in the argent twilight, one meets a girl with a herd of goats in the streets of Barcelona. She stops before the door of each customer. All the goats immediately lie down, while she goes in to get the milk measure. Then she comes out, steps among them, looks at each till she finds the one to milk for that place. She pulls the lady up by her ears, squats behind her, reaches one hand through the slender black straddling legs, and proceeds to fill her cup as nonchalantly as if you were not looking at her. And when you come home from the opera, between eleven and twelve, it gives you a queer sense of poetic security to find an old Catalan watchman, in knee-breeches, cap and red sash, standing

(Concluded on Page 64)

He Unlocks it for You and Says: "Adios!"

PHILADELPHIA, FEBRUARY 3, 1912

Political Boomerangs

A NOTION seems to be floating round New York that the governor of New Jersey has committed some crime of so heinous a nature that right-minded persons are absolved from treating him decently. His application to the Carnegie Foundation for the teacher's pension to which his educational services might well entitle him was dug out of the files and published in an amiable but mistaken belief that it would discredit him. A little later his private letter to a former friend was given currency, with an intention of making trouble at the psychological moment between himself and Mr. Bryan. Both the application and the letter would ordinarily have been considered confidential; and this willingness to injure the governor by sneaking means indicates that in some quarters he is regarded as beyond the pale of respectability.

Governor Wilson's crime, of course, consists in advocating Insurgent or radical political policies. As there is only one important locality where such policies are considered criminal, it will not be difficult to locate the quarter whence any sneaking attack upon him comes. It is well settled in American politics that attacks upon any candidate from that quarter are much more helpful than harmful to his candidacy. We hope it is going to be well settled, also, that dirty politics will always react upon its authors.

Post-Office Finances

THE Post-Office Department spends decidedly more than any other branch of the Government. Its disbursements are not a great deal less than those of the War and Navy Departments combined; but it is self-sustaining and, as long as receipts equal expenditures, it is immaterial, from the point of view of the national budget, how large the latter may be. Everybody understands that. The line between Government expenses and Government investments, however, is not so generally acknowledged. We have been accused of inconsistency for saying at one time that greater economy should characterize Government expenditures and at another time that the Government should devote large additional sums to certain objects. Bills are now before Congress that would entail heavy disbursements for Federal aid of good roads and improved waterways. Both objects ought to be supported by the Government; but they are permanent, wealth-producing improvements and belong in a quite different category from maintaining navy yards, for example. If the nation can spend three cents in bond interest and save nine cents in haulage costs, it certainly isn't losing anything.

The Oppressed Press Agent

IN ALL newspaper offices there is an unreasonable prejudice against the press agent and a haunting fear that he will "put something over" on the paper, thereby securing gratis a very valuable amount of advertising for his employer; but newspapers do not bar out the press agent. They take a more sinister vengeance upon him by refusing to print his stuff unless it is about something silly and trivial. If his leading lady should lighten the woes of all Europe and America by inventing a self-hooking dress, the copy would go into the wastebasket. If she should swallow a pint of hair oil it would be printed on the front page with illustrations. If the directors of his railroad raise wages the press agent cannot get in a line about it. If they have a monkey at dinner he can get a whole page in the Sunday edition.

We are satisfied that if press agents were given a fair show their pale and lofty brows would be found glittering in the very first rank of national progress and enlightenment. As it is, the managing editors, figuratively speaking, keep them tied to a garbage can.

Dividends From Prisoners

WE ARE invited to subscribe to the capital stock of a manufacturing concern, the special attractions of which are thus described in the prospectus:

"The company's factories are located inside prison walls and it has at present eight hundred prisoners under contract in Maine, Illinois and Kentucky. It proposes to double its production by making additional contracts with institutions that are advantageously located. There are no strikes or labor troubles in prisons. This company pays for its labor fifty-two cents a day a man, while its competitors who employ free labor pay an average of about two dollars a day. The company is supplied, free of rent, with factory buildings, storage warehouses and grounds inside the prison walls, and with free light, heat and power. To acquire similar facilities outside would take an investment of approximately one million dollars. . . . These are ideal conditions for profitable manufacturing."

The company feels sure of paying seven per cent dividends on its preferred stock, and ten per cent on the common stock, which is given away with the preferred as a bonus; "in fact, the company expects its net earnings to be double these dividend requirements."

We agree heartily that these are ideal conditions for manufacturing; but, while the state is selling the labor of these prisoners to fortunate contractors at one-quarter what it is worth, besides furnishing free rent, light, heat and power, the prisoners' wives and children are going hungry in many cases. An arrangement whereby the value of the labor of these prisoners went to buy bread and shoes for their dependents, instead of to pay dividends, would not be so ideal from the manufacturing point of view. Still, it would have something to commend it.

Parties in Germany

TEN groups, sufficiently numerous and cohesive to be called political parties, were represented in the last Reichstag. There were, besides, seventeen members unattached to any of these groups, representing various shoots, spurs and angles of political opinion in the Fatherland. The Socialists had only fifty-four members out of a total of three hundred and ninety-seven, and at the top of their strength in the preceding Reichstag they had only eighty-one. No party has a majority. The Ministry must always depend upon a combination of three or more parties that are by no means in harmony at all points—a situation that gives a great tactical advantage to a relatively small but consistent and well-led minority group. This condition is even more marked in the British Parliament, where the seventy-six votes of the Irish Nationalists, out of a total membership of six hundred and seventy, are necessary to keep the Liberal Ministry in office.

Under our system of two great parties, political opinion that does not command an outright majority of the whole nation gets virtually no representation. It can vote in Congress, of course, but simply to be outvoted. People in the United States do not hold one of two views any more than people in Germany or the United Kingdom do; but, under the two-party system, one of two views, broadly speaking, must always prevail. Under a democratic and representative scheme a government participated in by four or ten parties will, by and large, reflect public opinion more accurately than one participated in by only two parties. In the former case any considerable minority will, in time, have its day in court.

As to Wall Street Control

THE National Monetary Commission's banking bill provides that the United States shall be divided into fifteen districts; that the banks in each district which subscribe to the plan shall elect two directors of the National Reserve Association, both directors to be residents of the district, but only one of them to be a banker, the other being chosen to represent the agricultural, industrial or commercial interests of the district; that, in addition, all the banks subscribing to the plan shall elect nine directors at large, no two of them, however, to reside in any one district. Thus, out of thirty-nine elected directors New York could not possibly have more than three, and one of the three must be a business man who is not an officer of any bank or other financial institution. The remaining directors of the National Reserve Association are to be the governor, selected by the President of the United States, two deputy governors, the Secretary of the Treasury, the Secretary of Agriculture, the Secretary of Commerce and Labor and the Comptroller of the Currency—making forty-six directors in all.

The immediate management of the National Reserve Association, subject to the board of directors, will be largely in the hands of an executive committee, consisting of the governor, the two deputy governors, the Comptroller of the Currency and five others to be selected by the directors; but only one of the five can be chosen from any one district. How Wall Street can control an institution organized in this manner is not fully clear to us; but then, we are not numbered among the highly ingenious legal gentlemen who are retained by Wall Street to show it how to get what it wants.

A Thirsty Continent

THE amiable theory that drinking wine is a fine way to become temperate looks stranger than ever in view of some recent figures on the world's consumption of alcoholic beverages. If drunkenness is really very rare among the southern wine-drinking races, as compared with its shocking prevalence among us, their powers of resistance must be highly developed or else the consumption of alcohol is much more evenly distributed. Against our twenty gallons of beer for each person, for example, France is credited with thirty-nine gallons of wine and over nine gallons of beer, while her consumption of spirits is actually greater than ours by more than a third of a gallon a head. Italy uses thirty-one gallons of wine a head and rather more than half as much spirits as we do.

Like France, Germany, Austria and Hungary exceed us in consumption of spirits. On the other hand, we are only six gallons of beer a head behind Germany—but thirty-five gallons a head behind Belgium and eleven gallons behind England.

Newspaper Progress

"YET, on the whole, the newspaper has made genuine progress these eight-and-thirty years," said Henry Watterson the other day, speaking of the palmy, long-past, often-mourned days of the "great editors."

If anybody doubts it let him consult the files. The progress isn't in typesetting machines or telephones or multiplied telegraph wires. A generation ago the papers had as much "news" that anybody cared to read as they have now; but they have grown more civilized. Some of the "great editors" were great blackguards. Possibly they were not so "commercialized"; but if there is any increased domination of the counting room it is preferable, on the whole, to the old domination of political party. The latter was much more venomous. The notion that a mere citizen had any rights whatever that the press was bound to respect had hardly appeared. Malignant cruelty to the individual was commoner.

At present, we understand, some newspapers have advanced so far up the shining heights of civilization that a man may refuse to divulge news to them from motives which he deems honorable, and still not fear that they will take the first possible opportunity to overwhelm him with public ridicule or disgrace. The newspapers are better because they are kinder. We would willingly spare many "great editors" for that.

An Imaginary Fire

THE vaults of the Equitable Building, in New York, contained pieces of paper worth a billion dollars or more; and when the structure burned there was doubt as to whether the papers had been destroyed. In other vaults on the patch of land between the City Hall and the Battery are other pieces of paper, bound in account books or unbound, worth probably a dozen billion dollars. Please imagine—if you are in a genial mood—that they were all suddenly destroyed.

The actual wealth of the United States, of course, would remain exactly what it was before. The railroads, factories, mines and so on, ownership in which was represented by these bits of paper, would suffer no loss in value or earning power any more than the productivity of a farm is diminished by burning the title deed; but what a wild scurry there would be among individuals to reëstablish their ownership in the wealth! In comparison, the historic fights between Mr. Hill and Mr. Harriman to see which should own Northern Pacific, or between Mr. Ryan and Mr. Belmont for possession of the Subway, would seem like the strife of babbling infants over a rattle.

How would it ever be settled—if a few tons of paper in the form of stock certificates, bonds, notes and books of account, the whole intrinsically worth only a few thousand dollars, were suddenly destroyed? Perhaps there would be a grand court of equity, and every claimant to ownership in the country's actual wealth would be asked to show how he got it and what value he had ever given the country for it. More likely, there would be a grand scramble and the best scramblers would come out on top.

WHO'S WHO—AND WHY

Rudolph the Reformer

VARIOUS earnest persons have tried to create the impression that the motto by which Rudolph Blankenburg orders his personal and political affairs is: "*Thue Recht und scheue Niemand!*"—which is all well enough so far as it goes. "Do right and fear no one!" is a nice, moral, housebroken motto of large copybook prestige, and we all should live up to it—should, I say.

Nor have I any objection to assigning that neat little sentiment to Rudolph, providing there is any nutriment in it for him in any way; but the point is here: "*Thue Recht und scheue Niemand!*" may be Rudolph's afternoon-tea motto—the motto he has hung up over his fireplace in the library and mayhap engraved on his letter paper; but his genuine, hand-tooled, daily-practice motto isn't any pale pink fluff like that. His real motto is: "'*Raus mit 'em!*'" And who is there to say me nay?—said inquiry being directed specifically at B. Penrose, J. McNichol and Company.

For thirty years Rudolph Blankenburg has surged through Philadelphia and Pennsylvania, joyously hitting on the point of the jaw every political boss he has happened on, and as joyously offering the point of his own jaw for such counter as might be forthcoming. If it so was that political bosses did not appear plenteously enough to satisfy Rudolph's lust for batting them he never hesitated to go into the highways and the byways and look up a few to lambaste. He has been insatiable—that man; and from Pulaski to Perkasie, from Oswayo to Elk Lick, he has shouted, "Throw 'em out!" and has assisted in such throwing as, from time to time, the occasions and the circumstances afforded. The business of calling upon the people of Philadelphia and Pennsylvania to rise and eject the bosses has been reasonably disheartening and barren of results for a good many years. The bosses, it seemed, objected to being thrown out and made their objections stick by various little expedients of their own. However, this aversion to ejection, though it may have given other leading citizens acute attacks of that what's-the-use? feeling, never had an appreciable effect on Rudolph Blankenburg. He kept the thought, as the saying is, and crusaded right up to election day, when he voted amid his own clamor of "'*Raus mit 'em!*'" Next morning, when he scanned the returns and found the bosses were still in, he went gayly out and began all over again.

"Though it may be true the bosses have won this time," he would say, "that does not detract from the soundness of my contention that they should be dumped off the Delaware Breakwater. Hence rally, good citizens, and throw 'em out!"

Notwithstanding the stern disapproval of the bosses over such a contingency, there must inevitably come a time when the good citizens will listen and try the experiment. It has so happened elsewhere. It so happened in Philadelphia, the exact occasion being the day early in last November set aside by law for such exercises on the part of the male portion of the community who have reached the age of twenty-one, provided the male portion desires to perform. It always does happen when the voters address themselves seriously to the task.

The Thirty Years' War

RUDOLPH BLANKENBURG, after urging his fellow citizens to throw out the bosses, became the instrument by which the bosses will be thrown out, for he was elected mayor on an anti-boss platform and in an anti-boss campaign. The bosses ingeniously explain that his election was an accident, being accomplished by but a few thousand votes out of a great total cast; but accidents will happen even to the best-regulated bosses, and the general opinion is that Blankenburg's election was rather more than an accident to these explanatory gentlemen. There are some who go so far as to say it is a catastrophe; but, of course, it is too much to expect a public admission of that by the bosses themselves.

His campaign that resulted in his election as mayor was typical of dozens of other campaigns he has made in Philadelphia and in the state—not always as a candidate, but as a foe to the manners, methods and morals of the bosses. He has stood out in the open and fought bribery, graft, election frauds, ballot-box stuffing and all kinds of political trickery and dishonesty. He has always been an ardent Republican, but he has never let that fact stand in the way of his attacks on the men in his own party who controlled the machinery of that party in his city and state; in fact, his fights have been mostly within his own party and against the rulers of that party, and for the rights of the people.

He began years ago. For fifteen years between 1880 and 1895 he was chairman of the election-frauds committee of the Committee of One Hundred, organized in 1880—a body from which all the later reform committees of the city were developed. Blankenburg has fought Quay, McManes, Durham, McNichol, Vare and Penrose day in and day out, stumping the city against them and stumping the state against them. He was active in the fight against Quay in 1897 and 1898, and supported John Wanamaker for senator and later for governor.

Usually he was defeated; in fact, almost always defeated until the great upheaval in 1905 caused by the gas-lease scandal broke the ranks of the bosses for a time; but he never wavered in his fight or lost hope of success ultimately. Once, when the City Party movement was at its height, he ran for county commissioner and was elected. He served his three years and did what he could to purify things in the city. Also, he gave his salary of five thousand dollars a year to the police, firemen's and school-teachers' pension funds.

The bosses went far out of the beaten track in this latest campaign for mayor and nominated Earle, who has somewhat of a record as a reformer along certain lines. Blankenburg assailed the machine as vigorously as he had done twenty and thirty years before—and he won. The machine will get short shrift during his term of office; and that means more, perhaps, in Philadelphia than elsewhere, for the mayor's office has always been the hub of machine politics there, and the feed-bin also.

This sturdy old crusader was born in Germany in 1843. His father was pastor of a little German Reformed church in a village near Hanover. Rudolph was one of seven brothers and was prepared for the ministry. He did not preach, for his tutor came to this country in the early sixties and Blankenburg followed him, arriving in 1865.

When he was twenty-two years old he got a place with a firm of manufacturers and importers of dress goods, in Philadelphia, at six dollars a week.

He was a big, broad-shouldered, intelligent youth, and he rapidly learned the business and was as rapidly promoted. At the end of his first year he was put out on the road as a traveling salesman and in five years he was sent to Europe as buyer and salesman. He traveled all over the world, learned the business thoroughly and in 1875 set up for himself. His business grew into a great establishment and made Blankenburg a fortune. He retired from active connection with his house in 1909.

He married a Philadelphian two years after he landed in this country and was naturalized in 1875. He was a ready speaker, interested in politics; and it was not long before he began the crusade he has kept up for more than thirty years. His courage is unfaltering and his good humor boundless. He became a reformer; but he was an optimistic, good-natured, kindly, genial reformer—not a reformer with a grouch. Every reform movement in Philadelphia that had for its object the purification of the city, its release from boss rule, its progress toward clean and representative politics and government, found a supporter in Blankenburg. More than that, many of the movements originated with him, were financed by him and captained by him. He has been on the firing-line in Pennsylvania against the Quays and all the rest ever since he has had a vote—ceaselessly agitating, ceaselessly fighting, never discouraged and always sure that his end of civic regeneration and state regeneration ultimately would be obtained.

A great, broad-shouldered, bearded man, filled with love for his fellowman and with the joy of living, his activities have been remarkable in their scope. He is a part of the history of Philadelphia and Pennsylvania for the past thirty years. He has been identified with all the great charitable and other movements for the betterment of the city and its people, and for the relief of the stricken in every land. Socially he has been a prime mover in the Five o'Clock Club; and it is his boast that neither there nor at the Clover Club have they ever talked him down.

He is a born agitator, whose agitation has been directed along sane lines. Moreover, he is hearty, genial, good-humored—as pleasant and companionable a man as you know, and a whole heap of fun at a dinner. Unlike many reformers, he is sincere. Unlike many lovers of humanity, he really does want to do things for his fellowman instead of for himself. A very genuine and an exceedingly lovable person is Rudolph Blankenburg—and a big figure in Philadelphia and Pennsylvania.

An Optimistic, Good-Natured, Kindly, Genial Reformer

Serious and Frivolous Facts About the Great and the Near Great

Troubled Waters

CAPTAIN JOE WATERS, a Kansas attorney, tried a case at Council Grove not long ago. The captain was up against it; and he turned on the tears and let them flow unrestrained while depicting the woes of his client.

It was a great and tearful speech. In the middle of it a brother attorney who was sitting by was observed taking off his shoes.

"What are you doing that for?" asked another lawyer.

"By gum!" replied the lawyer who was removing his shoes, "I'm getting ready to wade out. It's right sloppy round here already—and Joe ain't half through!"

Skinny's Feast

ONE of the Toronto golf clubs gives a dinner each year to the caddy boys it employs. At the feast last fall one of the boys, a tough youngster, disdained to use any of the forks he found at his place, but loaded his food into himself with his knife. When the ice-cream course was reached and he still used his knife, a boy who sat opposite to him and who could stand it no longer shouted: "Gee, look at Skinny, usin' his iron all the way round!"

Reason Enough

GEORGE S. MARSHALL was elected as a reform mayor of Columbus and did a lot of reforming before he was defeated for reëlection. One of the reforms was the establishment of a garbage-disposal plant. This threw out of employment a lot of darkies who had formerly done a general scavenger business with ramshackle old wagons and ramshackler old horses.

One of these darkies, on the way to the polls to vote against the mayor, was asked why he opposed Marshall.

"W'y am I gwine t' vote agin dat man? W'y, dat low-flung rascal done took th' garbage right outen my mout'!"

Of *Campbell's Soups* flavor
That steals o'er my spirit prophetic!
The fragrant attraction that stirs me
to action
So earnestly peripatetic."

MINING SECURITIES

By Roger W. Babson

ONCE upon a time a friend of mine, who is a real Arizona miner, had working for him a man named Josh. This man Josh was a prospector of the type so commonly seen in that land of sand and sage-brush. He was a tall, slim creature of the soil, with skin as tough as leather, but with a big, bounding heart. Originally Josh was a boss miner, working at a fair salary in one of the well-known mines; but as he became more prosperous he mixed with the temptations of Bisbee, Tucson and other mining centers, and unfortunately he became addicted to drink and lost his good position. The rest of his life has been similar to that of the average prospector—work for a few months was only to be followed by a drunk for a month or six weeks, and then a period of repentance and discouragement. At the end of one of these periods, however, some good friend for whom he formerly worked "grubstaked" him and gave him food to go out into the mountains and prospect.

Practically this was simply a matter of charity with the former employer, knowing as he did that in mining only one prospector in a hundred makes good. Therefore when, one day, Josh returned from one of those prospecting excursions lasting a couple of months with some samples of ore, claiming he had "almost struck it rich"—which is the common report returned by most prospectors as they come in—my friend simply took the ore and threw it into the bottom drawer of his desk, saying: "Josh, you have done first-rate; now get a good steady job and quit both your drinking and your prospecting." Josh, however, was not quieted so easily, but kept returning to the office, stating that he could purchase for only a few hundred dollars from some Indians the entire claim from which this sample came; and he urged my friend to make the purchase. The twenty-four years spent in the hills of Arizona had, however, made my friend very weary of these "rich strikes." So he refused to pay any attention to Josh's earnest pleadings and Josh went to work again on day wages.

A Surprised Mining Man

Readers may imagine my friend's surprise when, about two years later, a new company was formed by some of the best men in Boston, and capitalized for two million five hundred thousand dollars, for the purpose of developing this little piece of property which Josh urged him to purchase for a few hundred dollars. At first this stock sold for about five dollars a share; but suddenly, to my friend's still greater surprise, a great pocket of very rich ore was discovered, and in a night—so to speak—the price of the stock soared to twenty-five dollars a share, from which price it gradually climbed to nearly two hundred dollars a share. Today my friend is a comfortable miner, worth probably from fifty thousand to one hundred thousand dollars. Moreover, he is probably fully as happy and his family happier than they would have been had he followed poor Josh's pleadings; but he cannot but feel chagrined at the thought of how he continually refused to purchase for a few hundred dollars this tract of land which within a very short time increased in value to several million dollars. Moreover, this stock is today daily traded in on the Boston Stock Exchange and is even now considered one of the best copper purchases.

Now my object in telling this story is twofold. First, I wish to explain to the readers the difference between buying stocks and buying land; and, second, to show how even the very ablest engineers are fooled as to actual conditions. However, of all this I will speak later; and at this point I will say a word relative to the first feature—namely, the difference between mining stocks and mining land.

All the readers of THE SATURDAY EVENING POST are acquainted with mining stocks—at least all are who read the Sunday papers, which seem to be the leading marketplace for these valueless promotion offerings. Those of us who do not systematically read Sunday-paper advertisements have doubtless received through the mail alluring circulars offering us some mining stock from one dollar to five dollars a share, which—according to the circular—"may soon become worth several hundred dollars a share." Of course, in reading the advertisement, the small investor entirely forgets the fact that the average stock selling at one hundred dollars a share has a par value of one hundred dollars and not one dollar, as in the case of these advertised mining stocks.

Stocks to Let Alone

It is, however, very difficult to suppress these advertisements, for they are prepared by expert advertisement writers with the advice of the ablest lawyers and with the knowledge that the advertisements will be scrutinized by Post-Office authorities. Certainly, anything that these authorities can nail will bar the advertisements from the mail. The use of the simple word "may" instead of the word "will" renders the Post-Office authorities powerless, and the advertisement still succeeds in separating the small investor from his money. I therefore urge all small investors, and large ones as well, to refuse even to read these advertisements, remembering not only that spending money for such stocks will bring loss ninety-nine times out of one hundred, but that for a man to buy such stocks is like going on a first drunk—it is not apt to be the last.

There are various reasons why I advise against the purchase of such stocks; but the most important is that, owing to the fact that there are many men on the ground fully acquainted with the property, these stocks—when there is any reasonable chance of their ever becoming of value—are taken up long before they ever reach New York, Philadelphia or Boston. The people of Arizona are not poor, and there is just as much money a head in Arizona looking for an investment as in Boston, Philadelphia, New York or Chicago. The Arizona man, however, does not make money from the purchase of stocks, but rather from the purchase of the land itself. If you or I were to buy a farm we should not capitalize it and endeavor to sell the stock; but we would simply work it as a private proposition, raising our crops, selling them, paying the expenses and retaining the profits.

If you or I should discover a small piece of land in Arizona or in any other state which we believed could produce ore and which would require only the digging of a shaft—as a mill near by often can be used for treating the ore—why should we want to capitalize it and give the public such a good thing? Why should we not develop and work it ourselves, as we would our farm? Well, this is the way the Arizona man enters mining. He stakes out a claim, agrees to spend at least one hundred dollars a year on development, and holds the title to that claim, gradually working it as you and I would work our farms. If he is a man of wealth he may have a large force of men and expensive machinery; if he is poor he will have only two or three working for him—but he will make proportionately as much. As he digs the ore out of the ground, he hauls it to a mill and sells it either before or after it has been treated.

Therefore the first point I want to make to THE SATURDAY EVENING POST readers, though rather radical, is briefly as follows: Keep out of mining ventures altogether; but if you really have the desire to "take a flyer," and will not purchase one of the high-grade stocks, then go to Arizona, buy a claim from some Indians for three or four hundred dollars, hire a man and work it! In other words, there should be no halfway about this mining business. Either have nothing to do with it at all, which is what I advise, or else simply invest in the land itself, working it and holding it for a purchaser or letting some one work it on a royalty.

Even in buying the land, one does not eliminate the possibility of loss; for, as has often been said, "almost as much money has been put into the ground as has ever been taken out of it." Among my acquaintances I know possibly twenty men who have devoted their lives to the development of mining properties, and of these twenty only two have anything left to show for their efforts. The competition for these claims is very keen; large companies, such as the Phelps-Dodge interests, the Cole-Ryan interests, and others, have engineers continually in the field, seeking new propositions. Moreover, it is necessary to spend considerable money to break out any claim before one knows whether or not he is to receive anything in payment for his labor. Therefore, even for the man who deals only in land and is located on the ground, it is a hard uphill fight amid keen competition, subject to the greatest discouragement. Of course this works two ways. In some years the engineers of the great mining and smelting interests get all the prizes, while the prospectors and independent miners get none; but in other years these great engineers themselves fall down, while the "plums" come to the small miners.

One of the largest interests, if not the largest in the world—the Phelps-Dodge—owns, and has owned ever since it was a raw prospect, a mine known as the Copper Queen. This mine was regarded by them as the one mine of the Bisbee Camp, in Cochise County, Arizona, and it turned into the coffers of the company millions of dollars annually; but the company also sends mining engineers into the far corners of the world to hunt up other mines. While such a search was going on, some plain native prospectors located claims adjoining the great Copper Queen; and, what is more, they offered to sell them to the great Phelps-Dodge interests for a trifling amount. The engineers looked at them—and "Nothing there!" was the verdict.

Early Days of Great Producers

A little later those same prospectors disposed of the claims to some people not so wise, who, in turn, sold them. A great new mining company, well known throughout the world, is the result. Already it has paid out in dividends over ten million dollars, and the property of the company is now said to be as valuable as the Copper Queen itself. Still the Phelps-Dodge people looked far afield, and other prospectors made locations adjoining another side of the great bonanza. Again the great engineers investigated the matter and shook their heads. "Nothing there!" was the reply. But another now well-known mine immediately opened up a great ore body, blocking out some fifteen million dollars' worth. One other mine which those same experts are said to have looked at and declared "worthless" is the United Verde. I am told that it was offered to the Phelps-Dodge interests for sixty thousand dollars; but the report again came back: "Nothing there!" It was offered later to Mr. W. A. Clark, of Montana, and taken. The United Verde is today recognized as one of the world's great mines and enriches him by millions yearly. The idea that the prospects of Cripple Creek would ever develop into big producers was pooh-poohed by men at the head of the profession; but Cripple Creek has poured out gold by the hundreds of millions of dollars since that day and is still turning out its golden stream.

Such mistakes, perhaps, do not happen often; but it is well to say "perhaps," for who knows what the future may unfold? Prospectors years ago passed by many a mine the earmarks of which they did not see in the light of their limited information. The world progresses. The engineer and the prospector are keeping abreast of the times, and it is only reasonable to suppose that the greatest and most valuable opportunities of all are today lying idle and undiscovered. You or I could probably have them for only the small filing fee of a few dollars if we would but hunt them up.

Is there any formula by which the average man can separate the wheat from the chaff when it comes to the selection of mining stocks? The question has been asked a thousand and one times in the past, and the answer given has been most perfunctory and unsatisfactory. So the question is yet before the public, and there

Digitized by Google

to stay until such a formula is produced. If a broker is consulted on the subject he will be able to give you some advice, it is true; but that advice will not be first-hand and, though honest enough, must of necessity be frequently misleading.

Like every other class of stock, mining *shares* may be divided into two broad classes: investments and speculations. Whether the "man in the Street" is moved by the *spirit* of speculation or a desire to secure a safe investment, he naturally likes to know something about the mine.

The first inquiry on the subject is addressed, most likely, to a broker, who, if an investment is desired, will secure without difficulty a record of any mining company since the time it came before the public.

With the information thus secured as a starting point, the most natural question that arises is: What is a reasonable rate of interest to expect on a mining stock? The interrogation is a fair one and, whether addressed to a broker or a mine operator, calls for a straightforward answer. The broker will doubtless say that it is difficult to give figures, and will quote the following: Anaconda, which, at forty, pays five per cent a year; Calumet and Arizona, at forty-eight, paying 8.33 per cent; and Kerr Lake, which, at seven, paid twenty-eight per cent last year. These three dividend-payers are selected as being different types of mining stocks and good examples of how widely dividends vary. The broker will tell you this, or the information can be secured from a manual; but, having it, the seeker has only just started on his quest. Thus early will he part company with the broker for a while and carry on his researches independently.

If he knows a mining engineer, so much the better; but if he has none among his acquaintances he may find out the main points about the game by the exercise of his own common-sense. To begin with, he will realize that a mining proposition stands in a class by itself. Long ago Nature placed just so much ore in that particular spot known as the mine. At the time the mine commenced operations there was a certain though unknown quantity. From that day the quantity has grown less and will keep on decreasing until the original quantity of ore is exhausted and the mine closes down. The investor, therefore, will see that his interest must be large enough to provide a sinking fund—and all this must be calculated on the probable life of the mine.

The same standards by which a farming or a manufacturing investment may be judged are not applicable to a mining investment. A farmer may earn eight per cent interest on his capital and, with care, his property may increase in value. A manufacturer may earn eight per cent on his investment, and if he keeps up his machinery his business may be as valuable ten years or even twenty years hence; but a mine, after each dividend is paid, is that much nearer its end.

The Life of a Mine

Now it is well known among mining men that the average life of a gold or silver mine is under rather than over ten years. There are exceptions to this rule, of course. Great low-grade mines like the Homestake or the Treadwell, in all probability, will be producing twenty-five or thirty-five years hence; but it is to the average mine that the law of averages applies. The exceptional mines are in a class by themselves and can be judged accordingly.

Granting that the life of a certain gold or silver mine is to be ten years, then, in order to pay back principal and a reasonable rate of interest, dividends of at least sixteen per cent should be distributed. Copper-mining, of which the statistics have been most accurately kept in New York and Boston, offers many inducements to the investor; but too much care cannot be taken in the matter of selection, for copper stocks in not a few instances have been boosted out of all reason.

As with gold and silver mines, so it is with copper mines. They had so much ore to begin with, and after each dividend they are that much nearer to the day when they will close down. For such mines, provided they have a good lease on life, eight per cent, or even ten per cent, may be regarded as only moderate returns.

These are merely samples of some general principles to be considered. They may be utterly at variance with the opinions of many authorities, and attention may be drawn to the stock of such companies as the Amalgamated Copper Company, now paying in the neighborhood of three per cent on its market value; Granby, two per cent; and North Butte, four per cent. In reply to this the investigator is justified in remarking that the atmosphere of speculation has given some stocks a higher market price than their returns warrant. The man who puts up hard-earned coin on an investment is well within the bounds of reason if, when offered a stock paying only seven per cent dividends, he asks: "Has it thirty years of life ahead of it?"

For purely speculative purposes, new issues are the most likely to be in demand. New issues have frequently made fortunes for the venturesome and will always have an attraction. It will be remembered that, in the mine's early history, Calumet and Arizona sold for five dollars. Not so very long afterward, as the life of mines is reckoned, it sold for one hundred and eighty dollars. It is now fluctuating round the fifty-dollar mark. As I explained in the issue of this weekly for December 2, 1911, Calumet and Hecla sold at the start around twenty-five dollars; and it has sold as high as one thousand dollars. Then take the porphyry mines, under which heading are included Utah Copper, Miami, Ray Consolidated and Nevada Consolidated—these mines have all made money for those who bought the stocks in the early stages; but in regard to them, as they stand today, may it not be questioned whether the milk has not been extracted from the cocoanut and whether they will not be fully occupied in keeping up their present positions?

The new ones coming—what of them? Well, inquiries through the ordinary channels will decide the speculator. If the house bringing out the issue bears a good reputation on the "Street," and its previous issues have made good, then there is a strong chance in favor of the last one. If, on the contrary, the firm has brought out a number and all of them are yet in the embryo stage—or, worse still, have not made good—then the advice of an old Comstock miner, "Metalliferous Murphy" as he was known, may be followed today: "If you are a poor man have nothing to do with it—and if you be rich leave it alone!"

Opening up a New Mine

Scientific management, card systems and the like are important details in the business world; but it is impossible to eliminate the human factbr—and where the human factor is there is romance. Corporations are said to have no souls; but before corporations ran mines the human factor was an issue. Again, before fresh mines are discovered and put before the public for investment or speculation, as the case may be, the human factor—the prospector and the miner—might well be taken into consideration. They live today in the West as different from the pen-pictures made of them in fiction as it is possible to be. The mining engineer, with a technical training that puts him "in the foremost files of time," stands side by side with the prospector on the bare rocks of the desert; and for the moment they are on an equal footing.

Reader, while you are looking over these pages, a prospect is being considered. That mineral is there both engineer and contractor agree, but does it go down and will it pay? These are questions that only work can tell. Neither the one nor the other can see six inches below the surface. The mining engineer goes on his way. He deals in accomplished facts and not surmises and prospects. The prospector works the claim. A pit is sunk and the ore gives out. Another one is sunk with the same result; and then the prospector goes on his way. Time has been lost, labor lost and money lost.

Reverse the picture. The first pit had ore in it down to the bottom. A second is sunk with a similar result. Then a third or more, and a system of mineralization is uncovered. Now comes the work of sinking the shaft, and that costs money; but the mine is a winner, and the prospector carefully selects the best of his ore, sacks it and ships it to the nearest custom smelter. With the returns from his shipment he operates; and slowly—compared with what can be done with capital—he develops a mine. In time the engineer returns to examine it. The system of mineralization having been uncovered and the ore-shoots located, he is able to see beneath the surface and can work out his plans. The mine now fetches a price out of all proportion to what the prospector would have taken for it years before, when the two stood on the cropping together. Here begins the history of the mine so far as the public is concerned, and the rest is for the broker and the investor.

Of course, at the best, one may still be fooled. I know of a young man who graduated as a mining engineer from Columbia University, studied at the best institutions of Europe and then went to Arizona with probably the finest preparation that any young man ever had. In order to make doubly sure of his position, he agreed with his father to spend a whole year in looking about for prospects before investing a dollar. During the year he traveled through most of the mining camps of Arizona and Utah and sifted his prospects down to three. On the very day his first year came to an end he visited the one of these three prospects that appeared to him the most attractive.

This was much more than a prospect; in fact, a friend of mine had been extracting ore from this mine for several months and it was paying splendidly. I well remember the circumstances. One morning this young man with the finest mining training came along to my friend, making him an offer for the mine, which consisted merely of a sixty-acre claim with a shaft about a hundred or more feet deep and no machinery to speak of. After digging the ore my friend simply carted it over a rough road to the railroad.

What the Water Told

For some days before the young engineer called, my friend had been getting rather nervous from fear that he had passed through the body of ore. He was just in this uncertain mood when the young engineer called down the shaft: "Mr. ———, I am now prepared to give you what I suggested for this property. If you will take it now I am prepared to give you a draft on New York at once. Otherwise, I shall leave tonight for another camp and trade with some one else." In a moment the thought came to my friend to taste the water! If the water should be clear and sweet he would know he had passed through the body of ore; for otherwise the water would be bitter and sulphurous. Thereupon he immediately stooped down, took up a little water in the palm of his hand, tasted it, found it clear as crystal and called to the young man: "I accept your offer."

The papers were exchanged at the bank of a town near by and my friend went off to hunt for new worlds to conquer, while the young man invested thousands of dollars in extending the shaft and on further development—but he never found a dollar's worth of ore!

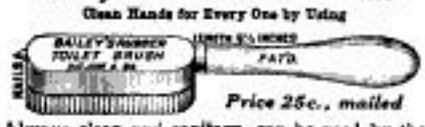
It will, therefore, be seen that to beat a mining game is a hard proposition. If you wish to buy stocks you have not a chance to come in until two or three previous interests have already taken their profits—and even then you have the promoters and brokers, who are well versed in every art of manipulation and exaggeration, against you; while if you go to the mining country and purchase the land outright you have the shrewdest miners trained by years of hard experience to encounter.

Therefore I believe it is not only a safer proposition, but one giving greater profit in the end, simply to confine one's purchases to the highest-grade "listed" stocks of proved value, buying them when fundamental statistics show that the country is entering a period of depression and selling them two or three years later, when fundamental statistics indicate that we are entering a period of prosperity. In this way the investor has his money always in conservative, established, dividend-paying investments, or else in cash. This gives him a sure rate of interest and, once in two or three years, a good profit in addition; but the idea of buying untried and non-dividend-paying mining stocks, with a hope that "some day" they will become of great value, appeals but little to me. Of course, as I have shown, there are cases where great profits have been made in mining; but for every one of these I can name several where fortunes have been lost.

In brief, there is no "short road to wealth" whatever; and there is but one "safe road," which is suggested in the preceding paragraph.

Beauty Lines

Are in **every** woman's face. Those who have **fewest** should **cultivate** them, those who have **most** should **retain** them. **Millions** of women have found that



Bailey's Rubber Complexion Brushes

never failed to give the desired results in all cases.

Bailey's Rubber Complexion Brush, mailed, 50 cents
Bailey's Petite Complexion Brush, mailed, 25 cents

Bailey's Rubber Toilet Brush

Clean Hands for Every One by Using

Price 25c., mailed

Always clean and sanitary, can be used by the whole family. Use with soap and water.

Cleans the teeth perfectly and polishes the enamel without injury. Never irritates the gums. Can be used with any tooth wash or powder. Ideal for children's use. No bristles to come out. ***No. 1, 25 cents; No. 2, 35 cents.*** Mailed on receipt of price.

Bailey's Rubber Shampoo Brush

For Bathing

It thoroughly cleanses the scalp and hair of all impurities, leaving both in a clean and healthy condition, simply by using with pure soap and water. It cleanses the skin of soil and oily waste, improves the circulation, builds up the muscles and smoothes out the wrinkles. Ideal for softening the beard before shaving. Price, mailed, ***$1.00.***

Bailey's Won't Slip Crutch Tip

This tip won't slip on any surface. Made in five sizes, internal diameter, No. 17, ⅝ in.; No. 18, ¾ in.; No. 19, ⅞ in.; No. 20, 1 in.; No. 21, 1⅛ in.

Mailed upon receipt of price, ***30 cents per pair.***

You want the Electric Lamp with the Long, STRONG Filament

FOR EVERY DOLLAR you spend for electricity you get more *useful* light, *better distributed*, with the Westinghouse Wire Type, *than you do with any other lamp.*

The Westinghouse Wire Type Tungsten Lamp

is so economical in the use of electric current that with it you can light your home **better than it is now being lighted, and besides** you can use all sorts of electric labor saving devices every day, **with a monthly electric bill no greater than at present.**

The Wire Type is made with the long filament which diffuses the light properly and **which gives the best results with all types of reflectors.**

The Wire Type is **strong.** It is being used in all modern schemes of illumination for homes, stores, public buildings, churches and factories.

You will know the genuine Wire Type by the little seal shown in the illustration marked "Westinghouse Tungsten." Do not accept a substitute. Write us for name of nearest dealer and booklet telling all about the Wire Type Lamp. Address "Westinghouse Lamp Dept. P, Bloomfield, N. J."

Sense and Nonsense

Carefully Weighed

IN THE Dana days on the New York Sun a young Cornell graduate was put at work reviewing books. One of the first books handed him was a massive Life of Napoleon, by a college professor.

The Cornell man had specialized on Napoleon at his university under a great authority, and thought rather poorly of this new biographer of Napoleon—who was a professor in another university, by-the-way. He glanced casually over the illustrations and wrote his review as follows:

"Life of Napoleon, by Professor So-and-So. This work weighs nine pounds."

Mr. Dana read the review and sent for the young man.

"Did you write this review?" he growled.

"Yes, sir."

"Did you read the book?" growled Mr. Dana again, fiercer than before.

"No, sir; I weighed it."

"That'll do!" growled Mr. Dana again.

Then he sent word down to the cashier to raise the reviewer's salary.

All for the Emerald Isle

TWO ardent Irish patriots met recently in a café—so "Red" McLaughlin, the New York sporting writer, says—and fell to comparing notes, each being boastful of what he had done for Ireland.

"Well," said one, "I've suffered in prison for my principles. I went to jail oncet for six months in Mayo fer tryin' to shoot a landlord."

"I've been locked up on Ireland's account myself," said the other.

"Is that so? Whereabouts in Ireland was you locked up?" said the first skeptically.

"It wasn't in Ireland at all—it was right here in New York," said the second.

"You was locked up in New York on Ireland's account?"

"I was that."

"For the love of Hiven, what did you do?"

"I threw eggs at the Russell Brothers!"

Fully Expected

UP IN Maine, a quartet from a village church choir was asked to go to the country to sing at the funeral services over a rich farmer. After the burial the members of the quartet climbed into the carriage that had brought them and prepared to start back to town. A distant relative of the deceased hurried up to them.

"You gentlemen mustn't be aleavin'," she said.

"Why not?" asked the barytone.

"Because you're all expected for dinner over at bereft's."

Easily Satisfied

BEFORE the fire on Christmas Eve, two old maids were planning for the holiday.

"Sister Mallie," said the younger, "would a long stocking hold all you'd want for a Christmas gift?"

"No, Elvira," said the older; "but a pair of socks would."

All Sounded Alike

SAM BENNETT was acting city editor of the early edition of one of the New York evening papers which gets on the street at nine A. M. One morning, just before presstime, a bulletin came in saying Charles Schwab had just been made president of the Steel Trust, at a salary of a million dollars a year. Bennett reduced it to a paragraph, wrote a one-line head over it and stuck it on an inside page. When the regular city editor came down he almost had a fit.

"Good land, man!" he stormed. "Why didn't you smear that story all over the first page, with a big head on it? Don't you know that a young man getting a salary of a million a year makes a great big story?"

"Boss," said Sam, "after it gets above forty dollars a week it all sounds alike to me!"

That was the week Bennett's salary was raised.

A Beautiful Decline

OLLIE JAMES, the gigantic and genial Congressman and Senator-elect from Kentucky, was in conversation the other day with a Washingtonian when the latter made certain inquiries with reference to a mutual friend whom he had not seen for a number of years.

"And how does Colonel Prescott spend his declining years?" he asked.

"Beautifully, sir; beautifully!" answered James. "He has a fine farm, sir. And a string of trotters, sir. And a barrel of whisky sixteen years old—and a wife of the same age, sir!"

The Worst Confirmed

NOT long ago an elderly English actor came over here to take his first American engagement. He had never visited this country before and he had strong—not to say fixed—prejudices touching these United States, as compared with the British Isles.

The voyage across was a rough one and the visitor's disposition did not sweeten any by reason of it. On landing he started for an English boarding house uptown, where he had been told he could get English food uncontaminated by base Yankee notions. To keep down expenses, he elected to repair thither by a street car instead of using a cab.

He emerged from the pier laden with his hatbox, his umbrella, his makeup tin, his grips—two in number—his steamer rug, his tea caddy, his overcoat and his framed picture of the Death of Nelson, and climbed aboard a horse car.

Just as he got fairly upon the platform the car started and he fell through the open door into the aisle, scattering his goods and chattels in every direction. As he got upon his knees he remarked in a tone of feeling:

"There now! I knew I shouldn't like the bloody country!"

When Three Were No Crowd

ACCORDING to an English actor, this happened in a small theater in a small town in provincial England, where a troupe of barnstormers was playing to meager audiences.

The villain dragged the shrinking heroine down stage to the footlights and in her ear he hissed:

"Are we alone?"

"No, gov'nor," interrupted the lone occupant of the gallery—"not tonight you ain't; but you will be tomorrow night!"

Snow Figures

ONE night during the early part of the winter Boss Clark, the city editor of the New York Sun, called a new reporter up to his desk.

"The man who handed in the weather story forgot to get the figures on the snowfall," he said to the cub. "Go find out just how deep the snow is."

What he wanted the cub to do was to call up the Weather Bureau on the telephone; but the cub, being green, asked the office joker how to proceed. The joker handed him the office space-measuring rule which, instead of being marked with inches and feet, is spaced off into dollars and cents.

"Go over in City Hall Park, where the snow is deep and smooth, and measure it," he said.

The cub put on his overshoes and went. Presently he returned and marched to Boss Clark's desk.

"Well," said Clark, "what does the snowfall come to?"

"A dollar and thirty-four cents!" said the cub.

Lacking Modern Improvements

TIM HURST, the prize-fight referee, was formerly an umpire in the big leagues. He was behind the bat one day and the catcher took exceptions to Tim's judgment of pitched balls.

One came whizzing over that the catcher thought should have been called a strike.

"Ball!" stated Tim.

"Look here, Mr. Umpire," said the catcher, "that plate has got corners on it!"

"Yes, son," said Tim; "but it ain't got bay windows on it!"

The Senator's Secretary

THE meeting of the Democratic National Committee in Washington demonstrated one big thing in national politics, which is that, at the time of the meeting and immediately after it, Woodrow Wilson was far in the lead for the nomination for president.

The situation when the committee adjourned and the great Jackson Day feast, with its thousands of cubic feet of hot air, had been held, was—to use a sporting term—Wilson against the field. He was in the lead over Harmon, Clark, Folk, Hearst, Underwood, Foss, Baldwin, Gaynor, Marshall and all the rest; and his chances were better for the nomination than any of these or all of them combined.

This was at the time of the committee meeting, with the convention slated for June twenty-fifth and the nominations not to be made until the twenty-sixth or twenty-seventh—or maybe a day or so later. Wilson's friends were jubilant. They had shown much strength. They threw the convention to Baltimore, where they wanted it for the double reason that Maryland has no candidate for the Democratic nomination, and Wilson, being a Southern candidate—in a way—wanted a Southern city, but not one too all-fired Southern. Moreover, Wilson, who is without much doubt about the greatest public speaker in this country, made a wonderful speech at the dinner, and so enraptured Bryan that Bryan cemented his friendship and regard by more or less openly declaring for Wilson—or, at least, by showing great partiality for him and by more or less taking himself out of the field as a possible candidate for the nomination.

Thus Wilson entered the New Year as the leader in the race, an advantage that is more apparent than real; for, with the situation Wilson against the field, Wilson immediately became the bright and shining mark for all the friends of all the other candidates to shoot at. There is no doubt that the man who beats Wilson will be the Democratic candidate for president. Hence all the sharpshooting of all the other candidates and their managers and friends will be at Wilson, for the sole actuating desire now of the other candidates is to make Wilson's nomination impossible. That is ground on which all can gather; and, once they have eliminated him, they can go at the fight of determining which one of themselves can get the nomination.

The Attacks on Wilson

So they are after Wilson hammer and tongs. They are digging up letters he wrote and microscopically examining speeches he has made to find paragraphs that can be quoted against him. They are not having much trouble either; for if there is any phase of political or economic or philosophical or other human thought on which Wilson, at some time or other, has not delivered an opinion it has escaped the notice of those who are familiar with his writings and speeches. Being largely intellect, and being in a position where it was easy to impress by stating definite opinions on definite propositions, Wilson has talked on about every known subject and has had opinions on the same. The quality of the man's mind precludes his stating anything without stating his conclusions thereon—that is, the quality of his mind before he went into politics precluded that; and the speeches and letters that are being collated and annotated and distributed are speeches and writings he made and delivered while he was a college president and before he jumped into the arena—and by said jump became a politician and began to talk politician-wise.

This, of course, is but one little phase of the fight that is being made against Wilson. It started with the printing of the fact that he applied to the Carnegie Pension Fund for a pension when he left off teaching. That was played up in the newspapers opposed to him. It may have had some effect. Politicians, who are the timidest persons on earth, thought it would ruin him; but it didn't. It was printed a short time before the Democratic committee met; and, as far as I could observe, no committeeman had left Wilson on that account. Then came the Joline letter, in which Wilson expressed the hope that some way might be devised for knocking Mr. Bryan and his kind of Democracy into a cocked hat. That was printed simultaneously with the meeting of the committee. Whereupon Mr. Bryan lauded Wilson and his speech at the dinner, and Wilson's men calmly put the convention where they wanted it to be.

The campaign has just begun. Wilson will be fired on from every angle. Every other candidate is gunning for him—guns loaded with slugs—and determined to bring him down. Plans are being rushed to solidify favorite-son movements, so Wilson can be held away from the required two-thirds on the first ballot and, if possible, kept from getting a majority; for the candidate who has a big lead on the first ballot is in a good position for the next ballot because of the natural tendency of delegates and leaders to get on the bandwagon the first time round.

How to Beat a Candidate

The bulk of the big financial interests are against Wilson and will do what they can to defeat him. Of course, if the big financial interests had any political sense they would be apparently for Wilson and that would do more to defeat him than their opposition; but the big financial interests have no political sense and never have had any. They are so obsessed with their own acuteness and power, because they can grab money, they think they can do everything else; and they confidently expected to see Wilson shrivel up and fade away as soon as he learned of their opposition. Fortunately for Wilson and for everybody else, the big financial interests and their opposition do not cut much figure in hurting a man in that part of the country situated off the Island of Manhattan.

The politicians, however, are operating by the cut-and-dried formula. The first rule in beating a candidate before a convention is to multiply candidates and thus corral votes against him that can be used for trading purposes later on. So the favorite-son movements are being stiffened and encouraged, and the search for flaws in the Wilson armor is being prosecuted industriously. They say impressively they have a letter in reserve—it may be printed before this is—written by Grover Cleveland, in which the former president says unkind things about Mr. Wilson and proves what he says. They are hinting at other bombs they intend to explode. There is no doubt that Woodrow Wilson will be a very busy man between this and the convention. They will be potting at him every minute. They are planning night and day to deadlock the convention against him. Wilson's job, though he is clearly in the lead at the time of writing, isn't a quarter over. He has before him the tremendous task of remaining in the lead, of getting safely over the obstacles that will be shoved in front of him and of taking all the hurdles successfully; and he will be variously and completely employed. They'll get him if they can—"they" meaning most of the old-line bosses, the big financial interests of New York, and a choice aggregation of understrappers who do things for the old-line bosses.

It may be the Wilson sentiment will be so strong within a month or two that the opposition will submit to the inevitable; and, then again, it may be that no such conditions will prevail. Certainly every time there is a chance to squash Wilson sentiment said sentiment will be squashed by the managers and friends of other candidates. Hence a lively and entertaining spring may be expected.

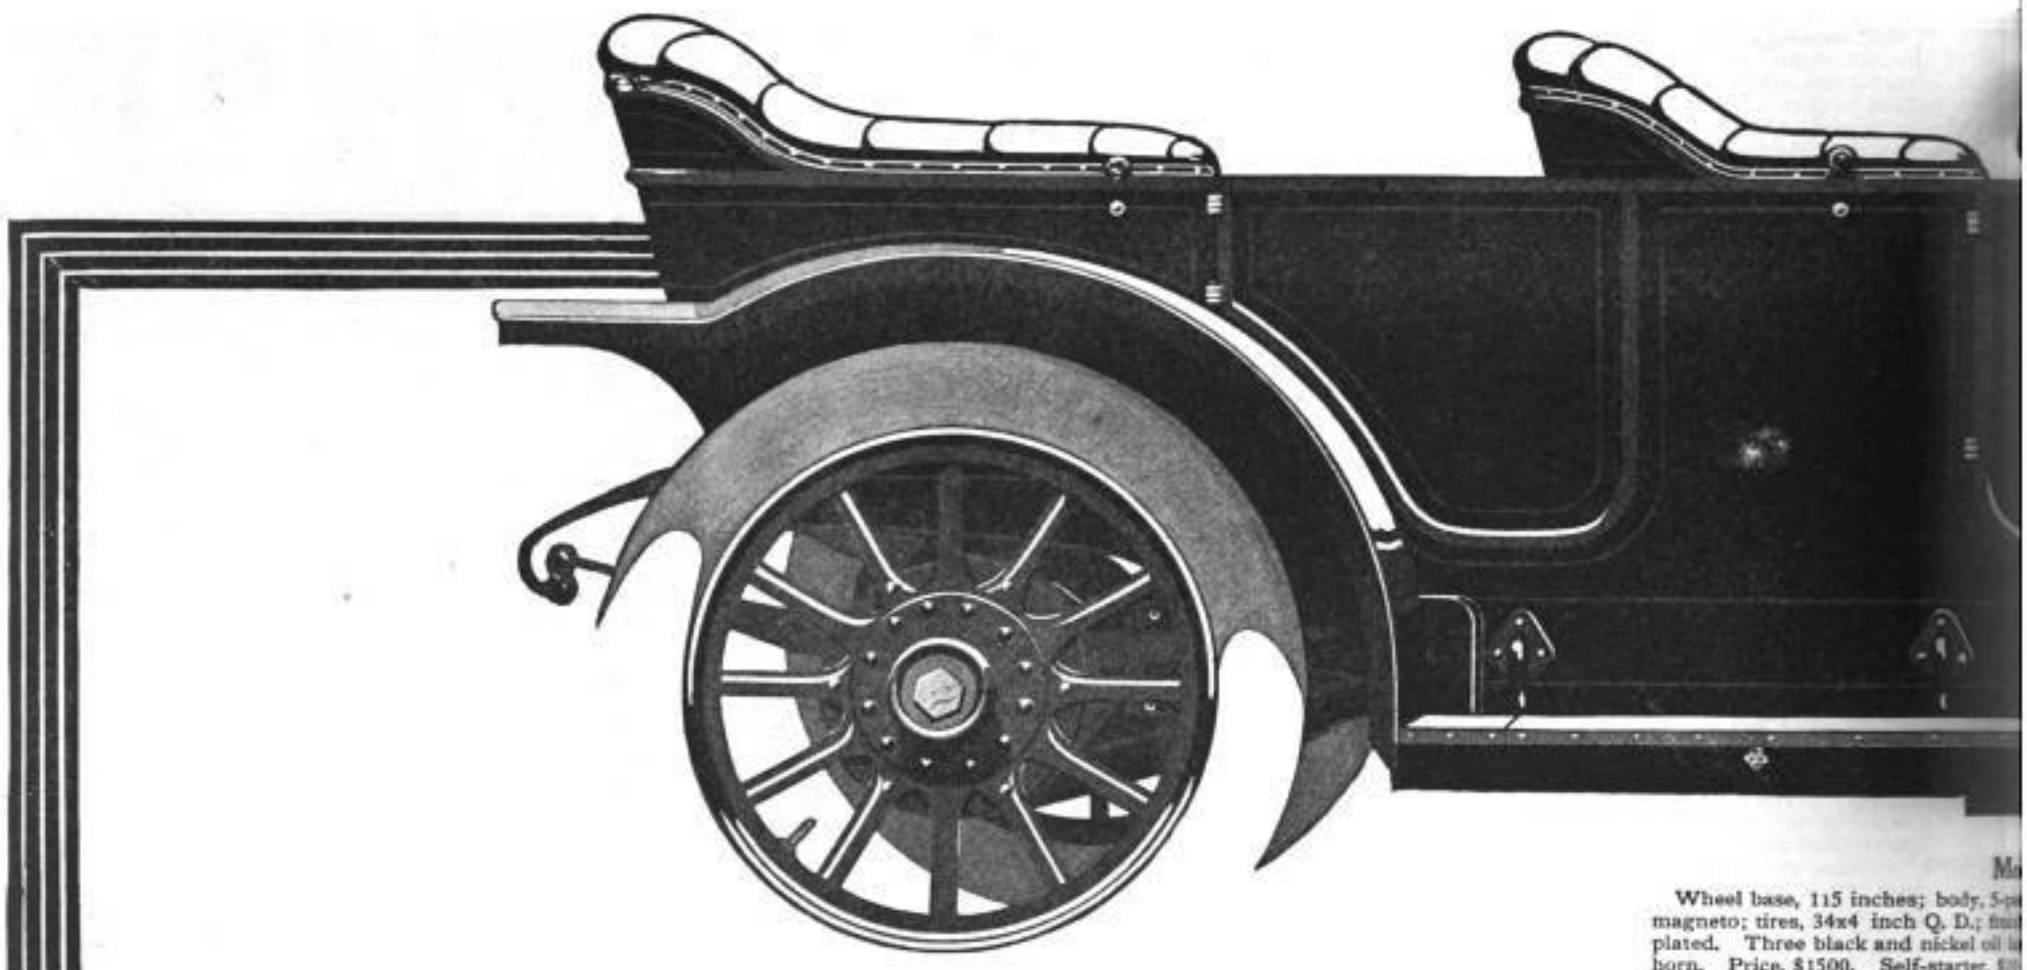
Mr. Taft and his friends continue optimistic—for purposes of publication. The real fact is that Taft has his back to the wall now and is fighting, tooth and nail. His dander is up, as we used to say, and he has passed the word to his friends to leave no stone unturned, and other stern words to that general effect—even to instructions to throw a few of the stones that may be turned if the occasion arises.

Naturally Taft is sore at Colonel Roosevelt. Naturally Colonel Roosevelt is sore at President Taft. The secret of it is a two-barreled one. The Colonel, having selected and elected Mr. Taft, had it in mind to continue somewhat in power himself by directing Taft's movements. Taft was willing enough. He avoids trouble in its early stages, and he could have plenty of fun being president and letting T. R. do some subbing; but, though the Colonel had a cinch on Taft, he had overlooked the remainder of the Taft family; and there is where the first break came. The President was willing enough and grateful enough and loyal enough to his former chief—but there were other Tafts, quite a number of them, who insisted that Taft was president, not Roosevelt; and whose insistence rather side-tracked various projects the Colonel had in mind.

Things wore along, and it is quite likely there would have been no disturbance of any consequence had it not been for that stump-speech presentment in the case of the Department of Justice against the United States Steel Corporation. It is offered in excuse of Mr. Taft and the attack in the presentment on Colonel Roosevelt that Mr. Taft did not see the presentment until after it had been made and printed. He was out West at the time and had a telegram saying the presentment had been made, but did not see the document or know of the language employed until afterward.

T. R. Watching and Waiting

Two things on which Colonel Roosevelt prides himself are his courage and his ability to take care of himself in any contingency; and to have a department of the Government he had formerly conducted come along and say, in a legal document, that he had been bamboozled and fooled and goldbricked by leading New York financiers was too, too much! Right then and there the passive boom for T. R. for president took impetus; and right then and there T. R. began his policy of saying nothing and sawing wood.



As it now stands, there are a few things reasonably clear. One is that Colonel Roosevelt, being a good politician, is keeping himself in a position where he can meet any emergency that may arise. Another is that, up to date, there is no real reason for thinking Mr. Taft will not be renominated by the Republicans. And the third is that, if the Democrats use ordinary and extremely common common-sense in their nomination and hold the Democratic House of Representatives steady, the Democratic candidate will be elected. Even if Mr. Taft should be defeated for the nomination and Mr. Roosevelt selected, those persons who are shouting that the Colonel surely will be elected are shouting without adequate information back of the noise. It is miles and miles from being a sure thing that even the supernatural Colonel could win; and that fact is nowhere better appreciated or weighed more carefully than at Oyster Bay, New York. The Colonel couldn't afford to take a beating. They put a crimp in him in the state of New York in 1910; and to be defeated for election to the presidency would be politically fatal. He would immediately become an historical instead of a live character. The Colonel's philosophy runs along the lines that La Follette, for example, could afford to take a beating while he—the Colonel—positively cannot. Hence the Colonel is watching and waiting. Besides, he says—and justly—it isn't his fight anyhow!

Meantime, with an acuteness of political needs that was marked, the Wilson people saw to it that the Baltimore people appeared with a check for one hundred thousand dollars and secured the convention. After they brought in that check on a salver, garnished neatly with certification, and the Democratic committeemen had felt it and smelled it and tasted it, there was nothing else to the struggle. The St. Louis people thought they could get the convention with less money and more oratory; but oratory is no good as collateral at the bank. And, inasmuch as the actual expenses of a national convention are about twenty thousand dollars, there will be a nice little bunch left for the financing of the early stages of the campaign.

The time has not yet arrived, dear brethren, when campaigns can be conducted without money. And suppose it is hot in Baltimore next June! It takes a heap of hot weather to make one hundred thousand dollars look undesirable, as Mr. Mack, and Mr. Sullivan, and Mr. Taggart, and Mr. Woodson and various others might say.

Overland

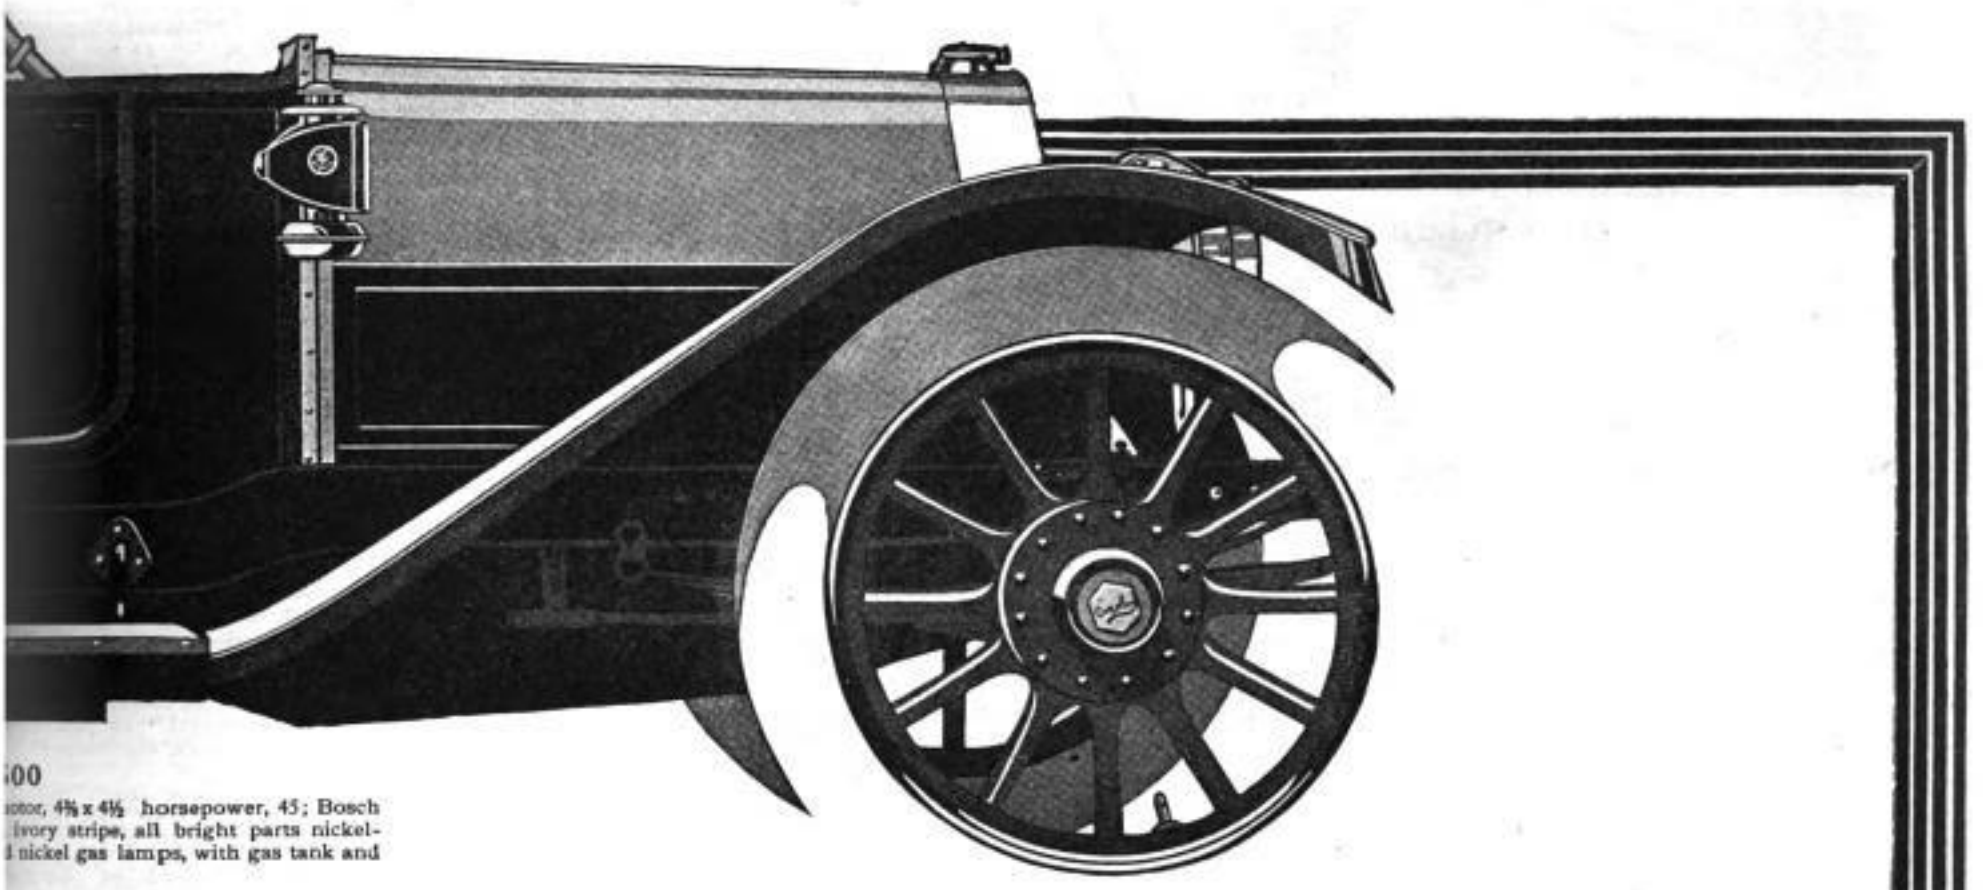
Economy in the Produ

This 45-horsepower Touring Car—$1500;

A POINT IN ECONOMY is best explained by a comparison of facts and existing conditions. And the clearest method of explanation is a simple set of figures. To start with, an automobile plant can manufacture a car just as economically as its facilities will permit. This fact you cannot dispute. It never varies. Let's see how this figures out. Most of the factories that make a standard forty horsepower touring car, produce somewhere around 5000 cars a year. These cars range in price from $1600 to $1800. Some are as high as $2000.

The Overland plants produce 25,000 cars a year and the price of our *forty-five* horsepower touring car is only $1500.

The answer is that we, with our 25,000-car capacity, *have five times the facilities* as that of the 5000-car factory, *and our cost of producing a car is, in consequence, anywhere from 20% to 30% lower.*



The explanation of which is, that the 5000-car factory *must* do the work by hand that we do by machinery, for they lack the automatic equipment; they *must* buy their materials in small quantities and pay the long price; they *must* buy parts from some outside source, which we manufacture—thus eliminating the middleman's profit. And no small number of them purchase their motor from some other factory, while we make our motor in our own shops; in fact every bit of every Overland chassis and every part of every Overland body is made in the Overland plants.

These few f

the most

expensive cars made. The gear and crank casings are made of pure aluminum. Others use cast-iron. All of the operating levers are in the center of the car. Door handles are located inside. The carburetor is the best Schebler makes—Model L. The magneto is a Bosch. The tires are big. The body is large and roomy, seating five big people with room to spare. The body design itself is gracefully proportioned. It is finished in deep Brewster green trimmed with heavy bright nickel-plate. Lamps are dead black and nickel-trimmed.

If you wish we will equip the car with a self-starter for only $20 additional. This starter is the most practical made. On continuous tests under all conditions it will crank a car ninety-nine times out of a hundred. It is simple and safe. All you have to do is to pull a little lever and your motor spins. Besides that, it is not complicated and is very economical. Use the same gas tank as you do for your headlights.

We doubt if you will find the equal of this car for much less than $2000. At any rate investigate before you buy. It will prove to be a very economical move. The Overland dealer in your town will be glad to answer all your questions. See him before you buy your car.

Our factory book gives in full the difference in automobile plants and shows why one plant can make a better car for less money than another plant. We will be glad to mail you a copy. Please ask for copy A-22.

Get the Welch Habit, for—"It's One That Won't Get You"

WE don't *make* WELCH'S grape juice—we offer it to you just as Nature makes it. We keep it fresh for you just as Nature keeps it fresh in the grape—hermetically sealed. WELCH'S has a delicious fruity tartness, a rich, ripe-grape aroma that immediately satisfies your taste for "something."

Welch's
The National Drink
Grape Juice

Men like WELCH'S as a Welch Grape Ball—tall glass, chunk of ice, fill half with WELCH'S, rest of the way with charged water. It makes a deliciously tart drink. They like it "straight" and as a Welch Grape Phosphate.

Drink WELCH'S when you drink grape juice—you can always get it at your club, cafe, hotel, soda fountain—or of your dealer.

Do more than ask for Grape Juice—
ask for Welch's—and get it.

If your dealer hasn't it we will ship a box of a dozen pints to any address for $3, express prepaid east of Omaha.

The Welch Grape Juice Co., Westfield, N.Y.

JAN TINGLOFF

(Continued from Page 13)

mate made his way to the upper deck. He found his captain in the pilot house, studying the barometer.

"Freight all aboard, sir."

"All right," nodded the captain; "but did you hear about the storm flags being up?"

"So I heard, sir."

"M-m! Close that door. It's cold." The mate closed the door; but almost immediately the captain raised a window and gazed down the harbor. "It looks bad to me," he said after a while.

"It is a bad-looking night," assented the mate.

"A wicked night!" barked the captain; and gathering up one end of his mustache he drew it between his teeth and began to chew on it.

The mate pursed his lips. "What will I do, sir?"

The captain stopped chewing his mustache. "It all comes down to dollars and cents. Use our judgment and stay tied up to the dock here and it's go hunt another berth. Do you want to hunt another job?"

"I got a family to look after—I can't afford to."

"Nor I. We'll put out."

"In with that freight runway and plank!" the mate called out to the waiting longshoremen. "And you"—a colored steward was at his elbow—"tell 'em all aboard on the dock and all ashore on the boat that's goin' ashore."

The steward voiced the mate's instructions; the last passenger came aboard and the last friend went ashore. The gangplank was hauled in, the lines cast off and the Port Rock steamer slid out from her slip.

She was well down the harbor before Jan took a piece of paper from his pocket. "Number two hundred and seventy-six," he read. "That's it—two hundred and seventy-six." And seeking out the number he knocked on the door. It opened slightly and Jan saw peeking out at him the lips, chin and half an eye each side of the nose of a pretty and well-dressed girl. Jan looked up at the number over the door again to see if he had made a mistake. Then the door opened more widely—and it was she, smiling out at him; but she was so rosy and terribly pretty that Jan felt afraid and drew back.

"I thought maybe you would like to get out for some fresh air soon," he stammered.

"I was just trying on the new hat I bought with the money you sent up last night—and a shirtwaist and a lovely long coat. How did you get through the night?"

"Fine! I went over to the drydock and turned into a bunk on the schooner."

She made a mouth at the mirror. "That was no place to sleep. You ought to get a comfortable room at the hotel."

Jan was silent.

"Yes, you should. I'll be right out."

She came out, but with her face veiled, and clung close to him as they walked the deck. Jan sniffed the air.

"Snow, I think," he said.

"Meaning a storm? I was never in a storm. Are they terrible?"

"A storm is nothing," said Jan, "when you get used to them. But will we go in to supper?"

They went in. The boat was now outside the harbor and pitching slightly.

She did not eat much and at length laid down her knife and fork.

"Seasick?" asked Jan.

"No. I must be too frightened to be seasick."

"Frightened of what?"

"Of him." She leaned across the table. "I'm sure I saw him. Yes—spying through the window of my room just before I left it just now."

Jan tranquilly went on eating. "He can't hurt you aboard a boat."

"I don't mind that, so he won't hurt you."

Jan shook his head. "He won't, because he can't on here without getting caught."

They stepped outside at last. Cozy enough in the dining room; but outside the snow was now thick enough to show white on deck where the passengers had not tramped it down. They sought the open space in the bow—Jan to see how it looked ahead and Mrs. Goles to feel the fresh gale blowing in her face.

"It's a northeast snowstorm," said Jan, "and coming thicker. But no danger. No—no danger," he repeated quickly, with a glance at her.

"It's not danger of a storm I fear," she said simply. She was peering not ahead at the darkening, rising sea but at the form and face of every muffled-up passenger who came near them.

Not many passengers were venturing on to the open deck; and those who did were wrapped high and close, with hardly more than their eyes showing out. "If he comes on us he will come like that—coat collar to his ears and hat over his eyes," she thought as one after another so wrapped appeared and passed; and almost with the thought, catching sight of a lurking man's figure in the passageway between the paddlebox and the outside row of staterooms, she added aloud: "Let us go up on the top deck."

"It will be pretty cold and rough for you up there," suggested Jan.

"Never mind; let us go there." A man could not very well hide on the more open top deck, was what she had in mind.

They could hardly keep their feet on the top deck. An officer in passing warned them sharply to be careful. She looked after him scornfully. "As if you weren't more at home on the sea than any of them!" she said proudly to Jan.

The wind on the top deck was blowing a gale. The snow was pouring down. Another officer bumped into them. "This is no place for passengers!" he yelled. "Better go below and inside the house!" And he hurried on.

"Excited, ain't he?" said Jan. "But maybe we better go below too. But let's go round by the lee side—this way."

In passing the pilot house a window above them was thrown open and a man's face thrust through, and a man's voice said:

"We'll never make Port Rock to-night, not against this gale and snow. And no use trying to see anything ahead."

Jan peered up through the dark and the snow to see who it might be. Against the light in the pilot house he could distinguish the head and shoulders of the captain.

"Then we'd better put in somewhere for the night, hadn't we?" Jan knew that for the mate's voice.

"Put in where?"

"I don't know—Gloucester, maybe?"

"Gloucester? And how does Gloucester bear now?—tell me that. And how does any port bear now?—tell me that too. Suppose we did know, would you try to take her into Gloucester harbor on a night like this? Gloucester!"

"Sh-h! There's something," said the other voice.

The voices were hushed. Two long moans came over the sea.

"Wait for them again. And time 'em." The captain's voice that.

Mrs. Goles stepped closer to Jan. "Does it mean there's danger to the ship?" she asked in a low voice in Jan's ear.

"No, no. But listen!"

One long moan and one short moan came fitfully over the sea.

"Thatcher's Island steam whistle," said the captain's voice. "An' bearing so." So thick was the night with snow that Jan had to strain his sight to make out the mittened hand and coatsleeve stretching out through the window over his head.

Jan felt the wind whipping him on the other side, and with that there came from the pilot house: "Well, if that ain't the devil's own luck! Here's the wind makin' into the northwest and the chief whistlin' up half-steam's all he can keep on her!"

"Ain't it always something wrong! I told 'em about them boilers—that they been leakin' right along. What will we do?"

"Only one thing to do now. Run her before it. Besides, she'll be blown offshore soon now. Run her across the bay. South-southeast. She ought to fetch Provincetown."

"Yes, sir. But when we get out from under the lee of the land what'll happen?"

"I don't know; but I do know what'll happen to her bumpin' over the rocks of this shore on a night like this!"

Jan touched Mrs. Goles' arm. "We better go below now, I think. And you better go to your room and wrap up in any warm clothes you have—two pairs of

stockings, if you have them, and things like that. To be ready for accidents, you know. And wait for me in the saloon."

"So there is danger?"

"You must not be thinking of that; but it is foolish not to be ready for accidents. And while you are dressing up I will take a look round."

"Oh, suppose he is aboard! Won't you watch out for him?"

"It's him has to watch out for me on a night like this," said Jan—"and maybe watch out for more than me."

Jan went to his room and put on his extra suit of underwear, and over his vest he drew his sweater. From his suitcase he took his mother's photograph and tucked it in his inside pocket. Then he went up again to the top deck and located a life-raft—made the rounds of the boatdeck and located the lifeboats.

It was time now to study the storm. The snow was not so thick, but the sea was making and the wind colder and stronger. A gale from the northwest it would be when they were out in the open bay; and, besides the wind getting stronger the sea would be higher. And it was as high now as was good for this old-fashioned side-wheeler with her old-time single engine.

Jan shook his head and, still shaking his head, once more made the rounds of the boatdeck. Eight boats; and each boat might hold twenty-five people—that is, if it was in a millpond. But a night like this—how many—even if the running gear were sound? "No, no," said Jan to himself, and reinspected the lone liferaft on the top deck. Two cigar-shaped steel air-cylinders with a thin connecting deck was the life-raft. Jan had seen better ones; but a raft, at least, would not capsize.

He descended to the main deck, to where, in the gangway between house and rail, he could find a little quiet and think things over. While there, amidships, a sea swept up under the paddlewheel casing. It boomed like a gun. With it went some crackling wood. Again a booming—again a crackling. The boat broached to. Sea-water was running the length of her deck.

From out of the snow and night another sea came; and this one came straight aboard, roaring as it came. Jan knew what it meant—there is always the first sea by itself. Not long now before there would be another.

And not long before there was another. And soon there would be a hundred of them, one racing after the other. And a thousand more of them—only this rust-eaten hull, with her scrollwork topsides, would not hold together long enough to see a thousand of them.

Jan tried to figure out how far they were from the Cape Cod shore. Ten, fifteen, twenty miles. Call it twenty. Jan doubted if she would live to get there, even with the gale behind her.

He walked round the house to look into the lighted saloon. She was there—the poor girl—sitting patiently by herself. Long before this the orchestra had given up playing and only a dozen passengers or so were there; but she was the only lone one—in a red plush chair under a cluster of wall-lights. Besides the passengers, there was one steward and a colored maid, both staring together through the lighted window.

Jan's feet were wet. He went down to the bar, where he called for a drink of rye whisky and a pint flask of brandy. "Of your best," he added.

Leaning against the bar he listened to the loungers there. Four of them were at a table under a window which looked out on the open deck. One was struggling in a loud voice with what should have been a funny story. His companions neglected no chance to laugh, but after each laugh they hastily sipped their drink. At intervals the wind would shriek and at each shriek they would look past each other with exaggerated calmness; but when the sea pounded the hull, and the spray splashed thickly against the window over their heads, they would look up at the window or across at the door. And when the boat would roll down and, rolling, threaten to dump them all on the floor, they would grab the table and yell "Whoa!" or "Wait a second!" with just a suggestion of hysteria in their throats; and somebody would call out, "Go on with the story, Joe!" and the story-teller would hasten to resume.

Jan turned to the bartender, who was filling the steward's hurried orders calmly if not impassively. After every heavy sea he would stop pouring or mixing to glance with unaffected interest at the beams above him or the door opening on the deck. He was an undersized man with lean, pale cheeks, a hard chin and a bright, cold eye. Once he looked fairly at Jan and Jan looked fairly at him. It was like an introduction.

"You a seagoing man?" he asked.

"I used to go to sea," admitted Jan.

"I thought so. But those there"—he lowered his voice and leaned across the bar to Jan—"they don't know whether this is a real bad gale or just the reg'lar thing. One of 'em says a while ago: 'This is the kind of weather I like!' I bet it's his first trip. But most of the passengers, the stewards tell me, are turned in, trying to forget it."

"Better for 'em," said Jan.

"Maybe so too; but what do you think of it?"

Jan shook his head. "I will be glad when morning comes."

"Same here. I've seen it as bad as this a couple of times before." He picked up Jan's bill. "But this old shoebox ain't getting any younger. Here's your brandy. It's good stuff—don't be afraid of it. Seventy-five and fifteen—ninety."

"Have a cigar," said Jan, "and finish the dollar."

"Thanks. I will. But I'll smoke it later, when it's quieter, if it's all the same to you." He rang up a dollar on the cash register and turned to a newcomer who had ranged up beside Jan.

"Brandy," said the newcomer.

As Jan thrust his flask in his inside coat pocket he flashed a sidewise glance at the man drinking. The man was buttoned up to his eyes, but Jan thought he knew the voice. Jan buttoned up his own coat, said "Good night" to the bartender and went out on deck, from where, through the window, he could view the man at the bar.

Jan saw the man empty his glass and motion for another drink. He drank that, paid and turned to go. Jan caught a front glimpse of his face. It was Goles. Jan also saw that the bartender was looking curiously after him.

Jan waited for him outside. As he came almost abreast, the ship heaved and the two men fell against each other, while a great splash of sea-water drenched them. Again a roll and jump, and Goles would have fallen had not Jan held him upright. Goles gave him no thanks, but he said huskily: "I heard one of the sailors say she's a goner." With Jan holding on to Goles, the two men were swaying and stumbling to the boat's heavy rolling and heaving.

"I don't know about that," said Jan; "but she's in a bad way. And it's going to be worse, I think."

"That's what the sailor said," muttered Goles.

"So if you want to shoot anybody you better wait till we're safe—tomorrow maybe. And your wife —— But watch out!"

The sea washed fairly over them both. With the wave went a broken rail and part of the splintered house. Following the crashing of the wood and glass came the frightened questions and the patter of excited people running out of their rooms. The story-telling group from the barroom came as one man. The glass of the window over their heads had been showered on to their table. The bartender stopped only to empty his cash-register, stuff the money in his pocket and get into a great-coat; then he came running out too. Bottles and glasses were breaking behind him as he ran.

"Come," said Jan. Goles followed. Jan went up and looked into the saloon. There she was, still waiting. "You stay here and I will bring her out," said Jan to Goles—"and don't you open your mouth when you see her."

Goles made no sign. He had then a grip of the house railing and his face was to the sea.

"Thank God for the sight of you!" she said to Jan as he came in. "Is the ship going down?"

"Not yet. But your husband is outside. He won't say anything. Don't you either. And when —— Hold hard!"

The deck bounded up under them. She gripped Jan's coat and Jan gripped a chair that was screwed to the floor; and then the deck rolled far down and Jan's chair came loose, and both were thrown across the saloon. "She is breaking up!" thought Jan. A moment later it seemed to Jan as if all the passengers in the ship had suddenly awakened and were trying to crowd into the place. A ship's officer and some stewards also came running in. The stewards

Dry Frying with Crisco

IN Crisco, the new cooking product, foods fry so quickly that they are always dry and flaky. Crisco heats to such a high point that you can cook foods in it in less than half the time usually required. Potatoes fry in Crisco in four and one-half minutes, instead of ten. They fry so quickly that a crust forms instantly and prevents absorption so that they are crisp and deliciously dry. They are absolutely digestible, wholly different from potatoes soaked in ordinary fats.

Purely Vegetable

CRISCO, the new product for frying, for shortening and for general cooking, is purely vegetable and should be used for cooking where you now use fats of animal origin.

In Crisco, Fish Balls Fry in One Minute

There is absolutely no animal matter in it. It is exquisitely clean and pure in origin and manufacture. It is put up in immaculate packages protected from dust and store odors. As soon as you see Crisco, you will be impressed with its purity. It is a delicious cream white, pleasing and appetizing in appearance.

Notice its Delicate Aroma

CRISCO has the fresh, pleasant odor of a vegetable product. Its use is not attended by the slightest odor in the kitchen, nor do Crisco fried foods or pastries have any suggestion of the offensive odor or flavor which accompanies the use of cottonseed oil or lard compounds. Test it in hot biscuits. Open a Crisco biscuit when it is very hot and notice the delightful biscuit aroma.

Purchase a package of Crisco today.

Packages 25c, 50c, and $1.00 except in the Far West

On request, we shall mail a fully illustrated booklet, showing many other advantages of Crisco.
The Procter & Gamble Co., Dept. K, Cincinnati, Ohio.

If you drive your car faster thar hour you need a Warne

The strain on Shaft, Bearings and Connections at higher speeds is tremendous. Warner construction is so sturdy that it will endure any strain which will not wreck or injure the car itself.

This explains why owners of good cars, capable of making twenty to fifty miles per hour with comfort to the passengers, consistently use the Warner Auto-Meter.

And why those who are satisfied with inferior speed indicators on good cars are usually found to be operating those cars in city traffic at low speeds. Or, on the other hand, that they may belong to the "jog-along" class, who derive no pleasure in traveling much faster than a horse can trot.

The headline likewise explains why Racing Cars and those entered in Glidden Tours and Reliability Runs are so generally equipped with Warner Auto-Meters. It is not merely because the entrants could *afford* the few dollars extra for the Warner—but for the more vital reason that the Warner *stays on* and *keeps indicating* at high pressure, and inferior speed indicators *do not.* At the last Elgin races several speed indicators (not Warners) were found in the tire pits after the first few laps. At Savannah a car was totally wrecked. The Warner was uninjured by the shock or strain, and went through the race on another car without adjustments of any kind. These two illustrations are representative.

WARNER AUTO-METER

"The Aristocrat of Speed Indicators"

The Warner endures the highest speed without breakdowns

The Warner safely endures the most extreme strains solely because we have persisted in **building up to a standard** instead of **down to a price,** as we are frequently urged to do.

It costs more money to make a strictly high-grade, high-speed Warner, and we naturally have to charge more for this enduring **quality.** Yet, notwithstanding the higher first cost, the Warner is still cheapest in the end.

The Upkeep Cost of the Warner is practically nothing

Every Warner sold is repaired and adjusted *free of charge* for a year from date of purchase—accidents and self-evide abuse excepted.

This service is performed at any one of twenty Bran Houses (see list below) so distributed that no matter whe you live there is a Warner Branch only a few hours awa The percentage of Warners requiring even slight attention less than *one out of each thousand made* during the first yea Warner is attached to a car. And only 1⅛% have requir attention after **three years** of Continuous Service.

Ask the man who owns an inferior speed indicator about *his* repairs

Total these repairs up for *one season only* and add to t original cost of the inferior indicator and it will frequen be found that the amount would have purchased a reliab trouble-proof Warner the first place, whi would have remain good as new for years.

Auto Manufacture Building for the F ture are Equippi with or Recommen ing the Warner

They recognize that satisfactory service in their c means the *perfect performance of every part.* If tires—top or speed indicator give trouble it seriously reflects on maker's knowledge of values—even though the make this car does not himself produce them.

And if an article which has given trouble and cau continued annoyance to owners one season is again t for a second, the customer logically questions the mak sincerity in claiming to give honest values in every par his car.

The wisest manufacturers in the auto field are those sighted ones who forecast complete equipment with **best** as inevitable. These have equipped with the War Auto-Meter for 1912 instead of waiting until 1913, as m have decided to do.

WARNER INSTRUMENT COMPANY, Main Offices and Factor 1250 Wheeler Aver

NOTE TO DEALERS! When suggesting a speed indicator always recommend the Quality Warner *first.* Then if you finally have to sell something inferior because of price, your customer can't blame you for his dissatisfaction—he refused the Warner against your judgment.

BRANCH HOUSES MAINTAINED AT

ifteen miles an Auto-Meter

The Quality Warner at three to four times the cost of other speed-indicators, visibly indicates the *Quality Policy* of these makers

We do not wish to even insinuate that these cars offer so uch extra value simply because these makers have paid m $20,000 to $50,000 extra money on their season's out- t to give you a Warner Auto-Meter. Quite the contrary. simply indicates that with these makers *Quality is of Par- ount Importance in every item*, and that the **best** every- ere is considered none too good for their trade.

Reliable Auto Dealers Push the Warner

The auto owner who has owned more than one car is rough with experimenting. He knows what it means in mfort and satisfaction to have a Warner on his car. He s found it poor economy to ignore **sterling value** for ged **bargains.**

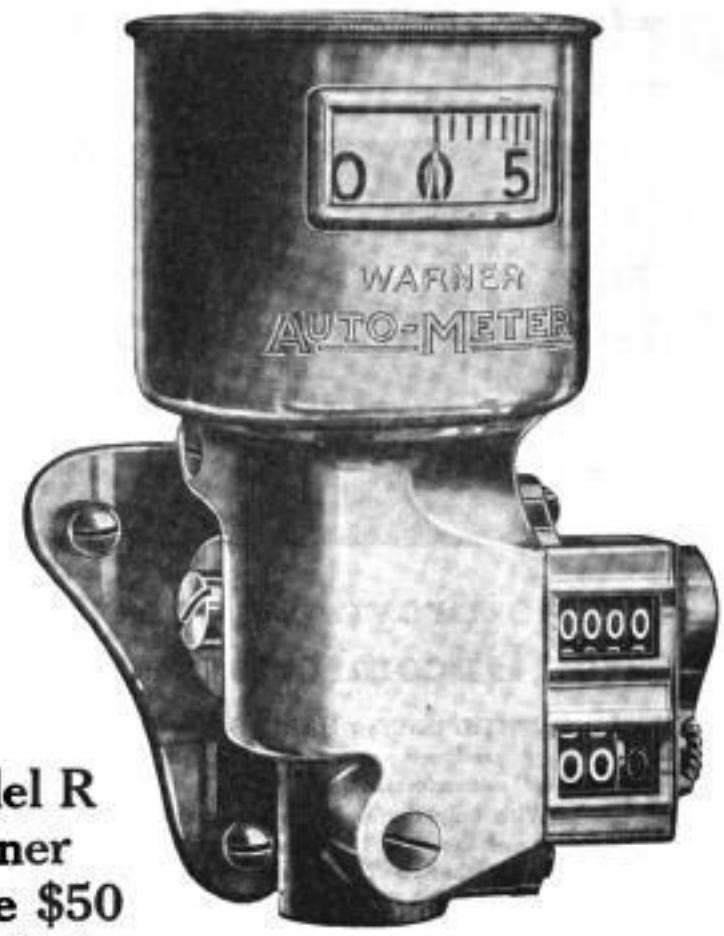
In consequence the Auto Dealer who sells him has wn wise by experience. He finds it the best business icy to suggest the Warner to his prospective customers as perfect harmony with the car he sells. His permanence in siness depends on the **satisfaction** and the **sterling quality** of at he recommends to his trade, and the Warner gives both.

The man who wants a Warner can now have it on any car except the very lowest priced

The far-sighted automobile manufacturer who realizes t future business depends on present **values** (rather than past formances), is already equipping with the Quality Warner. Other manufacturers who are now attempting to satisfy r trade with an inferior indicator or none at all, will equip the Warner for 1913 — perhaps before the end of 1912.

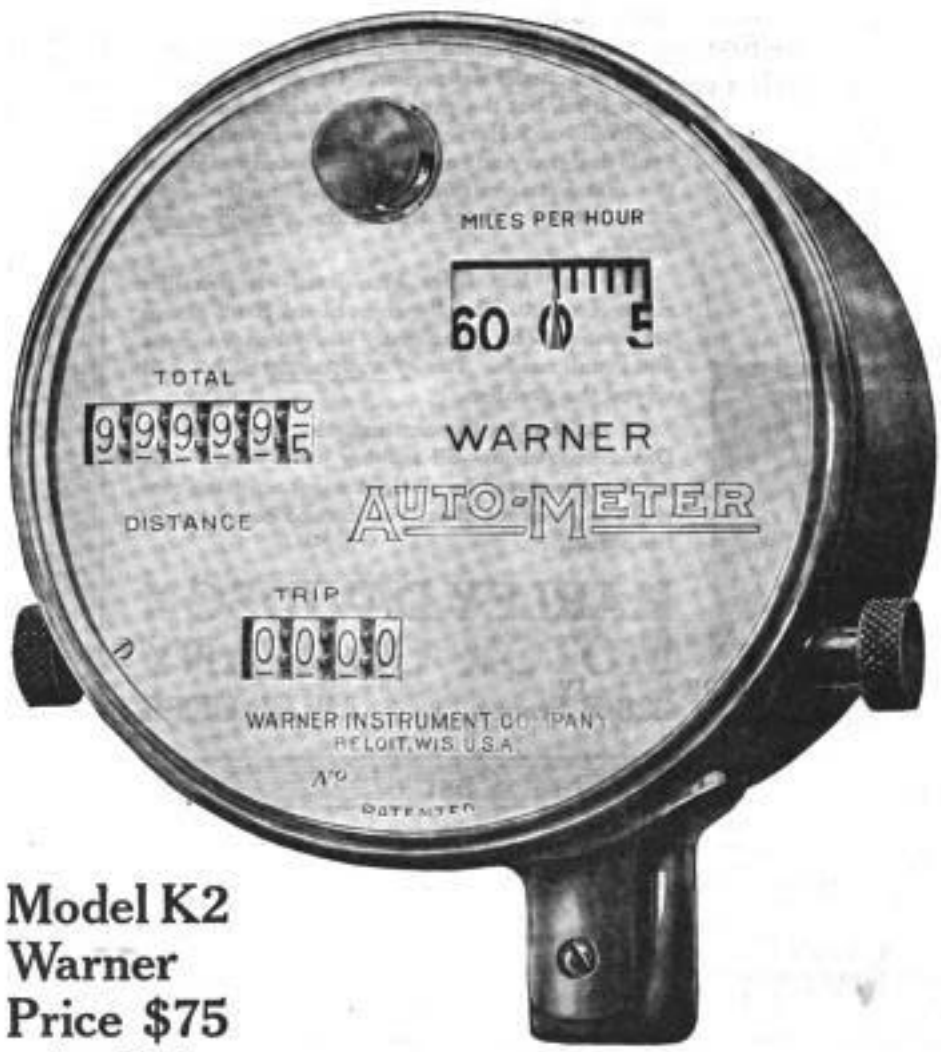
You need a Warner on the car you have or are about to buy

If the car you select is not regularly equipped with the Warner — *buy* or it. It will double your pleasure in the car.



If the car you decide on has an inferior speed indicator on it — throw it and *buy* a dependable Warner. It isn't worth the wear and tear on s and patience to bother with an inferior speed indicator.

If your dealer offers to throw in an unreliable indicator to get your order, take it. Pay the difference and get the BEST — the Warner — and *KNOW* instead of having to guess.



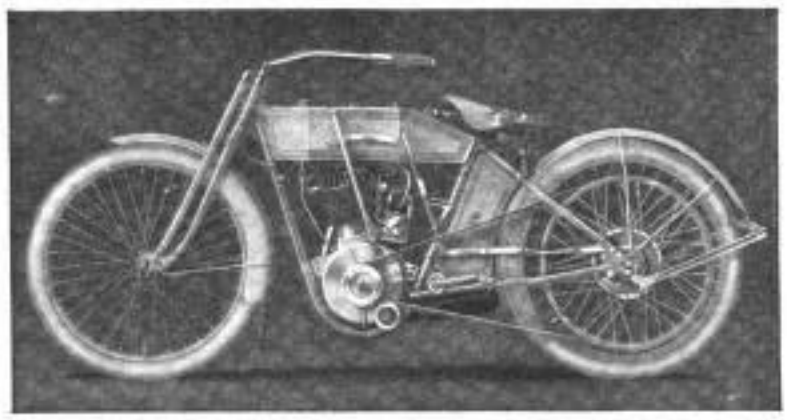
You'll get more pleasure out of the Warner than almost any of the con- nces and comforts on your car. Your dealer will gladly get you the style and model you like best.

BELOIT, WISCONSIN

The Warner can be secured through reputable Automobile Dealers in city or town in the United States. Warner branches are maintained in the principal cities for the convenience of these dealers and their cus- ners. Inquiry to Beloit or at our branches is invited for Warner literature.

Model R Warner Price $50
(Actual Size)

Model K2 Warner Price $75
(Actual Size)



Other Models Up to $145
With and Without High-Grade Chelsea Clocks

THE NEW

Harley-Davidson

"THE SILENT GREY FELLOW"

The Motorcycle That Is Not Uncomfortable

The Free-Wheel Control permits the HARLEY-DAVIDSON to be started like an auto.

UNTIL the New HARLEY-DAVIDSON was produced motorcycles were more or less uncomfortable.

With only the saddle springs and the resiliency of the tires to absorb the jolts, how could they be otherwise? When a motorcycle struck a 3 inch bump the tires and the saddle springs absorbed 1 inch of the shock—the rider got the rest.

Motorcycle manufacturers have long tried in vain to overcome this. They put longer saddle springs on and found that while this eliminated the hard jolts, when the machine struck bumps or crossings it added a "spring board like" action which threw the rider off the seat. This was even more objectionable than the jolts and jars and was actually dangerous. Other experiments were tried, but the problem remained unsolved, until William S. Harley, America's foremost motorcycle designer and engineer, suspended or floated the seat between two springs held under heavy compression. Hence the name Ful-Floteing SEAT.

Jolts and jars were eliminated—it was like riding on air. The "spring board like" action was gone. The rider really floated over bumps and rough roads. The Ful-Floteing SEAT had solved the problem.

In addition to its comfort, the new Harley-Davidson is clean—all moving parts where oil is used are encased in oil tight cases, and the machine is so silent that it cannot be heard across the street.

Sectional View of Ful-Floteing Seat

(Continued from Page 37)

had life-preservers, which they were buckling on to themselves. They remained; but the officer, after a look round, ran out again.

The boat rolled back on her keel. Jan led Mrs. Goles to the outer deck. Goles was there. "Come!" ordered Jan, and led the way to an iron ladder. The boat rolled far to one side and again far to the other. Mrs. Goles felt as if she were clinging to the tail of a kite, but still she clung to Jan; and Jan at last made the upper deck with her. He had forgotten her husband; but when he turned to look back the muffled form was there at his heels.

Jan groped his way to where the life-raft was lashed to the deck. He ordered Mrs. Goles to sit down on the raft. Goles sat down beside her. Goles seemed bereft of all volition.

"You wait here till I come back," Jan said to him and, turning to go below, bumped into another man.

"Hello! Is this you?" said the other man. "I thought I saw you come up here. 'And there's the man,' I says to myself, 'to tie to tonight!'"

Jan recognized the bartender. "You're just the man I want too," said Jan. He dove into his pocket and drew out a revolver. "Here, take this."

"A gun!"

"Yes—and loaded. Watch that man on the raft. And if he tries to hurt that woman or not let her on that raft if the boat goes down, shoot him!"

"You mean it?"

"Yes. He's bad! He's the man who was drinking in your place a few minutes ago—after me."

"Oh, him! Yes; he's bad, all right. He's been drinking raw brandy since seven o'clock. I was noticin' him."

"Don't shoot him unless you have to. And don't let him see me passing it to you. I'm going to get a few more people up to the raft."

"All right—but —— Wow! I never shot a man in my life."

Jan had hardly reached the saloon when the great crash came. He was swept away before it. Boom! it was—and again, crash! Now he heard the smothered appeals of people being swept overboard! Crackling wood was following the crash of every sea, and each sea receded only to let the next one strike even more heavily. It was now nothing but solid water that was coming aboard.

Her buoyancy had left her. Her roll had become a wallow. She was settling. "The water's in her hold!" thought Jan, and took a quick look about. All kinds and all ages—but there was one girl with an expression on her face that startled him.

Near the girl were a young man and a woman locked in each other's arms. Jan judged them to be a bridal couple. They were saying nothing—just holding each other and waiting. He hesitated an instant and then he saw a woman with a baby. She was leaning heavily against a stanchion crooning to the baby. He now saw that she was almost a middle-aged woman, a poorly dressed and toilworn woman—a Finnish woman probably. Jan's doubt was gone. He jumped to her side. "Want to save your baby?" The woman looked up at him and down at the baby. "Baby!" she said, and handed it to Jan. "Yes, save baby," she said. "Come!" said Jan, and grasped her hand. Then the lights went out.

Jan had marked the ladder in his mind, and in the dark he made his way toward it; but before he could get to it there were many adventures. He went floundering this way and that, holding the baby in one arm and dragging the mother with the other, keeping on until he bumped into a stanchion in the dark. "It's near here," he thought; and, reaching out with his feet, he found the bottom step of the ladder.

He had two decks to surmount. On the boatdeck, as he passed up, he could hear the ship's men shouting wildly and foolishly to each other. On the top deck he found the three just as he had left them. He gave the woman and baby into the care of the bartender and felt about until he found a coil of rope. He cut it loose and, carrying it back to the raft, lashed Mrs. Goles to a ring. Then, taking off his ulster, he wrapped it round the mother and baby, and lashed her. Then he lashed the bartender and Goles, and took a loose turn about a ring for himself. Then he waited.

It came soon enough. A large section of the top deck floated clear of the upper

Hundreds of Agents coining money. $5.00 worth of tools for the price of one. Drop forged from finest steel. Low priced. Fast seller. Big demand. Jack Wood sold 100 in two days. He says: "Best seller I ever saw." Get in the game. Write at once for terms and free sample to workers.
THOMAS MFG. CO., 3068 Wayne St., DAYTON, O.

works. Jan stayed by the floating deck until he was sure the steamer was surely sunk beneath them. Then he cut the raft clear of everything and let her drift.

The raft was swirled from wave to wave. The spray broke over them. "We'll get wet," said Jan; "but one thing—she won't capsize!"

The seas curled and boomed about them; but no solid seas rolled over them. They mounted every roaring white crest as if they were swinging from an aeroplane. The spray never failed to drench them and with every heaving sea came bits of wreckage that threatened them; but at least they were living, and not a living soul besides themselves had come away.

* * * * * * * *

The clouds raced beneath the moon; but by-and-by the clouds passed away, and the moon shone clear and cold on a terrifying sea. And so for hours—until the moon had gone and the struggling daylight revealed a surf breaking high on a sandy shore. They could not land there; so Jan took the long oar and wielded it over one end of the raft and held her parallel to the beach until he descried a point reaching out into the bay. On the other side of that point would be a lee and safety; but he said nothing of that to his companions yet.

In the middle of the raft lay Goles, huddled and silent as ever. Mrs. Goles, at the farther end of the raft, was mostly watching Jan as he heaved on the oar; but sometimes she seemed to be studying her husband. The Finn woman, nearest to Jan, was hugging her baby to her under Jan's greatcoat. She, too, when she was not watching her baby, was looking at Jan. The bartender, between Jan and Goles, was looking out for marks ashore.

The bartender was also thinking that the two other men were about the same age, and yet the man in the middle of the raft, when he let his face be seen, looked the older by ten years. All night long he had not spoken and he seldom raised his head—when he did it was to gaze at the land. He seemed to be taking but small notice of anybody. Toward the bartender who was behind him, he had not once turned his head.

Jan worked on the long oar. The point was coming nearer. "A hard drag yet; but we'll be there by sunrise!" said Jan in a low voice to the bartender; at which Goles looked round suddenly—but still had nothing to say.

At last they were under the lee of the point. The sea was beautifully smooth. Jan stopped sculling and went forward to Mrs. Goles. "The tide has her," he said. "Soon she will be in and we will all be safe!" She looked back at her husband.

The bartender stood up and shouted aloud. "Safe—hah! Say, but it's like looking at something in a moving picture." He stuck a hand into his coat pocket and pulled out Jan's revolver. He stared at it; then, with a low whistle at Goles' back, he returned it to his pocket. Only the Finn woman had seen it and she remained silent.

The bartender shoved a hand into his trousers pocket. He pulled out a handful of bills and silver. "Well, what do you know? And I came near putting that into the safe last night!" He unbuttoned his jacket and from his vest pocket he pulled out a cigar. "Well, what do you know?" He drew out a metallic matchcase. "Well, well—dry too!" He lit his cigar, took three or four puffs, contentedly sat down, and began smoothing out and counting the damp bills. "Well, well!—forty-five, fifty-five, sixty, seventy—the only time in my life I ever beat a cash register! Seventy-two—four—and on a good night there'd 'a' been three times the business—eight-four—six—eight. Eighty-eight dollars."

Goles looked over his shoulder at the bartender. He wet his lips and stood up. After a time he threw off his overcoat. "How about a drink from that flask?" he asked suddenly.

Jan, without looking round, drew the flask from his pocket and handed it to him. He had already given the two men a drink each—and the Finn woman and Mrs. Goles two swallows of it during the night; and almost half the brandy was now gone. Goles put the flask to his lips. The bartender stopped counting his silver to watch him; and, seeing it go, he called out: "Say there, Bill, just leave a taste of that, will you?" Goles drank it to the last drop. When he had finished he threw the empty flask overboard. "Well, if you ain't one fine gentleman!" uttered the bartender.

Goles paid no attention to him. "How long before we'll be ashore now?" he asked.

White Next Your Feet

These new Shawknit "Oxford Grey Mixture" Socks are *white inside.*

Outside is the fashionable new "Oxford Grey," matching the smartest clothes worn on Fifth Avenue.

This effect is produced by knitting *black over white.*

Black Silk outside, with White Lisle next your feet, cost you 50c the pair—*six* pairs in a box for **$3.00.**

The Royal Typewriter
Endorsed by "Big Business"

Many of the largest and most exacting concerns in America have adopted the Royal as their standard typewriter equipment.

They began by trying *one* machine; they now use *hundreds*. They could afford *any* typewriter; they use the Royal because they have proved that for efficiency, combined with economy, the Royal stands without equal among all typewriters.

Let this truth sink deep. It emphasizes why you owe it to yourself and your firm to *get the facts* concerning the Royal. Here are a few of them:

Fact 1—The Royal is unconditionally guaranteed to do highest grade work for a longer time, at less upkeep expense, than machines usually listed 33⅓ per cent. higher in price.

Fact 2—The Royal has every desirable feature and improvement to be found in *any* typewriter, with several features exclusively Royal.

Fact 3—The Royal has established a new standard of typewriter endurance. We have yet to learn of a single Royal wearing out in reasonable service.

Fact 4—There are fewer Royal repair men today, per thousand machines in use, than for any other typewriter.

Fact 5—When you buy a Royal, you deal with a world-wide organization, with unlimited resources to back up its machine.

There are many other facts you ought to know about this marvel among typewriters. They are interestingly told in

"The Royal Book"—write for it!

DEMONSTRATION! Best concerns everywhere are having the New Model 5 Royal demonstrated in their offices. Let us do this for you. No matter where you are, write to our New York office and our branch near you will give you prompt attention.

ROYAL TYPEWRITER CO., Room 61, Royal Typewriter Building, New York
Branch Offices and Agencies in all Principal Cities of the World

The latest development in typewriters—has *Two-color Ribbon, Tabulator, Back Spacer; also Hinged Paper Fingers, Tilting Paper Table, Roller-bearing Escapement, Dust Shields,* and other desirable improvements to be found *only* in the Royal. Price $75, everything included, no extras.

"Only a few minutes now," said Jan. He was still standing with his back to Goles.

"A few minutes?" repeated Goles. At the words his wife looked round. Husband and wife stared at each other.

"There's the sun coming over the sandhill now," said Jan. She turned to look.

The bartender, counting and chuckling over his money, felt a hand shaking the tip of his sleeve. It was the Finn woman. She pointed a finger toward Goles. The bartender saw Goles' hand come out of his bosom with a revolver.

"So long as we're safe," said Goles slowly, "you're going to get yours—and get it now, you ——"

Jan was looking at the shore, but Mrs. Goles had turned with the first word and thrown herself toward Goles as he fired. Mrs. Goles fell before the bullet. "I was going to get her anyway," said Goles evenly, and leveled his revolver at Jan, who had jumped to save her from falling overboard and was now holding her away from Goles.

"I got you where there's no comeback!" gritted Goles, and took careful aim at Jan!—but did not fire. He felt a ring of cold metal pressed against his neck and half-turned to see what it was. "Don't shoot! Don't!" he begged.

"You ——" The word the bartender gritted out could not be heard, because he pulled the trigger as he said it.

Goles sagged down until his knees rested on the deck. Then he fell forward and over the side of the raft. There was the gentlest of splashes, a patch of red—a cluster of bubbles which burst like sighs.

"Well!" said the bartender, and held up the revolver in wonder. "I never thought I'd live to kill a man!" He looked to see how the others had taken it, but they were paying no attention to him. He saw Jan holding the baby and trying to hush its little cries for its mother, while the baby's mother was pressing the tips of her fingers gently against the upper part of the injured woman's right breast.

"You mustn't die! You mustn't die!" Jan said when the baby would let him.

"I don't want to die—not now!" she answered.

The Finn woman looked up and smiled at Jan. "Not die. No, no—not die."

The raft grounded gently on the beach. Jan took the wounded girl and set out for the top of the sandhill with her. The bartender took the baby and toiled behind with its mother.

"Say," said the bartender, "you're all right! How many more children to home?"

"Home?" She held up seven fingers. "And him," pointing to the baby.

"Great Stork! Here!" He set down the baby, drew out the bar-money and offered it to her. "When a ship goes down, I heard a sea-lawyer say once, all debts go with her. And that means all credits go too. Here—for you."

"Me? No, no. I have husband. Fine job—dollar-half day."

"Dollar an' a half! It's too much for the father of eight children for one day! But this—see. For baby. And the Lord knows a baby who came through last night and never a yip out of him, he oughter get a million. Here; put in bank—for baby."

"Ah-h! For baby. Tenk you." She beamed and took the money. "You brave man! Him"—pointing to Jan's back—"brave man too."

"Him brave—yes. But me? No, no. Me scared blue. He'd 'a' shot me next; but I beat him to it."

"Kill baby too." She kissed the baby.

. . . . . .

The sun was well up when they reached the top of the hill—a pale, frightened-looking sun, but nevertheless a sun. The bartender took off his cap and saluted it gravely. Below them lay the town.

"We'll go down there," said Jan to Mrs. Goles, "and from there, when you're well, we'll go home—to my mother. But," he added gravely, "we will go by train."

She smiled weakly at him. "I could go without a train—on my hands and knees I could crawl to the mother of you! You don't know it, but when I was growing up it was a man like you I always used to dream about. And I'm not sure I'm not dreaming now!"

"Don't worry," said the bartender. "We're awake—and alive. And you bet it's great to be alive again! Ain't it"—he turned to the Finn woman—"you mother of eight?"

The Finn woman made no answer. She was nursing her baby.

Will you own up that you are not giving your body a square deal?

IF YOU will let me help you, I can add years of usefulness and greater efficiency to your business life. For you surely are not satisfied through sedentary habits to grow a little weaker and less valuable every day.

I am speaking generally, because I know that nine out of ten men who work indoors have surface muscles that are as soft as dough, and stomach and intestine muscles that are growing weaker every day. With even half-proper treatment, the vital muscles can be made strong enough to improve the health, appearance, temperament and ability of any man.

Big biceps and surface muscles no more indicate health than brick walls prove that a building is fire-proof. The true test is whether or not the day's work fags you, whether you sleep refreshes you and whether your body will obey the desires of your mind—in other words can you do the things you would like to do—can you set your body to work without waste of will-energy?

The Thompson Course

is a series of simple, natural movements which give greater strength, vitality and energy to the most important muscles of the body—the stomach, liver, lungs, heart, and other vital organs.

The Thompson Course requires no apparatus, does not force you to leave off any of your present habits, and takes but a few minutes of your day. Railroad presidents, and other men whose time is probably worth more than either mine or yours, have given their attention to my Course and have postponed their retirement many years on account of it, besides greatly increasing their present efficiency.

Unless you are so well satisfied with your physical and mental condition as to believe yourself incapable of improvement, you will profit by reading my book, **"Human Energy,"** which tells all about *Thompson Course*. I mail this book free to any responsible person. If you will send me your name and address I will mail you a copy with the understanding stipulation that you read it as though it were sent by a friend.

Take my word for it, this book is worth sending for *today*. Address

The Thirty-Thousand-Dollar Slap

(Continued from Page 17)

"He won't do it. I've seen his picture. He is a bear of a man with gray hair, isn't he? He's got a place up the Hudson. The family is in swell. Something like that. You've gone crazy. You've got him on this letter all right, all right, but he won't stand for the thirty-thousand-dollar slap."

"I want to see," said Mary Inness almost tenderly. "I want to see whether he will or not. The world gets fooled on some of these big men. I want to slap his face. I think he'll let me do it."

"Suppose he won't," said Paymaster with his eyelids narrowing with their characteristic shrewdness. "How do we divide then? Do I get half? You said it was my wit against yours. Well, here's a good gamble, my girl. I say he won't stand for it. Suppose I win—do I get half?"

"Yes," said the stenographer with spirit. "I've got that much life in me yet."

"I'm on?" Paymaster asked. "Is that what you mean?"

She nodded.

"What time is it?" he inquired.

She looked at her watch; the hands indicated eleven-ten. Paymaster pointed to the paper on the table.

"I'll just keep this in sight," he explained. "It's a good argument against your calling for help. It keeps us all in the same boat together. When it's within my reach it's a sort of gag against screams and such."

Mary Inness did not answer. She watched her visitor from the seat on the bed as if he might at any moment make some attack upon her or attempt the end for which he had at first come. Apparently her belief that she could summon help in any one of the passing moments was sufficient to hold the situation as it was. Paymaster, for his part, had reviewed all the possible ways in which he might make some such play. None of them was acceptable.

"This is a whale of a sketch!" he said, talking aloud for his own ears. "It gives me a pain! Excuse me, Miss Inness, if I say that I've known a lot of crazy women, but one that will pay thirty thousand dollars for a slap sounds like Matteawan to me!"

"Possibly," answered the other with a sniff; "but I consider it a bargain. Of course your opinion is not exactly disinterested. If you saw your chance I think you would probably knock me on the head."

"I'm too much of a gentleman for that," said Paymaster, lying gracefully. "And I rather like you because you are nervy."

Miss Inness gave a little smile that was composed of sadness, disappointment and loneliness.

"I prefer that you make no love to me," she said. "I have taken vows duly witnessed by my typewriter and rows of lawbooks on a shelf. I have dedicated myself to the office and a furnished front parlor on Twenty-eighth Street."

"Poor little girl!" exclaimed Paymaster.

Mary, watching him from the corner of one eye, went to the window and then looked down into the street.

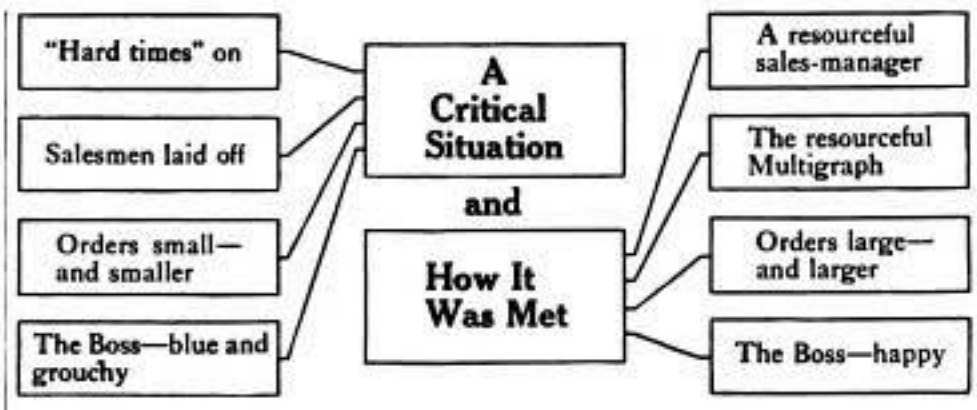
"You're not a very successful flirt," she said calmly. "It's all white with snow outside. I'm sorry you have no overcoat."

Paymaster winced.

"You're an old maid all right," he growled for revenge.

"That's what I was pointing out," she said. "Listen, there's a motor car now."

"They won't let this Valingworth come up, will they?" exclaimed the man fretfully, scenting an unforeseen complication. "You ain't going out that door either!"



"Oh, don't worry," she said; "it's all right. I've left word to have him shown up and he's coming alone."

Paymaster lit another cigarette. Then came a tap on the door.

"Let him in," he commanded, folding his arms. He showed no sign of his fear that in some way he was about to be outwitted and trapped, except for his shifty glances at this and that exit and at the strategic positions possible in case the affair turned out to be one for fight and attempted escape.

Miss Inness, on her part, seemed outwardly as cool.

"Hide behind that wardrobe," she said to Paymaster, and a second later ushered in the newcomer respectfully as if into a meeting of directors. "How do you do, Mr. Valingworth?" she said.

THERE! We've charted it—a typical Multigraph performance—a corporation saved from a crisis, perhaps from bankruptcy court—a complete reversal of a nothing-coming-in-all-going-out situation.

The concern was a big coal-company in a middle-west city. Business was in a bad way. The sales-manager simply *had* to lay off the road salesmen.

But he was a resourceful man. He looked for a resourceful means of holding *some* of his business. So he bought a Multigraph, and launched a campaign of price-lists and personal order-soliciting letters to the trade his road-men had been calling on.

THE MULTIGRAPH
Produces real printing and form-typewriting, rapidly, economically, privately, in your own establishment

He held *all* of the business, and landed *more*. There were no hotel and entertainment and mileage expense-accounts to audit—only postage and boy-hire.

When times grew better, the salesmen were ordered back to work—only to find that during their lay-off the Multigraph had sold more coal than they had in any other similar period. They started out with the knowledge that they had to hump more than ever. They *humped*, too.

This Multigraph is still at it. It *hunts* business for the salesmen, and *finds* it. The team-work is perfect. The sales-manager now whistles as he works.

Don't wait until times change before looking into the Multigraph, which prints as well as it typewrites. The Multigraph is always a fair-weather salesman—for it *makes* its fair weather.

You Can Now

Play Billiards in Your Dining Room

On the New "Brunswick" Convertible Dining, Library & Billiard Table

Style "E" Pocket Billiard Table
Shown With Dining or Library Top Partly Removed
Price $75, With Complete Playing Outfit

Yes—you can now play *real* billiards—in the *dining room*—on a *genuine* billiard table!

Our newest design Brunswick Home Billiard or Pocket Billiard Table entirely does away with the necessity for an *extra room* for billiards.

This beautiful Convertible Table makes your dining room, library or den available for billiard playing on a *real* billiard table.

Billiards is the greatest of indoor games—fascinating to young and old alike.

It combines healthful exercise of body and brain with the most delightful recreation. Just enough of the spirit of rivalry to add zest.

Yet so innocent and really *helpful* that the world's most famous educators, clergymen and physicians commend it in the highest terms.

The leading Y. M. C. A. directors are strongly in favor of billiards.

Evenings of Royal Fun Around the Home Billiard Table

Make home attractive to "Young America" by providing a Brunswick Home Billiard Table. It will prove a veritable "*home magnet*"—a never-failing source of entertainment for "father and the boys."

For the busy man of affairs, *home billiards* is the ideal diversion and recreation. The necessary *concentration* relieves the mind from cares and worries.

Business men find their mental condition clearer and fresher after a game. Physicians often prescribe "Billiards" instead of medicine.

After Dinner—BILLIARDS!

Remove the polished wood top from the handsome dining table and—presto!—your Brunswick Billiard Table is ready. Inside of five minutes you can be playing your favorite game of billiards or pocket billiards—in your own cozy "home billiard room." The table is equally well fitted for dining room, library or den.

Its appearance, when used as a dining table, gives no hint of its *double* purpose.

Splendid Playing Qualities

These tables are not "toys"—not mere *imitations* of billiard tables. Their playing qualities are perfect. Some of the world's greatest billiard experts use them for practice. They are genuine "Brunswicks"—designed and constructed in the same scientific manner as our standard-size tables, which are used throughout the world.

We Make All Styles of Brunswick Home Billiard Tables

Cash or Easy Payments

Complete Outfit Included

Playing Billiards on the Famous "Baby Grand"

If your room is 11 feet 6 inches by 14 feet or larger in size, you will be interested in the Brunswick "Baby Grand" Carom or Pocket Billiard Table.

The Cue Rack and Accessory Drawer form a desirable feature of the "Baby Grand" styles. The price of each table includes all accessories and complete playing equipment.

Write for Beautiful Illustrated Book—

"Billiards—the Home Magnet"

THE BRUNSWICK-BALKE-COLLENDER COMPANY
Dept. B, 324-328 S. Wabash Ave., Chicago

(30) Branch Offices and Salesrooms in All Principal Cities of the United States, Canada, France and Mexico

The lawyer was a heavy man. His face was powerful; some of its lines were as set as those of a bronze head. His hair was thick, iron-gray and brushed back, suggesting a restless, nervous force. Decision was in his chin, hard sense in his large, cold blue eyes. His strong hands were shut as if in anger; his thin, flexible lips moved as if holding in leash the terrors of his wrath.

"What's this all signify?" he cried. "Is it blackmail, eh? Now let me tell you that within three hours I will have you in the hands of the police!"

"Come, come, Mr. Valingworth," said Mary, moving round the table to keep out of his reach. "You are a sane man. You know very well you would not have me arrested. See! Here is a letter on this table. It goes with the contents of the bag and it would look well in a disbarment proceeding, wouldn't it? Don't try to bombard me with your rant and strike poses. I've worked for you fifteen years and have always been at a disadvantage. Now it's you who are at a disadvantage. Sit down!"

"Sit down?" gasped the great lawyer. "No, ma'am."

"You make it hard for me," Miss Inness said. "Personally I am tired of the whole thing. I can scream at any time and let the cat out of the bag. I have a mind to take my chances with you in spreading this whole affair before the authorities."

"Well—well—I ——"

"Sit down!"

Mr. Valingworth sat down.

"It was my intention to give this money to the Clinton Home for Women," said Mary. "But, of course, a woman's peculiarities will come out. I am curious."

Here she paused.

Mr. Valingworth seized this opportunity to execute a change of front.

"Why, that is all right," he said cajolingly. "Miss Inness, you and I can adjust this matter. I knew that you were not dishonest. I knew it all the time. We might come to some understanding as we ride back in my car. It's only a block or two to the garage. I'll go myself and tell my chauffeur. I will only be a minute."

"Sit down!"

"What are you curious about?" he asked after a moment, moving uneasily on his seat.

"I am curious to know whether you big men are big or only seem so," said Mary. "You have taken all the feminine out of me and so I can talk that way now. I've always served you and stood your refined brutalities because I believed I had to or else lose my job. For fifteen years you've held that unspoken threat over my head to crush my self-respect. Now I've got something to hold over your head and I want to find out whether big men, as they call themselves, are any different from us little fry."

"How's that?" asked the lawyer.

"Sit down!" Mary demanded. "Sit down and wait where you are."

She stepped into the bathroom.

"Don't get up," she cautioned. "Wait a minute. I'll find it. I'm going to show you something. I'm going to interest you, Mr. Valingworth." A second later she appeared again—the leather bag was in her hand.

"Ah!" exclaimed the lawyer involuntarily. "So it's here!"

"Yes," said the woman, "and here is the letter too—the—er—damaging letter."

He looked at it eagerly.

"Now, Mr. Valingworth—prominent attorney, owner of a summer villa and motor cars—big, strong, profane, blustering, terrible Mr. Valingworth, don't make any mistake in my meaning to carry out my little thirty-thousand-dollar drama. Here's the bag and the letter. There's only one way you can have them."

"How?" cried the other, rising.

"By letting me slap your face."

"It's absurd," roared the lawyer, growing red with his wrath. "What is it all for?"

"It means so much to me!" cried the woman. Her face was tense and white with a look of desire.

"Bah!" he roared, throwing up his arms. "You're mad! It's absurd. Give me that bag, you ——"

"Stop!" Mary cried, holding up her ten thin fingers. "Do you want me to scream?"

"But, Miss Inness ——" he began.

She smiled grimly.

"You have ten seconds," she said. "Be a man! Refuse to be bullied the way you have always bullied me. Don't sell your self-respect for thirty thousand dollars the way I have sold mine for half that price. That's my advice. But at the end of ten seconds I will scream for help unless ——"

"Unless ——?"

"Unless you put out that powerful face of yours and let me slap it."

The lawyer looked about the room.

"This is between you and me," he suggested.

"You have five seconds, Mr. Valingworth."

"It is mad."

"I hunger for it. You have two seconds."

He thrust his face forward.

He winced.

He closed his eyes.

Miss Inness uttered a little cry of joy—a forerunner of a pleased little laugh.

"That is all," she said quietly. "The drama is over. Open your eyes. I've known you all along—you and men like you. I was sure I was right. There's the money. It's yours. Go now! Don't stop to talk. Go!"

Valingworth reached for the bag and the sheet of paper, but did not raise his eyes to meet her sneering face. As he went out the door he did not look like a man of power.

Paymaster stepped down from the wardrobe. "I suppose now you are satisfied!" he said sourly.

"Yes," said Mary, "and now I am going to gather together my things and leave this hotel. What about you?"

Paymaster did not answer. He was listening to the retreating footsteps of the man with the bag, and he felt in his back pocket for the little pouch of lead shot with which men are assaulted from behind.

Miss Inness smiled at him sweetly.

"You won't forget me," she said as he walked toward the door.

"Why do you ask?" growled Paymaster.

"I didn't ask. I said you wouldn't."

Just before Paymaster slid out into the hall he received the impression that the stenographer was laughing at him.

He went quickly to his own room, pulled on his shoes, ran softly to the stairs, listened and then went down. He saw the lawyer, still holding the bag close under his arm, go out by the front door.

The office, with its tiled floor and ticking clock and sleepy clerk and empty wall chairs, was still. Paymaster crossed it without disturbing its peace and slipped out into the swirling snow.

His footsteps, following the imprints of the lawyer's progress toward the garage, made no clatter. He went one block. Then there was a turn. In the side street the shadows were heavy; even the white snow seemed dark there. He increased his pace, running softly on the balls of his feet. The man ahead did not hear any sound other than the wail of the wind, or see much besides the blinding dance of the flakes.

Paymaster, having reached the heels of his victim, swung the pouch of lead shot with precision. It settled without noise across the back of Mr. Valingworth's thick neck and delivered to the lawyer a new experience in the obliteration of sensations. The unconscious body pitched forward; the bag fell at Paymaster's feet.

There was no time to be lost.

The adventurer knew that his best chances were in leaving the city. Accordingly he rolled the limp body out of its overcoat, and, putting the stolen garment on, hid his prize beneath. Because later the police, having no other description, would pick up their clews by it, he recognized the folly of being seen in possession of the bag by any one. He caught an electric car.

"Cold night," he said to the conductor.

At the railroad station luck was still with him; an express from the north was at the moment standing under the train-shed, engine panting.

As the coach pulled out he folded the bag up in his new coat and tossed it carelessly into the rack above him.

"May have some snowplows out before morning," he suggested to the brakeman.

Half an hour later he was in the good old familiar metropolis once more. He teased his anticipation; he even stopped at an all-night lunchroom to drink coffee from a thick china mug. It was late when he crept up the stairs of his lodging house and shut his door behind him.

He opened a jackknife and slit the bag across one side.

"I always did have luck with women!" he said aloud.

He turned the thing inside out. A closely stuffed wad of blue mercerized cotton wrapped around a piece of gaspipe fell on the table. That was all. He shook the folds out of the cloth. He smiled grimly when he saw what was in his hands. It was a woman's petticoat.

START A MILLINERY BUSINESS
For $50.00 or $100.00

HERE IS YOUR CHANCE FOR A PAYING BUSINESS OF YOUR OWN

MAKE YOURSELF INDEPENDENT

Now is the time to establish yourself in a paying, pleasant business of your own. A small investment is all that is necessary to open a retail millinery store or department. Thousands are now enjoying good incomes that we have started in this way.

With one of our special complete stocks of ready Trimmed Millinery, you can open a store or department without the services of a trimmer. These stocks are made up of the very latest city styles. Every hat is a positive success and will sell quickly at a large profit, thereby assuring your success.

We conduct one of the largest wholesale and manufacturing Millinery concerns in the world, producing over 7,000 Trimmed Hats daily, and the most important department is selling Millinery stocks.

THERE IS MONEY IN MILLINERY

No other legitimate business offers the same opportunity. In few other businesses can you invest so little and draw out so much. Many of our successful customers, not wanting to start a separate store, rented space in a store where millinery was not handled, or used a room in their own home.

WE PROTECT MILLINERY DEALERS BY REFUSING TO SELL CONSUMERS

If you can invest $50 or $100 now you should be able to turn over your investment many times during the season. After you have opened your store we send you catalogs, style books, etc., thus keeping you always informed on the best and latest correct styles that are in popular demand. By using our catalog you can, without any previous experience, re-order such goods as you need, in as small a quantity as desired, thereby keeping your stock always new, up-to-date and complete. You can succeed in this business without previous experience and with less effort than in any other line.

WRITE TODAY for Itemized list No. 331. It tells just what our Spring and Summer Millinery stocks consist of, what they will sell for, just how much profit you can make, also full particulars how best to start a successful, paying Retail Millinery business. Write—right now. If in our city call on us.

DRAMA A LEAGUE FROM BROADWAY

(Continued from Page 19)

or drama, but usually drama with a tragic motif in it; and each of them, without exception, gathers his material from the life round him. These Yiddish playwrights do not find it necessary to hunt far afield for their types and their plots and their stories. They draw them from the East Side itself, from the streets and synagogues, the homes and shops, sensing as though by intuition that perhaps nowhere else are the reeking, raw contrasts of life so abruptly and brutally defined—aspiration and desperation, bounding hope and bottomless despair, abject poverty and sudden new affluence.

The lesson which Gordin, the pathfinder, taught has been well learned by these his disciples; and yet their creative work is marked by frequent revolutionary changes matching a city where changes come faster than in any part of metropolitan America. For example, those early pioneers in the field, the strolling, starveling mummers who played in the dingy halls in the slums of Cherry Hill twenty-five years ago, played Old World pieces exclusively. Gordin, coming along a little later, brought forward the Jew's life in all its realities as he lived it in Russia or Galicia or Poland, using it often as a foil for pictures of the Jew in America, struggling with a strange and new environment. He secured his best effects by representing the inevitable clash between the old type of Jew, intent on preserving unimpaired the faith and the traditions of his fathers, and the newer, younger type, filled with a burning desire to adapt himself in all things to newer ideals and newer standards. More lately still, there has been evolved a type of play dealing with the problems which confront the Americanized Jew; and in these the portrayal of the old patriarchal system is either eliminated altogether or else pushed far into the background.

The Popularity of English Plays

Also, with the gradual upbuilding of this Yiddish drama, there has come into existence a small but fast-growing class of Intellectuals, as the Yiddish papers call them—men and women students and thinkers who clamor for the naturalistic and the realistic expression of dramatic forms as distinguished from the *Moyahas*—gallery gods would be the English equivalent—who want idealistic plays, with plenty of color and exaggeration and what is called the popular note in them. It is due in a large measure to the demands of the student body of younger people—college and high-school graduates, teachers, professional men, most of them are—that Yiddish adaptations of the plays of Sudermann and Hauptmann, Ibsen and Tolstoi, have been seen on the East Side before Broadway audiences had a chance to judge of their merits in English translations. The advanced cult also was largely responsible for the fact that certain notable Broadway successes that dealt with the big conditions of life in the country—Klein's The Lion and the Mouse, to name a notable example—have recently been acted in Yiddish for Yiddish-speaking audiences; acted remarkably well, too, by all accounts, and through the talent and intelligence of the actors made to carry their messages home to thousands who, by reason of the differences in tongue, speech and manner of life, would get to know them in no other fashion.

The appearance of a new and much-heralded star from the other side—most of them being importations in these days—or the first performance of a new drama by a playwright who has shown promise, is an event of tremendous importance to hundreds of thousands of persons; indeed, outsiders would find it hard to grasp the significance and the scope of the interest that is thereby aroused. Among the people such a thing becomes the main topic for discussion and in their papers the critics will devote columns and sometimes pages to the new play or the new player, as the case may be—analyzing, interpreting, expounding, expanding if it be a play; criticizing, comparing, even advising and admonishing, if it be a player.

Literally a wave of vivid temperamental excitement swept the whole East Side a few weeks ago when the announcement was made that Boris Thomasheffsky had engaged for his stock company Rudolph Shildkraut, heralded as the greatest Jewish

Bachelors' Friend
TRADE MARK
HOSIERY

All women folks can remember the time when darning day came as regularly as washday and was about as hard. Different to-day. And the reason is easy to know.

However hard on stockings the men folks may be—these stockings wear. Wear because they are strong all over, but strongest in the wear spots that every woman knows. See this reinforced heel. That alone saves hours of darning.

These features combine to give Bachelors' Friend Hose their popularity: Combed Sea Island Cotton only—yarn that costs $1.40 a pound used in reinforcing—French welt, high reinforced heel—reinforcing does not stop—toe looped on two-thread looping machines—silky, elastic throughout.

You need these sock features. Bachelors' Friend are sold by leading jobbers and retailers. We do not sell direct. But if no dealer in your town can supply you, we will see that you have an introductory lot, if you send us money order covering the amount. Charges prepaid. Guaranteed to wear six months

Three grades:

actor alive, and was paying Shildkraut a salary unprecedented in the record of theatrical payrolls of the East Side in order to bring him down from the German theater in Irving Place, where he played in German, to Thomasheffsky's People's Theatér, where he is now playing in Yiddish. All that the Yiddish papers have printed about this man—and they have printed solid column upon solid column—is eagerly read by Jews of all ages and conditions, and as eagerly discussed. His work is contrasted daily with the work of Jewish actors of an older school; and in the East Side coffee saloons and among the pushcarts the adherents of past favorites quarrel with those who favor the methods of the newcomer. In an only slightly less degree a similar furor was created during the fall by the coming of a new woman actress who, so her sponsors predicted, would take the place that had been held for years by an older woman, the veteran tragedy queen of the Yiddish stage. This vividness of appreciation is fostered by the Yiddish dramatic writers.

"We try to stimulate right thinking on dramatic subjects among our readers—we regard it as the highest mission we could have," said one of these critics when I talked with him at his office—"because, in educating them, we educate ourselves—and you know how greedy the Jew is for education.

"In its essentials," he said, "the Yiddish drama, next to the public schools, is the biggest force among us down here on the East Side. It has grown so fast and so rapidly that it can no longer be summed up in a word or a phrase; but if I were set to the task of trying to tell what it mainly and mostly is I should say that, like the life which it reflects, it is a thing of glaring contradictions and paradoxes. It is absolutely a thing of America, for it had its birth and its development here; yet it is rendered in a jargon, which is not, strictly speaking, a language at all, by foreign-born actors to audiences that are ninety per cent foreign-born, and it deals with our problems and our puzzles, our successes and our failures, about which the masses of our native-born fellow Americans know nothing at all."

Audiences Loyal to the Last

"Then here is another paradox: In our plays we are constantly striving for new lines of thought and new issues; but we love our old actors with an affection which you, perhaps, could not understand and which I could not express in words. Long after an actor or an actress has grown old and wrinkled, he or she, in response to an irrepressible demand, will still be playing the juvenile rôles upon which his or her reputation was originally founded. The sentiment lives after the physical powers and the physical attractions of the individual have faded almost to the vanishing point. We welcome new favorites, but we don't forget the old ones. Mogulesco is an old man now—he played Yiddish farces twenty years ago, before there was a Yiddish theater in New York; but when he plays now, as he occasionally does, thousands go to see him and to cheer for him and to laugh at him and to cry with him, for he was the greatest Yiddish comedian our stage ever produced—and still is, we think.

"Therein—in our loyalty to our actors—we differ, I think, from the rest of New York. There is another point of difference that I have noticed. When I go, as I occasionally do, out of the Ghetto and into the uptown district to see a popular play done in English, I notice in the audience few men who seem to me to be workingmen—men who toil with their hands and who presumably must make a sacrifice in other directions to be able to spend a night at a theater; but among us this is not the case. Fifty per cent at least of our audience is made up of abjectly poor working people—men and women who must stint and deny themselves, even go hungry, perhaps, to scrape together the quarter or half dollar that pays for a seat; and among this class our most capable and discerning students of the drama are to be found. Maybe this is because we have more poor people and more working people in proportion to our population than any other quarter of the city. Maybe it is because the oriental love of amusement and the craving for light and color and music is a part of the Jewish nature. And maybe it is because of the mental hunger of the Jew to know—to know—to know!"

Special Telescope Offer

Over 3½ ft. Long

The Sign of Quality

You can see objects miles away. Vacationists can multiply their joys with it, for it brings all the country around right up to them. You can watch incoming or passing ships. And for farmers and ranchmen it is absolutely a necessity, for they can keep their eyes on their cattle, horses or men when far out in the fields.

For studying celestial phenomena, particularly the recurring sun spots, this solar eyepiece will allow a careful study of Old Sol and solar eclipses. This attachment *alone* is worth *many* times the entire price to any one interested in this science. Free with the

EXCELSIOR TELESCOPE

Eyepiece of telescope can be used as a microscope to detect insects or germs in plants or vegetables.

The Excelsior Telescope is made by one of the largest manufacturers in Europe. The lenses are carefully ground and correctly adjusted by experts. It is brass bound, and besides the solar eyepiece, has a brass dust cover at the end. Closed the telescope is 12 inches, and has a circumference of 5¾ inches. It opens over 3½ feet long in five sections.

Telescopes of this size usually cost $5.00 to $8.00—even without a solar eyepiece. For $1.98 you can now have a telescope with these advantages.

THE LIGHTED WAY

(Continued from Page 23)

cause of it might have been—a misunderstanding with his wife, perhaps, or a certain amount of weariness entailed by his new manner of living. At all events something *had* happened to set matters right. Mr. Jarvis was quite fluent upon the subject, and every one started his day's work with renewed energy.

Mr. Weatherley's energy did not evaporate with the departure of his confidential clerk. He motioned Arnold to a chair, and for another three-quarters of an hour he dictated replies to the letters he had sorted out for personal supervision. When at last this was done he leaned back in his seat, fetched out a box of cigars, carefully selected one and lighted it.

"Now you had better get over to your corner and grind that lot out, Chetwode," he said pleasantly. "How are you getting on with the typing, eh?"

"I am getting quicker," Arnold replied, still wondering whether the events of last week had not been a dream. "I think, with a little more practice, I shall be able to go quite fast enough."

"Just so," his employer assented. "By-the-by, is it my fancy or were you reading the newspaper when I came in? No time for newspapers, you know, after nine o'clock."

Arnold rose to his feet. This was more than he could bear!

"I am sorry if I seemed inattentive, sir," he said. "Under the circumstances I could not help dwelling a little over this paragraph. Perhaps you will look at it yourself, sir?"

He brought it over to the desk. Mr. Weatherley put on his spectacles with great care and drew the paper toward him.

"Hm!" he ejaculated. "My eyesight isn't so good as it was, Chetwode, and your beastly ha'penny papers have such small print. Read it out to me—read it out to me while I smoke."

He leaned back in his padded chair, his hands folded in front of him, his cigar in the corner of his mouth. Arnold smoothed the paper out and read:

"TERRIBLE DEATH OF AN UNKNOWN MAN

"FOUND DEAD IN A TAXICAB

"Early this morning a taxicab driver entered the police station at Finchley Road North and alleged that a passenger whom he had picked up some short time before was dead. Inspector Challis, who was on duty at the time, hastened out to the vehicle and found that the driver's statement was apparently true. The deceased was carried into the police station and a doctor was sent for. The chauffeur's statement was that about midnight he was hailed in the Grove End Road, Hampstead, by four men, one of whom, evidently the deceased, he imagined to be the worse for drink. Two of them entered the taxicab and one of the others directed him to drive to Finchley. After some distance, however, the driver happened to glance inside and saw that only one of his passengers was there. He at once stopped the vehicle, looked in at the window, and, finding that the man was unconscious, drove on to the police station.

"Later information seems to point to foul play, and there is no doubt whatever that an outrage has been committed. There was a wound upon the deceased's forehead which the doctor pronounces as the cause of death, and which had evidently been dealt within the last hour or so with some blunt instrument. The taxicab driver has been detained and a full description of the murdered man's companions has been issued to the police. It is understood that nothing was found upon the deceased likely to help toward his identification."

Arnold looked up as he finished. Mr. Weatherley was still smoking. He seemed, indeed, very little disturbed.

"A sensational story that, Chetwode," he remarked. "You're not supposing, are you, that it was the same man who broke into my house last night?"

"I know that it was, sir," Arnold replied.

"You know that it was," Mr. Weatherley repeated slowly. "Come, what do you mean by that?"

"I mean that after I left your house last night, sir," Arnold explained, "I realized the impossibility of that man having been carried down your drive and out into the road, with a policeman on duty directly opposite and a cab-stand within a few yards. I happened to remember that there was an empty house next door and it struck me that it might be worth while to examine the premises."

Mr. Weatherley withdrew the cigar from his mouth.

"You did that, eh?"

"I did," Arnold admitted. "I made my way to the back and I found a light in the room that presumably had been the kitchen. From a chink in the boarded-up window I saw several men in the room, including the man we discovered in your wife's boudoir, who had been spirited away. He was lying motionless upon the table and one of the others was apparently trying to restore him. When they found that it was useless they took him off with them by the back way into Grove Lane. I saw two of them enter a taxicab and the other two make off."

"And what did you do then?" Mr. Weatherley asked.

"I went and told Count Sabatini what I had seen," Arnold replied.

"And after that?"

"I went home."

"You told no one but Count Sabatini?" Mr. Weatherley persisted.

"No one," Arnold answered. "I bought a paper on my way to business this morning and read what I have just read to you."

"You haven't been rushing about ringing up to give information, or anything of that sort?"

"I have done nothing," Arnold asserted. "I waited to lay the matter before you."

Mr. Weatherley knocked the ash from his cigar and, discovering that it was out, carefully relit it.

"Chetwode," he said, "I have advanced you from something a little better than an office boy very rapidly, because it seemed to me that you had qualities. The time has arrived to test them. The secret of success in life is minding your own business. I am going to ask you to mind your own business in this matter."

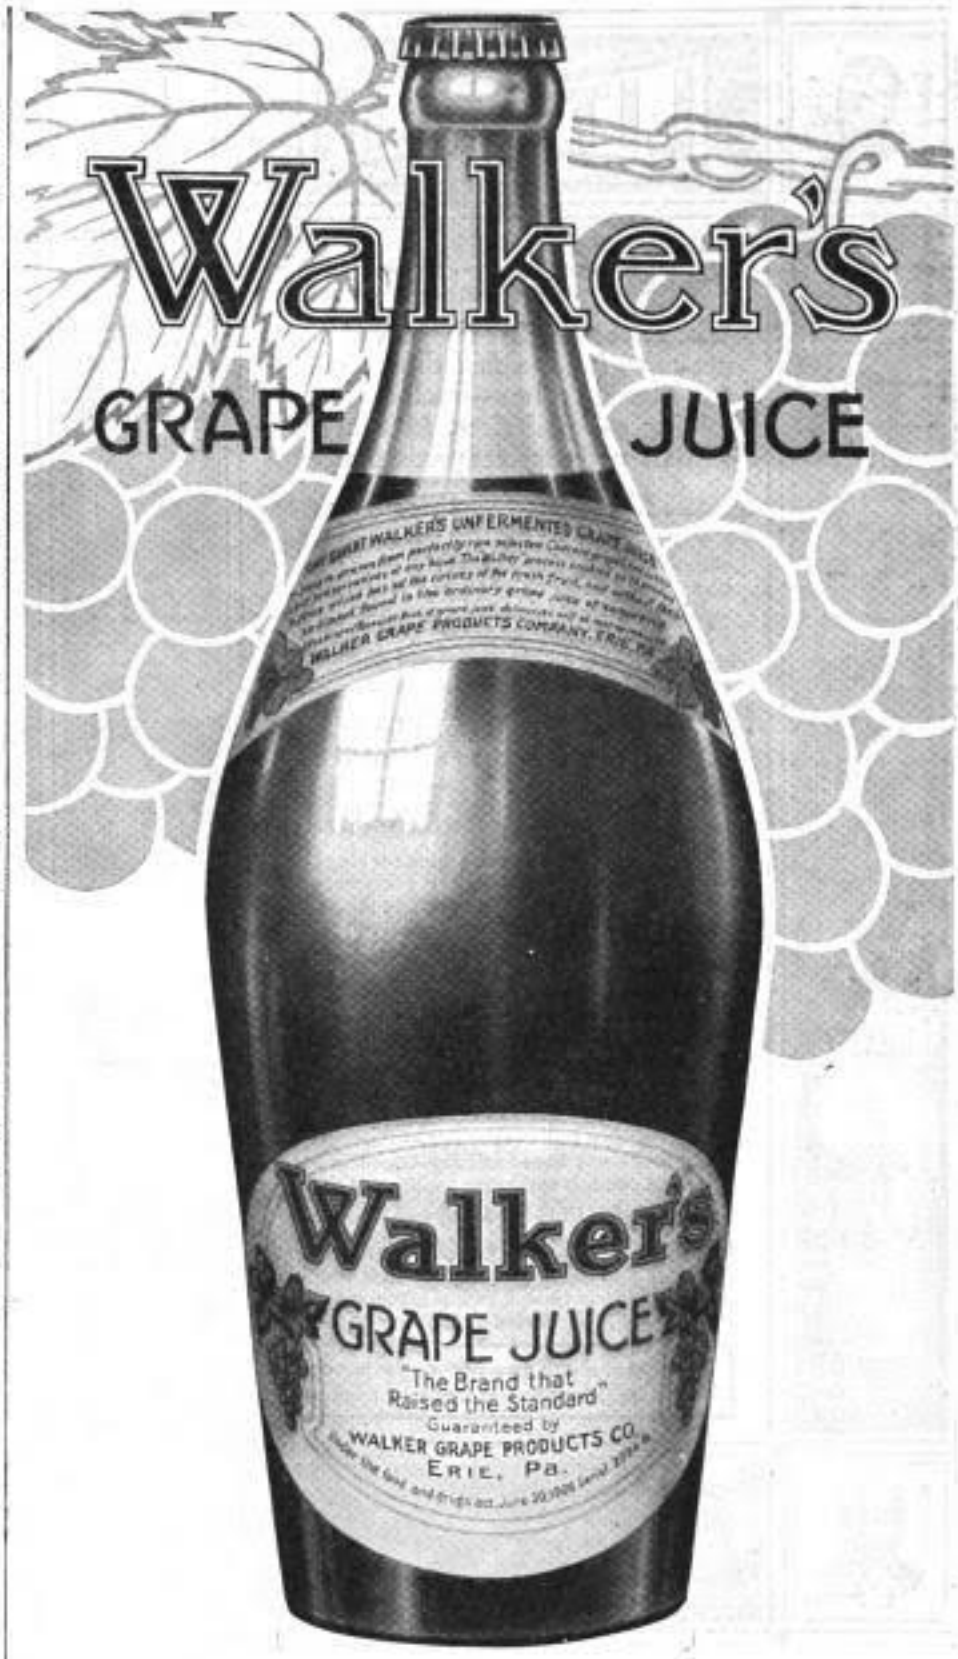
"You mean," Arnold asked, "that you do not wish me to give any information, to say anything about last night?"

"I do not wish my name or the name of my wife or the name of my house to be associated with this affair at all," Mr. Weatherley replied. "Mrs. Weatherley would be very much upset and it is, besides, entirely unnecessary."

Arnold hesitated for a moment.

"It is a serious matter, sir, if you will permit me to say so," he said slowly. "The man was murdered—that seems to be clear—and it certainly seems that he was murdered in your house."

Mr. Weatherley shook his head.



"That is not my impression," he declared. "I admit that at present the mystery is insolvable. The man was found dead in Mrs. Weatherley's boudoir, but there was no one in the house or apparently within reach who was either likely to have committed such a crime or even could possibly have done so. On the other hand, there are this man's companions, desperate fellows, no doubt, within fifty yards all the time. My own impression is that he was killed first and then placed in the spot where he was found. However that may be, I don't want my house made the rendezvous of all the interviewers and sightseers in the neighborhood. You and I will keep our counsel, Arnold Chetwode."

"Might I ask," Arnold said, "whether you knew this man—whether you had ever come into contact with him or seen him before?"

"Certainly not," Mr. Weatherley replied. "What business could I possibly have with a person of that description? He seems to have been, if not a habitual criminal himself, at least an associate of criminals, and he was without doubt a foreigner. Between you and me, Chetwode, I haven't the least doubt that the fellow was one of a gang of the worst class of burglars. Wherever he got that blow from, it was probably no more than he deserved."

"But, Mr. Weatherley," Arnold protested, "don't you think that you ought to have an investigation among your household?"

"My dear young fellow," Mr. Weatherley answered testily, "I keep no menservants at all except old Groves, who's as

Your Quality Guarantee—
The Walker "Ten-pin" Bottle

WALKER'S Grape Juice is made in the Chautauqua Grape Belt—where the sweetest, juiciest Concord grapes are grown. An extra and exclusive clarifying process is employed to extract the excess tannin, tartar and vegetable fibre, which substances, pressed from the skins, seeds and stems, detract from the purity and richness of ordinary grape juice. Walker's is then drawn into new sterilized "Ten-pin" bottles and hermetically sealed. The most healthful food-drink in the world.

There are as many grades of grape juice as there are of fruit. Learn to discriminate—insist on Walker's "Ten-pin" bottles and give your reasons to your dealer.

Sold throughout the United States and Canada by best Grocers, Druggists and Confectioners. The Walker Book of novel recipes and social dainties sent free on receipt of your dealer's name. If he can't supply you, send us $3 for trial dozen pints express prepaid east of the Rocky Mountains. Made only by the

Rubero SANITARY TOOTH BRUSH

Has a Velvet Touch

and is a boon to sensitive teeth. With it you can give them the thorough brushing they need without pain. This pure Para rubber brush keeps your gums healthy, prevents erosion and formation of tartar.

This illustration is nearly double the actual size. These rubber bristles do not shed nor soften. Their firm and clinging touch is refreshing; rubs the dirt off, not in. They are pointed, edged and welded together and remove all secretions, making the teeth white and glossy. Use them for awhile and you'll never go back to animals' bristles.

Rubero

outwears other brushes and is easily cleansed—frequent sterilizing does not injure it.

We'll send you one by mail if your druggist cannot supply you—45c, no postal charges.

BOWERS RUBBER WORKS, San Francisco, Cal.

meek-spirited as a baby, and a footman my wife has just engaged, who was out for the evening. A blow such as the paper describes was certainly never struck by a woman, and there was just as certainly no other man in my house. There is nothing to inquire about. As a matter of fact, I am not curious. The man is dead and there's an end of it."

"You will bear in mind, sir," Arnold said, "that if it comes to light afterward, as it very probably may, that the man was first discovered in Mrs. Weatherley's boudoir, the scandal and gossip will be a great deal worse than if you came forward and told the whole truth now."

"I take my risk of that," Mr. Weatherley replied coolly. "There isn't a soul except Groves who saw him, and Groves is my man. Now be so good as to get on with those letters, Chetwode, and consider the incident closed."

Arnold withdrew to his typewriter and commenced his task. The day had commenced with a new surprise to him. The nervous, shattered Mr. Weatherley of yesterday was gone. After a happening in his house that might well have had a serious effect upon him he seemed not only unmoved, but absolutely restored to cheerfulness. He was reading the paper for himself now, and the room was rapidly becoming full of tobacco smoke. Arnold spelt out his letters one by one until the last was finished. Then he took them over to his employer to sign. One by one Mr. Weatherley read them through, made an alteration here and there, then signed them with his large, sprawling hand. Just as he had finished the last the telephone by his side rang. He took the receiver and placed it to his ear. Arnold waited until he had finished. Mr. Weatherley himself said little. He seemed to be listening. Toward the end he nodded slightly.

"Yes, I quite understand," he said, "quite. That was entirely my own opinion. No case at all, you say? Good!"

He replaced the receiver and leaned back in his chair. For the first time when he spoke his voice was a little hoarse.

"Chetwode," he said, "ring up my house—16, Post-Office, Hampstead. Ask Groves to tell his mistress that I thought she might be interested to hear that Mr. Starling will be discharged this morning. The police are abandoning the case against him at present for lack of evidence."

Arnold stood for a moment quite still. Then he took up the receiver and obeyed his orders. Groves' voice was as quiet and respectful as ever. He departed with the message and Arnold rang off. Then he turned to Mr. Weatherley.

"Have you any objection to my ringing up some one else and telling him too?" he asked.

Mr. Weatherley looked at him.

"You are like all of them," he remarked. "I suppose you think he's a sort of demi-god. I never knew a young man yet that he couldn't twist round his little finger. You want to ring up Count Sabatini, I suppose?"

"I should like to," Arnold admitted.

"Very well, go on," Mr. Weatherley grumbled. "Let him know. Perhaps it will be as well."

Arnold took from his pocket the note that Sabatini had written to him and that contained his telephone number. Then he rang up. The call was answered by his valet.

"In one moment, sir," he said. "The telephone rings in his Excellency's bedchamber. He will speak to you himself."

A minute or two passed. Then the slow, musical voice of Sabatini intervened.

"Who is that speaking?"

"It is I—Arnold Chetwode," Arnold answered. "I am speaking from the office in the city. I heard some news a few minutes ago that I thought might interest you."

"Good!" Sabatini replied, stifling what seemed to be a yawn. "You have awakened me from a long sleep, so let your news be good, my young friend."

"Mr. Weatherley hears from a solicitor at Bow Street that the police have abandoned the charge against Mr. Starling," Arnold announced. "He will be set at liberty as soon as the court opens."

There was a moment's silence. It was as though the person at the other end had gone away.

"Did you hear?" Arnold asked.

"Yes, I heard," Sabatini answered. "I am very much obliged to you for ringing me up, my young friend. I quite expected to hear your news during the day. No one would really suppose that a respectable man like Starling would be guilty of such a ridiculous action. However, it is pleasant to know. I thank you. I take my coffee and rolls this morning with more appetite."

Arnold set down the telephone. Mr. Weatherley had risen to his feet and walked as far as the window. On his way back to his place he looked at the little safe that he had made over to his secretary.

"You've got my papers there all right, Chetwode?" he asked.

"Certainly, sir," Arnold answered. "I hope, however, we may never need to use them."

Mr. Weatherley smiled. He was busy choosing another cigar.

XIX

THEY sat on the edge of the wood and a west wind made music for them overhead among the fir trees. From their feet a clover-field sloped steeply to a honeysuckle-wreathed hedge. Beyond that was meadowland, riven by the curving stream that stretched like a thread of silver to the blue, hazy distance. Arnold laughed softly with the pleasure of it, but the wonder kept Ruth tongue-tied.

"I feel," she murmured, "as though I were in a theater for the first time. Everything is strange."

"It is the theater of Nature," Arnold replied. "If you close your eyes and listen you can hear the orchestra. There is a lark singing above my head and a thrush somewhere back in the wood there."

"And see, in the distance there are houses," Ruth continued softly. "Just fancy, Arnold, people if they had no work to do could live here, could live always out of sight of the hideous, smoky city, out of hearing of its thousand discords."

He smiled.

"There are a great many who feel like that," he said, his eyes fixed upon the horizon, "and then as the days go by they find that there is something missing. The city of a thousand discords generally has one clear cry, Ruth."

"For you perhaps," she answered, "because you are young and because you are ambitious. But for me who lie on my back all day long, think of the glory of this!"

Arnold sat slowly up.

"Upon my word!" he exclaimed. "Why not? Why shouldn't you stay in the country for the summer? I hate London too. There are cheap tickets and bicycles and all sorts of things. I wonder whether we couldn't manage it."

She said nothing. His thoughts were busy with the practical side of it. There was an opportunity here, too, to prepare her for what he felt sure was inevitable.

"You know, Ruth," he said, "I don't wish to say anything against Isaac and I don't want to make you uneasy, but you know as well as I do that he has a strange maggot in his brain. When I first heard him talk I thought of him as a sort of fanatic. It seems to me that he has changed. I am not sure that such changes as have taken place in him lately have not been for the worse."

"Tell me what you mean," she begged.

"I mean," he continued, "that Isaac, who perhaps in himself may be incapable of harm, might be an easy prey to those who worked upon his wild ideas. Hasn't it struck you that for the last few days ——"

She clutched at his hand and stopped him.

"Don't!" she implored. "These last few days have been horrible. Isaac has not left his room except to creep out sometimes into mine. He keeps his door locked. What he does I don't know, but if he hears a step on the stairs he slinks away and his face is like the face of a hunted wolf. Arnold, do you think that he has been getting into trouble?"

"I am afraid," Arnold said regretfully, "that it is not impossible. Tell me, Ruth, you are very fond of him, aren't you?"

"He was my mother's brother—the only relative I have in the world," she answered. "What could I do without him?"

"He doesn't seem to want you particularly, just now at any rate," Arnold said. "I don't see why we shouldn't take rooms out at one of these little villages. I could go backward and forward quite easily. You'd like it, wouldn't you, Ruth? Fancy lying in a low, comfortable chair and looking up at the blue sky and listening to the birds and the humming of bees. The hours would slip by."

"I should love it," she murmured.

Digitized by Google

"Then why not?" he cried. "We'll stop at the next village we come to and make inquiries."

She laid her hand softly upon his.

"Arnold, dear," she begged, "it sounds very delightful, and yet can't you see it is impossible?"

He turned and looked at her—looked at her, perhaps, with new eyes. She was stretched almost at full length upon the grass, her head, which had been supported by her clasped hands, now turned toward *him*. As she lay there, with her stick out of sight, her lips a little parted, her eyes soft with the sunlight, a faint touch of color *in* her cheeks, he suddenly realized the significance of her words. Her bosom was rising and falling quickly. Her plain black dress, simply made though it was, showed no defect of figure. Her throat was soft and white. The curve of her body was even graceful. The revelation of these things came as a shock to Arnold, yet it was curious that he found a certain pleasure in it.

"I had forgotten, Ruth," he said slowly, "but does it matter? You have no one in the world but Isaac, and I have no one in the world at all. Don't you think we can afford to do what seems sensible?"

Her eyes never left his face. She made no sign either of assent or dissent.

"Arnold," she declared, "it is true that I am an orphan. I have scarcely a relative in the world. But what you say about yourself is hard to believe. I have never asked you questions because it is not my business, but there are many little things by which one tells. I think that somewhere you have belonging to you a family with a name, even if for any reason you do not choose just now to claim it."

He made no direct reply. He watched for some moments a white-sailed boat come tacking down the narrow strip of river.

"I am my own master, Ruth," he said. "I have no one else to please or to consider. I understand what you have just told me, but if I gave you my word that I would try and be to you what Isaac might have been if he had not been led away by these strange ideas, wouldn't you trust me, Ruth?"

"It isn't that!" she exclaimed. "Trust you? Why, you know that I would! It isn't that I mind for myself either what people would say—or anything, but I am thinking of your new friends, of your future. If they knew that you were living down in the country with a girl, even though she were an invalid, who was no relation at all, don't you think that it might make a difference?"

"Of course not," he replied, "and, in any case, what should I care? It would be the making of you, Ruth. You would be able to pick up your strength, so that when our money-box is full you would be able to have that operation and never dare to call yourself an invalid again."

She half closed her eyes. The spell of summer was in the air, the spell of life was stirring slowly in her frozen blood.

"Ah, Arnold," she murmured, "you must not talk like that. It makes me feel so much like yielding. Somehow the dreams out here seem even more wonderful than the visions that come floating up the river. There's more life here. Don't you feel it? Something seems to creep into your heart, into your pulses, and tell you what life is."

He made no answer. The world of the last few throbbing weeks seemed far enough away with him too. He picked a handful of clover and thrust it into the bosom of her gown. Then he rose reluctantly to his feet and held out his hands.

"I think," he said, "that the great gates of freedom must be somewhere out here, but just now one is forced to remember that we are slaves."

He drew her to her feet, placed the stick in her hand and supported her other arm. They walked for a step or two down the narrow path that led through the clover-field to the lane below. Then with a little laugh he caught her up in his arms.

"It will be quicker if I carry you, Ruth," he proposed. "The weeds twine their way all the time round your stick."

She linked her arms round his neck; her cheek touched his for a moment and he was surprised to find it as hot as fire. He stepped out bravely enough, but with every step it seemed to him that she was growing heavier. Her hands were still tightly linked round his neck, but her limbs were inert. She seemed to be falling away. He held her tighter; his breath began to grow shorter. The perfume of the clover, fragrant and delicate, grew stronger with every step he took. He felt that somehow that walk along the narrow path was carving its way into his life.

"Dear Ruth!" he whispered.

She went very pale and very soon afterward she insisted upon being set down. They walked slowly to where the Weatherley car was waiting at the corner of the lane. Ruth began to talk nervously.

"It was charming of Mrs. Weatherley," she declared, "to lend you this car. Tell me how it happened, Arnie."

"I simply told her," he replied, "that I was going to take a friend out into the country who needed a little fresh air, and she insisted upon sending this car instead of letting me hire a taxicab. It was over the telephone and I couldn't refuse. Besides, Mr. Weatherley was in the office and he insisted upon it too. They only use this one in London, and I know that they are away somewhere for the week-end."

"It has been so delightful," Ruth murmured. "Now I am going to lie back among these beautiful cushions and just watch and think."

The car glided on along the country lane, passing through leafy hamlets, across a great, breezy moorland, from the top of which they could see the Thames winding its way into Oxfordshire, a sinuous belt of silver. Then they sped down into the lower country and Arnold looked at the milestones in some surprise.

"We don't seem to be getting any nearer to London," he remarked.

"It will come soon enough," she said, with a little shiver. "It will pass, this, like everything else."

They had dropped to the level now, and suddenly without warning the car swung through a low white gate up along an avenue of shrubs. Arnold leaned forward.

"Where are you taking us?" he asked the driver. "There is some mistake."

But there was no mistake. A turn of the wheel and the car was slowing down before the front of a long, ivy-colored house, with a lawn as smooth as velvet and beyond the soft murmur of the river. Ruth clutched at his arm.

"Arnold!" she exclaimed. "What does this mean? Who lives here?"

"I have no idea," he answered, "unless ——"

The windows in front of the house were all of them open and all of them level with the drive. Through the nearest of them at that moment stepped Fenella. She stood for a moment framed in the long French window hung with clematis—a wonderful picture even for Arnold, a revelation to Ruth—in her cool muslin frock open at the throat and held together by a brooch with a great green stone. She wore no hat and her wonderful hair seemed to have caught the sunlight in its meshes. Her eyebrows were a little raised; her expression was a little supercilious, faintly inquisitive. Already she had looked past Arnold. Her eyes were fixed upon the girl by his side.

"I began to think that you were lost," she said gayly. "Won't you present me to your friend, Arnold?"

(TO BE CONTINUED)

American Axle Features Are Patented Features

Your car is only as safe as its axles are dependable.

The marvel of the motor car—its ability to make with security upon the rough highway the speed with which an express train glides on steel rails—is all a matter of axle efficiency.

Or—to make the analysis complete—axle durability, axle silence *and* axle efficiency.

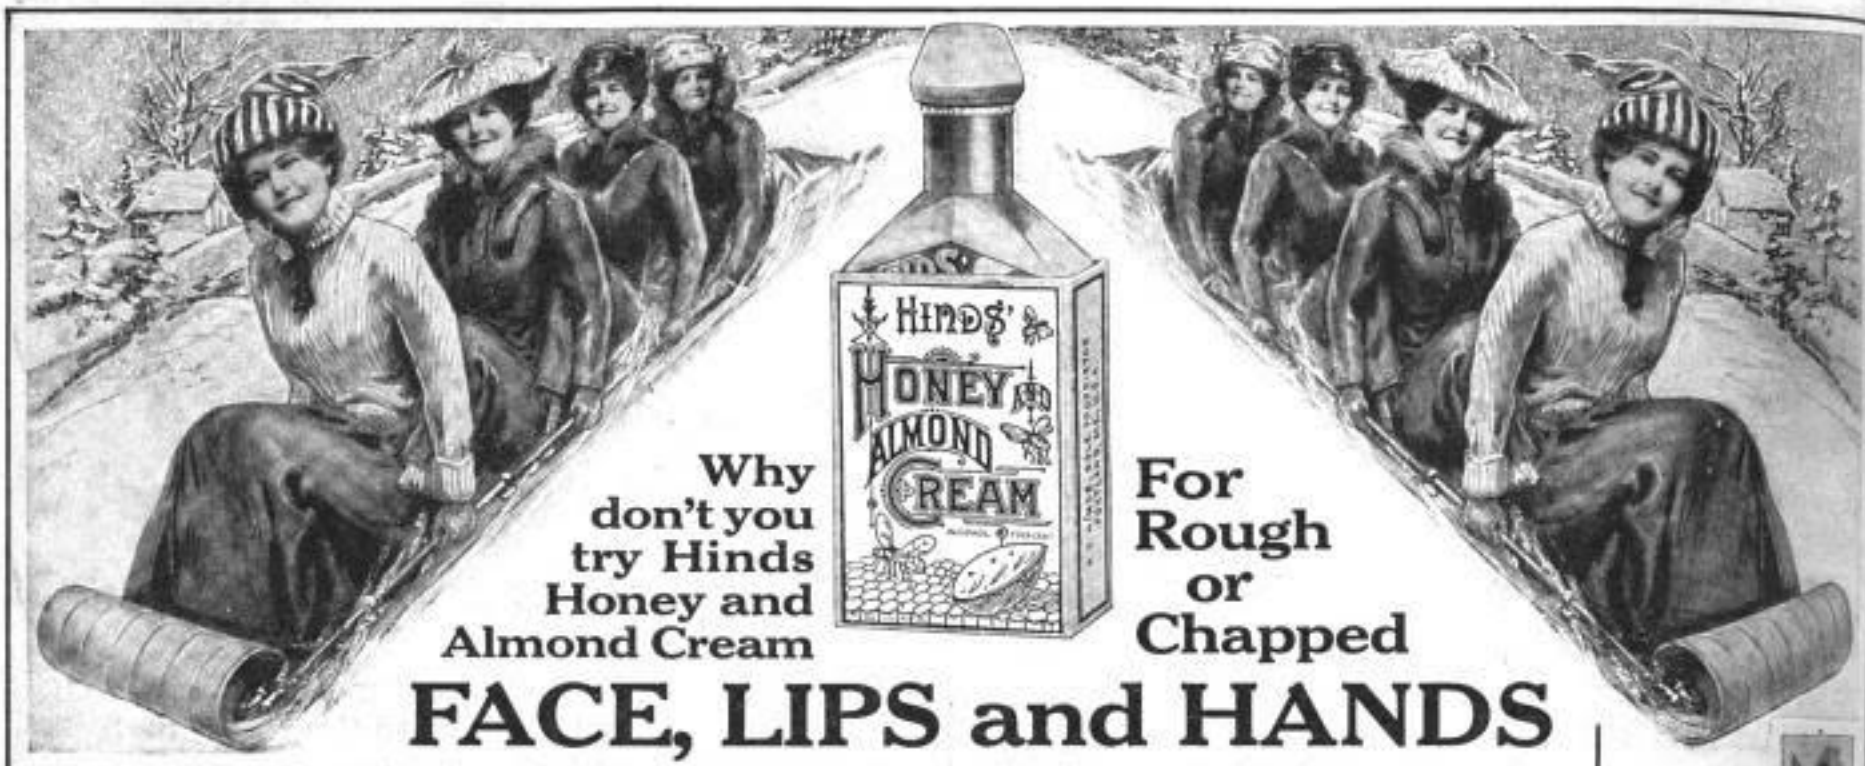
And these three requisites are dependent upon the correctness of the design; and as we explained in a previous announcement, upon the experience and the equipment engaged in its execution.

In the case of the American Axle, the essential features of construction by which these three all-important characteristics are secured—are patented features.

The Letters Patent conferred by the Government recognize in this case priorities of invention and meritorious contributions to the art, which date back to the inception of the industry.

Moreover, some of these patents are so fundamental and so inclusive in scope that they may be accepted as literal definitions for axle constructions embodying the three qualities—durability, silence and efficiency.

Every owner of a motor car owes it to himself to understand the supreme importance of his car's axles.



They must be depended upon to give him an excess of safety under any and all conditions.

You will be interested in knowing how thoroughly these vital questions have been solved in the construction of American Axles.

For your information we have prepared two booklets: "Front and Rear Axles" and "Axle Safety". Write for them today.

WORK AND PLAY

(Continued from Page 20)

It is a well-known fact that in those of our state prisons where the inmates are not allowed to work they often go mad. The idle rich are in a prison to which they have condemned themselves, and the specter of insanity looms before them. It is a well-known fact, also, that the most ghastly feature of our industrial civilization is that there are periods of business depression, when hosts of men are thrown out of work—men who have been working and who want to work, but who are suddenly forced out of employment by no fault of their own. They suffer bitterly; but these sufferings cease when times get better and there is again work for all who apply; and their misfortune, hard as it may be, is only temporary. The misfortune of the idle rich is permanent. And what makes their position the more pitiable is that they do not know the cause of their own misery. They do not recognize their responsibility to the body politic. They feel no obligation to their fellowman. They believe themselves to be free to do as they please—and they think it will please them to do nothing. It was the wise Huxley who once declared that it is when a man can do as he pleases that his troubles begin.

All this is obvious enough—it has been said more than once before, even if there is advantage in saying it again; but there is another aspect of our modern organization of society which has not received all the attention it deserves. This is the compulsory idleness imposed upon a large proportion of the women of the well-to-do, not only in Great Britain and on the continent of Europe, but also here in the United States. Until comparatively recently, the wife of the head of the house had abundant duties of her own which kept her busy. The Greek spouse and the Roman matron supervised the labor of the slaves and other servants; and so did the lady of the castle in medieval times. Less than a century ago the wife of the owner of a plantation in the South was charged with a host of incessant responsibilities; and, even if she no longer had to oversee the spinning and the weaving, she had to supervise the making up of the garments for all the slaves, as well as the curing of the bacon and the ham, the grinding of the corn, the baking of the bread and even the provision of the soap—then an article of domestic manufacture.

The Lilies of the Field

Today she—and her servants also—are likely to purchase most if not all of their clothes ready made; and the soap, the ham, the bacon, the flour, the bread, and even the cake and the pies, are likely to be bought from day to day as they are needed. The era of domestic manufacture has departed forever, and most of the things which it supplied are now produced and distributed by the factory system. In many ways this is an immense advance and it has lifted the burden of excessive and unceasing labor from the backs of countless women; but it has its disadvantages also—and in well-to-do circles it is slowly depriving the wife and mother of her proper share in the family work. She is ceasing to be as useful as she was; she is ceasing to be as necessary; and she bids fair to become, in a great many cases, only an ornament.

The modern man who toils feels it to be his duty to relieve the women of his family from work as far as he can. Especially is the American husband what is known in New England as "a good provider"; in fact, the ideal husband, in the eyes of many American wives, has come to be one who supplies his wife with all the money he can make, allowing her to do with it as she sees fit. And a great many American husbands attain this ideal; they are proud of the fact that they are able to release their wives and their daughters to luxurious idleness. Of course the immense majority of American women are still fortunately engaged in the most congenial work for any woman—they are engaged in bringing up their children, a task in which they are most likely to find happiness; but there is also a large and increasing minority to whom this privilege has been denied and who find themselves with no obvious duties and with all the former household tasks reduced to a minimum by the factory system. They have abundant leisure and abundant money, thanks to the devotion of their toiling husbands; and they are therefore at a

BEECH-NUT PEANUT BUTTER

IS simply *delicious!* For it's peanuts—the choicest that grow—roasted and salted and ground fine and put *quickly* into airless-sealed Beech-Nut glass jars, that keep all the fragrance and subtle taste until you use it.

And you find yourself using it in all kinds of ways—in sandwiches, on toast, crackers, biscuit—for lunches, 'tween meal "bites," in home-made fudge, etc. Children love it when they run in for something to eat after school.

Beech-Nut Peanut Butter is never sold in bulk; if it were, you'd never get its *flavor.* Always in airless-sealed jars. Get a 25c jar to taste today. But *insist* on Beech-Nut brand.

Made by the Beech-Nut Packing Company, Canajoharie, N. Y., who make delicious Beech-Nut Sliced Bacon.

Taste Beech-Nut Bacon *baked.* Send 15c for special Bacon Rack. Also free copy "Beech-Nut Breakfast News."

RICE'S MILL WHITE

"The Paint that Brims over with Sunlight"

Your plant needs this special, modern paint.

Paints that a few years ago were accepted as "good enough for the purpose" are to-day obsolete.

It is now known that cold water paints merely whiten for a time, then flake and scale. That ordinary white paint, made of lead and oil, quickly yellows. That zinc paint has not the highest covering power.

In other gloss white coatings than Rice's Mill White, varnish is used to give high gloss. Rice's Mill White contains no varnish—will not crack.

Our secret process of treating the vehicle gives Rice's Mill White qualities that no other paint can possess. An elastic surface that will not crack. Stays white longest. Utilizes every ray of light. Highest sanitary value. Flows evenly—laid with a four-inch brush. All the advantages of enamel at oil-paint cost. There are better results for You in Rice's Mill White.

If you have 20,000 or more square feet of ceiling and wall space to cover, write us on your letter head, and we will send you free a sample board showing the tile-like surface of Rice's Mill White, and our booklet, "A Clean Plant." Address Department I.

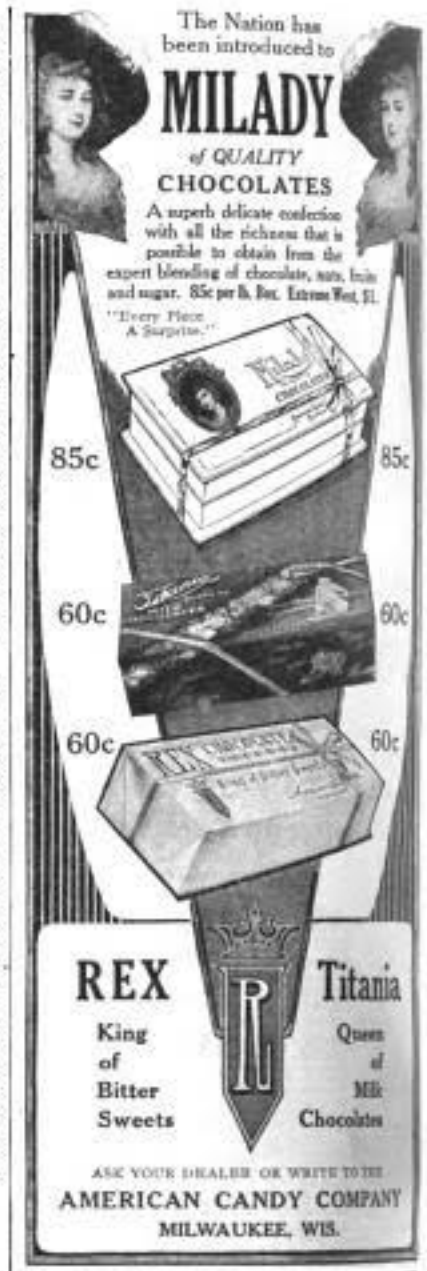
Retails for 5c, but looks better than a $10.00 gun to the small boy. We want live merchants to write for selling plan. Exclusive territory for quick replies.

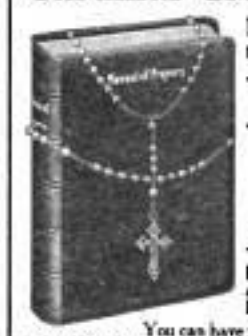
Pittsburgh Cap Pistol Co., Inc. Homestead, Pa.

loss to find employment. Their condition, strange as it may seem to make the suggestion, is not altogether unlike that of those inmates of our state prisons who are not allowed to work—and who often go mad in consequence of this deprivation. These women can do as they please; and, to paraphrase Huxley, it is when a woman can do as she pleases that her troubles begin.



The evolution of the social organization has taken from many a woman most of those useful activities which formerly kept her busy, and she is reduced to a freedom to do nothing—to a barren idleness often accompanied by superabundant luxury. It is no wonder she feels forced to fill out the emptiness of her existence by a feverish quest of pleasure—a quest which is foredoomed to failure. She has been deprived of her right to share in the useful work of the world. Robbed of this she has nothing to take its place; and it is not surprising that so many of these women are discontented and hysteric, petty, self-pitying and selfish. Nor can we hope that this is only a temporary condition. There is no reason to suppose that the social organization will ever revert to its earlier form.

Fortunately, as so often happens in life, the evil brings its own remedy. The social organization that has condemned so many women to luxurious idleness is very complex; and it has created a host of problems to be solved only by time, by tact, by knowledge and by hard work. It is a marvelous coincidence that, at the very moment when these women find themselves deprived of the work which kept their mothers and their grandmothers happy, the boundless possibilities of work of another kind, but of an equal necessity, now open before them. These women are living on themselves, which is always unwholesome—they are in constant danger of nervous prostration; but they do not need a rest cure so much as a work cure. Some of them have sought to fill out the emptiness of their lives by self-culture, which is a good thing in itself, no doubt, though finally it is not satisfying. The only true panacea is work for others—social service.



Nobody's Business

Now the social organization of today proffers an abundance of work of this sort for willing hands to do. There is no community—large or small—no metropolis and no city, no town and no village, where a woman of intelligence, of energy, of patience and, above all, of sympathy and tact, cannot find endless opportunity to do good, to do things that need to be done—things which are now nobody's business, but which a woman of this type can make her business and which a woman of this type is specially fitted to undertake. Some of these are big things, to be attempted only after long forethought and careful consideration of the ways and means. Others are little things—the little things which are often the most necessary to be done. It is given to very few women to be a Joan of Arc or a Florence Nightingale or a Jane Addams; but every woman, if she seeks diligently, can find something that needs to be done, something close at hand. Perhaps nobody else has seen the need and perhaps some other woman, keener-eyed, has already taken the first steps.

There are many things which have been undertaken by women of comparative leisure, free to employ themselves in unremunerated labor. Their efforts may not have been paid for in actual cash; but their reward is all the greater. Theirs has been a labor of love, amply remunerated by the knowledge of the good it has done for others. Work of this sort is to be found easily by any one who seeks it. It calls for sympathy and for tact—and it is not to be undertaken lightly. It demands untiring unselfishness; a willingness, first of all, to take trouble, and, secondly, to stand aside, if need be, and let others take a large share of the credit. It requires, above all, the ability to coöperate—to work with others and to enlist others in the work. Therefore it is possible only to those who have a sense of proportion and, above all, a sense of humor that will prevent their taking themselves too seriously. Social service is work, and hard work—but it is also play if it is done in the proper spirit. It is the safety valve of the women of compulsory idleness; but it will be ineffective unless they take the trouble to understand the machinery. If these women want to be saved they must work out their own salvation—like the rest of us.

Cardinal Gibbons says:

I urge upon all Catholics the use of the

Buick

A Giant in Action

If there is one word that most fully expresses Buick efficiency, it is "UNITY"—all Buick parts being made at the one great Buick plant—<u>everything</u> excepting lamps, carburetors, coils and magnetos—no essential parts being entrusted to other makers.

This "one-ness" of construction insures that unison of operation which today makes the Buick such a favorite wherever the utmost in automobile service is demanded.

Every Buick Car develops horse power far in excess of its rating. The roughest going presents no difficulties to the Buick, for the Buick Motor is a veritable giant in action, fully sustained by the utmost stability of every part—transmission, frame, body, steering gear, axles, shaft, differential, brakes, springs, wheels—**everything** down to bolts, nuts and cap screws. All this enables the Buick to take "low gear" hills on high gear speed, "picking up" at every yard without the shift of a lever.

In addition to all this, the Buick Motor has been so refined that all Buick models for 1912 stand in the front rank with the most **silent-running** cars. As every car-wise man is familiar with the unequaled racing record of the Buick, it is not necessary to mention speed.

Five models, priced according to power and size—$850, $1000, $1075, $1250, $1800. One-ton Buick Truck, $1000. Catalogue showing the various models sent on request, also the name of nearest dealer.

Self-Starter
Moon "40"—$1,800

Look Under the Hood and Beneath the Body!

As a life-long manufacturer, I want you to look at my big Self-Starting Moon "40" as a manufacturer would look at it. Look under the hood—look the engine all over, and make up your opinion *yourself*. Compare my 45-horsepower T-head motor with the motors of any other cars, even the high-priced ones. It took me five years to develop my motor. It is a long-stroke motor—4½-inch bore, 5½-inch stroke. It goes to full 45 horsepower on the brake test, and will take the car over any kind of road, and up any kind of hill. Just take in the big 4-bolt connecting rods—fan-in-the-fly-wheel—3-bearing crankshaft—1¾-inch bearings, the largest I know of in a motor of this size.

The Moon Self-Starter is a time-tried starter. I have been using a self-starter in my factory and road experiments for three years.

I want you to notice the Moon Frame. I never heard of a Moon's sagging. Observe the generous shaft and gears of the Moon Driving System—the big 36-inch wheels—demountable and quick-detachable rims—36 x 4-inch tires, front and rear—120-inch wheel base.

Then—when you have satisfied yourself, as I have, that Moon "40" is the utmost of mechanical excellence at $1,800, the beauty of its roomy, all-metal body in nickel plate and black finish, and the completeness of equipment will appeal to you all the stronger.

Write me and I will tell you where you can see Moon "40" near you. I will also send you my 1912 catalog and the famous Moon Book of Charts.

MOON MOTOR CAR COMPANY

NOTHING FOR SOMETHING

(Concluded from Page 15)

"Good morning," she said. "Did you come about money?"

. . . . . .

By the end of the fourth year I was desperate. Because of those four crisp ten-dollar bills—and the other money I had had to borrow to pay the interest on them—I had spent about two thousand dollars. Still I owed three hundred. For four years I had worked like a slave. I was a slave!

During all that year I was a sick man. What with the worry and not eating and sleeping, I was worn down to a skeleton. I could hardly get through my day's work; I could hardly drag myself home. I had no pleasure in my wife or my children or my friends.

One week I had to pay nineteen dollars and I had earned only fourteen. I begged an extension from Miss Blank; for, though I had twice paid up and left her, I had always returned.

"If you don't pay today," she said, "we'll send the collector Monday."

"You won't!" I cried in despair. "I'll kill myself!"

She laughed mockingly.

"They all say that," she answered. "Of course, if you do commit suicide, we'll close the office for a day and send flowers; but, whether you do or don't, our collector calls on Monday."

That night I almost threw away my life. I was insane. I wandered aimlessly. Late at night I found myself on the bridge, staring at the water. I had no fear—only a madness to be rid of the shark. I clambered out to where I could jump free—but, even as I did so, the face of my wife flashed across my mind. What would become of her? What would become of my little girl when she reached the age when a girl needs a father?

That night Anna learned all. I was in a fever when I reached home; and in bed I talked in my dreams. "Please!" I begged. "Only one week. I'll pay anything—only one week!"

My wife waked me. She was deathly pale.

"George," she said, "I have known something was wrong for a long time. Let's have a straight talk."

That night I learned to know my wife as I had not known her before. One thing the shark did for me—it taught me the bottomless depths of a woman's forgiveness and love!

. . . . . .

For a few days I felt better. My wife knew. However, together we were as helpless as I had been alone. Deeper and deeper the inturned teeth of the shark sank into my flesh.

Then, one Sunday morning about three months later, my wife came to me.

"George," she said, "I see by this piece in the paper that the Shylocks are against the law and there's a society to fight them. Why don't you see them and get their advice?"

Unshackled at Last

On Monday I went to the society and told its secretary the whole story. He made no promises. "I shall do what I can," he said.

As soon as I had unburdened my mind I felt better. Not that I had any hope, for things had been moving from bad to worse. I was desperate. I owed twenty dollars every week and I was doubling up, borrowing from one firm to pay another—borrowing to pay. I was sucked out—like an orange; and the offices—even those I had never been to before—all seemed to know it. No longer did the manager smile as she asked: "Did you come about money?"

On Saturday I had been refused loans at three offices and had failed to make payments at five. On Monday five collectors arrived; and I had nothing for them—not even an excuse. I knew that by Tuesday they would file on my wages.

On Tuesday morning I was called up to the president's office. I had never spoken to the president, though I knew the gruff, white-haired old man by sight. It was the first time in eight years that I had been called up. It was the end.

"Luce," said my employer as I stood before the long, black desk, "you've been a faithful employee for eight years; but you're a blamed fool!" I made no answer.

"We can't use fools in this office," he continued, glowering at me; "and the only reason I'm keeping you is because I am one myself. I learned yesterday for the first time that we have a rule in this office discharging men who borrow from loan sharks. Hereafter we don't discharge them, but defend their cases."

"You'll defend me?" I stammered.

"Don't make any more payments; and if any shark comes swimming along send him to our attorney. And now," he went on, "you look a little white in the gills. Take a day off with pay—and go home to your wife."

He did not let me thank him. I have passed him a dozen times in the building and have wanted to tell him how grateful I am; but he does not seem to remember me.

That five minutes' talk ended it. The collectors were sent to the lawyer of my employer—and they never came twice. The loan sharks did not dare sue. They came to my house and spread evil reports about me to my wife and the neighbors—going even to the minister; but they could not do anything, because they were outside the law and had already been paid ten times over. One day I passed Miss Blank on the street, and she gave me a black look and called after me a name that I shall not repeat.

How Employers Can Help

That was a year ago. Since then I have become a well man. I have had my wages raised. We have moved into a better house—twenty dollars a month. I have paid off my debts and have three hundred dollars in the bank. My wife is happy. My children look respectable. I have hopes and ambitions. I am no longer a slave.

Thank God, it's over!

. . . . . .

It is over for me, but is it for you? No salaried man can be sure that he will never have to borrow from a loan shark. You cannot go into any big office without seeing men who are secretly borrowing to pay—borrowing to pay. You cannot enter a street car without meeting some man who is planning to escape. As I skulked through the streets like a hunted criminal, not daring to look people in the face, so men are skulking through the streets today. As I thought of suicide—of the knife, the pistol, the glass of poison—so men are longing for death today. There are honest girls ready to sell their bodies to meet their notes—ready to go to the brothel to escape the shark! May God have mercy on all these!

It is over for me; but the game goes on as before. What has become of that giant of a man who came staggering out of the inner office, wailing like a child? What became of the young fellow, the indorser of a note, who stole to pay and served his time in jail? What becomes of the wretched men and women, old or young, foolish or unfortunate, who spend their Saturdays week after week making the rounds of the loan sharks? What becomes of the men discharged for debt and blacklisted ever afterward?

What can be done to save these others who travel the road I traveled? It seems to me that every city should have its society to fight loan sharks. If business men would not advertise in newspapers that carried loan-shark advertisements; if they would defend and not discharge employees who borrowed; if they would advise men as I was advised—much of the evil could be remedied.

More must be done however. There should be companies in every city where men could borrow—at two or three per cent a month—on their household furniture. In every big business there should be a coöperative loan society where men who save might invest their money and men who had to borrow—and were honest and decent—could get money at a fair rate. So long as there is no other place to go, a man will go to the shark in his day of trouble.

It is over for me; and yet, night after night, I wake up staring, babbling, begging for a week—for one week only! In my dreams I see the faces of all those women managers.

Occasionally I run across the newspaper that prints the advertisements, and when my eye falls upon its columns I shiver. And sometimes on the street I see men pale, haggard, with death in their faces, and I wonder if they, too, are in the jaws of the shark—if they, too, have wandered into the offices where a quiet girl asks you:

"Did you come about money?"

THE LAYMAN AND THE LAW

(Continued from Page 7)

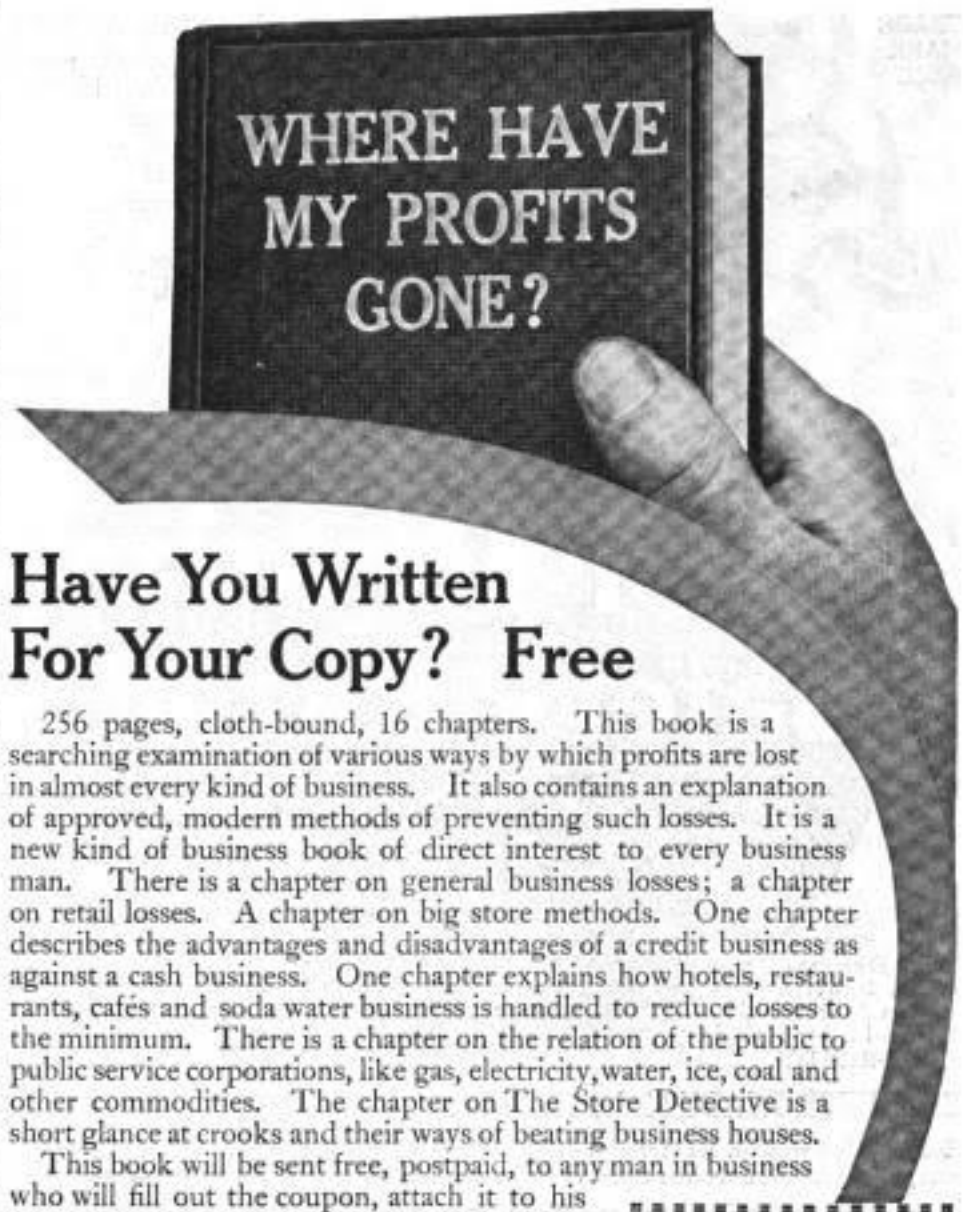
The purchaser should never rely upon such security. The person from whom he buys the land may be insolvent in ten years, and then his warranty in the deed will be of no benefit. The one who purchases may have lived on the land for fifty years—and yet it may happen that he holds only under a life estate. There may be infant heirs whose right to proceed against the land will not accrue for fifteen or twenty years; there may be obscure defects in previous deeds or wills, or the like, which would invalidate the title of the present owner; and if one should purchase from him one might lose the land in a suit brought by collateral heirs, or some other purchaser or claimant.

There are so many jeopardies connected with land titles that a purchaser cannot be too strongly urged to take every precaution to see that the title to the land which he purchases is clear and unquestioned. The litigation which arises from the carelessness of persons in this respect crowds the court dockets.

There is another thing that requires a word here—namely, the common impression that one may safely purchase lands at a judicial sale—that is, in a suit and under the direction of the court. This is not an unreasonable opinion, since men would naturally believe that the court would not order a public sale of lands to which the title was not valid. The fact is, however, that such suits are often not ones in which the question of title arises; and the court is merely selling the right of the litigant, whatever it may be, to the lands, and the purchaser is purchasing that right at his peril.

Laws That Affect Land

These things are true in certain jurisdictions; and consequently the same rule applies to these purchases as to all other purchases of lands, that one should never acquire them without first knowing that the title which he purchases is valid. Here again he should not take the common rumor or the opinion of the officer making the sale, or the advice of his neighbors.



It is important to remember, along the line of these suggestions, that there are contracts, agreements, and the like, which cannot be enforced in the courts unless they are in writing. These agreements were first embraced in what is called the Statute of Frauds, passed in the reign of Charles II, the contents of which have been enacted generally, in some words, in nearly all of the United States.

Thus, usually all contracts for the sale of lands must be in writing or some memorandum thereof, and signed by the person to be charged or his agent; contracts not to be performed within a year; promises to answer for the debt default or miscarriage of another; certain promises of executors and administrators; agreements in consideration of marriage; and so forth. All of these cannot be gone into here in detail; but to rely upon any of these agreements, unless some memorandum is kept of it in writing, according to the provision of the law of the state in which the transaction arises, or in which the contract is to be performed, is to rely upon something you cannot enforce. The agreement may be made in good faith; and, though the parties may believe it to be valid, it is, in fact, voidable.

It is therefore evident that, if we are to arrive at that chief end which Confucius suggested, the cheapest and wisest way to accomplish that result is to set out right in the beginning in all matters that may result in litigation. The safe thing to do when there is any doubt about the matter is to consult a competent attorney in advance.

Partnerships are a source of more danger than men usually suspect. In some states it is no crime for a partner to appropriate partnership funds. A rogue in such jurisdictions may draw out a partnership account in bank, put it in his pocket and snap his fingers at the criminal law. Men often rely upon the restraining effect of the criminal law only to discover that it is by no means the broad, protecting shield they believed it to be.

Again, in some jurisdictions a partner may become personally liable to the limit of his whole personal estate for partnership debts, and he may easily be ruined by a

Have You Written For Your Copy? Free

256 pages, cloth-bound, 16 chapters. This book is a searching examination of various ways by which profits are lost in almost every kind of business. It also contains an explanation of approved, modern methods of preventing such losses. It is a new kind of business book of direct interest to every business man. There is a chapter on general business losses; a chapter on retail losses. A chapter on big store methods. One chapter describes the advantages and disadvantages of a credit business as against a cash business. One chapter explains how hotels, restaurants, cafés and soda water business is handled to reduce losses to the minimum. There is a chapter on the relation of the public to public service corporations, like gas, electricity, water, ice, coal and other commodities. The chapter on The Store Detective is a short glance at crooks and their ways of beating business houses.

This book will be sent free, postpaid, to any man in business who will fill out the coupon, attach it to his firm's letterhead, state whether he is proprietor, manager, superintendent, representative, or whatever position he holds with the firm, and send to us.

This coupon is required merely to prevent the sending of this expensive work to those not connected officially with some business. Others who desire a copy of "Where Have My Profits Gone?" can obtain it by sending $1.50 plus 12 cents for postage.

AMERICAN SAFETY RAZOR CO.
Herald Square, New York

careless or unscrupulous partner. It is a relation that one should form only with the greatest care and only with persons of known and tested integrity. There is much more safety in corporations, for there one is only responsible, as a rule, for the amount of stock for which he subscribes, except in the case of bank stock, when the liability is usually double that of the subscription.

With a corporation, however, the average man who is not a moving factor in it ought to be very careful how he takes a place on its board of directors, because, by his negligence in such a position, he may very seriously involve himself, even to the extent of criminal liability. This is especially true of directorships in banks. Unless one intends to give his time and attention to it, and determines to know exactly all that is going on, he should never take a place on a board of directors. The laws are now very strict. Make it a rule never to go on the board of directors of a corporation unless you have enough financial interest in it to watch every transaction as closely as if it were your own private business.

Men living in little communities and in the country are often named as executors and guardians, and not infrequently they involve themselves in litigation and loss through their ignorance of what the law requires of them. The fact is that the law is very exacting with respect to executors and guardians, and no one ought ever to undertake to act in these capacities except upon the advice of some attorney upon whom he can rely. In dealing with the funds of estates or as guardian one should never make any move with respect to them without first having a definite order of the court to do so. It is not safe to do the thing first and then to apply to the court to confirm it—that is, to take the chance of meeting the loss yourself. The law requires certain settlements, as a rule, at certain designated intervals, and these should be made exactly and as the law directs.

Fight When Right

The administration of the law and, for that matter, the whole structure of civilization itself rest on the fact that men are naturally honest, and that they are disposed to rely on the honesty of one another. Certain precautions, however, are not only wise in themselves but prevent annoyance and litigation. In such matters as proofs of loss in life and fire insurance, or railroad or express freights, or the like, one should promptly comply with the conditions required in the printed policies, receipts, bills-of-lading, or the like. Usually there is no particular difficulty in doing this; and it not only puts one in the position of having done exactly what the law might require one to do but it also enables the insurance company, or the railroad or express company, to act promptly and with a degree of certainty in paying what is due, or in finding or returning the lost articles. It is carelessness that fills the court with cases.

It may be useful to bear in mind that one is not compelled always to go to law to settle a controversy. The courts recognize the right of adjustment by arbitration, and the findings of arbitrators often can be entered upon the records of the court with the same validity as the finding of a jury. This is often the cheapest and the most expeditious way of settling disputes; but it is of no use to undertake to adjust a matter by arbitration unless the intention of both parties is to abide by that arbitration.

It is not possible always to avoid litigation. The most honorable man may be sued at law or charged with a crime. It is the right and duty of such a person vigorously to defend himself. He ought not to take such attacks, as the English say, "lying down," merely because he is innocent of the crime or in the right in a suit at law.

Civilization, after all, depends more than one may imagine upon maintaining what has been so aptly called "the fighting edge." The upright and the just should strike back hard and quickly—they should make the rogue respect and fear them; and when they are assailed they should respond with such virility that they will be remembered. When you are thus charged with a crime, or sued at law, do not consider yourself in disgrace. Go at once to some competent attorney, prepare your case for trial according to his directions, and give the person who assails you good reason to remember you.

In doing that you are supporting law, order and justice, and you are making for the peace and dignity of your neighborhood.

A Message to the 300,000 Traveling Men of America

SOME fine day, Mr. Traveling Man, you'll wake up and find out what a punch you have. You don't begin to realize what a real power you are. There are three hundred thousand of you, and you spend about ten dollars a day each in expenses. That is three million dollars a day, and that alone should give you tremendous weight.

But that is not where your real power lies. You are one of the biggest, active, progressive forces in American life. You have the promotive spirit. Every one of you is boosting something. You fairly radiate the spirit of enterprise. I am a cigar manufacturer and I don't know what I wouldn't give to have you men, as a class, talking for and pushing my cigars.

Why, Men, anything that has you Traveling Men back of it is bound to win. You could swing a national election if you were united.

Yet, while you are doing big things in a big way and carrying the spirit of progress far and wide, you are imposed upon in a good many ways. Each one of you gives up enough, in tips alone, to support a family. I'll bet you scatter $300,000 a day in tips. Of course,

The "expectant hand" is everywhere in some hotels. A traveling man's tips would support a family.

some of these tips you give willingly, but isn't it a fact that you are practically held up for money by porters, bell boys and waiters, in Pullman cars and hotels, from one end of the country to the other?

Where Do the Tips Go?

Ninety per cent of the hotels of this country are supported by the Traveling Men, yet many of them are not content to charge you a fair price, but your tips are depended on to pay most of the wages of the help. This tipping evil has grown to an enormous extent, and I am glad to know that some of the Traveling Men's Associations have now a movement on foot to check it. I hope they will be able to do it, and I am mighty sure they will if you three hundred thousand men get together and exercise your enormous power.

There is another unreasonable condition you have to put up with. That is, the methods of cigar stands in many hotels where you go. It is only fair to the proprietors of these stands to say that they usually have to pay enormous rents and they can't get it back with the ordinary profit on a cigar. To make a bigger profit they frequently sell private brand cigars instead of the well-known brand which you would prefer.

Of course, every dealer has a right to conduct his business as he likes. But it would be better business for him to sell good cigars at a fair price, because he would sell more.

Take my cigar, the Rigoletto, for instance. I sell the Rigoletto cigar to dealers at a price which permits it to be sold, everywhere, at a fair profit. I have had lots of dealers ask me to put up this cigar under another name so that they could sell it at fifteen or twenty cents. I refuse to do this.

The Rigoletto has one price and one quality. I put into it the costliest tobacco and the best workmanship that can be had. It is a wonderful cigar. It sells rapidly and makes big business for every dealer who handles it.

Since I began to advertise the Rigoletto in this weekly last fall, I have had thousands of letters from Traveling Men all over the country asking me to send them quantities of this cigar. That is why I am addressing this to you Traveling Men. I want you to be able to get the Rigoletto wherever you want it. I want you all to try it, because I know that when you have smoked it and find out what a good cigar it is, you will recommend it to your friends and carry the news of it far and wide. In other words, I know that when you have tried the Rigoletto it will get the benefit of the great promotive, progressive influence which you Traveling Men carry. I want you to be able to buy the Rigoletto cigar at every hotel cigar stand, in dining cars and in every good cigar store from Eastport to San Diego.

Duck the Unknown Brands

It is already sold very widely, but, frankly, some dealers would rather handle an unknown brand on which you couldn't possibly guess the profit, and, when you can't guess the profit, you bet your boots you can't guess whether the cigar is worth what you pay for it or only half as much.

Ask for the Rigoletto at the next hotel stand you pass or the next corner cigar store. If you can't find it, send me a dollar and I'll send you ten cigars prepaid so you can know exactly how it smokes. This is only a get-acquainted offer. I'm not doing a mail order business, and I cannot supply you direct from the factory regularly. But I want you to try this cigar and I know you will then ask for it at cigar stands and stores.

You'll do this because you will know the Rigoletto. You will know it is always the one price—always full value and always a

This is the answer. Ask for the Rigoletto.

Some cigar stands prefer to sell private brands on which you can't guess the profit

rattling good smoke for yourself or to give away to your friends.

In other words, Mr. Traveling Man, I am going to do what I can to standardize the cigar business, and I want you to help me. This is the first definite plan to make one high-quality cigar, in four popular shapes, standard at 10 cents throughout the United States, but I am going to do it. I am going to clear up some of the dark and devious ways of the cigar business and put it on a fair and square money's-worth-for-money, know-what-you-are-getting basis.

I am going to tell you in these pages some things about cigar making and cigar selling that you never dreamed of. I am going to tell you things that lots of cigar dealers don't know. Look out for my advertisements in future issues of this weekly. They will make interesting reading.

Use the Power You Have

I am depending upon you three hundred thousand Traveling Men to put in a few licks to help me. Buying the Rigoletto and asking for it, and telling your friends to buy it, you are going to help my business. But I want you to know that you are also going to help yourself a whole lot. Your influence counts with these hotels and cigar stands. It is your money that keeps them going and if you ask for a cigar and ask for it as if you meant to have it, that cigar dealer is going to put that cigar in, even if he does not make quite so big a profit on it.

I tell you, Men, this is a big question. Like the tipping graft, it is not a question of spending a little extra money here and there, but it is the principle of getting your money's worth for what you pay. It is the principle of putting the details of traveling on a sound basis. Your expenses may be paid by the firm directly, but you pay them indirectly because your income depends on keeping down your expenses to a reasonable basis.

You owe it to yourself to help settle these questions. You can't do it alone by a little good-natured growling. You have to take a stand.

After The Winter, Your Skin Needs Refreshing.

Examine your skin closely

See if the pores have become large and clogged; if it has lost its smoothness; if it has grown colorless.

The constant strain imposed upon the skin during the winter months when we eat heavy foods and take almost no exercise, makes it unable to withstand such trying conditions. Each spring it needs *refreshing*.

To refresh your skin

Woodbury's Facial Soap re-supplies what is exhausted from the skin by these conditions. If used regularly, Woodbury's arouses your skin, keeps it active, makes it glow with health.

Get a cake today. Notice its stimulating tonic effect the first time you use it. This is a promise of what its *steady use* will do. Woodbury's costs 25c a cake. No one hesitates at the price after their *first cake*.

Write today for samples

For 4c we will send a sample cake. For 10c samples of Woodbury's Facial Soap, Woodbury's Facial Cream and Woodbury's Facial Powder. For 50c, a copy of the Woodbury Book on the care of the skin and scalp and samples of the Woodbury preparations. The Andrew Jergens Co., 2603 Spring Grove Ave., Cincinnati, Ohio.

Woodbury's Facial Soap

For Sale by Dealers Everywhere

AN OLD WOMAN IN THE OLD WORLD

(Concluded from Page 35)

beside your door with a long spear shining in the lamplight. He unlocks it for you and says: "Adios!"—God go with you!—as you ascend, looking back to see him still smiling and his spear still glistening. Of course one is safer in a well-policed American city, but I doubt if one ever feels so delightfully safe.

Looking back over our long pilgrimage, I do not know yet what to say in conclusion about the women in the Old World, what to prophesy. One thing is certain, the new women are facing a crisis everywhere of which they do not seem to be sufficiently aware.

The suffragists are still somewhat in the air as to their ideals and the methods for accomplishing what they want. As we go along we face life, not a new or old theory of it, but life, and we must act accordingly, which is much more difficult than merely thinking out a solution or organizing a procession in the interest of this new suffrage. And just here the women come face to face with an obstacle that they overlook. Men like one woman at a time, not ten thousand with a brass band leading them.

I am far from wishing to stir up any neurasthenic apocryphal sect, but I have always thought it a matter for regret that Our Lord did not call at least one woman to be His disciple. In these days we should have been profoundly interested, say, in the Gospel according to Martha. And I doubt if women would have had then so many prejudices to combat as Paul put in against them. Paul was a good man and did the best he could, better than any man could who is not divinely inspired. But though there is no limit to divine inspiration, my observation is that there are amazing limits to a man's capacity for acting up to it. Paul acted up to all the times would stand in that day. But we have come somehow upon very different times in this century. The oriental estimate of women is no longer large enough, or at least they do not think it is.

Of one thing we may be reasonably sure—the women will get suffrage in that nation where the men make the least love to them. This indicates England, of course. Women always see themselves the way they look in men's eyes. So long as that image indicates adoration and tender flattery, they are contented. But when it becomes an exact, realistic, less and less complimentary negative they find the discontent to rise and to rebel against the conditions no longer to be endured. In those countries where there are the greatest number of advanced women in proportion to the whole sex, you will also find the men most indifferent, least faithful to feminine charms, the greatest number of bachelors who are only casual lovers. The men in Spain, for example, do not make good husbands, but they do become husbands, most of them. And they are the most fascinating lovers in the world. They have a practiced and highly developed gift for framing those humble, adoring speeches so dear to the hearts of us all, and so long as Spanish women are the objects of this passionate eloquence they will never "advance." They will endure frightful privations, sorrows, infidelities, for the sake of the hope they have of men simply as their lovers. In Italy the same conditions hold fast. Here I am reliably informed that platonic friendships actually exist between men and women for a lifetime; that signora may be an honorable married woman and still have an affinity. I set that down here for what it is worth. It seems to me not only reasonable, but natural, that a middle-aged woman would prefer an eloquent, faithful soul like this to a lover. But somehow I could never make up my mind that a man of any age would become this kind of a sublimated being. It may be that Italian men are different. They do not look it; but I am willing to give them the benefit of the doubt.

The point is, if they really exist there they will retard the movement for woman suffrage longer than all the other traditions put together. A woman will always sacrifice her own rights and the rights of her unborn granddaughters to pose as the ideal of a devoted man.

Editor's Note—This is the eighth and last of a series of articles by Corra Harris.

Sixty-four Years!

Every packet of Henderson's seeds that is sold has behind it the experience of 64 years of successful seed growing and selling. The methods of seed testing and trials that were the best three generations ago have been improved and bettered by us from year to year and are, to-day, still the best. The initial cost of the seeds is really the smallest cost of your garden and it pays to be sure you have started right. Henderson's are Tested Seeds.

THE CHECKERBOARD TABLE

(Continued from Page 6)

inches behind her. Here they were tacked to the floor. As a final measure of security a spool of silk thread was wound in numberless coils round the psychic and the chair, in such fashion that a movement on her part would have snapped the frail cord.

"The table was moved beyond the psychic's reach but directly in front of her. In its center was placed the tin megaphone which the psychic herself provided, but which, subjected to the closest scrutiny, revealed nothing out of the ordinary. A tag with the price, seventy-nine cents, was glued inside, and to err on the side of safety this was carefully scraped off. At the psychic's direction we also placed in the center of the table the photograph of a gentleman, some years deceased, from whom the psychic hoped to receive a message.

"The table was the Checkerboard one used in the previous sittings. This table, as mentioned in the accounts of the earlier phenomena, had been made some years before by the psychic's control, Adolph Degelman, and presented to the writer's father. This opens an interesting field of speculation. Do our spirits return to hover over and round that which interested us most on the earth plane? Does the spirit of the great artist linger lovingly over his masterpiece? Does the little girl's spirit still live in her sampler or her doll?"

[This is a very uncomfortable theory. I have slept for years under a quilt made by my grand-aunt Mary Hill. Would the man who loved pigs during earth life have to pass his spirit life in a pig-pen?—L. M.]

"The circle was arranged as on the previous evening. The writer held the right hand of the psychic as it was fastened against her breast. The writer's other hand was placed lightly on the table. On the left side of the psychic Mr. Sands occupied the same position. Next to him on his left was Miss Lizzie Maitland with both hands on the table. Beyond Miss Maitland was placed Hannah Thompson, an old and trusted servant, thoroughly reliable and without imagination. Hannah's left hand touched the writer's right.

"By the time everything was in order the psychic was in an unspiritual frame of mind. Possibly owing to this the first two hours were without result. The psychic groaned and twisted and complained bitterly of her wrists and ankles. Hannah Thompson grew impatient after the first hour and only with the greatest difficulty was induced to keep her place. At five minutes after ten the psychic declared that Adolph was in the room, but she was unable to locate him. Shortly after that she reported the floor throbbing under her feet, a phenomenon not observed by the rest of the party. At ten-thirty she went into a trance state, muttering 'Adolph' at intervals, but not replying to questions. At eleven o'clock the real phenomena began to occur."

V

I PREFER to describe what occurred myself. Tish and I differ on one or two points. For instance, Tish still maintains that the megaphone was floating above the surface of the table when the voices began. I am positive it was not. The room was dark, but the megaphone lay exactly between me and the gray rectangle of the window. I do not believe it lifted an inch.

Aggie had been in her trance for half an hour, during which she had sneezed twice but had only roused enough to ask Tish to wipe her eyes for her, when suddenly the table began to tremble. "Ah," said Charlie Sands, "is that you, Adolph?"

The trembling ceased immediately, but from back of Aggie's chair in the cabinet came a sort of scratching noise.

"Are you there, Tom?" asked Aggie in a trembling whisper. Tom was Mr. Wiggins. There was no answer and the scratching stopped at once. I could feel Charlie Sands straighten up next to me.

"Is somebody here?" he asked.

And a muffled voice that we had never heard before said "Yes."

"Is it Tom?" asked Charlie, who hadn't any idea who Tom was.

"No," whispered throatily from the megaphone or just beside it.

"Who is here?"

"Ida."

"What Ida?"

"Ida Forsyth."

"Do you mean she is in this room?"

"No."

Aggie leaned forward and glared through the darkness at Charlie Sands.

"If this séance is to go on," she said disagreeably, "you will let me do the questioning or I'll get up and leave."

"Good heavens," he objected, "why do you talk and spoil it all? Besides, if you're the medium you'll have to go back into your trance. You can't be the whole show."

"Are you there, Tom?" said Aggie defiantly.

Tom, Tom, the piper's son,
Stole a pig and away he run!

said the muffled voice. And then it laughed, an awful, choking, muffled ha-ha that was worse to hear than a yell. Every hair on me stood straight up.

"Now listen," said Charlie Sands soberly. "We want to help Ida. Do you understand? We will help her. We won't let anything happen to her."

"That's what they all say," said the voice.

"What made Ida leave home?" asked Charlie Sands.

"Peaches!"

The peaches seemed to be a sort of joke, for it laughed again.

The idea of carrying a sense of humor to the great beyond hadn't occurred to me before, but if we do take it along it will make Heaven more endurable.

"Do you really mean peaches?"

"No. It was some sort of poison."

"Who gave it to her?"

"She didn't take it. That's one on you!"

"Who tried to give it to her?"

"Now you're talking!" said the voice. "Martin St. John."

I gasped and Charlie Sands clutched my hand.

"Why?"

"Money, of course."

"Who sent Mrs. St. John the special-delivery letter?"

The answer came at once, "I did." But Charlie Sands said it was probably meant for "Ida."

"Ida was living then?" he asked.

"She still lives."

"You're doing that yourself, Charlie Sands!" Tish said suddenly.

"By all I hold sacred," he replied excitedly, "I couldn't do it if I wanted to! Adolph, was the letter the cause of Mrs. St. John shooting herself?"

There was no answer to this, but a sort of sob seemed to come out of the megaphone.

"Can't you bring Thomas Wiggins, Adolph," asked Aggie plaintively from her side of the table. "You'd recognize him by the picture on the table."

"Wiggins!" said the voice. "What a name! Wiggins! Wiggins! Wiggins!" And went off into peals of muffled laughter. The laughter seemed to get farther and farther away and then died in a sort of gasp.

For ten minutes Charlie Sands asked question after question, but the horn lay perfectly still and nothing happened.

He was angry. He said that Aggie had broken up the current, or whatever it was, just as he was getting what he wanted. Aggie was fearfully offended, of course, and wanted to be cut loose and put to bed. But Tish said it was still early and perhaps at midnight we should get something more; that the other world seemed to get busy at midnight.

Hannah had been twisting and wriggling, and now she declared she was cold and her tooth was killing her. So we let her go to bed. Charlie Sands tried to coax her to stay, but she was downright nasty about it and finally we had to let her go. She stumbled out of the room and down the hall as if she'd been asleep and we heard her door slam behind her.

Charlie Sands wanted to go too, but Tish insisted that we try again. Nothing happened for almost an hour. We'd agreed that we would not speak at all for sixty minutes, and that no matter what occurred we would not break the circuit.

What followed I quote from Tish's report:

"Hannah Thompson having left the circle there was some doubt as to what we could accomplish with a smaller battery.

"Just before the clocks struck twelve the psychic, Miss Pilkington, complained in a low whisper of cold air blowing from

Ford

YOU are asked to buy a FORD Model T not because it is a cheaper car, but because it is a ***better*** car.

Better because it has the lowest purchase price and running cost per mile per passenger of any five passenger touring car in the world.

Better because of Vanadium Steel Construction.

Better because it is the simplest motor car in design; the easiest and most reliable in control.

Immediate delivery.

There will be power for an army of factories at Keokuk, Iowa, a few months hence, when the waters of America's greatest river will be harnessed by the gigantic one mile dam, now rapidly nearing completion, across the Mississippi, from Keokuk to the Illinois shore.

The immensity of this work is the talk of the whole engineering world—the dam and power plant are costing $25,000,000, and will be capable of developing 200,000 electrical horse power—the largest single water-power plant in the world.

KEOKUK

"The City of Power"

will offer to manufacturers locating here this huge supply of power at a lower cost than it can be obtained anywhere else in the country.

Keokuk has competing railroad lines running in seven directions—it has the advantage of a splendid waterway, covering thousands of navigable miles. Through New Orleans all the ports of the world are open to Keokuk.

The dam will create a large lake, the level of which for miles above the dam will not vary over four feet in drought or in flood, affording docking facilities which cannot now or hereafter be equalled by anything of the kind at any point on the Mississippi, Missouri or Ohio Rivers.

Every manufacturer should write for illustrated pamphlet and learn all the facts about Keokuk, "The City of Power."

ARMSTRONG MFG. CO., 1559 Chestnut St., Waterloo, Ia.

the cabinet. Almost immediately after, as the town clock announced midnight, the portière of the cabinet blew directly over the psychic's head, enveloping her completely. The chair overturned with a crash, throwing the bell and other articles to the floor, and a huge, luminous figure, indeterminate in line, emerged from immediately behind the psychic, crossed the room uncertainly and noiselessly and vanished in the darkness of the hallway, leaving behind it an unmistakable odor of tuberoses—that most funereal of flowers. I mention the odor because in the celebrated Myra Jones materializations the fragrance of heliotrope was invariably present.

"Mr. Sands left the table immediately, against the advice of the writer, and hurried into the hallway. He found nothing, however, and returned to the circle much bewildered. Ten minutes later, nothing new having developed and the psychic sneezing continuously from excitement and fright, the sitting was declared at an end and the lights were turned on.

"The connecting door was closed as before and from beyond we could hear a child crying. The rolling-pin, bell and clothespins lay on the floor beside the chair, which had been overturned and pushed to the left. The psychic was found as she had been left, her arms securely fastened and the silk threads unbroken. One of the tapes behind her chair had been torn from its fastening, however, the end being frayed as if from a powerful jerk. The tack remained in position.

"Mr. Sands insisted on making a search of the apartment, but found nothing. The megaphone remained in its original position and bore no traces of its remarkable experience. The photograph of Mr. Wiggins, however, was found on the floor under the chair originally occupied by Hannah Thompson.

"The writer has reported the phenomena exactly as they occurred. They are not unique, but they present two unusual features—the rapid development of Miss Pilkington as a psychic and the occurrence of materialization—for so we must regard the last phase—while the medium was not in trance, after only three sittings, and not only without the volition of the psychic but absolutely against her desire."

VI

CHARLIE SANDS slept on the sofa in Tish's parlor that night, and when we wakened he had gone without waiting for breakfast. Perhaps under the circumstances it was as well, for Tish, going to the kitchen for her morning cup of hot water and a dash of salt, found nobody there and Hannah's room empty.

On the dining-room table, however, we found a note written on coarse yellow paper.

"Dear Miss Carberry," it said, "I have been called away by urgent business, but I expect to return in time to prepare the dinner. Hannah."

"'Urgent business,'" sniffed Tish. "'Prepare the dinner!' Look at that writing! Hannah Thompson never wrote that!"

"Who did?" asked Aggie, who had come out in her kimono to ask me to make her a cup of tea.

"After what happened in this apartment last night I give it up." Tish went into the kitchen and rattled at the stove, and when she came back it was clear she had made up her mind to something.

"I've got something to say to you, Agatha, and you might as well hear it now," she said. "You're in with a bad crowd. I know it isn't your fault, but it's true. I'm not going to have any more murderers round here, and you can tell Adolph that for me. I don't know that I blame Hannah for leaving."

Aggie put down her teacup and stared at her. "Good heavens!" she said. "The Checkerboard Table isn't mine, is it?"

"It was a perfectly respectable table up to three days ago," Tish commented viciously, slamming the plates on to the table. "I've been a good friend to you, Aggie, for thirty years or more. But when it comes to having a disembodied spirit turned loose in my apartment, driving away my servant and perhaps hiding in a cupboard where it can come out at midnight and rattle its bones at me, I don't like it."

"How can a disembodied spirit rattle its bones?" I asked facetiously. I thought we needed humor that morning. But they paid no attention to me.

Aggie was wiping her eyes.

"You got me into it, Tish," she sniffled. "And as for H-Hannah, she says she'll be back."

"Back!" repeated Tish furiously. "I don't want the hussy back. Who do you suppose wrote that note?"

We both stared at her. There was something in her voice.

"Ch-Charlie Sands?" Aggie ventured.

"Humph!" said Tish in disgust. "Can you see Charlie Sands eloping with Hannah Thompson? I tell you I lay that communication to the same evil spirit that has taken control of you, Aggie—to Adolph!"

Aggie turned perfectly white.

"Adolph!" she said, stunned. "Then where is Hannah?"

"How do I know?" Tish shrugged her shoulders. "In some cemetery probably. She's been man-crazy for ten years. Where did Adolph go last night after he materialized?"

"They don't generally go anywhere, do they?" I asked uneasily. "They—they dissolve, don't they?"

"He went to Hannah's room," Tish affirmed and shut her jaws with a snap. "Do you recall that the minx refused to open her door after Charlie Sands had searched every other corner?"

"She was in bed," I protested. "Goodness knows, Tish, after keeping her up half of the night and with a toothache, too, she ought to be allowed the privacy of her own room."

Tish snapped her fingers at me and at that moment we both noticed Aggie. She had two red spots in her cheeks and her eyes seemed to have sunk into her head.

"I don't think it was Adolph!" she said, leaning forward and looking at us with a sort of haggard desperation. "It—it wasn't a man!"

"Humph!" sniffed Tish. "It was fully six feet high; if ever I saw a murderous figure it was that one."

And then Aggie suddenly burst into hysterical weeping and had to be taken back and put to bed. I have never seen her in such a state. She kept muttering between sobs something about having felt queer ever since the portières had gone over her head and about a strange sensation of emptiness in her left side. We were badly frightened. Tish made a plaster of mustard and held it to her side, and I put cold cloths to the back of her neck and a hot iron to her feet.

She stopped sobbing finally, and lay in a sort of stupor for ten minutes or so, when she suddenly plucked off the plaster and flung it to the floor. "I am going to die," she wailed. "They always die! I've been reading about it since dawn. When you separate the astral from its human habitat, and it doesn't come back, you die! Oh, Tish, Tish!"

Well, it was a terrible situation if she was right; and both of us had seen a figure materialize from just behind her, and it had not come back. We sat there perfectly helpless—Aggie without her astral body and none of us with the least idea of how to recover it for her. And if you know Aggie, and how helpless and impractical she is, you will realize how forlorn her astral must be, floating round through space and knocking at one human body after another and not finding its proper home.

We gave her some blackberry cordial and put her on the couch in Tish's room by the fire. She said that, except for the emptiness in her left side round her heart, she didn't feel ill, but that she realized that she was close to the other world. We gave her Mr. Wiggins' picture to hold, and left her with her hands crossed on her breast over it. Then we went out and closed the door, and stared at each other hopelessly in the hall.

Well, we straightened up the apartment, although we had no heart for the work, and Tish cut up a chicken for broth for Aggie. But both of us felt the absurdity of nursing the shell when the spirit was wandering round somewhere in outer darkness.

Just before noon Tish found the Theosophical Society in the telephone book, and got the secretary on the wire. She explained that, during certain experiments—she had to concede they were rash in view of our inexperience—a refined and cultured woman of middle life had lost her astral body, and was there anything he could advise us over the phone to do to recover it.

The young man at the other end of the wire seemed to be puzzled, Tish said, and she had to repeat it all over again, word for word. He seemed so interested that Tish was quite hopeful; but after all, it seems

Digitized by Google

that Tish had the wrong number and that the young man was merely amusing himself *with* our predicament, for when Tish asked him the usual procedure in such cases, he said to say "Eenie, meenie, minie, *mo*" *three* times at midnight, and then advertise in the "lost" column of any good newspaper.

At noon the doorbell rang, and I opened the door. Before me stood a nice-looking young man, very bald, but pleasant.

"Miss Carberry?" he asked.

"She's busy. I'll take any message," I said.

"I'm from the Chronicle," he said. "Do you mind if I ask you a few questions?"

"It depends on the questions."

"Oh, the questions are all right. It is true, I suppose, that Miss Ida Forsyth has spent the last two days here?"

"What?"

"Miss Forsyth," he explained patiently; "Miss Carberry is a relative, is she not? The early edition of the Star says that Miss Forsyth has been with Miss Carberry, ill."

Well, I took him back to Tish in the dining room, and we read the Star, which he had with him, and learned that Miss Forsyth had had an attack of temporary loss of memory, had wandered to Tish's apartment, Tish being an old friend of her mother's, that we had nursed her back to health and reason, and that she had now gone back, fully recovered, to help take care of her sister!

My name was there in cold type and so was Aggie's. It was astounding. We got rid of the reporter finally, and Tish sat down on the hatrack in the hall and read the article aloud to me slowly. Miss Forsyth said she was glad to be back, that we'd been most kind to her and that there was no mystery about her disappearance. That we had been so busy nursing her that we had not even seen the newspapers.

I do not know just when the idea came to us or which got it first. But if Aggie was right, and she had freed her astral body, only to lose it, was it not at least possible that the poor thing, finding itself homeless, had taken on the form of the missing girl—perhaps, indeed, had found her dead body and clothed itself with it?

I broke into a cold sweat.

As Tish said later, we deserved it all for playing with forces we knew nothing of. She said the most terrible thing to her was to think of the astral of a spinster of fifty suddenly turned loose in a young and beautiful body, a body that did not hang up its curves at night or go over its chin with tweezers every Sunday morning. If this were the case, Aggie's astral was lost to her for good. We both felt it.

At three o'clock Aggie smelled the chicken broth and came back to the kitchen where Tish and I were sitting in stricken silence. She said the feeling of something missing was stronger than ever. We coaxed her to have the broth and she took it, but her air of hopeless detachment never left her. Tish said it was heartbreaking, and it was.

Then at five o'clock Hannah Thompson came back!

She walked into the kitchen defiantly and asked Tish if she should go, or if she should take off her things and get the dinner. Tish looked at her severely.

"Can you give me your word as an honest woman that you have not done anything today that you are ashamed of?" she asked.

But Hannah only stared at her. Then, without any warning, she burst into tears and went into her room and slammed the door.

Aggie took the broth and four toasted crackers and went back to her couch, and soon Tish and I followed her. Aggie said she had read somewhere of a man whose astral body had been released during a séance, and by somebody jumping up, as Charlie Sands had done, the frail bond had been snapped and the astral left wandering. And that night the man's wife dreamed that she saw the poor lost astral body trying to get over a fence to escape the attacks of a savage bulldog.

When she wakened her husband was dead beside her, and there were marks of teeth on his legs!

VII

THE early part of the evening passed somehow. Hannah cooked and served dinner sulkily, and refused to answer any questions as to where she had been during the day. Aggie ate a pork chop and a sweet potato at dinner, and seemed to feel more resigned although not cheerful.

We put her to bed after dinner, and she asked us to place Tom's picture under her pillow, which we did; and Tish dropped a tear on Mr. Wiggins' nose so that to this minute he has a Cyrano de Bergerac appearance, only a little to one side.

At seven-thirty Hannah answered the bell, and said that the druggist from next door wanted to speak to Tish in the parlor, and looking rather startled Tish went to see him. I followed.

He was a tall, cadaverous-looking man, with a sandy beard cut to a point, and he had a package under his arm. Tish said afterward that the moment she saw the package she grew dizzy.

"Good evening, Miss Carberry," said the druggist.

Tish bowed.

He took the package from under his arm and fingered it nervously.

"I—I want to ask you to say nothing of this to Mrs. Schmidt," he said, swallowing hard. "Fortunately I discovered it myself in my closet. Mrs.—er—Mrs. Schmidt is of a nervous temperament."

He held out the package to Tish and she eyed it sternly.

"I'm nervous myself," she said coldly. "Perhaps you'd better open it."

He hesitated, then he drew a long breath and snapped the string with a lean forefinger. The paper fell open, disclosing something white. Tish gasped as Mr. Schmidt solemnly shook out the folds, held it out and stared at it accusingly. It was one of Tish's nightgowns, with her full name on it in ink.

Mr. Schmidt eyed us both somberly.

"If Mrs. Schmidt had found it," he said, "it would have been horrible, ladies, horrible!"

"Good Heavens!" Tish said, and snatched the thing from him. "You don't suppose I took it in there and hung it up myself, do you?"

But Mr. Schmidt was fumbling in his overcoat pocket. In a moment he brought forth something and held it out to us, with his face slightly averted. It was a shell hairpin.

"Mrs. Schmidt found this," he said painfully. "She—she uses wire ones. The unfortunate thing is that she—er—left the city a day or two before I could follow, and she—she is of a nervous temperament."

Tish opened her mouth but no words came.

"I—I hope, if she inquires, Miss Carberry, that you will say positively, no matter what the facts are, that you were not in my—our—apartments during her absence."

He got out his handkerchief and mopped his forehead. Then he turned to the door and opened it.

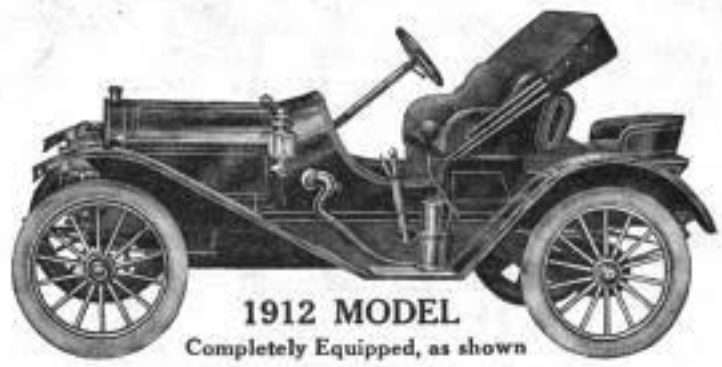
"I guess I'd better explain that that wasn't the right mattress for that bed. The other is away being renovated. If I'd known beforehand you'd have been more comfortable."

With that he went slowly out and we heard him tiptoeing down the hall past his own door. Tish and I were left with the nightgown between us; and with rage and humiliation Tish broke down, and I saw her cry for the first time since we helped Aggie lay Mr. Wiggins away—twenty-five years before.

As she said when she got her breath, to have lived a perfectly virtuous life for fifty years and then to have the corner druggist, who was privately known to serve whisky in soda water with as little compunction as he did castor oil—to have this man return to her an intimate piece of wearing apparel and accuse her of hanging it in his closet and compromising him. It was too much!

"But how did it get there?" I asked. "It's the one I made you for visiting day in the hospital the time you broke your arm."

Tish looked at me hopelessly.



"Lizzie," she said solemnly, "I haven't a word against Aggie; she's a perfectly good woman; but there isn't any question in my mind but that Adolph Degelman is making this place a rendezvous. And I won't have it. Either Aggie gives up Adolph or—I give up Aggie."

We went into Tish's room and she put the nightgown in a drawer and locked it; but before she did she cut the laundry mark off. She said, with truth, that she had no certainty that the thing would not go wandering again, and she would run no further risk of being compromised.

At ten o'clock, when we were ready for bed, Charlie Sands came. He had a basket

$495.00

The Automobile Sensation of the Year!

1912 MODEL
Completely Equipped, as shown

METZ "Twenty-Two" ROADSTER

Every atom in the make-up of this car is strictly *standard*—in quality, strength and design. It is the greatest automobile value ever offered. It is the only four-cylinder, water-cooled, completely equipped car sold at anything like the price.

The METZ "Twenty-Two" is the most economical car you can buy AT ANY PRICE. It will carry you from 28 to 32 miles on one gallon of gasolene, 100 miles on a pint of lubricating oil, and from 8,000 to 10,000 miles on a single set of tires.

The three METZ cars which completed the famous Glidden Tour from New York to Jacksonville, Fla., were the *lowest priced* cars entered in that stamina-testing event. They were the *only team*, out of the eighteen that started, to arrive in Roanoke, Va., with a perfect score and inside the schedule, without time extension.

The METZ car is guaranteed to climb hills as fast as any other car made, regardless of its power or price. It is easy-riding, simple in operation, a marvel in efficiency, absolutely dependable under any and all conditions.

To Dealers—This is the big seller for 1912. We have a great proposition for live automobile agents everywhere. **Write today for Book "E" giving full particulars.**

METZ COMPANY, WALTHAM, MASS.

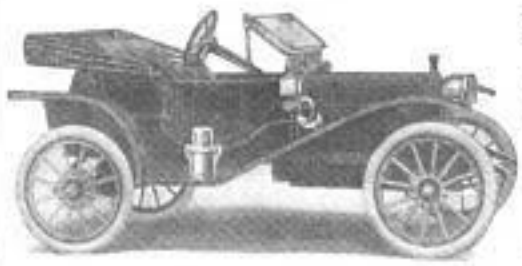
Hupmobile Long-Stroke "32" Five-Passenger Touring Car—$900

F. O. B. Detroit, including equipment of windshield, gas lamps and generator, oil lamps, tools and horn. Three speeds forward and reverse; sliding gears. Four cylinder motor, 3¾-inch bore and 5½-inch stroke. Bosch magneto. 106-inch wheel base. 30 x 3½-inch tires. Color—Standard Hupmobile blue.

Not an ordinary $900 car but a $900

Hupmobile



Not an ordinary $900 car either outwardly or inwardly—as the picture and the summary of special features will quickly disclose.

A car of infinite refinement, which proves conclusively that a low price need not be accompanied by crudity of construction.

The product of a plant which has always looked higher than its own price for inspiration—which has always sought to give the most in merit; not merely the least in price.

A result made possible by a skilled organization held intact since its inception under the leadership of E. A. Nelson, who designed the original Hupmobile; by shop-generalship of the highest order, striving continuously to surpass its own previous ideals.

Hupp Motor Car Company, 1229 Jefferson Ave., Detroit, Mich.

Hupmobile Runabout—$750 f. o. b. Detroit

Including top, windshield, gas lamps and generator, three oil lamps, tools and horn. Four cylinders, 20 H. P., sliding gears, Bosch magneto.

Chassis same as World Touring Car—$850 f. o. b. Detroit.

$2500 Features in the $900 Hupmobile

Small-bore, long-stroke motor;
Cylinders cast en bloc;
Valves enclosed;
Three-bearing crankshaft;
Bronze bearings lined with Babbitt;
Transmission gears large enough for 40 H. P. car;
Full-floating rear axle of extreme strength;
Multiple disc clutch with 13-inch plates;
Imported Coventry chain to drive camshaft and magneto;
Hyatt and F. & S. Imported Annular High Duty roller bearings in the transmission;
Bower High Duty roller bearings on the wheels;
Standard Imported Bosch magneto.

Hupmobile Exhibit, Coliseum, Space G-2, Chicago, Jan. 27–Feb. 3

over his arm and he led the way to the parlor, turned on the lights, and pulling out the Checkerboard Table placed his basket on it.

"Where's the psychic?" he asked.

"In bed, poor soul," said Tish. "She's had a horrible experience. The—the thing that she materialized last night did not come back, Charlie."

"What's that?" he said, pausing in the act of taking the paper off the basket.

So then we told him about Aggie's astral body, and he sat looking at us in astonishment. We told him about the "gone" feeling in her side and about the man and the bulldog, and he seemed to get more puzzled all the time.

"When was all this?" he asked finally.

"When a thing materialized behind poor Aggie, threw the portière over her head and vanished into nothing in the hall," Tish explained. "It's perfectly true, although the man at the Theosophical Society thought I was joking."

"The Theosophical Society!" said Charlie Sands, and then he fell into a chair and began to emit one wild whoop after another, beating time with his legs on the floor. "Oh, suffering cats, the Theosophical Society!"

Well—not to keep the reader in suspense any longer—it was not Aggie's astral body at all. It was Miss Ida Forsyth, who was hiding in the druggist's apartment during his absence. It seems that he'd been on a visit with his wife and baby, and his wife's sister's children developed whooping cough, so they had to come home a week sooner than they expected. Which accounts for her appearing as she did.

We wakened Aggie and told her the good news, and she felt better at once. She asked if there was any baked custard left from dinner, and we got it for her, and she ate it in the parlor, clothed in a blanket, while Charlie Sands told his story.

"First of all," he said, "yours truly is some nifty detective. Clews! I've got 'em by the basketful."

"Why do you want clews?" asked Aggie from the custard.

But, instead of answering, he opened the basket and laid out on the table the stiffened body of a blue Persian cat. Beside it he put some pieces of broken glass, a half-burned letter, a photograph of a very pretty girl, a partly decayed peach and a leaf from a small notebook.

"Now, then," he said, "we'll call these exhibits A, B, C, and so forth. We'll start with the glass.

"Exhibit A—pieces of glass from a broken water-pitcher, *hoffentlich* still containing some crystals of cyanide of potassium."

"Cyanide!" said Aggie triumphantly. "S-I-A-N, of course."

"That's not the way to spell it," snapped Tish, and Aggie looked crestfallen.

"Exhibit B," said Charlie Sands, "one of a number of peaches placed in close proximity to the said pitcher of poison, to cover the peach odor, and both placed beside Miss Forsyth's bed by an unscrupulous brother-in-law."

"To kill her?" asked Aggie breathless.

"Well, I dare say he had thought of that," said Charlie Sands, "only she had a good combination of nose and brains. She sniffed the pitcher and then flung it out of the window.

"Exhibit C—one dead Persian cat, result of said flinging of pitcher and contents out of the window. The cat's name was Omar."

Aggie could no longer be restrained.

"Adolph told you all that before," she exulted, "and you wouldn't believe him. 'Omar,' 'cyanide,' 'peaches' and 'pain'—we got them all."

"Exactly," said Charlie Sands. "Good old sleuth!" He patted the Checkerboard Table, and positively the thing seemed to wriggle with pride under his hand.

"Exhibit D," he said, holding up the half-burned letter, "a little *billet-doux* to Mrs. St. John, acquainting her with the fact that in order to get Miss Forsyth's money her husband had tried to murder her sister by poisoning her. An injudicious epistle, written in the heat of rage, on receipt of which Mrs. St. John tried to shoot herself. The letter is signed 'Hannah Thompson.'"

We were all three on our feet in a moment, but he held up his hand for silence.

"Exhibit E—a photograph of Miss Forsyth—another peach!" He put it in his pocket after a lingering look at it.

"Exhibit F—leaf of my notebook in which I find the following entry: 'Barnes, night man on Leslie Street beat, saw woman in motor coat climb steps to Aunt Letitia's porch at four A. M. Tuesday morning. She sat on porch for half an hour, then was admitted by somebody from within. Thought at the time by Officer Barnes to have been my aunt Letitia.'"

We were speechless.

He waved his hand at the various exhibits; then he turned to us with his winning smile.

"Exhibit G is in bed by this time, I suppose. I refer to Hannah, the medium."

"Hannah!" said Aggie, sitting up suddenly. "Do you mean to insinuate ——"

But Tish had risen solemnly and was staring at him.

"Then it was Miss Forsyth who hung my nightgown in Mr. Schmidt's cupboard!" she said. "The—the minx!"

Well, of course you know the story—how Charlie Sands, who says he'd suspected from the start, followed the figure that materialized behind Aggie and saw it slip into Hannah's room; how he'd waited until dawn and surprised Hannah trying to smuggle out a young woman, presumably the figure, and had recognized Miss Forsyth. How the two broke down and told the story of Mr. St. John's villainy, and that the girl was going to try to get off by a ship that sailed that day.

But Charlie Sands persuaded her to go back to Melrose instead, with Hannah and himself, and to face St. John. So they had gone, and although Charlie Sands had enough evidence in the basket to send the man to prison for life they had let him get away, on his wife's account. And with that Miss Forsyth goes out of the story, although not out of our lives, for Charlie Sands is going to marry her.

Tish is quite anxious for the match, being of the opinion that the newspaper life is full of temptations. Aggie demurred, objecting that Tish's nephew would be brother-in-law to a man who was a murderer at heart. But Tish gave her one withering look.

"That's better than being controlled by a murderer," she snapped. And that takes me back to Adolph.

We do not believe in Charlie Sands' theory that Hannah is a true psychic, that she went into a trance at each of the two sittings and replied to questions while in that condition, the first night moving the table, the second night speaking.

He points out that the table only told us what Hannah already knew, and we are obliged to admit that one thing supports this theory. Hannah spells cyanide, S-I-A-N-I-D-E.

Charlie Sands explains the Omar incident in the same way, insisting that Miss Forsyth had seen the cat near the pool of poisoned water on the cement walk beneath her window, and had confided her anxiety to Hannah.

He quotes, in support of his theory, that Hannah was in a sound sleep at the end of each sitting and was difficult to rouse, and also that our "trumpet" voices might easily have been Hannah speaking through her bandage.

But people will go a long way to support their theories, and so we absolutely discredit his statement that as nothing was happening during the early part of the first séance at which he was present, he had himself manipulated the Checkerboard Table with his fingertips, causing it to perform various movements, and that until the question "Have you found out where Miss Forsyth is?" the phenomena were of his own creating.

But, on the other hand, what about the throbbing of the table that Aggie felt the first night when Hannah was not present? What about the tingling and pulling in her arms? What about the strange circumstance of her asking Adolph in her sleep to help her move the table, and our hearing a sound from the parlor as if it had been stealthily moved?

True, it may have been Hannah, but was it?

One sad fact remains out of our chaos of theories—Adolph has gone. No doubt his sensitive soul rebelled at the gibes of Charlie Sands, who persists to this moment in flippantly addressing the table as "Old Sleuth."

Adolph has gone, and without bringing Aggie any message from Mr. Wiggins. We meet sometimes at Tish's and sit round the Checkerboard Table. Sometimes it creaks a little and lately we have thought it vibrated at times. But Adolph, poor, sensitive, discredited spirit, has not come back.

FAIRBANK'S TIME-SAVERS

Make Every Minute Count

"Cleanliness" the Watch-Word

Gold Dust

If your tins and kitchen utensils could only talk—they would cry out for a daily cleansing with Gold Dust and water. Gold Dust goes right for dirt and grease, and cleanses so quickly that little effort on your part is required.

If you only knew how much cleaner your house would be, how much lighter your work would be, and how much time you would save, you would insist upon having Gold Dust if it cost twice its present price.

Buy a package of Gold Dust today, and try the economical and labor-saving way of keeping house.

Use **Gold Dust** for washing dishes, scrubbing floors, cleaning pots and pans, woodwork, bathtubs and fixtures, sinks, refrigerators, etc., softening hard water, washing clothes and making the finest soft soap.

"Let the Gold Dust Twins do your work"

Fairy Soap

If you are using a white soap in your toilet and bath—other than Fairy—smell it. It will likely have a common, "soapy" odor that comes from cheaper ingredients than are used in the making of Fairy Soap. Fairy is dainty, refined and delicate in perfume. It has the appearance, odor and performance of a high-class product.

Fairy Soap—the pure, white, floating, oval cake—costs **but 5c.**

We could charge you five times the five cents asked for **Fairy Soap**, but we could add nothing to the quality. In most higher priced soaps you are paying for fancy wrappers and expensive perfume.

"Have you a little 'Fairy' in your home?"

Sunny Monday

Laundry Soap

Sunny Monday Laundry Soap will not harm any fabric even if you soak the clothes in it over night. It is a white soap made from choice fats and pure vegetable oils—it is as harmless as good toilet soap, and leaves the hands and clothes free from that disagreeable odor of yellow laundry soaps.

Sunny Monday contains a wonderful **dirt-starter** which saves half your rubbing and adds to the life of your clothes. Washes in any kind of water.

Because of its purity and whiteness and because it starts the dirt so quickly, one bar of **Sunny Monday Soap** will go as far and do as much work as two bars of ordinary yellow laundry soap.

"Sunny Monday Bubbles will wash away your troubles"

MORE THAN A MILLION AND THREE-QUARTERS CIRCULATION WEEKLY

Digitized by Google

The "hundred-point" cigar

HERE is a cigar that really is different. Different because it combines two virtues in an unusual marriage, the marriage of "Full flavor" and "Mildness."

It is easy to get mildness alone; it is possible to get full flavor (at a price); but tell us honestly, did you ever get both together? You can get it in the **Girard** cigar for 10 cents—a rich, full-flavored, satisfying smoke, yet with a mildness and innocence that will commend it to your physician.

The entire filler is pure Havana tobacco, **Cuban grown,** and matured for use by the slow, old-fashioned Cuban method. We are not up-to-date where that up-to-dateness means an inferior product. Our method, often requiring four months, seasons the tobacco evenly and thoroughly in a natural way. It eliminates all rankness and bitterness, and retains all the fine native quality and aroma. And the aroma is all in the tobacco; we use no flavoring of any kind.

Every **Girard** cigar is hand-made from beginning to end.

We have discovered and improved a method of combining and blending the leaf for the **Girard** cigar which makes flavor and quality absolutely uniform. This method is one of the most important discoveries in the whole history of cigar-making and is known only to us. The cigars produced by it cannot be obtained by any other means. Believe us, when we say that the **Girard** cigar "really is different."

GIRARD Cigar

Made in the following standard shapes

"Brokers" 5¼-inch Perfecto. Shown in the box above.

"Mariners" 5⅝-inch Panatella. Shown in cut.

"Founders" 5-inch Blunt. Shown in cut.

The Girard cigar is sold by dealers generally. Ask for it where you usually buy. But if your dealer can't supply you today, fill out the coupon below, enclose a dollar bill and we'll send you, prepaid, a box of ten Girard cigars of the shape and color you prefer. If you do not like these cigars better than your dollar, we will send the dollar back to you on request. We know they will make good.

We are not in the mail order business. The Girard cigar is sold through dealers only, but we do want you to try them and will therefore send you the first box direct if necessary.

This coupon is merely for your convenience. A letter will do as well.

Antonio Roig & Langsdorf
317 N. Seventh Street
Philadelphia

I enclose one dollar, for which please send me, charges prepaid, one box of 10 Girard cigars.

The "MARINER." Actual Size

Girard cigars sell on merit alone. We offer no premiums or prizes. We put the value into the cigar. The **Girard** cigar is a quality proposition and on quality alone we want it to stand or fall. As a matter of fact, it is not only standing but its sales are growing by leaps and bounds. And the explanation can be found at the beginning of this page—it combines a satisfying full flavor with mildness.

Send along the coupon today. It isn't merely that these cigars will be worth your dollar, so much as that this is the way for you to discover the smoke that will hereafter be your own particular favorite.

Congress in the Twilight Zone

A GREAT ADO ABOUT TRUSTS—AND LITTLE DOING

By Henry Beach Needham

A BANKER of New York and a senator of the United States were discussing the public welfare. Quite naturally, perhaps, the banker's thoughts were centered in the problems affecting Big Business; while the senator, a Democrat, was seeking light on the action that Congress, in its wisdom, ought to take in regard to trust legislation. The banker was not groping in darkness.

"The first thing Congress should do," declared the banker with thorough assurance, "is to repeal the Sherman Law."

"Without arguing that point," said the senator good-naturedly, "I must tell you that there is not the slightest possibility of the repeal of the anti-trust law."

"That's it—that's just it—that's Congress all over!" exclaimed the banker; "cowardice! cowardice!"

"Hold on a minute," urged the senator, deftly pulling a high card from his sleeve, unnoticed by the banker. "Didn't you give out an interview in the New York press recently that comprised your solution of the trust problem?"

"Yes; I gave such an interview."

"As I recall it," said the senator, "you did not publicly advocate the repeal of the Sherman Law."

"Of course I didn't!" said the banker. "That wouldn't have been prudent."

The legislator is *cowardly*, whereas the man concerned with Big Business is *prudent*. Perhaps it's only a difference in terms. But at this writing the trust question is overburdened with terms, surcharged with "views," dissolved in "solutions," vexed with remedies—practical, legal, economic and quack—and about as clear as mud. It's no wonder that in every discussion of the troublesome problem there is invariably some mention of the "Twilight Zone."

The Twilight Zone! No one, not even the Supreme Court, has surveyed and staked out this territory of doubt, this region of legal miasma, this psychological *Hinterland*.

A twilight conscience lighted thro' a chink.

It must be a spooky spot, where captains of industry tread softly—if one may judge from their testimony—where corporation counsel guess rather than advise their clients, and where the Government Trustbuster, certainly prior to the year of dissolution nineteen hundred and ten, was wont to wield his big stick with nerveless uncertainty. But if the term "Twilight Zone" refers merely to an area abounding in fog then its capital has been moved from New York to Washington. "Groping" fittingly describes the attitude of Congress toward the trust question at the present time, and for the term I am indebted to the men who make our laws. The Goddess Uncertainty not only rules trade today but governs a large majority of our legislative agents.

"I am giving careful study to the great question"; or, "My ideas have not become crystallized so far"; or, "We must wait for the courts to work out this serious problem"; or, "The courts have failed to give the people adequate relief, therefore Congress must act—but act after due deliberation"—these are samples of the opinions expressed—"not for publication"—by senators and representatives. Constitutionally, Congress should look to the President for leadership. But, in the first place, Congress is divided against itself, with a Democratic House and an Insurgent-Standpat Republican Senate; and, in the second place, there appears to be in the Chief Executive's mind a Twilight Zone. Going back no farther than the first of the President's popgun messages to the second session of the Sixty-second Congress we find these two warring observations: "It [the Sherman Law] is not intended . . . to prevent the accumulation of large capital in business enterprises. . . . Mere size is no sin against the law." "When men attempt to amass such stupendous capital as will enable them to suppress competition, control prices and establish a monopoly they know the purpose of their acts."

Consistency is the argument of unprogressive minds. It should never be demanded in a public career if one looks for a growing man. But it might reasonably be expected in a single presidential utterance. From many of the statements contained in the President's message on trusts one might logically conclude that the Sherman Law ought to be repealed. Mr. Taft's conclusion is to the contrary. But he seems to believe, now, that it was a bad law until the Supreme Court interpreted it and thereby cleared the way for untrammeled competition. Notwithstanding, he also believes in supplemental legislation—sees in it "decided advantages"—legislation that will define what acts are lawful and what acts criminal under the conclusive rulings of the Supreme Court. Finally, he inclines to the belief that the courts should be relieved of the burden of regulating business, and that the executive branch of the Government should supervise and control through the medium of voluntary Federal incorporation.

A wide-awake theatrical press agent could glean from the President's message a variety of opinions calculated to bolster up any and every side of the trust question. That is why, perhaps, this many-sided document does not carry more weight with Congress. In the Senate the President's recommendations are practically ignored. By praising the Tobacco Trust decree as the "best ever" Mr. Taft seriously weakened any influence he might possibly have exerted. In the House the message is condemned by the Democrats, who are opposed to an extension of the Federal power. Standpat Republican congressmen called it an "admirable state paper"—and then willingly saw it pigeonholed because, as one leader expressed it, "Taft's Federal incorporation is deader'n a doornail." Obviously, therefore, leadership in trust legislation is not to come from the Titular Recommender.

For three weeks I followed the hearings before the Interstate Commerce Committee of the Senate. Every monopolistic enterprise, from the Bathtub Trust to the Money Trust, came in for a lashing. Kings of finance, talking much about the common good, and college professors, preaching efficiency in "big units," coincided in their recommendations to the committee. Senators interrogated, and from the form of their questions one could approximate the drift of the legislative mind. Up to the adjournment of Congress for the holidays this inquiry had resulted in 1430 pages of testimony. Averaging 530 words to the page, the grand total would amount to 757,900 words.

Words are like leaves; and where they most abound,
Much fruit of sense beneath is rarely found.

In this wilderness of type one is particularly struck with the propensity of practical men to theorize—notably, George W. Perkins, formerly of the House of Morgan. Mr. Perkins is regarded as a practical business man of very wide experience, because of

Digitized by Google

his prominent part in the formation of the Steel, Harvester and International Shipping combinations. But in his testimony the former Morgan partner appears as the theorist. Either he lacked the facility to draw on his own experiences for pertinent illustrations, or he felt constrained to clothe in mystery the trust formations in which he had been a masterbuilder.

"I have spent most of my life in what you might call corporation work," Mr. Perkins told the committee, "such as insurance companies, with the steel company and the harvester company and others like that. . . . While I was a member of the firm of J. P. Morgan and Company it was all in connection with corporation problems. Therefore I have had an exceptional opportunity to look into them and become acquainted with such problems; and they took me all over the world and I saw not only our problems but the other problems. And I gradually came to believe they are going to be the problems of our time and our country, and that they can be solved only by men who have had practical experience with them. As I was not especially ambitious to become—I am speaking quite frankly now—to become an enormously wealthy man, I thought I would be more interested in trying to lend a hand to the solution of some of these problems than to go on just simply from the standpoint of making money the rest of my life."

As Mr. Perkins made this statement with apparent sincerity it "listened well," and promised valuable assistance in the solution of the trust problem. And Mr. Perkins was not backward with his solution. He advised Congress to create "a business court or controlling commission, composed largely of experienced business men," with power to license corporations doing an interstate or international business. This license, he recommended, should "depend on the ability of the corporation to comply with conditions laid down by Congress . . . and with such regulations as may be prescribed by the commission itself." He insisted that a corporation so licensed should "secure the approval of said commission of all its affairs, from its *capitalization* to its *business practices*." He was prepared to "make the violation of such rules and regulations punishable by the *imprisonment of individuals*." The italics are the writer's.

Still he listened well. But on cross-examination Mr. Perkins proved a disappointment as a problem solver. The interrogatories of senators were largely devoted to the subject of overcapitalization; this was entirely warranted, inasmuch as Mr. Perkins had proposed to give his industrial commission power to pass on the corporations' capitalization. When the question of watered stock was raised Mr. Perkins lost his frankness. He began to hedge. Asked if the Steel Corporation, when launched, was not overcapitalized, he replied:

"My judgment is that it was not too much, in view of all that has been worked out. . . . It will always remain an interesting question of discussion as to whether the price that was paid for the companies that entered into that Steel Corporation was too much or too little."

How Mr. Perkins Hedged

MR. PERKINS preferred that it "remain an interesting question of discussion!" But the business of the committee was not to embalm in the record interesting questions of discussion. There followed then this colloquy:

SENATOR POMERENE: Assume that we had this industrial commission or court that you speak of, and you were one of the judges sitting on that court, and an application had been made to you by the promoters of the United States Steel Company for a license to do business. Do you think that, in view of the method in which these plants were taken in, a license should have been issued to them to organize that large concern?

MR. PERKINS: That exactly covers one of my points about a court. I think that if at that time we had had such a court the situation that existed could not have existed.

SENATOR POMERENE: But assuming that it did exist just as it did?

MR. PERKINS: I beg your pardon, sir; it could not have existed.

SENATOR POMERENE: That still does not answer my question. Were you sitting as a judge on that court, would you have issued a license to that combination?

MR. PERKINS: That is a question that it is impossible for me to answer unless I could have all the collateral evidence pertaining to the question before me and act on it.

SENATOR POMERENE: I ask you because I regard you as one of the greatest experts we have on that question.

MR. PERKINS: Thank you. But I think one of the hardest things to do is to put your mind back even in the frame it was a moment ago.

Mr. Perkins declined to answer—that's the point. He boasted of his wide experience; put himself forward as a practical business expert; and then refused to answer a vital question relating to a combination of which no one man knows more than he. The effect was to discredit utterly his testimony. In future when George W. Perkins essays to solve the trust problem he should be written down as a Pecksniffian theorist.

Louis D. Brandeis, the Boston lawyer, may be regarded by some practical business men as a theorist. He followed Mr. Perkins as a witness before the Interstate Commerce Committee of the Senate. For three days he held the attention of the committee. In all that time, unlike Mr. Perkins, he discarded theory and pounded away at the facts—incontrovertible facts. Incidentally, he demolished the theories of Mr. Perkins. For one thing—and this is of great importance in considering the trust problem—Mr. Brandeis demonstrated that efficiency does not necessarily go with corporate bigness; indeed there is a point in business expansion where efficiency breaks down.

"Success or failure of an enterprise," said Mr. Brandeis, "depends usually upon one man, upon the quality of one man's judgment and, above all things, his capacity to see what is needed and his capacity to direct others. Now, while organization has made it possible for the individual man to accomplish infinitely more than he could before, aided as he is by new methods of communication, by the stenographer, the telephone and system, still there is a limit to what one man can do well; for judgment must be exercised, and in order that judgment may be exercised wisely it must be exercised on facts and on a comprehension of the significance of the relevant facts. . . . When, therefore, you increase your business to a very great extent and the multitude of problems increase with its growth, you will find, in the first place, that the man at the head has a diminishing knowledge of the facts and, in the second place, a diminishing opportunity of exercising a careful judgment upon them. Furthermore—and this is one of the most important grounds of the inefficiency of large institutions—there develops a *centrifugal force greater than the centripetal force*. Demoralization sets in; a condition of lessened efficiency presents itself. These manifestations are found in most huge businesses—in the huge railroad systems as well as in the huge industrial concerns. These are disadvantages that attend bigness."

The Falling Off of Trust Business

MR. BRANDEIS proceeded to prove his case by concrete illustrations. First, the trusts that could not secure a domination of the industry—trusts that lacked the ability to control prices—have failed, like the Whisky, Cordage and Malting combinations; or have shown no marked success, like the Print Papers Trust (the International Paper Company), the Writing-Paper Trust (the American Writing-Paper Company), the Upper Leather Trust (the American Hide and Leather Company), the Union Bag Trust and the Sole Leather Trust. "You will find daily evidence of their lack of success," said Mr. Brandeis, "in market quotations of the common stock where they are quoted at all, and the common stock of some has even fallen below the horizon of a quotation."

Second, the trusts that have been markedly successful, like Standard Oil, the Shoe Machinery Trust and the Tobacco Trust, have succeeded through their monopolistic position. "To this monopolistic power in the main," he argued, "and not to efficiency in management, are their great profits to be ascribed.

"Leaving the realm of industry for that of transportation, compare the failure of Mr. J. P. Morgan's creation—the International Mercantile Marine—and the astonishing success of the Pullman Car Company. The trans-Atlantic steamship trade was open to competition, and could not, in spite of its price agreements, fix rates at an elevation sufficient to be remunerative. The Pullman Company, possessing an absolute monopoly, has made profits so large as to be deemed unconscionable."

Third, take the combinations that have not controlled the market alone, but that have exerted control through price agreements or understandings—as the Sugar Trust and the Steel Trust. According to Mr. Brandeis, those trusts have paid large dividends because they were able to fix remunerative prices for their products, but neither has been able to hold its own against its competitors. "At the time of the Knight case," he said, "a little less than twenty years ago, the Sugar Trust had practically the whole business of the country—I think the Supreme Court report shows something like ninety-five per cent. The company's report to the stockholders of 1910, as I recall it, shows that the company now controls only forty-two per cent of the production of the country. . . . Profits were maintained, not only through price agreements, but through methods that were vulgarly criminal—through false weighing; through stealing of city water; through extensive railroad rebating.

"In the Steel Trust you have a similar manifestation of ebbing prestige. In spite of the control of raw material, the control of transportation, the control of certain trade through its railroad associations, the control of other trade through its money power—and the addition of the Tennessee Coal and Iron Company—in spite of all this the Steel Trust has been a steady loser in percentage of the iron and steel business of this country. And not only has it been a steady loser in the percentage of business in this country, but despite its ability to largely maintain prices, notably of steel rails, throughout that period, the later years show a diminishing return upon the capital invested as compared with the earlier years of the trust.

"What does that indicate? Does it not indicate a lessened efficiency, either actually or relatively, to other businesses?"

Mr. Brandeis then pointed out that efficiency is manifested with respect to quality, and he took up the manufacture of steel rails and fence wire. He called attention to the marked increase, during the life of the Steel Trust, of derailments due to defective rails. As reported by the Interstate Commerce Commission, in 1902 there were seventy-two derailments due to broken rails; in 1911 there were 249; and although a greater test has been put to rails in recent years with the increase in size of locomotives and weight of cars, as Mr. Brandeis says, "This great and powerful Steel Trust, with its huge earnings, the huge resources which enable it to develop the art in which it was engaged, has failed to meet the needs of commerce, the needs of transportation in this respect"—to safeguard the community against railroad accidents, loss of human life. A somewhat similar condition exists in respect to fence wire. The farmers of America found that their fence wire lasted very much less time than it used to do. So numerous were the complaints that the Department of Agriculture made an investigation and found the complaints to be well founded.

"Another test of efficiency to which the United States Steel Corporation has been subjected," said Mr. Brandeis, "and which it has failed to meet, is this—it has shown itself unable to maintain its prestige in the world's competition." In the ten years of the Steel Corporation's life our foreign steel and iron tonnage increased from 1,154,000 to 1,533,000 tons; Germany's tonnage increased from 838,000 to 4,868,000; and the United Kingdom's tonnage increased from 3,213,000 to 4,594,000 tons. The figures show that, coincident with the existence of the Steel Trust, we have been losing our prestige in the world's steel market. Germany has been running away from us. During the last four years, notwithstanding the fact that Germany and England were acquiring most of the increasing world's trade, the plants of the United States Steel Corporation have been utilized to an extent varying from fifty-five to seventy-five per cent of their capacity only; for much of the time the trust has had thirty-three and one-third per cent of unused capacity.

The Enormous Profits of Promotion

MR. PERKINS emphasized the supposed benefits that "combination" enables a business to confer upon workingmen. He stated that the Steel Corporation had distributed among its employees, during the last ten years, twelve million dollars. Commenting upon this testimony, Mr. Brandeis said:

"Twelve million dollars in ten years is one million two hundred thousand dollars a year. Judge Gary tells us that the number of employees in the Steel Corporation is about two hundred thousand. If that be the number of the employees, and had been the number during this whole period, that profit share would amount to six dollars a year or to fifty cents a month for each employee, if divided equally among all the employees.

"In connection with the alleged fairness of that course consider these facts, found upon an official investigation by the Commissioner of Corporations. He found that the profits—the clear profits—of the syndicate that undertook the promotion of the United States Steel Corporation were sixty-two million five hundred thousand dollars. Mr. Perkins' firm, J. P. Morgan and Company, received, not for their participation in the syndicate, but as managers, and purely as managers of the syndicate, a commission of twenty per cent, or twelve million five hundred thousand dollars, for a few months' work. As members of the syndicate they received another very large amount, variously estimated from seven million dollars to thirteen million dollars. Is that Mr. Perkins' idea of justice to be attained through these great corporations by applying profit sharing?"

Mr. Brandeis demonstrated that the Steel Trust's so-called "profit sharing" isn't profit sharing at all, and he cited a number of Massachusetts companies to illustrate real profit sharing between employer and workman. He presented figures of wages in the steel industry and showed that they have been relatively lower since the trust was formed. Then he took up the hours of labor in the steel industry.

"What are the conditions?" he asked. "Approximately one-fourth of the ninety thousand workers reported on by the Commissioner of Labor are employed eighty-four hours a week—twelve hours a day for seven days a week. And, what is worse even—if anything worse is conceivable—note that in making the shift at the end of a week or two weeks, men work not twelve but eighteen and at times twenty-four hours on a stretch. Approximately one-third of all the employees reported on had a regular working week of more than seventy-two hours, which practically

(Continued on Page 35)

THE MOB FROM MASSAC

By IRVIN S. COBB

ILLUSTRATED BY F. R. GRUGER

YOU might call it a tragedy—this thing that came to pass down in our country here a few years back. For that was exactly what it was—a tragedy, and in its way a big one. Yet at the time nobody thought of calling it by any name at all. It was just one of those shifts that are inevitably bound to occur in the local politics of a county or a district; and when it did come, and was through and over with, most people accepted it as a matter of course.

There were some, however, it left jarred and dazed and bewildered—yes, and helpless too; men too old to readjust their altered fortunes to their altered conditions even if they had the spirit to try, which they hadn't. Take old Major J. Q. A. Pickett now. Attaching himself firmly to a certain spot at the far end of Sherrill's bar, with one leg hooked up over the brass bar-rail—a leg providentially foreshortened by a Minie ball at Shiloh, as if for that very purpose—the major expeditiously drank himself to death in a little less than four years, which was an exceedingly short time for the job, seeing he had always been a most hale and hearty old person, though grown a bit gnarly and skewed with the coming on of age. The major had been county clerk ever since Reconstruction; he was a gentleman and a scholar and could quote Latin and Sir Walter Scott's poetry by the running yard. Toward the last he quoted them with hiccups and a stutter.

They Made a Hard Fight of It, Spouting Arguments and Oratory Like So Many Inspired Human Spigots

Also there was Captain Andy J. Redcliffe, who was sheriff three terms handrunning and, before that, chief of police. Going out of office he went into the livery-stable business; but he didn't seem to make much headway against the Farrell Brothers, who owned the other livery stable and were younger men and spry and alert to get trade. He spent a few months sitting at the front door of his yawning, half-empty stables, nursing a grudge against nearly everything and plaintively garrulous on the subject of the proverbial ingratitude of republics in general and this republic in particular; and presently he sickened of one of those mysterious diseases that seem to attack elderly men of a full habit of life and to rob them of their health without denuding them of their flesh. His fat sagged on his bones in unwholesome, bloated folds and he wallowed unsteadily when he walked. One morning one of his stable hands found him dead in his tiny office, and the Gideon K. Irons Camp turned out and gave him a comrade's funeral, with full military honors.

Also there were two or three others, including ex-County Treasurer Whitford, who shot himself through the head when a busy and conscientious successor found in his accounts a seeming shortage of four hundred and eighty dollars, which afterward turned out to be more a mistake in bookkeeping than anything else. Yet these men—all of them—might have seen what was coming had they watched. The storm that wrecked them was a long time making up—four years before it threatened them.

There had grown up a younger generation of men who complained—and perhaps they had reason for the complaint—that they did nearly all the work of organizing and campaigning and furnished most of the votes to carry the elections, while a close combine of aging, fussy, autocratic old men held all the good county offices and fatted themselves on the spoils of county politics. These mutterings of discontent found shape in a sort of semi-organized revolt against the county ring, as the young fellows took to calling it, and for the county primary they made up a strong ticket among themselves—a ticket that included two smart young lawyers who could talk on their feet, and a popular young farmer for sheriff, and a live young harnessmaker as a representative of union labor, which was beginning to be a recognized force in the community with the coming of the two big tanneries. They made a hard fight of it, too, campaigning at every fork in the big road and every country store and blacksmithshop, and spouting arguments and oratory like so many inspired human spigots. Their elderly opponents took things easier. They rode about in top buggies and democrat wagons from barbecue to rally and from rally to schoolhouse meeting, steadfastly refusing the challenges of the younger men for a series of joint debates and contenting themselves with talking over old days with fading, grizzled men of their own generation. These elders, in turn, talked with their sons and sons-in-law and their nephews and neighbors; and so, when the primaries came, the young men's ticket stood beaten—but not by any big margin. It was close enough to be very close.

"Well, they've licked us this time!" said young Dabney Prentiss, who afterward went to Congress from the district and made a brilliant record there. Dabney Prentiss had been the younger element's candidate for circuit-court judge against old Judge Billy Priest, the incumbent. "They've licked us and the Lord only knows how they did it. Here we thought we had 'em outorganized, outgeneraled and outnumbered. All they did was to go out in the back districts and beat the bushes, and out crawled a lot of old men that everybody else thought were dead twenty years ago. I think they must hide under logs in the woods and only come out to vote. But, fellows"—he was addressing some of his companions in disappointment—"But, fellows, we can afford to wait and they can't. The day is going to come when it'll take something more than shaking an empty gray sleeve or waving a crippled old leg to carry an election in this county. Young men keep growing up all the time, but all that old men can do is to die off. Four years from now we'll win sure!"

The four years went by, creakingly slow of passage to some and rolling fast to others; and in the summer of the fourth year another campaign started up and grew hot and hotter to match the weather, which was blazing hot. The August drought came, an arid and a blistering visitation. Except at dusk and at dawn the birds quit singing and hung about in the thick treetops, silent and nervous, with their bills agape and their throat feathers panting up and down. The roasting ears burned to death on the stalk and the wide fodder blades slowly cooked from sappy greenness to a brittle dead brown. The clods in the cornrows were dry as powder and gave no nourishment for growing, ripening things. The dust powdered the blackberry vines until they lost their original color altogether, and at the roadside the medicinal mullein drooped its wilted long leaves, like lolling tongues that were all furred and roiled, as though the mullein were suffering from the very fevers that its steeped juices are presumed to cure. At night the moon shone full and red, with two rings round it; and the two rings always used to mean water in our country—two rings for drinking water at the hotel, and for rain-water two rings round the moon—but week after week no rain fell and the face of the earth just seemed to dry up and blow away. Yet the campaign neither lost its edge nor abated any of its fervor by reason of the weather. Politics was the chief diversion and the main excitement in our county in those days—and still is.

One morning near the end of the month a dust-covered man on a sorely spent horse galloped in from Massac Creek, down in the far edge of the county; and when he had changed horses at Farrell Brothers' and had started back again there went with him the sheriff, both of his deputies and two of the town policemen, the sheriff taking with him in his buckboard a pair of preternaturally grave dogs of a reddish-brown aspect, with long, drooping ears, and long, sad, stupid faces and eyes like the chief mourners' at a funeral. They were bloodhounds, imported at some cost from a kennel in Tennessee and reputed to be marvelously wise in the tracking down of criminals. By the time the posse was a mile away and headed for Massac a story had spread through the town that made men grit their teeth and sent certain armed and mounted volunteers hurrying out to join the manhunt.

Late that same afternoon a team of blown horses, wet as though they had wallowed in the river and drawing a top buggy, panted up to the squat little red-brick jail, which stood on the county square alongside the old wooden white courthouse, and halted there. Two men—a constable and a deputy sheriff—sat back under the overhanging top of the buggy, and between them something small was crushed, huddled down on the seat and almost hidden by their broad figures. They were both yellowed with the dust of a hard drive. It lay on their shoulders like powdered sulphur and was gummed to their eyelashes, so that when they batted their eyelids to clear their sight it gave them a grotesque, clownish look. They climbed laboriously out and stretched their limbs.

The constable hurried stiffly up the short gravel path to the jail and rapped on the door and called out something. The deputy sheriff reached in under the buggy top and hauled out a little negro, skinny and slight and seemingly not over eighteen years old. He hauled him out as though he was handling a sack of grits, and the negro came out like a sack of grits and fell upon his face on the pavement, almost between the buggy wheels. His wrists were held together by a pair of iron handcuffs heavy enough to fetter a bear, and for further precaution his legs had been hobbled with a plowline, and his arms were tied back with another length of the plowline that passed through his elbows and was knotted behind. The deputy stooped, took a grip on the rope across the prisoner's back and heaved him up to his feet. He was ragged, barefooted and bareheaded and his face was covered with a streaky clayish-yellow caking, where the sweat had run down and wetted the dust layers. Through this muddy mask his pop-eyes stared with a dulled animal terror.

Thus yanked upright the little negro swayed on his feet, shrinking up his shoulders and lurching in his tethers. Then his glazed stare fell on the barred windows and the hooded door of the jail, and he realized where he had been brought and hurried toward it as toward a welcome haven,

Digitized by Google

stretching his legs as far as the ropes sawing on his naked ankles would let him. Willing as he was, however, he collapsed altogether as he reached the door and lay on his face kinking and twisting up in his bonds like a stricken thing. The deputy and the constable dragged him up roughly, one lifting him by his arm bindings and the other by the ropes on his legs, and they pitched him in flat on the floor of the little jail office. He wriggled himself under a table and lay there sniffling out his fear and relief. His tongue hung out of his mouth like the tongue of a tied calf, and he panted with choky, slobbering sounds.

The deputy sheriff and the constable left him lying and went to a water bucket in the corner and drank down brimming dippers, turn and turn about, as though their thirsts were unslakable. It was Dink Bynum, the deputy jailer, who had admitted them and in the absence of his superior he was in charge solely. He waited until the two had lowered the water line in the cedar bucket by a matter of inches.

"Purty quick work, boys," he said professionally, "if this is the right nigger."

"I guess there ain't much doubt about him bein' the right one," said the constable, whose name was Quarles. "Is there, Gus?" he added.

"No doubt at all in my mind," said the deputy. He wiped his mouth on his sleeve, which smeared the dust across his face in a sort of pattern.

"How'd you fellers come to git him?" asked Bynum.

"Well," said the deputy, "we got out to the Hampton place about noon I reckon it was. Every man along the creek and every boy that was big enough to tote a gun was out scourin' the woods and there wasn't nobody round the place exceptin' a passel of the womenfolks. Just over the fence where the nigger was s posed to have crossed we found his old felt hat layin' right where he'd run out from under it and we let the dogs smell of it, and inside of five minutes they'd picked up a trail and was openin' out on it. It was monstrous hot going through them thick bottoms afoot, and me and Quarles here outrun the sheriff and the others. Four miles back of Florence Station, and not more'n a mile from the river, we found this nigger treed up a hackberry with the dogs baying under him. I figure he'd been hidin' out in the woods all night and was makin' for the river, aimin' to cross, when the dogs fetched up behind him and made him take to a tree."

"Did you carry him back for the girl to see?"

"No," said the deputy sheriff. "Me and Quarles we talked it over after we'd got him down and had him roped up. In the first place she wasn't in no condition to take a look at him, and besides we knowed that them Massac people jest natchelly wouldn't listen to nothin' oncet they laid eyes on him. They'd 'a' tore him apart bodily."

The bound figure on the floor began moaning in a steady, dead monotone, with his lips against the planking.

"So, bein' as me and Quarles wanted the credit for bringin' him in, not to mention the reward," went on the deputy, without a glance at the moaning negro, "we decided not to take no chances. I kept him out of sight until Quarles could go over to the river and borrow a rig, and we driv in with him by the lower road, acrost the iron bridge, without goin' anywhere near Massac."

"What does the nigger say for himself?" asked Bynum, greedy for all the details.

"Huh!" said the deputy. "He's been too scared to say much of anything. Says he'd tramped up here from below the state line and was makin' for Ballard County, lookin' for a job of work. He's a strange nigger all right. And he as good as admits he was right near the Hampton place yistiddy evenin' at milkin' time, when the girl was laywaid, and says he only run because the dogs took out after him and scared him. But here he is. We've done our duty and delivered him, and now if the boys out yonder on Massac want to come in and take him out that's their lookout and yourn, Dink."

"I reckon you ain't made no mistake," said Bynum. Cursing softly under his breath he walked over and spurned the prisoner with his heavy foot. The negro writhed under the pressure like a crushed worm. The under jailer looked down at him with a curious tautening of his heavy features.

"The papers call 'em burly black brutes," he said, "and I never seen one of 'em yit that was more'n twenty year old or run over a hundred and thirty pound." He raised his voice: "Jim—oh, Jim!"

An inner door of sheet-iron opened with a suspicious instantaneousness, and in the opening appeared a black jail trusty, a confirmed chicken thief. He ducked his head in turn toward each of the white men, carefully keeping his uneasy gaze away from the poor negro lying between the table legs in the corner.

The Sheriff Taking With Him a Pair of Preternaturally Grave Dogs

"Yes, suh, boss—right here, suh," said the trusty.

"Here, Jim"—the deputy jailer was opening his pocket-knife and passing it over—"take and cut them ropes off that nigger's arms and laigs."

With a ludicrous alacrity the trusty obeyed.

"Now pull him up on his feet!" commanded Bynum. "I guess we might as well leave them cuffs on him—eh?" he said to the deputy sheriff. The deputy nodded. Bynum took down from a peg over the jailer's desk a ring bearing many jingling keys of handwrought iron. "Bring him in here, Jim," he bade the trusty.

He stepped through the inner door and the negro Jim followed him, steering the manacled little negro. Quarles, the constable, and the deputy sheriff tagged behind to see their catch properly caged. They went along a short corridor, filled with a stifling, baked heat and heavy with the smell of penned-up creatures. There were faces at the barred doors of the cells that lined one side of this corridor—all black or yellow faces except one white one; and from these cells came no sound at all as the three white men and the two negroes passed. Only the lone white prisoner spoke out.

"Who is he, Dink?" he called eagerly. "What's he done?"

"Shut up!" ordered his keeper briefly, and that was the only answer he made. At the far end of the passage Bynum turned a key in a creaky lock and threw back the barred door of an inner cell, sheathed with iron and lacking a window. The trusty shoved in the little handcuffed negro who groveled on the wooden floor upon all fours. Bynum locked the door and the three white men tramped back through the silent corridor, followed by the sets of white eyes that stared out unwinkingly at them through the iron-latticed grills.

It was significant that from the time of the arrival at the jail not one of the whites had laid his hands actually upon the prisoner.

"Well, boys," said Bynum to the others by way of a farewell, "there he is and there he'll stay—unless them Massac Creek folks come and git him. You've done your sworn duty and I've done mine. I locked him up and I won't be responsible for what happens now. I know this much—I ain't goin' to git myself crippled up savin' that nigger. If a mob wants to come let 'em come on!"

No mob came from Massac that night or the next night either; and on the second day there was a big basket picnic and rally under a brush arbor at the Shady Grove schoolhouse—the biggest meeting of the whole campaign it was to be, with speaking, and the silver cornet band out from town to make music, and the oldest living Democrat in the county sitting on the platform, and all that. Braving the piled-on layers of heat that rode the parched country like witch-hags half the town went to Shady Grove. Nearly everybody went that could travel. All the morning wagons and buggies were clattering out of town, headed toward the west. And in the cooking dead calm of the midafternoon the mob from Massac came.

They came by roundabout ways, avoiding those main traveled roads over which the crowds were gathering in toward the common focus of the Shady Grove schoolhouse; and coming so, on horseback by twos and threes, and leaving their horses in a thicket half a mile out, they were able to reach the edge of the town unnoticed and unsuspected. The rest, their leader figured, would be easy. A mistake in judgment by the town fathers in an earlier day had put the public square near the northern boundary, and the town, instead of growing up to it, grew away from it in the opposite direction, so that the square stood well beyond the thickly settled district.

All things had worked out well for their purpose. The sheriff and the jailer, both candidates for renomination, were at Shady Grove, and the sheriff had all his deputies with him, electioneering for their own jobs and his. Legal Row, the little street of lawyers' offices back of the square, might have been a byroad in old Pompeii for all the life that showed along its short and simmering length. No idlers lay under the water maples and the red oaks in the square. The jail baked in the sunlight, silent as a brick tomb, which indeed it somewhat resembled; and on the wide portico of the courthouse a loafer dog of remote hound antecedents alternately napped and roused to snap at the buzzing flies. The door of the clerk's office stood agape and through the opening came musty, snuffy smells of old leather and dry-rotted deeds. The wide hallway that ran from end to end of the old building was empty and echoed like a cave to the frequent thump of the loafer dog's leg joints upon the planking.

Indeed, the whole place had but a single occupant. In his office back of the circuit-court room Judge Priest was asleep, tilted back in a swivel chair, with his short, plump legs propped on a table and his pudgy hands locked across his stomach, which gently rose and fell with his breathing. His straw hat was on the table, and in a corner leaned his inevitable traveling companion in summer weather—a vast and cavernous umbrella of a pattern that is probably obsolete now, an unkempt old drab slattern of an umbrella with a cracked wooden handle and a crippled rib that dangled away from its fellows as though shamed by its afflicted state. The campaigning had been hard on the old judge. The Monday before, at a rally at Temple's Mills, he had fainted, and this day he hadn't felt equal to going to Shady Grove. Instead he had come to his office after dinner to write some letters and had fallen asleep. He slept on for an hour, a picture of pink and cherubic old age, with little beadings of sweat popping out thickly on his high bald head and a gentle little snoring sound, of first a drone and then a whistle, pouring steadily from his pursed lips.

Outside a dry-fly rasped the brooding silence up and down with its fret-saw refrain. In the open spaces the little heat waves danced like so many stress marks, accenting the warmth and giving emphasis to it; and far down the street, which ran past the courthouse and the jail and melted into a country road so imperceptibly that none knew exactly where the street left off and the road began, there appeared a straggling, irregular company of men marching, their shapes more than half hid in a dust column of their own raising. The Massac men were coming.

I believe there is a popular conception to the effect that an oncoming mob invariably utters a certain indescribable,

"Judge Priest, Please, Suh, Wuke Up—the Mobbers is Comin'!"

Digitized by Google

sinister, muttering sound that is peculiar to mobs. For all I know that may be true of some mobs, but certain it was that this mob gave vent to no such sounds. The mob came on steadily, making no more noise than any similar group of seventy-five or eighty men tramping over a dusty road might be expected to make.

For the most part they were silent and barren of speech. One youngish man kept repeating to himself a set phrase as he marched along. This phrase never varied in word or expression. It was: "Goin' to git that nigger! Goin' to git that nigger!"—that was all—said over and over again in a dull, steady monotone. By its constant reiteration he was working himself up, just as a rat-terrier may be worked up by constant hissed references to purely imaginary rats.

Their number was obscured by the dust their feet lifted. It was as if each man at every step crushed with his toe a puffball that discharged its powdery particles upward into his face. Some of them carried arms openly—shotguns and rifles. The others showed no weapons, but had them. It seemed that every fourth man, nearly, had coiled upon his arm or swung over his shoulder a rope taken from a plow or a well-bucket. They had enough rope to hang ten men or a dozen—yes, with stinting, to hang twenty. One man labored under the weight of a three-gallon can of coal-oil, so heavy that he had to shift it frequently from one tired arm to the other. In that weather the added burden made the sour sweat run down in streaks, furrowing the grime on his face. The Massac Creek blacksmith had a sledge-hammer over his shoulder and was in the front rank. Not one was masked or carried his face averted. Nearly all were grown men and not one was under twenty. A certain definite purpose showed in their guit. It showed, also, in the way they closed up and became a more compact formation as they came within sight of the trees fringing the square.

Down through the drowsing town edge they stepped, giving alarm only to the chickens that scratched languidly where scrub-oaks cast a skimpy shade across the road; but as they reached the town line they passed a clutter of negro cabins clustering about a little doggery. A negro woman stepped to a door and saw them. Distractedly, fluttering like a hen, she ran into the bare, grassless yard, setting up a hysterical outcry. A negro man came quickly from the cabin, clapped his hand over her mouth and dragged her back inside, slamming the door to behind him with a kick of his bare foot. Unseen hands shut the other cabin doors and the woman's half-smothered cries came dimly through the clapboarded wall; but a slim black darky darted southward from the doggery, worming his way under a broken, snaggled fence and keeping the straggling line of houses and stables between him and the marchers. This fleeing figure was Jeff, Judge Priest's negro bodyservant, who had a most amazing faculty for always being wherever things happened.

Jeff was lithe and slim and he could run fast. He ran fast now, snatching off his hat and carrying it in his hand—the surest of all signs that a negro is traveling at his top gait. A good eighth of a mile in advance of the mob, he shot in at the back door of the courthouse and flung himself into his employer's room.

"Jedge! Jedge!" he panted tensely. "Jedge Priest, please, suh, wake up—the mobbers is comin'!"

Judge Priest came out of his nap with a jerk that uprighted him in his chair.

"What's that, boy?"

"The w'ite folks is comin' after that there little nigger over in the jail. I outrun 'em to git heah and tell you, suh."

"Ah-hah!" said Judge Priest, which was what Judge Priest generally said first of all when something struck him forcibly. He reared himself up briskly and reached for his hat and umbrella.

"Which way are they comin' from?" he asked as he made for the hall and the front door.

"Comin' down the planin'-mill road into Jefferson Street," explained Jeff, gasping out the words.

As the old judge, with Jeff in his shadow, emerged from the shadows of the tall hallway into the blinding glare of the portico they met Dink Bynum, the deputy jailer, just diving in. Dink was shirtsleeved. His face was curiously checkered with red-and-white blotches. He cast a backward glance, bumped into the judge's greater bulk and caromed off, snatching at the air to recover himself.

"Are you desertin' your post, Dink?" demanded the judge.

"Jedge, there wasn't no manner of use in my stayin'," babbled Bynum. "I'm all alone and there's a whole big crowd of 'em comin' yonder. They'll git that nigger anyhow—and he deserves it!" he burst out.

"Dink Bynum, where are the keys to that jail?" said Judge Priest, speaking unusually fast for him, who usually drawled his words with a high singsong.

"I clean forgot 'em!" he quavered. "I left 'em hangin' in the jail office."

"And also I note you left the outside door of the jail standin' wide open," said the judge, glancing to the left. "Where's your pistol?"

"In my pocket—in my pocket, here."

"Git it out!"

"Jedge Priest, I wouldn't dare make no resistance single-handed—I got a family—I ——" faltered the unhappy deputy jailer.

The moving dustcloud, with legs and arms showing through its swirling front, was no more than a hundred yards away. You could make out details—hot, red, resolute faces; the glint of the sun on a gunbarrel; the polished nose of the blacksmith's sledge; the round curve of a greasy oilcan.

"Dink Bynum," said Judge Priest, "git that gun out and give it to me—quick!"

"Jedge, listen to reason!" begged Bynum. "You're a candidate yourse'f. Sentiment is aginst that nigger—strong. You'll hurt your own chances if you interfere."

The judge didn't answer. His eyes were on the dust-cloud and his hand was extended. His pudgy fingers closed round the heavy handful of blued steel that Dink Bynum passed over and he shoved it out of sight. Laboring heavily down the steps he opened his umbrella and put it over his shoulder, and as he waddled down the short gravel path his shadow had the grotesque semblance of a big crawling land terrapin following him. One look Judge Priest sent over his shoulder. Dink Bynum and Jeff had both vanished. Except for the men from Massac there was no living being to be seen.

They didn't see him, either, until they were right upon him. He came out across the narrow sidewalk of the square and halted directly in their path, with his right hand raised and his umbrella tilted far back, so that its shade cut across the top of his straw hat, making a distinct line.

"Boys," he said familiarly, almost paternally—"Boys, I want to have a word with you."

Most of the Massac men knew him—some of them knew him very well. They had served on juries under him; he had eaten Sunday dinners under their rooftrees. They stopped, the rear rows crowding up closer until they were a solid mass facing him. Beyond him they could see the outer door of the jail gaping hospitably and the sight gave an edge to their purpose that was like the gnawing of physical hunger. Above all things they wished to hurry forward the thing they had in their minds to do.

"Boys," said the judge, "most of you are friends of mine—and I want to tell you something. You mustn't do the thing you're purposin' to do—you mustn't do it!"

A snorted outburst, as of incredulity, came from the sweating clump of countrymen confronting him.

"The hell we mustn't!" drawled one of them derisively, and a snicker started.

The snicker grew to a laugh—a laugh with a thread of grim menace in it, and a tinge of mounting man-hysteria. Even to these men, whose eyes were used to resting on ungainly and awkward old men, the figure of Judge Priest, standing in their way alone, had a special emphasis. The judge's broad stomach stuck far out in front and was balanced by the rearward bulge of his umbrella. His white chin-beard was streaked with tobacco stains. The legs of his white linen trousers were caught up on his shins and bagged dropsically at the knees. The righthand pocket of his black alpaca coat was stretched away down by some heavy unseen weight.

None of the men in the front rank joined in the snickering, however, they only looked at the judge with a sort of respectful obstinacy. There was nothing said for maybe twenty seconds.

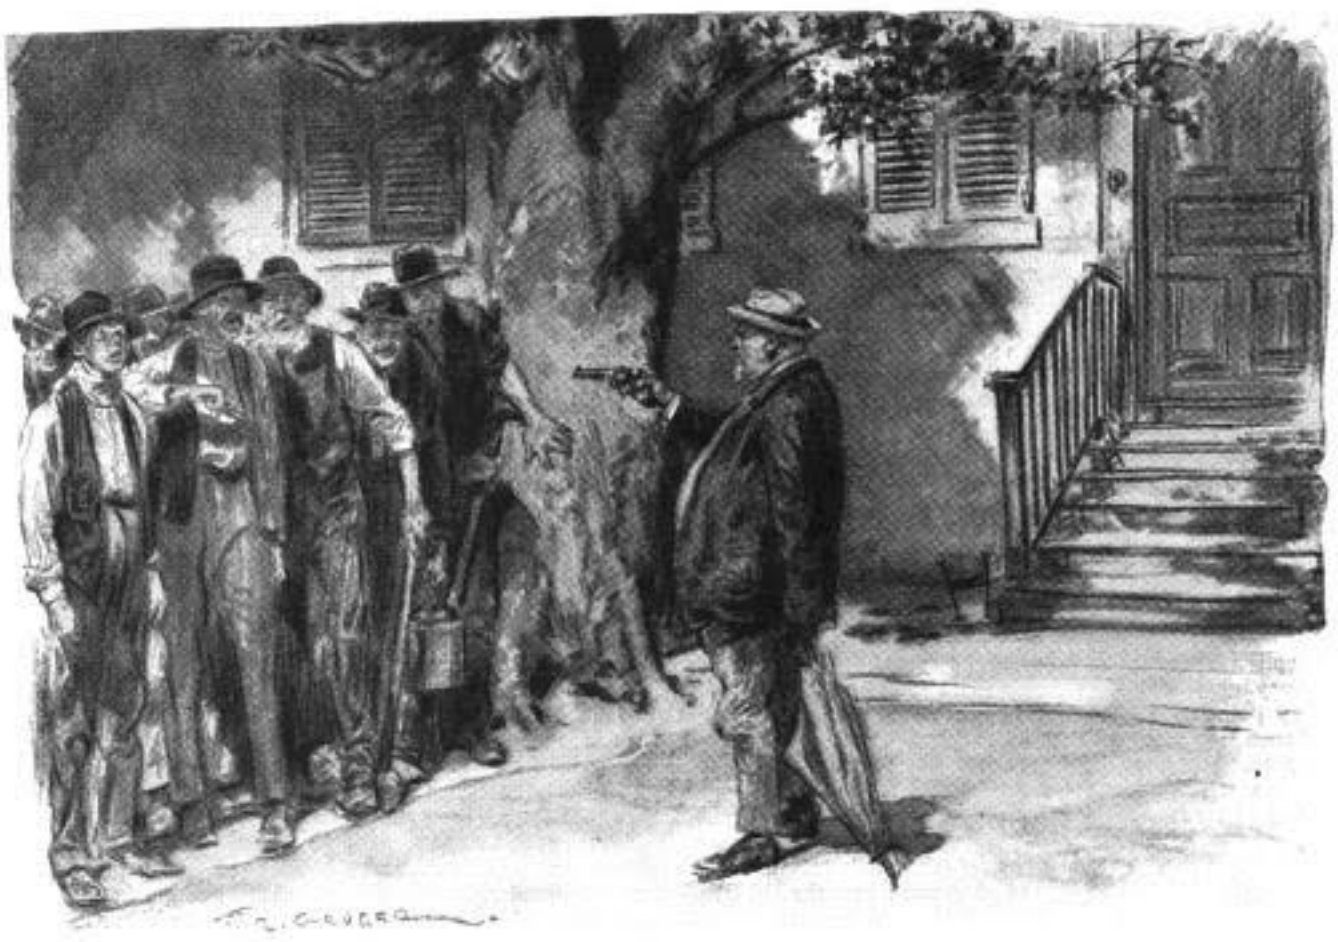
"Jedge Priest," said a spokesman, a tall, spare, bony man with a sandy drooping mustache and a nose that beaked over like a butcher-bird's bill—"Jedge Priest, we've come after a nigger boy that's locked up in that jail yonder and we're goin' to have him! Speaking personally, most of us here know you and we all like you, suh; but I'll have to ask you to stand aside and let us go ahead about our business."

"Gentlemen," said Judge Priest, without altering his tone, "the law of this state provides a proper ——"

"The law provides—eh?" mimicked the man who had laughed first. "The law provides, does it?"

"—— provides a fittin' and an orderly way of attendin' to these matters," went on the judge. "In the absence of the other sworn officials of this county I represent in my own humble person the majesty of the law, and I say to you ——"

"Jedge Priest," cut in the beaky-nosed man, "you are an old man and you stand mighty high in this community—none higher. We don't none of us want to do nothin' or say nothin' to you that mout be regretted afterward; but we air goin' to have that nigger out of that jail and stretch his neck for him. He's one nigger that's lived too long already. You'd better step back!" he went on. "You're just wastin' your time and ourn."



A growling assent to this sentiment ran through the mob. It was a growl that carried a snarl. There was a surging forward movement from the rear and a restless rustle of limbs.

"Wait a minute, boys!" said the leader. "Wait a minute. There's no hurry—we'll git him! Jedge Priest," he went on, changing his tone to one of regardful admonition, "you've got a race on for reëlection and you'll need every vote you kin git. I hope you ain't goin' to do nothin' that'll maybe hurt your chances among us Massac Creekers."

"That's the second time that's been throwed up to me inside of five minutes," said Judge Priest. "My chances for election have nothin' to do with the matter now in hand—remember that!"

"All right—all right!" assented the other. "Then I'll tell you somethin' else. Us men have come in broad daylight,

THE SECRETS OF A RAILROAD EXECUTIVE'S RISE

By Edward Mott Woolley

ILLUSTRATED BY C. D. WILLIAMS

TWENTY years ago I was a brakeman on a railroad running into Jersey City. I braked for several years on freights and finally was advanced to the passenger service, if advancement I may call it, for I received no increased pay. Further advancement, however, was so slow in coming that I almost despaired; more than once I came near quitting my job to hunt up something that would give me a better show in life. I liked railroading, but to ride up and down the line daily for five long years at fifty dollars a month or thereabout was not in keeping with the ambitions of a chap in his twenties. Besides, I had married and established a home at a division headquarters about a hundred and fifty miles from New York, and I didn't see how my increasing necessities could be met on such a meager salary. It was up to me to strike a lead somehow."

The man who uttered these words is a high railroad executive today, which is evidence enough that he did make a strike. After he made his first strike and got the hang of the thing, he went up very fast. Just how he did it he never told—until he told it for the present article. He would not have told it even then except for a casual remark he let slip to the effect that success in life, after all, is only the working out of a definite philosophy.

A very busy man is this executive, with weighty responsibilities that mean life or death to millions of passengers, perhaps, every year. He smiled his dissent when it was first suggested to him that he outline this magic philosophy. No; he regretted that he lacked the time. The traffic of a great railroad system was pivoted upon his office. Besides, his philosophy was action; success with him had been the acting of it.

The Chesterfield of the System

THIS was all the better. For the benefit of the multitudes of men who lack any philosophy of success, would he not reveal in narrative form the inner secrets of his rise?

There was an appeal in this. Most railroad executives are broad-gauge men. Show them a way to help their fellows and they want to do it. So, in the midst of duties that took his mind sometimes a thousand miles across the country, he unfolded his philosophy. There was not much of the abstract about it; every graphic incident was crowded with action and every point rang true to life. The hundreds of thousands of men who will read it must benefit, whatever their occupation.

"It was up to me to make a strike," he repeated. "Either I must quit railroading or secure a promotion.

"I Watched for Opportunities on the Train to Bestow Little Attentions on Passengers"

I thought the proposition over very carefully and my wife and I talked about it earnestly. She suggested that I go to the superintendent and explain that I had worked for years in a humble capacity and deserved something better—really needed it. I could tell him all the things I had done for the railroad and, by thus showing what a good man I was, force myself on the superintendent's attention.

"This seemed, at first, a fine idea. I would do the thing before I made my next run, I declared. So my wife laid out a white shirt and my reserve uniform, and off I started. In less than an hour I was back home.

"'Well?' asked Mary anxiously, as she met me on the steps.

"'I only got as far as the door of the superintendent's office,' I returned. 'You see, Mary, I—I sort of lost my nerve while I was waiting outside on the bench. I—I was trying to think up the speech I was to make to him; and somehow I couldn't frame it up to suit me. I—well, to tell the truth, Mary, I got up and ran away.'

"I saw the tears of disappointment and vexation spring to my wife's eyes. Upstairs in our cottage the baby was crying. I glanced about ruefully upon our meager little home. Everything spoke of our need of money.

"'Oh, John!' the poor girl cried—'Oh, John! I really thought you had more nerve!'

"'Well,' said I, sinking into a chair with a sigh. 'I'm not so sure that it's nerve I lack. Maybe it's something else. You suggested that I tell the superintendent all the things I had done for the railroad. Now that's just where all the trouble lay. When I came to framing up my speech I couldn't think of anything I'd done—not one solitary thing, Mary, beyond the things I was forced to do.'

"'But John,' she protested—'But John, you know you've always been faithful! How can you say such things about yourself?'

"'A dog can be faithful,' said I. 'Now I tell you, Mary, I've got a hunch that I've gone about this thing from a wrong philosophy. Before I hit the old man for a better job, I'm going to do something that he can see for himself!'

"Mary went upstairs to quiet the baby and I fell to thinking.

"I kept on thinking that day while I was out on my run. My train was a fast one; at some of the stations we stopped to discharge passengers from a distance, but not to take anybody on. At these stops we almost always had a lot of trouble with people who mistook our train for the local following it. To prevent their getting on, we had to use the whole train crew to bar the steps. Our conductor was a grouchy old chap—a good railroader, but a poor man to handle people diplomatically. Many a time I had seen him confront anxious travelers at these discharge stops and, without explaining, merely grunt: 'Nothin' doin'!' Sometimes he had to fight with them almost to keep them off the train.

"Well, I had fallen pretty much into the same habit myself—so had the rest of the crew; but now, on this particular day, a new light came over me. I wanted to do something for the railroad out of the ordinary, so it occurred to me to begin with politeness.

"'This is the special limited, madam; it is not allowed to take passengers from this station. Will you please wait for the local? It'll be along pretty soon.' This, or something like it, was the way I commenced to act upon my new philosophy.

"About a week later the superintendent was on the train. As he walked up and down the platform at one of these troublesome stops, I saw him glance at me sharply as I explained, with rather extraordinary elaborateness, that local tickets were not good on the special limited. I knew well enough that my bearing and politeness were unusual on our line. At that time the officials of the road had given the finer points of personal contact little thought.

"During the following month I broadened my scheme; I watched for opportunities on the train to bestow little attentions on passengers. I looked after the ventilators more carefully, opened and shut windows, carried baggage for women and old persons; and quite a good many times I had occasion to refuse tips. I was after bigger game. My philosophy was to serve the company;

"'Before I Hit the Old Man for a Better Job, I'm Going to Do Something That He Can See for Himself!'"

and if incidentally I served the company's patrons I was not the sort to take money for it like a servant. This view of the thing never seemed to occur to my associates on the railroad, and I was subjected to much good-natured raillery—and some that was not good-natured—because of my altered demeanor. Mary and I talked it over, and we kept our counsel.

"'It's like this, Mary,' I said, one night at supper: 'If only I can make myself stand out conspicuously in the eyes of the officials something is bound to come of it. In the past I've been only one bean among a bushel. Now I'm a different sort of bean, you see. I'm getting away from the common lot.'"

How the New Philosophy Won

"'YES,' my wife agreed, as she helped me to another dish of prunes. I remember we were long on prunes those days. 'Yes; and I think, John, that since you're making yourself agreeably conspicuous, you'd better wear your reserve uniform after this and get another for emergencies. It won't pay to look shabby.'

"So I spruced up and, altogether, became quite a Chesterfield.

"Among other things I did under my new philosophy was to announce the stations so that every passenger in the car could hear. Instead of standing on the platform and yelling to no purpose, I walked the length of the car, calling the stations repeatedly. One day, after I had done this, an old gentleman summoned me. 'You are the first brakeman I ever knew who called the stations properly,' he said. 'It is evident to me that you have the right sort of intelligence and energy. I'd like to have your name.'

"I gave it to him, and afterward I learned that he was one of the directors in the company. It was only a week later that a special messenger came to my house one night with orders to take out number six, at eleven-fifty-five, as conductor. A proud moment it was for me when I gave the signal and swung myself aboard.

"Well, I was happy enough for a time, but Mary said to me one day:

"'John, you mustn't stop where you are. Now that you've learned how to get a better job, why not try for trainmaster? Don't become a mere bean among the bushel again; you're smart enough to be president of the railroad some day—you know you are.'

"'I've been thinking about that too,' said I—'there are beans among conductors as well as among brakemen. I think I'll have to turn myself into a radish, so they'll pick me out and put me in the radish class.'

"So I set about giving myself a distinction as conductor. Mary and I often planned it out and reduced our philosophy to actual fact. 'John,' she said, 'you must get the reputation of being the very best and most agreeable conductor on the line. Aren't there lots of times when you can help the passengers plan out their connections and routes, and things of that sort? Can't you help them about deciding on hotels? And say, John, couldn't you do something to make traveling pleasanter for folks who don't ride in Pullmans? When I've been on the cars myself I've often longed for a pillow to put against the back of the seat and a place to wash my hands—and things of that sort.'

"It was not always easy to keep up my Chesterfield atmosphere; but, with my wife's encouragement, I did it.

Digitized by Google

I got the reputation of being the most popular conductor on the road, and it wasn't long before I could see that the higher officials had me singled out. They talked to me when they traveled over the line and I knew they were pleased with me.

"The trainmaster, too, classified me as belonging to a species out of the common run of conductors; but even he did not know that I was really a sort of actor—that, had *I followed* my own inclinations, I should have remained a bean instead of becoming a radish. To be a radish, in other words, required a distinct, conscious effort, steadily maintained. This, I take it, is what some men in trade call a business policy. It is what every man must have if he makes the most of success.

"One day, when the general manager was on my train, I suggested to him the ideas my wife had originated—washbowls and pillows. He laughed at first, but the next time I saw him he said he had laid the matter before the president, who was much interested in building up our passenger traffic.

"It was not a great while before some of our coaches on the long runs were equipped with these conveniences. One day I observed a woman passenger tying a newspaper about her hat before she put it on the rack—and another idea came to me. When the general manager went over the line on my train next time I suggested furnishing large paper bags for protecting women's hats. This was a clever thought, he agreed; it was one of those little conceits the president was looking for in his efforts to make our road distinctive. The plan was adopted, and I know it brought many hundreds of dollars in traffic to our company within a year. I talked with group after group of women on my trains who told me they had selected our route because the cinders on the other lines were so harmful to their hats.

"Another time I noticed a passenger tugging at one of our awkward wooden window-blinds, and I suggested to the president himself, who came over the line next day in his private car, that we substitute the sliding-curtain. This was done as fast as possible.

"In these days I grew into the acquaintance of those above me and had the satisfaction of knowing that I was contributing in a material way to the success of our railroad. Not all my suggestions were adopted, but I had gained the reputation of being a man with ideas worth cultivating."

The Stepping-Stone

"I WAS not surprised, then, when I succeeded to the position of trainmaster, the former incumbent having been made division superintendent.

"'Now, John,' said my wife that very night, 'you've got among the radishes at last, but you mustn't stay there. You've got to change yourself into a—well, a cabbage.'

"'Not quite so fast, Mary,' I answered; 'I fancy I'll have to be a turnip first.'

"The problem now seemed harder than ever. What could I do as trainmaster to make myself stand out above all the trainmasters on our road? Yet, if I meant to go about deliberately to lay my wires for another promotion I must draw the attention of the management in some consistent but nonspectacular way. I must steadily hammer home the fact that I was delivering every day a stock of ideas that benefited the road and made me more valuable.

"I looked about on my fellow trainmasters and analyzed them. They were good, capable fellows; but, as I came to know them—personally in some cases and through their work—I could not discover in one of them any evidence of the philosophy along which I myself was working. Not one among them seemed to stand out conspicuously as a high-grade man. I tried to imagine myself in the position of the general manager, surveying these men in a quest for executive ability. Which one would be most likely as a candidate? Mary and I discussed the problem, and she closed the subject by saying: 'John, they're all radishes and all just alike; you really must be a turnip.'

"I thought about the problem all day and night. It was a great game I was playing. I had won so far and I meant to go on winning. We had moved out of our tiny cottage now and had an eight-room house. Things were coming my way, including a bank account.

"'Mary,' I said one evening, 'I've got a splendid idea for a new signal code, and if it weren't for butting in on that cranky engineer of signals I'd propose it to the company; but that chap is sore at me already for being too busy, as he says.'

"'What department is he in?' asked Mary.

"'He's under the chief engineer of maintenance-of-way,' I explained. 'I don't like to antagonize those fellows, but ——'

"'Go straight to the chief engineer of his department!' interrupted my wife. 'It's just the chance you've been looking for.'

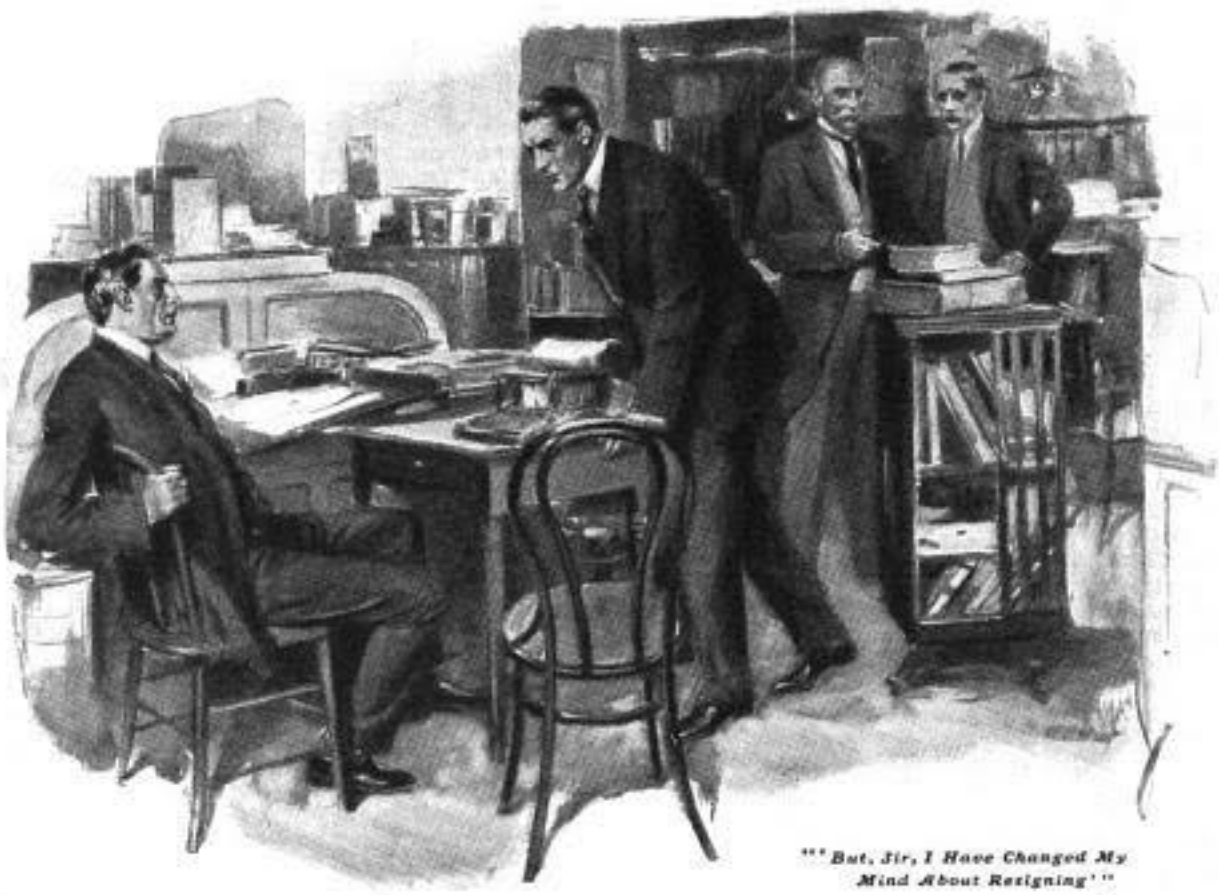
"So I went—and the ultimate result was a radical change in some of our signaling methods; but by doing so I aroused the jealousy of more than one man and made some enemies who afterward influenced my life very much—for my own betterment.

"Well, that signal idea was only the beginning. I evolved a lot of ideas on railroading and I set to work to study everything that would help me. We were doing a good many things in those days rather crudely. If you will look back you will see what vast strides the railroads have made in every branch of the business. Did you ever stop to consider that somebody thought out, with infinite study and slow evolution, every one of the improvements? Yet I can turn back in memory to my associates of that period and call off man after man who never contributed anything worth mentioning to the march of progress. And among those men were none who ever got very high up.

"One day during that period I heard a young locomotive engineer boast that he often ran past signals when he was sure they were only matters of form. This set me thinking, and I proposed to the division superintendent that he make a quiet test to discover what engineers were in the habit of doing this. Observers were stationed where they could keep a systematic watch during a certain night; the result was astonishing and alarming. The discipline was immediately drawn very tight.

"On another occasion I worked out a plan by which a change in our time-schedule enabled us to obviate chronic congestion on a certain division. On this division it was not uncommon to hold freight trains on sidings for six or eight hours at a stretch. This was not my business, strictly speaking; but I was working on the theory that anything was my business when it benefited the road. I was always looking for these neglected problems. No matter what your calling, you will always find plenty of them. Why, I can go into almost any business establishment you may designate this moment and find, within half an hour, just this sort of material to work on. Why don't men see their opportunities? My own success has come from analyzing opportunity.

"Once, when I had occasion to spend half a day at a town on our line, I found myself analyzing the layout of a new station, work on which was just beginning. I could see very plainly that the depot was to be built on the wrong side of the right-of-way. As soon as I had a chance to see our architect—who was on the staff of the chief engineer—I mentioned the matter to him. He became very angry and told me bluntly to mind my own affairs.



"I related the incident to my wife that night. 'Well,' she said, with genuine logic, 'if it really weren't your affair you could afford to drop it; but, since you expressed your opinion purely for the good of the railroad, I think you'd better take the matter higher up.'

"I had opportunity to do so within a day or two when I met the chief engineer out on the road. He listened to my suggestion and, after some consideration on the part of those at the very top, the station was built on the other side. The wisdom of this has been demonstrated ever since, for the strategic site of the new depot enabled our road to get many passengers who were brought to this town by the trains of another railroad and had the choice of two lines to a common terminal.

"Of course this wasn't any of my business either. The architect became another one of the little army of enemies I was making. He was a narrow man and I didn't worry much over him.

"I had a similar experience with the engineer of tests when I suggested the necessity of doing something differently. I felt certain that disaster would result unless the method of testing were changed; and, instead of crawling into my shell after being rebuffed, I saw the general superintendent of motive power. The engineer of tests was furious, but —— Well, I was making myself a turnip, and I didn't care. In the midst of considerable friction I was steadily forcing home a lot of ideas that earned the company money—and, I believed, saved lives. I knew, too, that the company had me singled out as a man out of the ordinary.

"I had been thinking about all this for quite a while when I said to Mary one day: 'Of course I run some risk of crowding myself in too fast, but I don't think there's a great deal of danger so long as I show that I'm vitally interested in the road—that I'm not a mere crank. And I'll tell you, Mary, just as soon as I feel that the men over me no longer want ideas which I know to be sound to the core I'll quit my job and look for one on some other railroad. I've heard of instances of that sort and I don't mean to be held down by enemies and jealousies.'"

"'But, Sir, I Have Changed My Mind About Resigning'"

Petty Jealousies

"I WAS promoted sooner than I expected to the position of division superintendent. It was now up to me, as my wife put it, to get out of the turnip class and parade myself as a cabbage in the turnip patch. I wasn't long in doing this, for I had seen very clearly the chief faults in the organization under me. This was especially true of the station-masters, station-agents, baggage-agents, train-dispatchers, operators, levermen and other minor but really important cogs in our operating machine. A good deal of attention had been given to larger matters and not enough to lesser ones. I have always gone on the theory that the little things make the big betterments.

"There were a good many divisions on our road, and I got very well acquainted with all the division superintendents. Here, too, was a lamentable sameness. Of course, when there is no particular choice, chance usually must determine the selection of a man for advancement. Each one of these division superintendents wanted to be advanced, and pulled his wires accordingly. Not one of them, however, pulled the wires as I was doing. The more common way was to work along the lines of personal friendship. My way was to deliver more goods to the company than any of my associates.

"But pretty soon I began to see that I was really running into the danger of which I had spoken to my wife—I was crowding the thing rather hard. In reorganizing the staff under me and tightening the lines all through, I was doing many things that lacked precedent. From long practice in the art of analysis I had come, almost unconsciously, to be original.

"Our road at that time, for instance, placed the levermen and tower-repairmen directly under the supervision of the master mechanic of the division. I removed these workers from the master mechanic's direct command and placed them under the chief operator. I created a new position—that of general foreman of locomotives—and

THE HEART EXCHANGE

By Peter B. Kyne

ILLUSTRATED BY C. EVERETT JOHNSON

"Yes, I'm Back Again—and Back to Stay! Now Suppose We Proceed to Get Busy and Get Out a Newspaper"

THERE was a crisis imminent in the affairs of E. Wicks, city editor of the Herald. To Wicks, life was one long succession of reverses and disappointments, and one might very naturally suppose that he would have become used to the ups and downs of life by this time and developed into a philosopher; but Wicks was not built on that plan. He was an orderly creature of habit, who struggled with the problems of daily life as if they were deadly and implacable enemies that must be overcome at any cost. Hence, anything that added to the ordinary burden of his lot in life always threw him into a rage; and if there was one thing more than all others that particularly incensed him it was the sight of a young man loitering round the entrance to the local room about midnight. The sight of such a young man always predicated a crisis in Mr. Wicks' affairs. If it wasn't a good sob sister it was the society editor, and if it wasn't the society editor it was almost certain to be the private-exchange operator. Generally it was the private exchange; and it always meant matrimony and the consequent heartbreaking job of rounding up a girl with brains to fill the niche left vacant by the depredations of the young man who loitered round the entrance to the local room about midnight.

As has already been stated, a crisis was imminent. Mr. Wicks, glancing up from a sheet of copy, was fully convinced of the fact. For several weeks he had noticed a strange young man hanging round the foot of the stairs leading up to the local room and had congratulated himself that his bailiwick was not threatened. He thought it must be one of the stenographers in the business office—one that worked late. Now, however, he was both enraged and amazed to observe that the young man, grown tired of waiting in the cold at the foot of the stairs, had had the effrontery to climb the stairs and take up his vigil just inside the door of the local room, where there was a stove going. He had the old, telltale, sheepish look of a lover in his mild eyes—a look that Mr. Wicks hated—and since he paid not the slightest heed to Madame Teazle—the society editor—Wicks was convinced that he must have designs on Miss Lily Grabsky, the private exchange. Miss Grabsky occupied a dark dungeon or box stall just off the local room, which very probably accounted for the young man "crushing in" where he apparently had no legitimate business.

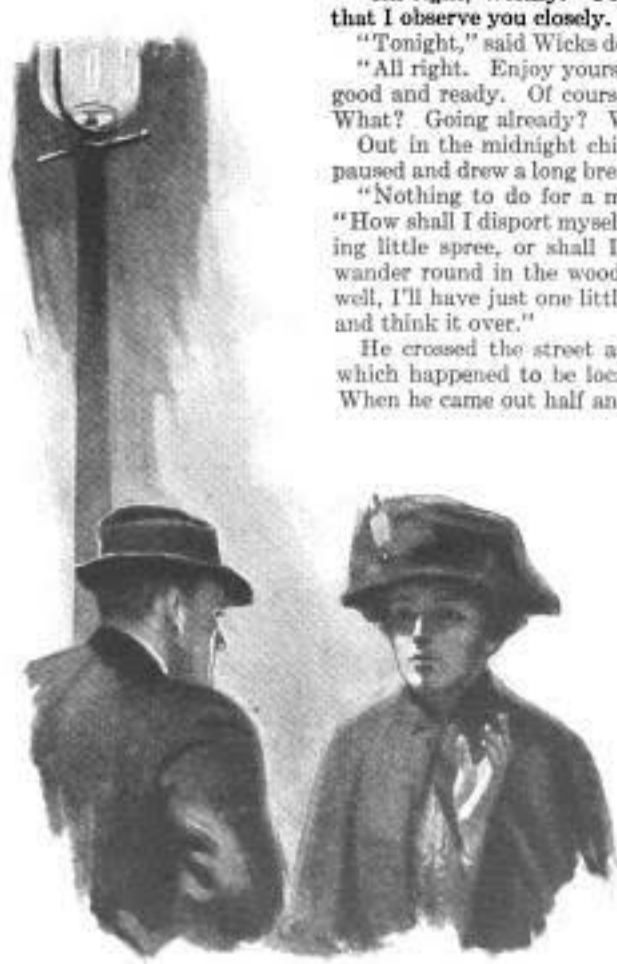
"If I don't put the rollers under this swain," soliloquized Mr. Wicks, "he'll get his courage in hand, invade the telephone room and drape his limp person over the switchboard; and then I never shall get a number. I'll just see if he's after the Grabsky girl, and if he is I'll give her the distress signal and have her shoo him away. I can't stand for this."

Saying which, Mr. Wicks marched up to the strange young man and in harsh tones desired to know his pleasure.

"I'm waiting to escort Miss Grabsky home," replied the youth, and blushed.

"Huh!" grunted Mr. Wicks, and went back to his desk.

So it was true! His peace of mind was threatened again as it had been so often threatened before. He knew not the hour or the minute when Miss Grabsky would give him notice; and if he knew Miss Grabsky at all he knew she was the kind of girl who works right up to payday and fails to report for duty next afternoon. Wicks sighed, for Miss Grabsky was the third private exchange in seven months; and—well, if you've ever worked round a newspaper shop with a big story breaking and a limited force to handle it you will realize the importance of a private-exchange operator with brains.



"Doggone it!" snapped Wicks peevishly. "The minute I get 'em broken in they run off and get married. If this thing keeps up I'll go crazy."

Poor Wicks! He was a little man, pasty of complexion, keen of eye and savage of mouth. Round this feature there lurked always a bitter, sneering expression, as if the daily grind had seared his harried soul until it had shriveled and dried forever the founts of tears and smiles. He was just a newspaper man, who had seen all that was crooked and sordid in life, and little that was manly and brave and decent. He was a great city editor, only the pity of it was that he had ideals and clung to them. He had a notion that he could run a clean, honest newspaper if he had the money and the courage to try—and Wicks had never been given an opportunity to try. This, together with his dislike of adjectives and a horror of rule-of-thumb writing, made him a marked man. Nobody loved him and he loved nobody. Moreover, he didn't care. Being by nature outspoken, and endowed with the courage of a bulldog, he seemed to glory in his reputation as a slavedriver. A man had to be twenty-four carat to hold a job under Wicks.

Wicks was thirty-eight years old and a womanhater. He had never married and never expected to. He had his work to do, and experience had proved to him that women were wholly brainless and not dependable. Wicks hated brainless people. And as for marriage! Huh! Not for E. Wicks. He had all he could attend to, keeping his paper from being scooped. Wicks admitted there were a few fine women on earth, but he wouldn't have married the finest of the lot. In the final analysis they were all alike when a man stayed out late—and Wicks was a newspaper man and could never by any possibility be anything else. He had dreamed of bigger work once, but the grind had soured his soul and ——

Well, I hate to say so, but once in a while, when the strain commenced to tell heavily on him, Wicks was wont to put a man in his place and go out and get very, very "full." On such occasions he generally acquired a black eye or a skinned nose—Wicks was vicious in his cups; and the shame of his return always kept him good for months thereafter. Wicks could never quite understand himself in this respect. He had never been able to advance any legitimate reason why he acquired the blues and a jag coincidently, unless it was that he was conscious of the fact that he was growing old and nobody cared. He knew he wasn't fond of liquor. His life merely demanded a leaven. He simply had to do something different occasionally or go mad with the pent-up cussedness within him.

For nearly a week now Mr. Wicks had been feeling the downhill pull. He hadn't had a vacation in five years and he hadn't had any excitement out of the ordinary in eight months. He was unpopular; so he had money in the bank, with a week's pay in his pocket—while here was another crisis at hand. Really, mused Wicks, it wasn't fair that he should have the job of breaking in a new telephone operator. It was monstrous to reflect that, in his present state of nervous tension, he should be called upon to wait on the line for ages, while cities were sacked, lightweight championships decided and tariff schedules revised. No, by Jupiter, it wasn't right! When E. Wicks took down his 'phone and told Miss Lily Grabsky to get the mayor of San Francisco on the line he didn't want to be informed, at the end of ten minutes, that the mayor was at a banquet. He wanted the hotel where that banquet was being served; he wanted Miss Lily Grabsky to order the hotel management to send a page to the mayor with the request that he come to the 'phone and speak with the city editor of the Herald; he wanted the mayor and he recked not how or where the mayor was to be found. He wanted him and he hadn't the time to waste telling Lily Grabsky how to go about the job. The fact of the matter is that Wicks required something more than an exchange operator. He required a female detective. He said, or rather growled, "Get me So-and-So"; and if So-and-So wasn't forthcoming Mr. Wicks would rend his hair and gnash his teeth and kick over the wastebasket.

"'I Bind Myself Not to Get Married and Quit Until a Period of Two Years From Date Shall Have Elapsed'"

For perhaps fifteen minutes Wicks ruthlessly slaughtered the pearls of thought handed in by the waterfront reporter, while he meditated subconsciously upon the benefits to be derived from a month's vacation. Presently he arrived at a decision. He bounded up, trotted into the telephone exchange room and confronted Miss Grabsky.

"Say, look here, Grabby, my dear," he began, "what d'ye think we're running here? A heart exchange? There's a soulful youth waiting outside to escort you home and I want to know your intentions. What are you up to, Grabby? Are you going to marry him?"

There was a challenge—a do-it-if-you-dare sort of echo in Wicks' tones as he volleyed his questions. Miss Lily Grabsky blushed prettily and hung her head. Wicks gazed at her sternly.

"Aren't you ashamed of yourself, Grabby—getting married the minute you really begin to be worth twelve dollars a week! There's all my drilling gone to waste for the third time within a year. Remember, Grabby, marriage is a lottery. You want to be careful. How long have you known this young fellow? Are you certain he's the pure quill? He doesn't appear to have much gimp and ——"

"Mr. Wicks," snapped Miss Grabsky, "I was paid today; so I guess I'll quit tonight. I know my own business, I think."

"Ah-h-h-h!" snarled Wicks, disgusted beyond measure. Five minutes later he pulled on his cuffs, climbed into his coat and walked into the office of the managing editor.

"I'm worn to a frazzle," announced Mr. Wicks. "I'm all in! I see big black spots when I read copy and I'm as jumpy as a kangaroo. I've got to have a month off."

The managing editor knew Wicks of old. He, better than Wicks, knew just how far you can drive a willing horse; and quickly he made up his mind that a two-weeks fling would do Wicks a world of good. The fall election was coming on, with all its resultant excitement and extra work, and it would be well to have the outburst over with now. So he said:

"All right, Wicksy. You do look a trifle peaked, now that I observe you closely. When do you want to leave?"

"Tonight," said Wicks desperately.

"All right. Enjoy yourself and come back when you're good and ready. Of course your salary goes on as usual. What? Going already? Well—goodby, Wicksy."

Out in the midnight chill of the deserted street Wicks paused and drew a long breath.

"Nothing to do for a month," he murmured happily. "How shall I disport myself? Shall I indulge in a disgusting little spree, or shall I go out into the country and wander round in the woods and hayfields? Or shall I—well, I'll have just one little snorter and then I'll go home and think it over."

He crossed the street and entered the nearest saloon, which happened to be located on the corner of an alley. When he came out half an hour later he had forgotten his troubles, having effectually drowned them in not less than six Scotch highballs. This was well inside the dangermark for Mr. Wicks; nevertheless, it was sufficient to drive from his mouth the hard, sneering, bitter expression that always lurked there and to cause him to feel at peace with the world again. The fact that Mr. Wicks only stayed in the saloon half an hour and was now on his way to his rooms at the Press Club, like any respectable citizen, will be proof positive to the reader that Wicks still retained his self-respect. On the morrow he might lose it; but tonight ——

A woman came out of the shadows of the alley and

Digitized by Google

approached Mr. Wicks. In a vague, indefinite way he realized that she intended to accost him; and though ordinarily—being a womanhater—he would have avoided her, still the fact that it was now one-thirty o'clock A. M.—an hour when all good women are safe within the protecting walls of their homes—and the further fact that Mr. Wicks' courage was just a trifle strengthened by the highballs hereinbefore mentioned, impelled him to pause until she had finished speaking, when he resolved to give her a grilling on the impropriety of her existence.

The girl stood in front of Mr. Wicks and lifted her eyes rather tragically to meet his stony glance. She parted her lips to speak, but seemed to change her mind. Her chin quivered and even under the flickering gaslight Mr. Wicks distinctly saw her blush.

He looked at her with new interest. A woman of the night who could blush—hum! That was—different. Mr. Wicks made swift appraisal of her eyes and found them large and brown and sweetly tender. She wore a jaunty little black hat—faded and rusty enough, but still jaunty. Her little nose was gloriously uptilted. A novelist would have called that nose retroussé. "Pug" was what Mr. Wicks labeled it. Her mouth was well formed, firm and full, denoting character; but her lips were very white. Mr. Wicks resented this. The lips should have been red—not that he cared a whoop personally, but then, from the purely abstract standpoint of artistic effect—well, it was easy to see that this business was a new "stunt" with her. Mr. Wicks resolved on a little lecture.

"Look here, my girl," he began in his terse, clean-cut, city-editor accent, "this is a new game for you and I'd advise you to give it up"—here Mr. Wicks paused for one awful frightened second: he had made a discovery—"and quit going hungry just because you can't bring yourself to the point of asking a gentleman for a small loan. It's no disgrace, I assure you. I've been in the same boat myself. How long since you've had anything to eat?"

Two big tears glistened in the girl's eyes, and Mr. Wicks was seized with sudden panic.

"Three days," she faltered. "I've been ill—in the City and County Hospital; I couldn't get any employment; and my money—I had a little, and I—I ——"

"Suffering saints," gasped Mr. Wicks, and backed up against a lamp-post.

"I'm not a—bad woman," protested the waif, for in very truth she was more of a little girl than a young woman. "I saw you when you went into the saloon—and I—thought you looked—kind. It—it seemed to me that you'd—understand ——"

"By all means," said Mr. Wicks weakly—"by all means. I'm a most understanding person, I am. You pay me a very delicate compliment, for you're the first soul on earth that ever thought I looked kind. I'm not kind. I'm a dog. I'm a slavedriver. I'd can my own mother if she fell down on the job. I'd—my dear young lady, can you plug in halfway decent on a six-trunkline private exchange at twelve dollars a week? Grabby—that's our private exchange now—has quit. Going to get married. And she's left me in the lurch ——"

The light of hope long deferred gave way to the tears in the girl's eyes. She started to speak; but Wicks had seen that sudden birth of new life, and with his natural perversity he cut in:

"All right, young lady. The job's yours on one condition. You are to hold up your right hand and repeat after me the following oath. Hold up your right hand."

"Won't the left do just as well?" the girl inquired, smiling bravely.

"Certainly, if you have a preference," said Mr. Wicks. "Now repeat after me: 'I do solemnly swear that in accepting this private-exchange-operator job I bind myself, of my own free will, not to get married and quit until a period of two years from date shall have elapsed.' Do you so promise? Answer—'I will.'"

"I will," murmured the girl, repeating the ridiculous oath word for word.

"Fine!" said Mr. Wicks. "The job is now yours. Even if you are green you can learn—and I won't be there to teach you, so I won't have to suffer at any rate."

He pulled a card from his pocket, scratched a few hurried lines on it and thrust it into the girl's hand.

"You report at the Herald office at five o'clock tomorrow afternoon. I'll 'phone them you're coming. You do the night shift, which belongs to me. I have the say-so when it comes to hiring the girl on the night shift. I'm the fellow that uses you most and I must have a live operator. Meantime, you're hungry. Here's the price, hungry girl, and see that you make good by the time I get back from my vacation. I won't stand for any foolishness. 'Make good or get out!' is my motto."

He thrust two twenty-dollar goldpieces toward her. She drew a slim hand from under her old opera cloak—her left hand, Wicks noticed—and with her eyes fixed upon Wicks' face, for all the world as if he were the very latest arrival from Heaven, she accepted the money, without noticing that it was not silver, but gold, that he gave her.

"But—but I want to pay you back some day," faltered the girl confusedly. "And you're going away. Tell me where you're going and I'll send it to you ——"

"I don't know where I'm going," snapped Wicks enigmatically; "but I'm going somewhere to buy a thousand drinks with a thousand devils in every drink. And I'll stay pickled for a month!"

And with this remarkable statement Mr. Wicks picked himself together, so to speak, and fled into the night without further ado. An hour later, far from sober, he leaned over the bar of the Press Club and sadly declaimed:

The sky is an inkpot upside down;
The world is a wobbling tomb;
The earth is one huge sarcophagus ——

The downhill pull had arrived at last! Toward morning they put Mr. Wicks to bed upstairs. He was weeping about something and kept repeating that it was a shame!

. . . . . .

Nobody had anything to say to Mr. Wicks when he appeared on the job one afternoon, just three weeks after he had left it. He looked over his assignment book, swore a little, declared that somebody had stolen his shears and offered to fire the man in whose possession he found them. Then he said his pastepot smelled abominably and ordered the office boy to clean it out; after which he started very patiently to clip "bulldog" from the Eastern exchanges. That was all. In an hour he was the same old Wicks, the slavedriver, harsh but just, and pulling in more news over the 'phone on certain stories than the reporters had been able to get in a personal interview.

That night, when Wicks put on his cuffs and coat and started home, he had a haunting impression that something had been overlooked. He paused at the top of the stairs and scratched his head, perplexed. He wondered what it was. For once in his life the night had gone by with wonderful smoothness. News had been plentiful and sensational and easy to get—ah, that was it! The exchange operator! The gimlet voice of Miss Lily Grabsky had been eliminated from his life and the new girl appeared to be a crackerjack. Whereupon Mr. Wicks suddenly recalled his early morning adventure with the hungry girl, and a consuming curiosity impelled him to learn whether or not she had called and secured the job.

"I wonder if that little girl was giving me the bunk that night!" he mused. "I had a few under my belt and maybe I looked easy. I'll just look into the telephone room and see if that's my little night bird on duty. I might as well introduce myself to the new girl, whoever she is, and let her know that I'm the regular old Bluebeard of this newspaper shop. I wonder what she looks like. Bet a dollar she buys her hair by the pound."

Reflecting thus, Mr. Wicks walked into the telephone room. Before the switchboard sat the hungry girl, plugging in—with her left hand.

"Hello!" said Mr. Wicks in what was for him a wonderfully cheerful tone of voice. "I'm back on the job again—a week ahead of time and sober as a Supreme Court Justice. I'm Wicks—the city editor, you know. I'm the boy that's kept you jumping all night. You will recall that I sent you over here for this job. Glad to see you making good."

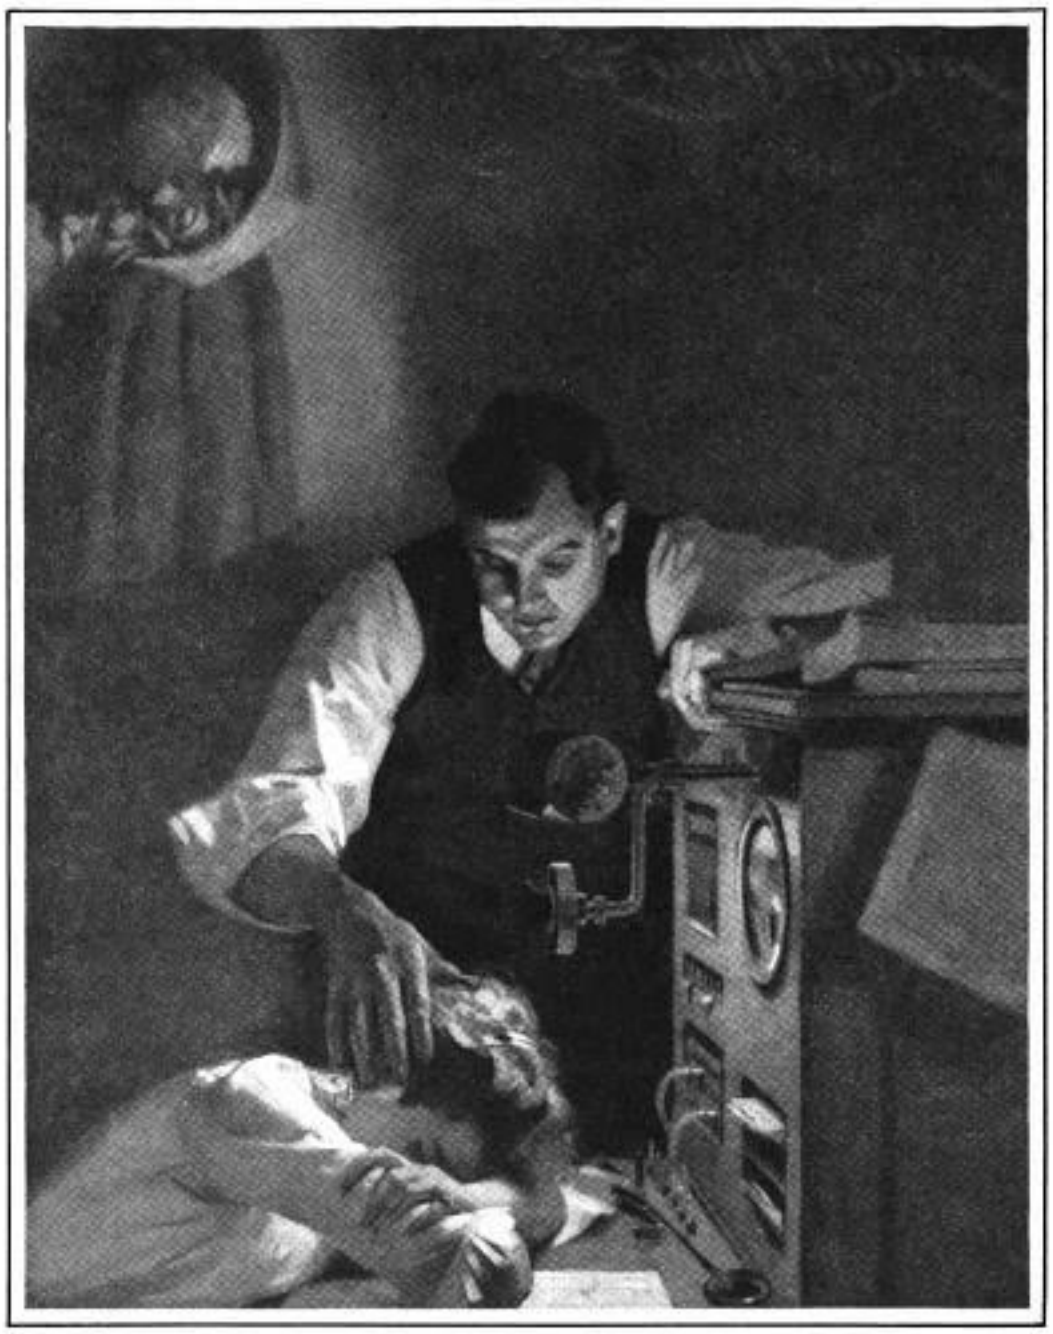
"My name is Annie Coyle, Mr. Wicks," said the new operator. "I'm not going to bother you with expressions of thanks for what you did for me. I wouldn't know how to go about it to convince you that I'm sincerely grateful; so you'll just have to take it for granted."

She smiled upon him—a dazzling smile; but it was lost on Wicks, who was looking at her lips and reflecting upon her exact ratio of mentality. The lips were red now, he noticed, and unconsciously he gave a grunt of approval. At least the young lady was eating regularly. He was glad of that. "What a most remarkable young woman!" mused Wicks. "I do believe she has brains, and—Jumped-up Jehoshaphat!—her hair's her own!"

"You're a corking good operator," he told her in the same emotionless voice in which he would have told a reporter that he had dug up a good story. Wicks never praised anybody. He merely made a statement of fact.

"I used the forty dollars you gave me," the girl continued. "I'll pay it back some day."

"Oh, take your sweet time about that," replied Wicks carelessly. "Got a good boarding house?"



"I have a room and do my own cooking," replied Annie Coyle. "I'm doing very nicely, thank you, Mr. Wicks. I can pay you a dollar a week until I ——"

"You're left-handed," charged Mr. Wicks, interrupting.

The girl's face crimsoned. She turned in her swivel chair and thrust out her right arm. Wicks, horrified, saw that the hand was missing.

"I used to be a good stenographer and typewriter," she said with just the suspicion of a tremor in her low, sweet voice, "until I got mixed up in a street-car wreck; and then ——" She shrugged her shoulders bravely. "I can manage the board with one hand, even in a rush. You didn't have any long wait tonight, did you, Mr. Wicks?"

THE GALLERY GODS

HOW TO LOOK AN OLD MASTER IN THE EYE

By Edward W. Gregory

ONE day Sir Caspar Purdon Clarke, late director of the Metropolitan Museum, New York, sat at lunch in the grillroom of the Victoria and Albert Museum, London, with one of the most famous art connoisseurs in Europe and the writer.

"If a man brings me a picture," said the critic, "for my opinion on it, and I feel any doubt about it whatever, I always damn it—I feel it's better damned than deified."

"But, of course, you would have a reason for doing so?"

"Not at all. I may be able to find no fault with the painting. Even to myself I might be unable to give a reason for my judgment; but if, at the first glance, I do not recognize it as a genuine article I pronounce against it."

"But, after consideration ——"

"I never consider. I never allow second thoughts. It's like this: If the waiter here put on the table doubtful fish, would you eat it?"

"No; but I should have a reason. It wouldn't smell right."

"Exactly. That's my point. You wouldn't say you'd think about it and see it again in a day or two. You'd tell the waiter to remove it, and be quick about it too."

"But you can't tell a good picture by smelling it!"

"Yes, I can; but I don't use my nose. I use my judgment, which is perhaps not so plain as the nose on my face; but I know it exists, for I've used it pretty well for the past thirty years, and it's been moderately reliable, on the whole."

Sir Caspar Purdon Clarke, himself a great expert, seemed to think there was something in all this.

No Proof for Beauty

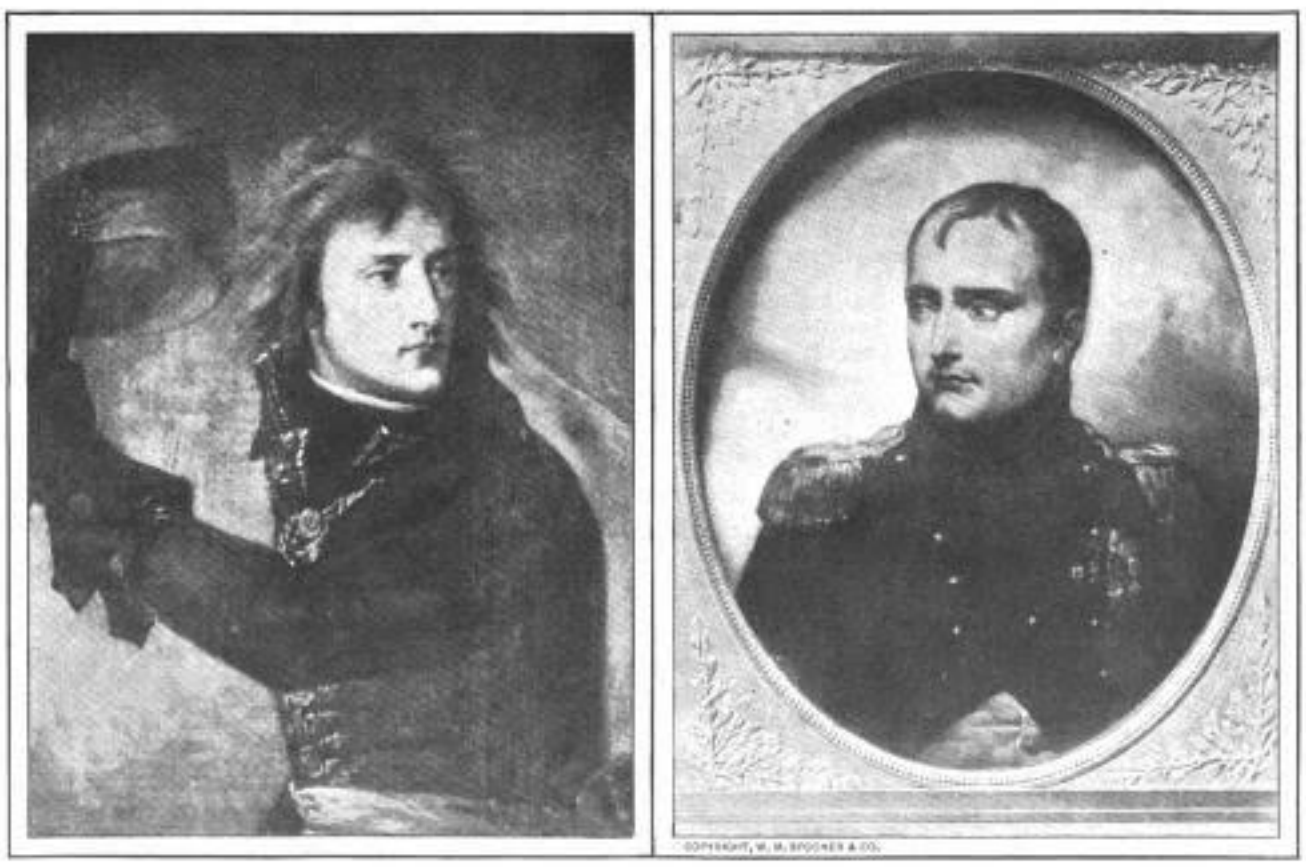
NOW this story puts in a nutshell and explains the whole craft of the connoisseur of pictures. It is utterly impossible to demonstrate the worth of a work of art. It is not a matter for demonstration, but perception—totally different things. Perception enables you to see one sheep in a field, but to tell how many there are in a flock you must demonstrate by counting. Demonstration, however, will stimulate perception, for after much experience you may be able to judge pretty accurately at a glance how many sheep there are in a flock. Even then, to make sure, you must count. John Ruskin explained in volumes the artistic merits of the pictures of J. M. W. Turner. He told us in brilliant word painting what he saw in Turner's brush painting; but he never succeeded in demonstrating beyond fear of contradiction that what he saw was actually true, as Newton proved the truth of his theory of gravitation. If you read John Ruskin's works, however, you are more likely to perceive the beauty of Turner's works than if you never glanced through the pages of the great writer, for Ruskin lends you his eyes in his books. If, after all, you can see nothing in Turner it is your perception that is at fault. Yet it was Ruskin who described Whistler as a coxcomb flinging a pot of paint in the face of the public! Subsequently the public forgot the pot of paint and saw only the picture. So, in this instance at any rate, there may have been wanting something in the perception even of the critic.

Some little time ago the picture by Rembrandt called The Mill hung for many weeks in the National Gallery, London. The experts agreed that it was a great work of art. One hundred thousand pounds was the price, and it was for sale. The British public was to have the refusal. Thousands went to the gallery, but they were not particularly enthusiastic. They would not subscribe to beat

The Smile That Took Leonardo da Vinci Four Years to Paint. Would Any Man be Tempted by a Face Like This Today?

the American who finally brought the picture to the United States. The critics flooded the press with their tremendous statement that it was the greatest landscape on earth; but they could not actually demonstrate that it was so. The public dutifully went to look at the picture and didn't think so. Perhaps the public was wrong. It is just possible it was right, for critics do not possess the monopoly of perception. If you buy a horse and pronounce him a good one, and some one doubts what you say, it is easy enough to trot him out or put him at a fence. You can prove his worth; but you can't make a picture show paces, though you may place it at the bar of public opinion.

Last summer a man went to an exhibition of watercolor paintings in London. He had made money, had built a house and wanted pictures. He would trust no dealers, no experts—only his own eyes. In this he was right. In this he was unconsciously a genuine patron of the arts; for the right spirit in which to buy a picture is first to desire it solely because you like it. If your tastes are not those of others you are surely more of a real lover of art than he who buys only what experts tell him to buy. In this instance, however, the man's point of view had become biased by commerce. He had made money by the process of addition. Arithmetic was at the bottom of his philosophy of life. He had found out the great and abiding principle that two and two make four. He knew it was so. He could prove it. His experience abundantly supported him. So he went into the gallery armed with his checkbook, the visible sign of prosperity and the power to purchase. Without much delay, he pointed out to the secretary the pictures he liked and was told the prices. So far so good; but here he went astray, for, pulling out a pocket rule, he demonstrated to his own satisfaction that the prices were all wrong.



Art by the Square Foot

"HERE," he said, "you ask me fifty pounds for a picture ten inches by eight, and I can have this one, measuring twenty by fourteen, for twenty-five pounds; and there's another over there I like which is thirty by twenty, and you're only asking sixteen pounds-ten for it. How do you explain it?"

And the secretary explained, so that eventually the rich man became a purchaser; but he did not understand. He only believed, as a judge of mankind, that the secretary was an honest man. This story is true and the rich man is not to be laughed at. For in buying pictures he went on the same principle that he had found by experience to be the best in his life of commerce—that of buying according to measurement or bulk. Yet, in the end, he bought on an assumption he could not possibly measure—namely, that the seller was an honest man.

Another wealthy man went to Paris to buy pictures. He also had no experience but that of business. He had heard of the Old Masters and he went through the Louvre with care, examining the works of Rubens, Velasquez, Leonardo, Raphael, Correggio and all the rest of them. Then he went to dealers in the antique, finally deciding not to buy. Prices—which were high enough—did not frighten him, and he did not trouble himself at all about size; but what he kicked at was the fact, as it presented itself to him, that all old pictures were more or less brown—and he did not like brown pictures. However, why should he be laughed at? He preferred bright green, and there is nothing fundamentally wrong with bright green. In the end, he bought many modern French landscapes. They looked to him more like what he had seen of the country from the train. In a word, they appealed to him.

He had sufficient perception to see their realistic portrayal of Nature; but he had not the deeper perception which would have caused him to love the landscapes of Claude or revel in the quiet gray monotones of Corot. On the other hand, no power on earth can actually prove, beyond all shadow of doubt, that the pictures of Claude and Corot are better than the best of modern French landscapes. Authority—which has unlimited power in these matters—can only say that they are better. Authority can fill reams

Which of Napoleon's Portraits Most Resembles Him?

of paper in defense of its opinion and probably influence and educate perception. It can do no more.

Within the last year or two there have been exhibitions in Paris and London of the works of painters who are known as the Post-Impressionists. Now, without going deeply into a dissertation on their methods or analyzing their views, it may be said at once that ninety-nine out of every hundred people who have seen their works pronounce them to be, in a word, impossible; but the ninety-nine may possibly be wrong. They may not have sufficiently acute perceptions to enable them to see the merit in these works.

The Statuette That Aroused Ridicule

HERE is an instance of what I mean: An exhibition of Post-Impressionist painters was held in the Grafton Gallery, London; and being a very new thing it attracted great crowds. Among others was a man who had considerable knowledge of art and was a great collector. I saw him stand before a statuette in bronze of the figure of a woman. He gazed for a while; then, containing himself no longer, he burst into roars of laughter, stuffed his handkerchief into his mouth and rushed from the gallery to tell his friends he had seen the most absurd, ridiculous, childish, idiotic statuette of a woman he had ever seen in his life.

Now the figure was obviously what any one but a Post-Impressionist would call out of proportion. The legs were too short, the breast flat and the whole torso disagreeably lumpy and corpulent. The arms were thin and emaciated-looking, and the hands big and offensively masculine. In life no woman could stand as this woman was perched. Her feet were turned in to deformity—in itself almost unthinkable in sculpture—and she appeared to be leaning or pushing herself against nothing in particular. She seemed about to topple over. Obviously, however, if you will think a moment, all these criticisms are but a variation of those of the man who brought a pocket rule to measure pictures. It may be that the artist had finer perceptions than the man who bolted from the gallery in volleys of laughter. It may have been that the sculptor had a good reason for making such short legs. Perhaps—who knows?—he was desirous of raising merriment in the minds of the spectators, in which case he was certainly successful; for no one looked at the figure without a smile.

In the same exhibition was a picture that drew forth the criticism—this time delivered pointblank at the artist—that, "after all, trees never look like that."

"But they are not intended to be trees," objected the painter.

"Then what on earth are they intended to be?"

"I really don't know, myself," replied the author of the picture.

This is not an overdrawn incident. Post-Impressionists appear to deny the right of any one to object to their works on the ground that the details cannot be identified with the commonly accepted aspects of natural forms.

"I have never seen a man's nose look like a doorknocker before!"—"Wherever in Nature did any one see a sky-blue horse?"—"How is it that woman's eyes look like two dice when you have thrown a five and a three?" were some of the remarks heard in the gallery—all very natural, very sensible; but like the contentions of the man with the pocket rule, if less violent than Ruskin's phrase concerning the pot of paint, which might have destroyed Whistler.

One day I was in the studio of the late George Frederick Watts, the painter who has probably received more individual honor in England than any other native artist of the last fifty years. Many of his works, the property of the British nation, are hung in one great room at the Tate Gallery, in London. "Size," he said to me, "is a quality by itself. Actual bulk must be reckoned with in a work of art. It has its value. For instance"—pointing to a reduced facsimile of the Venus of Milo—"that figure as it stands is exactly like the Greek original in every particular but that of size. It can never, however, give me the same emotions as the original, simply and solely because it is not big enough."

On the other hand, there are artists who will say that size has nothing whatever to do with a work of art—did not the secretary of the watercolor exhibition argue so?—and that what really matters is proportion. The latest phase of fine art, however, would appear to deny to a great extent even proportion; so that, if any reliable system for the guidance of the lay public is ever to be made known, it would almost seem that science will have to dig deeper than ever she has yet done into the mysteries of art and produce an entirely new pocket rule—something by which the mystified seeker after truth may at least measure with more or less accuracy the bewildering and rapidly changing manifestations of the art of our time.

Within the last year a very eminent statesman had his portrait painted to be hung in a well-known political club. At the unveiling a speech was made by a man who had traveled a great deal in Italy. He referred to the scores of pictures in the famous galleries, of men whose names were not even known today. It seemed to him a deprivation that the tourist should be without means of identification when looking at a portrait. He approached works of art and inspected them not as pictures but as records. He could not appreciate art without a label. He never looked at a picture of a man without asking the question, "What was his name?" It did not matter if the man had been dead three hundred years and was a nobody even in his lifetime. He still wanted to know his name. No matter how fine the painting might be, it dropped immediately in his estimation if no one could tell him who it was.

"I have seen," he said, "in hundreds of cases, under an old Italian picture merely the words, 'Portrait of a Gentleman.' Let us congratulate ourselves"—waving his hand gracefully toward the portrait of the statesman—"that under this picture, at any rate, no such label can ever be put." Rather a maladroit remark; but indulgent listeners—among whom was the politician himself—rightly concluded that the speaker wished thus picturesquely to illustrate the everlasting fame and name of the subject of the portrait. To the art critic the awkward phrase suggested something more. It exemplified the invariable attitude of mind of the public toward portraits. Every one regards a portrait as the reflection of a personality. Nearly all of us want to know, first, who the subject is supposed to be. Only artists criticise the picture first as a work of art. The rest look upon it as a likeness; and the more like it is to the sitter the better it appears to them.

Now this is a fundamental essential of all portraits: The closer they resemble the subjects, the better they are—as portraits; but the older they become the less possibility there is of determining likeness. Who is to judge which of the many portraits of Napoleon Bonaparte is most like him? Who can say whether the existing busts of the Roman Emperors resemble the royal sitters? No one. So that if the picture of a man survives many centuries it does so rather by its virtue as a work of art or as a mere document, not necessarily on account of its fidelity to the appearance of the original subject. The portraits by Velasquez are a case in point. Philip of Spain may have looked as the great Spaniard painted him—we do not know. We cannot demonstrate it; but we can perceive that the portraits by Velasquez are fine pictures.

Two men were going through a picture gallery. One called out the numbers he saw on the frames, the other kept his eyes on the catalogue he held in his hand and read aloud the titles. They went all the way through from 1 to 485 without a mistake and then searched for a Study of an Oyster, which had come too late for classification and had been so entered. It is a moral certainty that neither of those men clearly saw a single picture. All they did was to check the accuracy of the compiler of the catalogue. There are five senses—seeing, hearing, tasting, feeling and smelling. You don't need to hear, taste, feel or smell a picture; but you must see it. This being so, to trouble about what the man enters in the catalogue and what number he puts on the frame is clearly superfluous. Don't use your sense of hearing by listening to him. Just look at the picture yourself; and if it does not speak to you through your eyes you may be sure you have no use for it. That's not to say it's a poor picture, for it's quite conceivable you may be a poor judge.

Books have been written about how to look at pictures. The subject is scarcely worth discussion, for it does not matter in the least how you look at pictures; but it does matter how the picture looks at you. If I tell you that I shut one eye, screw up the other, and hang my head on one side, using my thumb and finger as an eyeglass, to be able to see the effect of Millet's Angelus at five yards, it is no proof that this is the proper way to behave—only that this is how I behave. You may prefer to regard the picture with both eyes open in the same way that you look at a friend; and if you do so you will find that Millet's Angelus will look at you in a friendly way, as it has looked out from its frame upon every human being who has seen it from the time it was first painted until now.

Half a Dozen Photographs Will Tell the Artist of Today More About How a Pretty Woman Smiles Than Leonardo Learned From La Gioconda in a Twelvemonth

The Relation of Eyes to Art

I HAVE heard a group of Anglo-American tourists in Antwerp Cathedral hold an animated argument about the right place to stand in order to see Rubens' Descent from the Cross properly. There is no right place. If there were it would have been chalked out on the flagged pavement long ago. Besides, if a man with long sight can see it from one point, is the shortsighted man to come back home from his tour with the melancholy reflection that he has never seen the picture at all because he had to go five yards nearer in order to distinguish red from blue? When you go to a concert do you worry about the correct way to listen? Assuredly not! All you care about is to get into such a position that you can hear.

Centuries ago a man made the first gun. It was a great achievement. Nobody had ever seen a gun before. The maker was proud of it and put in a lot of time ornamenting it and cleaning it up afterward with a bit of leather. We make guns today—better guns than his. They will shoot straighter and carry farther; but the only gun we should care to have in a museum is that first gun, made by the man who had never seen one before, because it exhibits in every part the struggle of inventive genius to overcome

EASY MONEY

By Campbell MacCulloch

ILLUSTRATED BY MARTIN JUSTICE

A Tale of High Art and Wall Street

"I'll Say This for Peter: He's Right Quick to Take a Hint"

MONEY," observed Mr. Jeremiah Simpson sententiously, "in addition to bein' th' root of most divorce cases, is a luxury that mighty few folks is eddicated up to, and still fewer has got any license to flirt with."

Seated in the broad window of a Riverside Drive apartment, Mr. Simpson was gazing at the slate-gray outlines of a Chinese warship that had just anchored in the Hudson River. His cherubic countenance, with its chief feature seeming to be an escarpment of several chins retreating by a sort of *diminuendo* effect into a wide-mouthed collar that openly yawned pleasantly to receive them, expressed a cheerful content with life; a pair of twinkling blue eyes belied the sixty-odd years their owner admitted when pressed, and a pair of large, black-rimmed spectacles slightly tinted with yellow merely accented the Pickwickian effect of the owner.

Mr. Simpson was not alone, for opposite him, reclining on his shoulderblades and the back of his neck in an easy-chair, sat his partner, Mr. James Forsythe Kingsley. This young man was the scion of an excellent New England family, but had long since eschewed the paths of rectitude after his university had turned him loose with some education and more debts. He had joined a group of carnival workers as a stall when affairs went ill with him, and had found the devious ways of graft so much to his liking that he had continued therein. Some few years before, he had attached himself to the fortunes of Mr. Simpson, who, having waxed old in the profession of deceit, and being too well known to the police of innumerable cities by alias and thumbprint, felt that a residence in the background of affairs was desirable. Mr. Kingsley was known to a large circle of acquaintances as Larry Winterloth. Inspector Laughlin, of the metropolitan police, had watched him skating close to the edge of the penal code and regretted exceedingly that he had never come ashore. Some day the good inspector hoped to catch his young friend with the goods, a wish he had openly expressed in his intended patient's hearing.

Now Mr. Kingsley removed his feet from the window-sill and regarded his old friend.

"Ya-as," he observed languidly; "and we've been doing what we could to decrease the temptation by taking it away from them."

Mr. Simpson was evidently merely pursuing a reflection to its lair, for he did not regard the interruption.

"Hell hath no fury like a wise guy that's bin trimmed good and plenty," quoth he, nodding his head at the Chinese ensign that unfurled its great dragon to the breeze at that moment. "Also, Larry, he knows enough to keep his trap shut, which is worth a lot to missionary folks like you an' me. Again, my boy, keep it in your mind that the same wise yap falls easier than most folks. *In hoc signo vinces!* says one of them foreign sharps, which, accordin' to my dope, means that when you're in bad it's a sucker play to sign vouchers agin the bankroll; but there's lots of guys you couldn't never teach that to, no matter how hard you was to try."

Mr. Kingsley sat up on the end of his spine and regarded his elderly *confrère* with interest.

"I've not abided in your refreshing company during these years for nothing," he remarked. "What's doing? What peculiarly pert plan has my ancient friend jolted forth from his cerebrum? Shoot your wad."

Mr. Simpson turned a mildly reproving eye upon his young friend.

"Some of these days, Larry, you're a-goin' to meet up with a man's-size idea right on the public street, an' th' shock is goin' to be so rough that they'll dump you in an ambulance. Your nervous system ain't up to intellectual jolts like these." And he gazed riverward again, shaking his hoary head as if he feared the worst.

There was silence for a time, and then Mr. Simpson went on with his extraordinary reflections:

"Is th' Chinks more artistic than th' Guineas, or does it just happen that we ain't broke to their style? If the Chinks was livin' just over th' Canadian border, would chop-suey make a bigger hit than spaghetti as a pillow-stuffin', or would we soak up more preserved ginger than olive oil—eh?"

Jimmie Kingsley bent a searching look of anxiety on the old gentleman.

"You sound to me like a man that's been smoking a page out of a puzzle-book," he said. "What brand of conversation is that, and why? Do I have to know the answers to all these nut-farm conundrums?"

Mr. Simpson sighed wearily.

"Oh, forget it!" he said. "All I was gettin' at was whether art was really long, or only long green, an' why art an' money is mostly distant acquaintances instead of twins. If th' first why not interdooce 'em?"

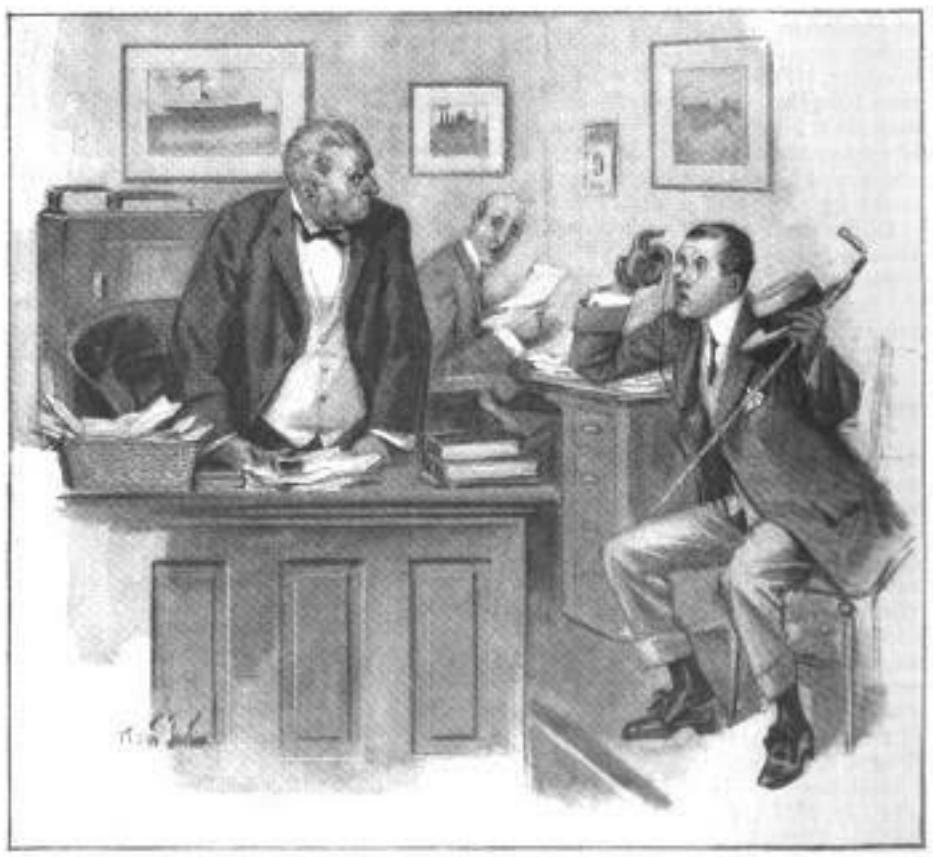
Kingsley began to look alarmed and got up to stand near the other's chair.

"I'll swear you were all right when I peeked at you half an hour ago!" he muttered. "You look just the same, but you've surely got me going with such rummy talk." He came round to the front of his friend's chair and looked again. "I'll be telephoning for a taxi and having myself examined by a good alienist soon." He paused and addressed the clock. "I suppose I'll have to humor him. Come, Rollo, tell Percy what you did with the gingersnaps. Did 'oo feed 'em to the cuckoo clock?" He wagged a finger at Mr. Simpson and that gentleman flushed slowly red.

"You go to blazes!" he snapped. "Here I'm tryin' to cook up a little game to cop th' kale, an' you rave round as nutty as a rube that's bin stung with th' shells. I'm for art—A, double R, T. Art's my front name an' Cush is th' second; an I certainly don't want to be called Arthur either."

Mr. Kingsley stared and slowly shook his head.

"Art, eh?" he commented. "Art!—and you wouldn't know a Sistine Madonna or a Venus de Milo if they waltzed in front of you and did a fire dance."



Mr. Simpson snorted angrily.

"Mebbe not, son," he growled; "but I know enough to play it on the double O. I'm not so fussy about art as some I know; but I've got a live hunch that I can tag her and make her come across with th' doubloons—an' that's more'n some guys can do that knows her well enough to call her 'Babe.' You listen to me, my lad, an' you'll hear somethin' that'll make you take notice."

The young man's manner changed instantly, for he recognized the signs that preceded one of Mr. Simpson's famous coups for the replenishing of the exchequer and the removal of cash from the custody of those who did not know enough to care for it. In the years they had spent together the aged minister of guile had planned many a financial feat, yet never once had the shadow of the law actually fallen across their line of retreat; never once had their numerous operations left more than a faint trace for the hounds of the law to follow more than a block or two; never once had the plans that emanated from Simpson's fertile old brain failed to score heavily. Though the police had many times intuitively guessed at their connection with an affair, proof had always been entirely lacking—and even suspicion had generally failed to point her finger at the pair.

Kingsley could have made a name for himself as a character actor, while Simpson, too old to learn new ways in the direction of honest endeavor, had long been a player of many parts, as must every man who essays the paths of guile. Simpson lay like a humorous and somewhat kindly spider at the center of his web, and moved men and things according to his plan. Kingsley, with no particular initiative ability, was yet the active partner because of his appearance and breeding and his capacity for carrying out orders. Together they made a combination responsible for many an unsolved entry on the blotter at police headquarters.

"There is no guy that falls so easy an' so soft as an American millionaire, Larry," observed Mr. Simpson. "You an' me has proved that a couple of times. It's funny too; because you take a man that's begun life on a dump-pile as chief engineer of a wheelbarrow or nurse to a steam shovel—who's put in twelve hours a day callousin' his hands an' rough-neckin' his soul earnin' twenty-two-fifty a week—an' when he gets a piece of burlap tied round a bundle of dollars, th' custom-house can hardly keep track of th' junk he brings over. He's out for art an' he plays no favorites. A castle or a club—it's all th' same to him. Some gink tells him he's a natural art critic; that th' same talent he used to cheat th' government can be used to pick pictures; that the ability to cast rotten armor-plate gives him a license to back his choice on old armor—an' get stung. Honest, Larry, some of those European sharks ought to get pinched for what they do to our plutocratic pets. One of these moneyed bugs builds hisself a house that he has to hire strong men to live in, an' he fills it with art in gobs, chunks, by th' yard, full o' wormholes an' musty odors, made in Elizabeth Street, with th'

"They Brought You Up Awfully Badly, Didn't They? My Word, Yes!"

Digitized by Google

rust hardly set yet. I never doped it out just why, unless they're all achin' to show other folks that their early days wasn't confined to pickin' coal off th' tracks or wipin' a bar."

Jimmie Kingsley laughed heartily.

"You're just crazy about the American rich man, I don't think!" he chuckled.

"I'm crazy about his tainted money," retorted the old man. "Anyway, any sucker that butts into a game he don't know deserves to get his. Ever hear of Peter K. Harding, Larry?"

"Steel, banks, Wall Street, cottage at Newport, young daughter fishing three seasons for a title and nothing doing? They say he wrote all the bunco games there ever were; invented the financial hat trick, the blind pool and three orphan asylums and so forth. What about him?"

"I hereby unanimously select Peter K. to head a little private charity list you an' me is gettin' up. Mr. Peter Harding will kindly come across with the check."

The young man fell into a chair with a gasp.

"Suffering snakes!" he cried. "You must be getting flittermice in your campanile! You couldn't get him to buy a gold eagle at nine-ninety-eight! He'd take your collar off and steal your socks while you were trying to sell him a seed catalogue!"

Mr. Simpson did not bat an eyelid. He merely shuffled one section of chin inside the collar and his eyes snapped twice as brightly.

"You heard me!" he announced. "Peter K.'s due to be the goat. He'll feed his spinach to us on a gold plate—an' come pretty near beggin' us to take it too. It wouldn't surprise me if he didn't get real peeved if we wouldn't hook his money. Crazy! Yes, I am—just like a fox." He paused to light a long cigar.

"How's your English dialect, Larry?" he went on. "Ain't forgot that there Piccadilly accent, have you? No. Well, better practice up a spell. An' say, Larry—see that white yacht lyin' over there behind that Chink cruiser? That's yours, son. I give it to you. A present from papa. Take it an' be happy; but don't go too far out of sight of land. It makes father nervous—an' th' water's real damp."

He chuckled softly to himself and regarded Kingsley with a twinkling eye. The latter stared at him.

"Get out!" he exclaimed. "That's Lord Markdale's yacht! He crossed the ocean on her himself."

"Right, fair youth," replied the old man. "And maybe he'll go back on her—who knows? All of which has nothin' to do with us. Ever see him?"

"Who? Lord Markdale?"

"The same."

"No."

"Then take a peek," said Simpson, tossing over the folded paper he had been reading. "That's a pretty good cut of him, I'd say; an' you're enough like him to be his brother, Larry. Hear me? You might be his brother."

"Me?" queried Kingsley.

"You, my lad. Come on over here an' I'll put you wise to somethin'. In th' first place, said noble gent ain't in this neck of th' woods, accordin' to th' scandal sheet there. He's out after 'big game,' as they call it—which don't mean faro, nor yet roulette. Peter K.'s daughter has had her eye on our noble pal, but papa ain't made up his mind to put up th' price yet. The sob-squad sister what writes the society gush for this scandal sheet says that Peter K. has no real compunction against owning a son-in-law with a ruined castle and an ancestry that hikes back to Adam; but that daughter has not yet managed to get a rope over his dukelet's front feet. The chances are that he'll listen to reason in the end. Anyway, Peter is likely to want to do a favor for his prospective-maybe-perhaps-if-he-don't-get-away relative, and at the same time do a neat stroke of business in adding to his collection."

"Then you mean ——" began Mr. Kingsley.

"I sure do; an' now you listen to me." Whereupon Mr. Simpson began to talk and kept it up for the best part of an hour. He laid his plan carefully, tested it for heat, cold and position, administered the acid, explained, ordered and instructed, and finally regarded the admiring features of his young friend with some pardonable pride.

"That sounds pretty good—eh?" he inquired blandly.

"A wonder!" fervently admitted Jimmie. "A sure wonder ——" He paused while Simpson regarded him closely. "Well—but what?" Simpson inquired.

Jimmie displayed an embarrassment entirely out of keeping with his usual manner.

"There's Laughlin ——" he began; but Simpson rose from his chair and shook his finger sternly in the young man's face.

"Now, you stop right there!" he commanded. "That's the only yellow streak you've got, Larry, an' it's as wide as a door. Laughlin, eh? An' it's that thick-neck cop that's on your mind? That flat-hoofed dub couldn't catch up with my gait if you hooked an express train on to him. Some o' these days I'm goin' to send Laughlin a postcard tellin' him that we'll be round at headquarters at noon sharp th' next day to pinch th' clock out of th' main corridor—an' we'll go do it! It'll be a cinch, for he'll have th' whole force up in th' Bronx guardin' a movin'-picture factory from bein' burgled by a burlesque troupe that day. That's about his limit. Don't you bother about Laughlin. He couldn't catch a horsecar on th' Belt Line!"

"My Word, You are a Nailer. Big Man in One Thing, Big Man in All—Eh?"

Mr. Simpson expressed such disgust at the very idea of Inspector Laughlin ever exhibiting an atom of perception that in sheer self-defense Jimmie changed the subject.

"Just go over the last part again, will you?" he asked. "I'm to send a card in, and ——"

"Now wait," begged Mr. Simpson. "Don't you get too slippy about this. There's anything up to a couple of hundred thousand lyin' waitin' to be picked up. We won't pull it off till we get it right. Now we'll take up the main points again. Listen!"

When he had finished the rehearsal he shook his head sadly.

"Now there ain't no 'buts' in this, Larry. I'll be th' goat myself; an' all you've got to do is th' parlor, receive-th'-guests business. You're th' front. By th' Lord Harry, but I wish I had your eddication an' my brain! I'd make Andy Carnegie look like a piker two-dollarin' hisself into a financial decline at th' track. I'd make him feel that his library stunts was about equal to givin' out dime novels at a messenger boys' picnic. However, it ain't your fault that these things don't come to you. I'll just have to go on layin' th' pipe, an' you'll do th' couplin' of it up to th' tank, which in this case is Peter K. Harding, Esquire, New York, Newport, Lakewood and Comeonville. Hustle out now an' telephone Bantry that he'd better get up here an' see me about th' time Mr. Edison turns on th' street lamps. Then you see Schmidt."

Mr. Kingsley telephoned as he had been bid, and then took his hat, stick and gloves from the hall. He was particularly careful about his personal appearance, and with some excuse, for he looked to the manner born, which was one of the reasons Simpson clung so closely to him. Coming back into the room for his handkerchief, he found Simpson writing laboriously upon the back of an envelope.

"You might send this telegram while you're out," he suggested, passing it over. "It's to Matt Bleekman, up at Rye Beach. You remember Matt? He helped us with that Benziry Brothers' bond deal. Matt's playin' gentleman now with a good-sized schooner yacht up on the Sound. I want him to lend us a fast power launch he's got. Savvy? All right, son. Beat it!"

Outside Mr. Kingsley strolled easily along until a passing taxi overtook him, which, hailing, he entered and went off downtown to an address at Third Street and Greenwich. It need hardly be remarked that he knew no one there, but merely had a dislike to letting the chauffeur know where he really was going. When he had paid the man and the cab had disappeared he walked along Third Street toward Broadway until he came to a small and dingy cigar store, into which he dodged. Passing quickly through into the back part of it, he waited until the proprietor came to him.

"Schmidt," was all he said, and the man nodded.

"He'll be back in a minute. Went out for a scuttle of suds."

Almost as he spoke an obviously German personage who just as obviously had only a hearsay acquaintance with barbers and baths, entered with a tin can.

"Hello, Schmidt!" said Kingsley. "How are the Old Masters coming along?"

"Rodden, danks," replied the Teuton.

"Would you like to put a couple across on the plutocratic debasers of the poor?" asked Jimmie easily. "Like to saw off a pair of punks on some wealthy wizard—eh? Just as soon pluck a few piasters from the gizzard of capital, old top?"

The man's heavy eyes glittered malevolently.

"I would sog gapidal efery time der chance offers!" he growled. "Some of dese days dere shall be a revolu ——"

"Yes, I know," said Jimmie lightly; "but we haven't time to run over to Cooper Union just now, so the rest of that speech will have to wait. We want to talk about Old Masters—Velasquez, Tintoretto, Titian, Correggio, and what not—our old friend Bill Rembrandt, Muggsy Van Dyck and ——"

"Blease!" interrupted Schmidt—"Rembrandt's name was not Pill ——"

"Have it your own way," said Jimmie airily. "They're your friends, not mine. We'd like to get a couple of early Kiplings, and ——"

The German rose and sawed the air savagely with his arm preparatory to speech; but Jimmie went on again:

"Well, then, we'll waive the Kiplings. Now what can you do for us? By the piper, but I believe you take your blessed faking seriously! Well, more power to you. An honest faker, good folks, by my halidom—a right righteous knave! Never mind, let's get down to business. We need about four pretty good pieces of junk—and don't forget the wormholes, Schmidt. We need the wormholes in our business to give an appearance of verisimilitude to the affair. In two words, our sucker won't bite on anything that isn't wormeaten. Once they handed him a cape that no self-respecting moth would touch, and he handed it back to its rightful owner because he thought it was a queer one."

Schmidt smiled crookedly.

"I haf a freunt vot is der best vormhole-maker in dis country. All der finest vormholing dot you fint is hiss. Two dimes haf dey sent him vork from Venice to vormhole. All vill be right. Vere is der bictures to go?"

"North River. I'll let you know the exact location later. Same price, eh? Don't be greedy now, Paul Rubens."

The other stared, speechless for the moment. Then he burst forth:

"Greety! Gott in Himmel! Olt Masters at elefen tollars per each—und he says 'greety'! Vot sacrilege!"

Kingsley laughed and left the old man shaking his head to and fro like an angry lion and muttering to himself. He walked quietly to Broadway and up that thoroughfare until he came to the intersection of Fifth Avenue, along which he proceeded until he came to the shop of an English tailor. For two hours he amused himself by selecting weird combinations of cloth and cut—garments to proclaim his nationality. When he returned to the apartment he found Simpson studying the Chinese cruiser through a pair of prism glasses.

"Funny!" the old man commented as Kingsley entered the room. "I've been watchin' all afternoon, an' them Chinks ain't hung out a line of wash or beat a gong. I don't understand it at all. Begins to look as if some of these here bird's-nest-soup-rat-pie yarns we bin gettin'

WHY WE LEFT THE FARM

ILLUSTRATED BY ARTHUR WILLIAM BROWN

She Didn't Propose to Work Herself to Death for a Lot of Hired Hands, Even if I Did!

A WELL-TO-DO young farmer of the Middle West, astride a good horse, paced springily out of the barnyard into the wood pasture early one morning in corn-planting time. He had just eaten the kind of a breakfast money cannot buy for the city dweller: strawberries—the pick of the patch, almost as large as after-dinner coffee-cups—with the dew on them, served with the richest and sweetest of cream; country-cured ham—as unlike the city product as a nutmeat is unlike its husk; new-laid eggs; toast, and sweet, golden butter just from the churn; hot, sparkling coffee, with more real cream; finishing up with crisp waffles and clover honey from his own hives.

Horse and master were alike feeling their oats as they drew in great lungfuls of the pure, fragrant air. The wood pasture was velvet-swarded; its trees were very beautiful in their tender new green.

A clear brook sparkled its way in and out among the gentle slopes, and sleek, sleepy cattle were peacefully grazing beside it.

The farmer felt a good deal of pleasure in the ownership of these things. His straightened shoulders and high-held head were the outward signs of an inward I-am-monarch-of-all-I-survey consciousness. Perhaps a thought of how far the grazing cattle would go toward paying for the new "eighty" entered into his satisfaction, but not necessarily. There is more poetry than is suspected by any but his intimates in the make-up of the average farmer, and he loves the beautiful in Nature without dreaming of talking about it, any more than he would publicly express his love for wife and babies.

A brisk trot brought the young farmer to the far gate, opening into the first plowed field. A wiry old plowman, with four big mules and a plow, was turning over the chocolate loam in long, moist waves. As he perceived his employer at the gate he slouched yet farther forward and cracked his long whip over the mules, who sprang onward against the pressing collars with a quickened step. The farmer paused only long enough to measure with his eye the amount of work done and to be sure all was well. Perhaps there was a simple question or suggestion, then he passed on his rounds.

As he trotted along the hedgerows, the violets and spring-beauties smiled up at him; the lark and the dove, the robin and the blackbird, sang to him; while the consciousness of soft young things growing was like a living presence about him.

The Most Independent Man on Earth

WHEATFIELDS covered with a six-inch pile of green rolled away on one hand; clover and timothy hayfields, whose augmented growth since yesterday he could almost recognize at a glance, were on the other. In some fields the tender young corn was just starting through the soil, marking the brown earth off into regular squares, green-starred at every corner. The clicking of the corn-planter near added a rhythm to the soft, still noises of spring.

He passed through field after field, overseeing the work done in each, keeping a master's eye on details and seeing that everything was in good working order all over the place.

Should plowshares become dulled or small accidents occur, he himself, as being most easily spared, would be likely to make the trip to the village blacksmith shop. There he would converse with friends and neighbors who had come to the village on similar errands, and get and read his mail. A day rarely passed without giving him this opportunity for recreation.

However, except in the village and at mealtime, he was in the saddle all day; and when night came he told his wife he was dead tired and dropped into a dreamless sleep almost as soon as his head touched the pillow.

Such sleep was not the least of his blessings. It is only induced by healthful exercise in the bright sunshine and pure air, taken without undue haste or sense of worry. No wonder he awoke cheerful and optimistic, satisfied that the "farmer is the most independent man on earth." The thought of another day's work before him was altogether pleasant, for he loved the farm and farming.

His wife rose at four o'clock that morning as usual, hurriedly dressed, quickly built the kitchen fire and had breakfast on the table when the hands returned from feeding their teams and milking. Remember the menu and you will understand that she worked with rapidity.

Breakfast over and the milk strained and put away, ice-box overhauled and the soiled dishes stacked on the kitchen table ready for washing, she hastened to feed and water the chickens and look after the setting hens and incubator. This done, she gathered fruit and vegetables for dinner. She hurried through this task with never a glance at the tempting spring landscape. This was not because she was unappreciative of its beauty, but because her whole mind was centered on finishing this task before the baby should awake and become alarmed at her absence. As she neared the house and heard the expected wail, she quickened her pace into as much of a run as the brimming buckets in her hands would allow. Setting down her pails in the kitchen, she rushed up the stairs and snatched the crying infant from his cozy nest, kissing him, petting him and talking foolishness to the accompaniment of his delighted gurgles all the way down the steps. Such delights, however, must be short-lived. Hastily—always hastily—she bathed, dressed and fed him and put him down to play; then took up the rounds with a glance at the clock that sent her racing through bedmaking, sweeping, dusting, setting to rights—and then back to the hot kitchen. For the kitchen was hot even thus early in the season. There is no such thing as gas in most farming districts, and gasoline stoves are not to be thought of in the preparation of a full meal for hungry farmhands. That would be as absurd as using a sewing-machine oilcan to oil an automobile.

By this time the dirty dishes were even more unpleasant to handle than dirty dishes usually are. If you think they should have been washed immediately after breakfast my advice to you would be not to criticise the routine followed by a farmer's wife unless you know what you are talking about. If she were not an expert of the highest efficiency at her own particular business she could never do the amount of work that she does.

However, she had no time to reflect on any little added unpleasantness in dishwashing. On with the work! In and out of the hot suds and rinsing-pan she put those dishes—no sink to lighten the labor—dried them, put them away, mopped and tidied the kitchen, unendingly drew water and emptied water, cleansed the vegetables, dressed chickens, made hot bread—no handy bakery here—prepared dessert and coffee, and had another delicious meal smoking on the table by twelve o'clock, when her husband and the men trooped hungrily in from the fields.

After dinner she washed the dishes, tended to the baby and put him to bed for his afternoon nap, did such odd jobs as churning, cutting out of the kettle one hundred pounds or so of soap and carrying it to the drying room, picked and canned or preserved the strawberries that had ripened since yesterday, and in the driblet of time remaining between this work and the getting of supper she sped the sewing machine to its wildest limit in an effort to make, for herself and baby, garments that she would never have time to make unless she used such minutes as these, squeezed out of her busy days.

She prepared a hot supper. Men who work in the open must have three hot meals a day—they will all tell you so if you ask them.

If it had been washday or ironing day, or if her baby had been sick or cross, the extra work these circumstances entailed would have been performed by some means. She would have carried the fretting child about in her arms as she worked, and perhaps gone to bed later than usual.

At night when she lay down to rest every muscle and every nerve was throbbing with fatigue, and her harried spirit was in no condition to drop into healthful repose. She was awakened half a dozen times during the night by the fretting of her child and had to soothe it to sleep again before her own slumbers could be renewed. Next morning her broken sleep and the sense of hurry that pursued her even in her dreams left her feeling almost as tired as when she went to bed.

After ten or fifteen years of the above program, when the number of babies had multiplied and she realized that she was as complete a slave as ever wore an iron collar, she loathed the farm and all it stood for to her.

. . . . . .

There seems to be quite a shaking of heads among men deeply interested in the welfare of our land about so many well-to-do farmers moving to town and leaving the highly important business of agriculture to incompetent and land-robbing tenants.

The real reason for this exodus ought to furnish these unselfish patriots food for thought and start them on a campaign for the amelioration of the condition of wealthy farmers' wives. I am quite convinced that in almost every case where such a farmer moves to town the wife is really the cause of his going. A woman of any intelligence will not remain on a big farm today under such conditions as exist on most of them if she has influence enough over her husband to drag him away by either fair means or foul. And her innermost reasons are always the same reasons, no matter what line of argument she uses to convince him—whether it is that the children must be better educated or given better social advantages, or that she fears his health can no longer stand the strain of farm labor.

. . . . . .

Fifteen years ago Louis and I were married. He was a capable farmer, as was his father before him, and well-to-do—rich his neighbors called him, because to most farmers in that day a sum of money that needed five figures for its expression meant riches.

What Farmers Sacrifice for Cash

I HAD never lived on the farm, but had both visited and taught in the country. Of course it had not escaped my observation that farmers' wives worked too hard and had too little recreation; in fact I had never known one whose life was not a ceaseless round of work. And the paradoxical thing about it was that the higher up in the financial scale their husbands were, the harder these women worked. The comparatively poor had no hired hands to feed, did not keep so elaborate a table, had fewer chickens, put up little meat and therefore escaped soapmaking, had much less milk and fruit to care for, and, in fact, lived very much as women in the same station live in town. The rich men's wives were the overworked drudges.

It did not occur to me that I could be pushed, driven, dragged or otherwise coerced into doing like these women. Therefore, though I knew Louis' family quite well, I was sure that I should never grow to look like his hardworking mother who was old and wrinkled, or his homely sisters who lacked the grace and daintiness that I meant to keep.

His hale and hearty father was a humorous old despot. He had long ago retired from active work, given to his

Digitized by Google

grown children a large part of his lands, rented out most of the remainder and spent his abundant leisure in reading, joking his wife, keeping an eye open for *any* unnecessary expense in the housekeeping, and poking about the farm. Every day he could be seen slowly sauntering about the old orchard or along the hedgerows, ostensibly looking for guinea or turkey nests or stray pigs—in reality, enjoying the beauty and sweetness of all outdoors as everybody who lives in the country should do. I never knew his wife to step out of the yard unless on some pressing errand, *and I am* sure she never saw, with the inward eye at least, any of the beautiful things that were spread so lavishly before her in every direction. To her husband it was a matter of course that she should be so; he would as soon have expected to see her suddenly get up and dance a hornpipe unannounced as to see her take a walk for the sake of walking and enjoying the scenery. His was a keen and active mind, and he had early emancipated himself from the drudgery of the farm. That his wife needed any emancipation I am sure never occurred to him to the day of his death. And yet he would have indignantly denied, and in very forceful language, that he was other than a good husband. He was a good provider—of food, be it understood; not of nice clothes or furniture or conveniences or any of the pleasant things a normal woman always longs for. I have never known one of these "good providers" who was not also a "hearty eater."

A Matrimonial Venture

HE WAS fond of remarking in his wife's presence that he had given away and rented out his land so he could help his wife with the housework—she had so much to do! This observation never failed to elicit from her a snort of rage which delighted his soul.

He really did wash the dishes sometimes, spattering dishwater impartially over floor, walls and table, and leaving the cooking vessels in such an unspeakable condition of greasiness that he was never allowed to do it except under vigorous protest.

I have seen him mind the baby when its mother was especially busy, at which times it was hard to tell which most rasped the nerves of the distracted woman—the baby's shrieks or his stertorous singing, a duet in which each tried to outdo the other. He would sit with half-closed eyes, the baby's head as likely as not resting on a suspender buckle as it howled, he singing with all his might, but paying no more attention to the baby's comfort than if it had been a feather pillow. When at last the distracted mother snatched the infant from him the look of mild surprise which he cast upon her was belied by the twinkle in his very blue eyes. That her answering look was peculiarly bitter seemed to me at one time a little funny—she was so obviously without a sense of humor; but I have lived to suspect that the sense of humor possessed by many husbands is likely to kill that same sense in the women who have to live with them and endure their humorous remarks and actions.

When Louis and I became engaged there was a good deal of the usual misgiving indulged in on each side of the house.

"Eleanor a farmer's wife! What a joke! She will have to wear her wedding clothes ten years and then make them over for the children," said my flippant young sister.

Or my equally flippant young brother would ask me if I expected to keep a hen to lay eggs for us, and whether I knew which breeds of cows gave sweet milk and which gave buttermilk! And would I carry the butter to town, wearing a slat sunbonnet, as Mrs. So-and-So did? Whereupon he would imitate me doing it, with a comicality that swept the rest of the family with gusts of laughter, even though my gentle mother always looked at me in a troubled way.

"Are you quite sure of yourself, Eleanor?" she asked me timidly one day, for the subject of love and marriage was a very sacred one to her and not to be meddled with, even by a parent.

"Quite sure, mother dear," I replied, with a brave smile and a kiss; and she never hinted further that she had misgivings.

Louis was hearing from his family after this wise:

"If You Did Not Want to Work You Should Not Have Married a Farmer!"

"Eleanor is a nice girl—a very nice girl—but a farmer's wife! She can play the piano, but can she cook? She can entertain you with her conversation, but who will sew on your buttons? You admire her fine clothes now, but how will you like them when you have to foot the bills?"

We cared as little what any of them said as any other young people do under similar circumstances. Life with each other could mean nothing but happiness. We would meet and conquer all its difficulties together. How fortunate it is that young people always look at the glaring sun of reality through the smoked glass of imagination!

We were married early in the year in my city home and springtime found us settled in the new cottage on Louis' farm, everything therein inexpensive, but dainty, tasteful and fresh. There were no conveniences such as the simplest city cottage contains. All water was drawn from a well in the yard; there was no sink in my kitchen—and, of course, no bathroom or furnace, no built-in china-closets, linen-presses or bookshelves; but at that time not half a dozen country houses in our whole county had any of these things, though many of the farms were worth one hundred dollars an acre, and a farm of less than three hundred and twenty acres was scarcely looked upon as a large one.

I did not know much about housework when I married, but I had the true home-loving instinct, a habit of orderliness and abundant energy. Given these, a woman of ordinary intelligence learns what must be learned about housework quickly. I think I must have been born a good cook, descended as I am from generations of Southern women famous for their hospitality; for my cooking was a source of wonder to all of Louis' relatives.

"The best cook in the family!" they declared.

In fact, my entire management was a surprise to them and a source of pride to Louis. That I could maintain my personal daintiness while working in the kitchen was also a matter of frequent remark among them.

I did all my own work, and I worked as hard as any woman ought to have to work; for, aside from the fact that I had no conveniences to lighten my labor, I was learning as I went and often took a dozen steps where one would have answered.

When I displayed my household linen, prepared by my own hands before my marriage, to Louis' mother, she took one of the hemstitched monogrammed sheets in her hands and said scornfully:

"What do you think these will look like after the hired hands have slept on them a while?"

"We will not have the men in the house," I answered quietly. "There are two tenant houses on the farm and it is much better to let them live outside our home."

She smiled pityingly.

"That will do for a year or two; but you will see that Louis will want them in the house after a while. He can get 'em out earlier when they are right in the house and it saves some on their wages."

I put the things away, carefully concealing my resentment and disbelief.

There was nothing in that first summer's experience to make me think she was right. Louis was very tactful and considerate. He had been ready to make many allowances for my ignorance of farm ways—even to endure some positive discomforts; and he watched my progress in housewifely arts with quiet pleasure in the fact that I seemed to be justifying his choice. From the very beginning his home was quite comfortable and he was well fed. He had early provided me with a horse and buggy of my own, and I visited my friends occasionally, drove to church or town when I wanted to do so, and lived a sane, comfortable life.

Face to Face With the Servant Question

TRUE, I worked hard according to the standards of city women; but my work did not take all my time and the beautiful country life compensated me even for the hampering conditions under which I labored. I had always loved the country. Now I never missed strolling out in the late afternoons to the woods and hedgerows. Often Louis went with me and we always came back laden with wild flowers for our rooms. I never failed to return rested, no matter how tired I had been upon starting out. By the evening lamp I read aloud to Louis or played for him, and we were as foolishly happy as young married couples much in love with each other usually are.

I was not bothered with the hands, or with milking, or with the heavy gardening—as was my husband's mother. I did not yet have many chickens or much fruit on the farm. I kept myself and my house immaculate, and pridefully felt that I had solved the farm-life problem easily and well. It makes me smile a little to remember that I thought then that my work would be easier after a while when Louis was able to put modern conveniences in the house. I even thought, if he became very prosperous, that I would find a nice maid to do the hardest work.

I was to face the servant question in the country much sooner than I anticipated. Winter came and my usual good health had quite deserted me. In my buggy Louis and I scoured the surrounding country and neighboring towns for twenty miles in every direction in search of a woman to do housework on the farm. The few unemployed ones "would not work on a farm for anything!" They said the work was too hard and it was too lonesome. Nothing we could promise helped. They one and all refused

"You Have Already Done Enough Work Today to Exhaust a Stevedore. And Your Husband is a ——"

Digitized by Google

even to consider any proposition we could make. At last we found a timid, ignorant creature, inhumanly treated at home by a cruel stepmother, to whom any condition would be welcome in preference. Her ignorance was abysmal, and the things I had to ignore that she could not or would not learn to do right sometimes rent my heart. My pretty china was smashed; silver spoons were found in the ashes, burned and ruined, and my best napkins were occasionally taken for dishrags when nothing else conveniently offered. I could not discharge her, for I was absolutely unable to work and I knew I could find no one to take her place.

Louis made light of my household tragedies, telling me that Dora was doing the very things he expected me to do when we first started to keep house; and, since he had made up his mind to see those things done, they were not troubling him in the least! When I became really distressed he sympathized with and comforted me as well as he could.

The remembrance of the kindness and patience with which he met every discomfort then was the greatest help to me through the hard years that followed. For I could always realize that the real Louis was a good, kind man, and that only the hard requirements of farm life made him seem different.

A year from the day we moved into our new home our first baby was born. The roads, always in a fearful state at that season of the year, were then quite impassable. We had to send for an ignorant, stupid quack, whose sole recommendation was that he lived five miles nearer than a good doctor. I passed through two days of torment such as I hope even lost souls are not called upon to bear.

Though far more dead than alive when my baby was placed in my arms, I still had consciousness enough left to feel that I could yet "bear all things, endure all things" for this, my own child. Louis voiced the same feeling in his own way a day or two afterward when he said playfully to the baby:

"Well, young lady, this old farm has got to get up and hustle after this to provide for your future."

I did not regain my usual buoyant health that summer. Before baby was two months old my cook had left me. She said she was sick; but the fact was she had learned enough from me to seek a place in town, which she promptly did. We were too busy to hunt for another, feeling—as we did—that the search would be long, if not altogether fruitless.

Had we lived near town, I could have sent out the washing and the sewing and had a woman in once a week to help me clean. As it was, the nearest laundry was twelve miles away, and no woman within five miles of us was poor enough to do other people's work.

When Family Privacy is Impossible

MY HUSBAND had thrown himself into the farming with great vigor; and a sense of fairness, if nothing else, would have spurred me to keep even pace with him and do my part. So I made a study of systematizing my work; I made every movement count, as far as possible, toward some definite end.

My first care was baby. Nothing ever prevented me from keeping her immaculately clean, healthy and happy. That I did not have leisure to enjoy her loveliness, and watch her little mind and body develop hour by hour, grieved me; but I told myself that this was the common lot of mothers. That some who did have the leisure chose to spend it in social dissipations instead was to me unthinkable.

Besides doing the housework as I did the summer before, I was also trying to raise chickens enough for our own use. A man born and bred on the farm would as soon think of buying champagne for his table as chickens, though nobody likes to eat them better than he. Louis had bought me an incubator and a brooder, and I was highly successful with them. They took up more of my time than the old setting hens, but were less unpleasant to handle.

The young fruitvines we had planted the last year were now bearing. Abundant strawberries, raspberries and blackberries were to be picked. What we could not eat I must can or preserve. When I say I canned or preserved fruit I am dealing in terms of gallons and bushels—not the tiny glasses or pint jars town women mean when they talk of canning. Moreover, it was all done over a hot wood range; and the carrying of the wood and water necessary was not the least part of the work. Though Louis usually filled the wood-box and the water-bucket before leaving the house, they both seemed to be empty always.

"If the house were to catch fire this bucket would be the first thing to burn," he would sometimes good-naturedly grumble as he picked up the empty pail and started for the well.

Some of the men in the community were not so considerate of their wives. I had one neighbor—a second wife—whose husband, an ex-legislator called "highly educated" because he was a university man, was reputed to be worth seventy thousand dollars. Their cookstove was so old and dilapidated that three of its four legs were gone and had been replaced by bricks, and it leaked ashes at every pore. He would never have her wood cut and she was too proud to cut it herself. I have been in her kitchen when she had one end of an old tree-branch stuck in the stove for fuel, the rest of the branch projecting halfway across the room and supported by two chairs. As the end in the stove burned off, the remainder was gradually fed into the fire until the supporting chairs could be safely removed. Then another branch was brought into requisition. Poor woman! She is now dead, like her predecessor; and their well-preserved husband is industriously seeking a third wife.

I went absolutely nowhere that summer. The spring was late, and during the first rush of plowing my buggy horse was impressed—and somehow it was never convenient to restore her to me. On Sunday Louis professed to be too tired to go to church and I did not insist on going. Secretly I preferred to spend this precious leisure in the intimate companionship of my baby or in reading when she was asleep. Louis spent the day in riding over the farm and planning the week's work. We had to give up reading together in the evening as my work was never done before bedtime. My work-hardened hands refused to do my bidding at the piano, so I scarcely ever attempted to play. I passionately loved music, and to have to give it up was one of my most disheartening experiences. Of course we never had time for the pleasant walks in the woods and along the hedgerows now. We had a large, shady yard, and for her health's sake I kept baby out-of-doors most of the time; but neither of us ever got outside of the yard.

That winter Louis bought the adjoining one hundred and sixty acres that he had often spoken of needing. The next spring, when hiring the new hands, he said to me:

"Eleanor, can't we let two of the men eat in the house for the next three months? They can sleep over the toolshed and you will not be bothered with them except at mealtime. I can get all the men out earlier if part of them are right here with me." At my dismayed look, he continued: "You know we have got to work harder to pay for that land."

So we took to getting up at four o'clock and there were four extra men to feed instead of two. They brought mud and bad odors into the house; they only half washed their faces and hands and wiped the rest of the dirt on the kitchen towels, so I was obliged to change them after every meal. They ate in a slovenly manner, so my table no longer presented its usual attractive appearance. What little conversation they held was about crops and crop conditions. Our dining room had become only a part of the farm workshop.

I had begun to suggest modern improvements for the house immediately after starting housekeeping and mentioned them again and again as the work grew heavier, but was always told to "wait until we get out of debt." Now it is a fact that hardly any of the big farmers are ever out of debt. When they nearly approach that happy state there is always a new piece of land to buy or new improvements in farm buildings or equipment to make. Rarely indeed is a sum large enough to provide bath, kitchen sink, furnace and lights forthcoming for the home. The farmhouse is really the most important workshop on the place and invariably the poorest provided with labor-saving machinery—this in spite of the fact that the women of the family must do the work in the house, while that elsewhere is done by hired laborers.

"I Shall Leave the Farm; With Louis if I Can, Without Him if I Must"

I began to look pretty bad. Aside from the fact that I no longer had the time to dress as carefully as before, to arrange my hair becomingly or fix the little accessories that add so much to a woman's appearance, I was so tired all the time that I looked positively ill. Louis felt called upon to remonstrate.

"You work too hard by trying to keep things so clean. Let things go more. Eat off an oilcloth. Let the men eat their dessert on their plates. That is better than they are used to."

That we should have to eat off the oilcloth, and mix our pudding with the meat and vegetables on our own plates, did not seem to occur to him to be an objection to the plan.

We had an unusually good crop that year. We nearly paid for the one hundred and sixty acres in the fall, and Louis promptly bought eighty more, three miles from home. He also went to market and bought feeders—cattle to fatten on the abundant corn we had raised that summer. This necessitated keeping hands in the house all winter, as feeding requires great care—else much money may be lost. Of course the men could not sleep over the toolhouse in winter; so I had to prepare two extra bedrooms for them. After the democratic manner of farmers, they sat in our living room when not at work. The farm had now invaded the whole house. We had not so much privacy in our family life as boarding-house keepers.

All this time I hired help in the house whenever I could get anybody, which was not often. Nor did they stay with me long when I did get them. "The work is too hard" was their invariable excuse. In vain I pointed out to them that they did not do nearly so much as I was compelled to do when I had no help, for I was never idle even when they were with me. One of them remarked witheringly that that was no skin off of her nose. She didn't propose to work herself to death for a lot of hired hands, even if I did!

The Tragedy of a Kitchen Sink

LOUIS was not the least bit stingy about paying house-servants. He always wanted me to have them if they could be gotten without losing time from the farm work. Since the first summer of our marriage he had never done any of the laborious work. Superintending the farm took all his time. All manual labor was delegated to the men employed for that purpose. This was right and proper. The point is, conditions on the farm were such that he could get workers and I couldn't.

I had gradually gotten into the ways of other country people; and a glance at conditions on the farm will show that these ways are almost a necessity. Fruit and vegetables have to be raised in abundance to supply the farm table if these things are ever to appear there fresh, and it would be wanton mismanagement to throw away the surplus and buy inferior canned stuff for winter. You have to kill your own hogs to have hams, bacon and lard of the best quality. After the nightmare of hog-killing time is safely over, the unused fat must be made into soap or utterly wasted. Turkeys, chickens and eggs must be supplied for the table. It is very little more trouble to provide enough to make a big showing in paying the grocery bill. Milk and butter are used abundantly for the home. Skimmed milk is absolutely essential to the well-being of the young pigs. Who would think of feeding the cream to them, also, instead of making it into golden butter for the market-basket?

In fact, the greater part of my neighbor women paid all grocery bills with these things; and some of them even had enough left to buy some longed-for piece of furniture occasionally.

It was about this time that I began to feel the strain of farm life in my spirit. Heretofore, though I usually went to bed so tired that every bone and muscle in me ached, my discomfort was almost wholly physical. I adored my husband and my baby. We had good health and no worries for our financial future. My husband's ambition was so great that he had swept me along with him in his plans and I uncomplainingly accepted my part in them. I can truthfully say I never shirked either what he expected of me or what I expected of myself. In this way I carried a bigger burden than I should if I had abandoned myself to either his ideas or my own. He would have been comparatively satisfied with a disordered home, a slovenly looking wife and a dirty baby, so long as the hands were well fed at the proper time. I must do menial service for his laborers because he expected it of me; but I must keep myself, my child and my house neat and clean because I expected that of myself. I dared not relax my efforts here. I had long ago dropped every diversion I had ever had. Now, when he, already owning more than five hundred acres of land, promptly bought eighty more without providing me even a kitchen sink, my spirit broke a little.

ARNOLD sprang to his feet. It was significant that, after his first surprise, he spoke to Fenella with his head half turned toward his companion and an encouraging smile upon his lips. "I had no idea that we were coming here," he said. "We should not have thought of intruding. It was your chauffeur who would not even allow us to ask a question."

"He obeyed my orders," Fenella replied. "I meant it for a little surprise for you. I thought that it would be pleasant, after your drive, to have you call here and rest for a short time. You must present me to your friend."

Arnold murmured a word of introduction. Ruth moved a little in her seat. She lifted herself with her left hand, leaning upon her stick. Fenella's expression changed as though by magic. Her cool, good-humored but almost impertinent scrutiny suddenly vanished. She moved to the side of the motor car and held out both her hands.

"I am so glad to see you here," she declared. "I hope that you will like some tea after your long ride. Perhaps you would prefer Mr. Chetwode to help you out?"

"You are very kind," Ruth murmured. "I am sorry to be such a trouble to everybody."

Arnold lifted her bodily out of the car and placed her on the edge of the lawn. Fenella, a long parasol in her hand, was looking pleasantly down at her guest.

"You will find it quite picturesque here, I think," she said. "It is not really the river itself that comes to the end of the lawn, but a little stream. It is so pretty, though, and so quiet. I thought you would like to have tea down there. But, my poor child," she exclaimed, "your hair is full of dust! You must come to my room. It is on the ground floor here. Mr. Chetwode and I together can help you so far."

They turned back toward the house and passed into the cool white hall, the air of which was fragrant with the perfume of geraniums and clematis. On the threshold of Fenella's room they were alone for a moment. Fenella was summoning her maid. Ruth clung nervously to Arnold. The room into which they looked was like a fairy chamber, full of laces and perfume and fine linen.

"Arnold," she whispered, "you are sure that you did not know about coming here?"

"I swear that I had no idea," he answered. "I should not have thought of bringing you without telling you first."

Then Fenella returned and he was banished into the garden. At the end of the lawn he found Mr. Weatherley half asleep in a wicker chair. The latter was apparently maintaining his good spirits.

"Glad to see you, Chetwode," he said. "Sort of plot of my wife's, I think. Your young lady friend in the house?"

"Mrs. Weatherley was kind enough to take her to her room," Arnold replied. "We have had a most delightful ride and I suppose it was dusty, although we never noticed it."

Mr. Weatherley relit his cigar, which had gone out while he dozed.

"Thought we'd like a little country air ourselves for the week-end," he remarked. "Will you smoke?"

Arnold shook his head.

"Not just now, thank you, sir. Is that the river through the trees there?"

Mr. Weatherley nodded.

"It's about a hundred yards down the stream," he replied. "Bourne End is the nearest station. The cottage belongs to my brother-in-law—Sabatini. I believe he's coming down later on. Any news at the office yesterday morning?"

"There was nothing whatever requiring your attention, sir," Arnold said. "There are a few letters that we have kept over for tomorrow, but nothing of importance."

Mr. Weatherley pursed his lips and nodded. He asked a further question or two concerning the business and then turned his head at the sound of approaching footsteps. Ruth, looking very pale and fragile, was leaning on the arm of a man-servant. Fenella walked on the other side, her lace parasol drooping over her shoulder, her head turned toward Ruth, whose shyness she was doing her best to melt. Mr. Weatherley rose hastily from his chair.

"God bless my soul!" he declared. "I didn't know—you didn't tell me ——"

"Miss Lalonde has been a great sufferer," Arnold said. "She has been obliged to spend a good deal of her time lying down. For that reason today has been such a pleasure to her."

He hurried forward and took the butler's place. Together they installed her in the most comfortable chair. Mr. Weatherley came over and shook hands with her.

"Pretty place, this, Miss Lalonde, isn't it?" he remarked. "It's a real nice change for business men like Mr. Chetwode and myself to get down here for a little quiet."

"I Looked in the Glass and Even My Vanity Was Satisfied"

"It is wonderfully beautiful," she answered. "It is so long since I was out of London that perhaps I appreciate it more even than either of you."

"What part of London do you live in?" Fenella asked.

"My uncle and I have rooms in the same house with Mr. Chetwode," she replied. "It is in Adam Street, off the Strand."

"Not much air there this hot weather, I don't suppose," Mr. Weatherley remarked.

"We are on the top floor," she replied, "and it is the end house nearest to the river. Still one feels the change here."

Tea was brought out by the butler, who was assisted by a trim parlormaid. Fenella presided. The note of domesticity that her action involved seemed to Arnold, for some reason or other, quaintly incongruous. Arnold waited upon them and Fenella talked all the time to the pale, silent girl at her side. Gradually Ruth overcame her shyness; it was impossible not to feel grateful to this beautiful, gracious woman who tried so hard to make her feel at her ease. The time slipped by pleasantly enough. Then Fenella rose to her feet.

"You must carry Miss Lalonde and her chair down to the very edge of the lawn where she can see the river," she told Arnold. "Afterward I am going to take you to see my little rose-garden. I say mine, but it is really my brother's, only it was my idea when he first took the place. Mr. Weatherley is going down to the boat-builder's to see some motor launches—horrible things they are, but necessary if we stay here for the summer. Would you like some books or magazines, Miss Lalonde, or do you think you would care to come with us if we helped you very carefully?"

Ruth shook her head.

"I should like to sit quite close to the river," she said shyly, "just where you said, and close my eyes. You don't know how beautiful it is to get the roar of London out of one's ears and to be able to hear nothing except these soft summer sounds. It is like a wonderful rest."

They arranged her comfortably. Mr. Weatherley returned to the house. Fenella led Arnold through a little iron gate to a queer miniature garden, a lawn brilliant with flower-beds ending in a pergola of roses. They passed underneath it and all around them the soft, drooping blossoms filled the whole air with fragrance. At the end were the river and a wooden seat. She motioned to him to sit by her side.

"You are not angry with me?" she asked a little timidly.

"Angry? Why should I be?" Arnold answered. "The afternoon has been delightful. I can't tell you how grateful I feel."

"All the same," she said, "I think you know that I laid a plot to bring you here because I was curious about this companion of yours, for whose sake you refused my invitation. However, you see I am penitent. Poor girl, how can one help feeling sorry for her! You forgive me?"

"I forgive you," he answered.

She closed her parasol and leaned back in her corner of the seat. She seemed to be studying his expression.

"There is something different about you this afternoon," she said. "I miss a look from your face, something in your tone when you are talking to me."

Arnold shook his head.

"I am not conscious of any difference."

Fenella laughed softly, but she seemed even then a little annoyed.

"You are not appreciating me," she declared. "Do you know that here, in the wilderness, I have put on a Paris muslin gown, my best white shoes and white silk stockings—of which you can see at least two inches," she added, glancing downward. "I have risked my complexion by wearing no hat, so that you can see my hair really at its best. I looked in the glass before you came and even my vanity was satisfied. Now I bring you away with me and find you a seat in a bower of roses, and you look up into that elm tree as though you were more anxious to find out where the thrush was singing than to look at me."

Chetwode laughed. Through the raillery of her words he could detect a certain half-girlish earnestness that seemed to him delightful.

"Try to remember," he said, "how wonderful a place like this must seem to any one like myself who has spent day after day for many months in Tooley Street. I have been sitting up on the hills listening to the wind in the trees. You can't imagine the difference when you've been used to hearing nothing but the rumble of drays on their way to Bermondsey."

She looked up at him.

"You know," she declared, "you are rather a mysterious person. I cannot make up my mind that you are forced to live the life you do."

"You do not suppose," he replied, "that any sane person would choose it? It is well enough now, thanks to you," he added, dropping his voice a little. "A week ago I was earning twenty-eight shillings a week, checking invoices and copying letters—an errand boy's work; pure, unadulterated drudgery—working in a wretched atmosphere, without much hope of advancement or anything else."

"But even then you leave part of my question unanswered," she insisted. "You were not born to this sort of thing?"

"I was not," he admitted; "but what does it matter?"

"You don't care to tell me your history?" she asked lazily. "Sometimes I am curious about it."

"If I refuse," he answered, "it may give you a false impression. I shall tell you a little if I may. A few sentences will be enough."

"I should really like to hear," she told him.

"Very well then," he replied. "My father was a clergyman; his family was good. He and I lived almost alone. He had an income and his stipend, but he was ambitious for me. By some means or other, while I was away, he was led to invest all his money with one of these wretched bucketshop companies. A telegram fetched me home unexpectedly just as I was entering for my degree. I found my father seriously ill and almost broken-hearted. I stayed with him and in a fortnight he died. There was just enough—barely enough—to pay what he owed, and nothing left of his small fortune. His brother, my uncle, came down to the funeral, and I regret to say that even then I quarreled with him. He made use of language concerning my father and his folly that I could not tolerate. My father was very simple and very credulous and very honorable. He was just the sort of man who becomes the

Digitized by Google

prey of these wretched circular-mongering sharks. What he did, he did for my sake. My uncle spoke of him with contempt, spoke as though he were charged with the care of me through my father's foolishness. I am afraid I made no allowance for my uncle's peculiar temperament. The moment the funeral was over I turned him out of the house. I have no other relatives. I came to London sooner than remain down in the country and be found a position out of charity, which is, I suppose, what would have happened. I took a room and looked for work. Naturally I was glad to get anything. I used to make about forty calls a day on chance. I called at your husband's office in Tooley Street and accepted a situation."

Fenella nodded.

"I thought it was something like that," she remarked. "Supposing I had not happened to discover you, I wonder how long you would have gone on."

"Not much longer," he admitted. "To tell you the truth, I should have enlisted but for that poor little girl whom I brought down with me this afternoon."

His tone had softened. There was the slightest trace of a frown upon her face as she looked along the riverside.

"But tell me," she asked, "what is your connection with her?"

"One of sympathy and friendliness only," he answered. "I never saw her till I took the cheapest room I could find at the top of a gaunt house near the Strand. The rest of the top floor is occupied by this girl and her uncle. He is a Socialist agitator engaged on one of the trades-union papers—a nervous, unbalanced creature on fire with strange ideas—the worst companion in the world for any one. Sometimes he is away for days together. Sometimes when he is at home he talks like a prophet, half mad, half inspired, as though he were tugging at the pillars that support the world. The girl and he are alone as I am alone, and there is something that brings people very close together when they are in that state. I found her fallen upon the landing one day and unable to reach her rooms, and I carried her in and talked. Since then she looks for me every evening and we spend some time together."

"Is she educated?"

"Excellently," he answered. "She was brought up in a convent after her parents' death. She has read a marvelous collection of books and she is very quick-witted and appreciative."

"But you," she said, "are no longer a waif. These things are passing for you. You cannot carry with you to the new world the things that belong to the old."

"No prosperity should ever come to me," he declared firmly, "in which that child would not share to some extent. With the first two hundred pounds I possess—if ever I do possess such a sum," he added with a little laugh—"I am going to send her to Vienna, to the great hospital there."

She shrugged her shoulders.

"Two hundred pounds is not a large sum," she remarked. "Would you like me to lend it to you?"

Arnold shook his head.

"She would not hear of it," he said. "In her way she is very proud."

"It may come of its own accord," she whispered softly. "You may even have an opportunity of earning it."

"I am doing well enough just now," he remarked, "thanks to Mr. Weatherley, but sums of money like that do not fall from the clouds."

They were both silent. Fenella seemed to be listening to the murmur of the stream. Arnold's head was lifted to the elm tree, from somewhere among whose leafy recesses a bird was singing.

"One never knows," she said softly. "You yourself have seen and heard of strange things happening within the last few days."

He came back to earth with a little start.

"It is true," he confessed.

"There is life still," she continued, "throbbing sometimes in the dull places, adventures that need only the strong arm and the man's courage. One might come to you, and adventures do not go unrewarded."

"You talk like your brother," he remarked.

"Why not?" she replied. "Andrea and I have much in common. Do you know that sometimes you provoke me?"

"I?"

She nodded.

"You have so much the air of a conqueror," she said. "You look as though you had courage and determination. One could see that by your mouth. And yet you are so much like the men of your nation, so stolid, so certain to move along the narrow lines that convention has drawn for you. Oh, if I could," she went on, leaning toward him and looking intently into his face, "I would borrow the magic from somewhere and mix a little in your wine so that you should drink and feel the desire for new things; so that the world of Tooley Street should seem to you as though it belonged to a place inhabited only by inferior beings; so that you should feel new blood in your veins, hot blood crying for adventures, a new heart beating to a new music! I should like, if I could, Mr. Arnold, to bring those things into your life."

He turned and looked at her. Her face was within a few inches of his. She was in earnest. The gleam in her eyes was half provocative, half a challenge. Arnold rose uneasily to his feet.

"I must go back," he said a little thickly. "I forgot that Ruth is so shy. She will be frightened alone."

He walked away down the pergola without even waiting for her. It was very rude, but she only leaned back in her chair and laughed. In a way, it was a triumph!

XXI

RUTH was still alone and her welcome was almost pathetic. She stretched out her arms—long, thin arms they seemed in the tight sleeves of her worn gown. She had discarded her carefully mended gloves, and her hands were bare.

"Arnold," she murmured, "how long you have been away!"

He threw himself on the grass by her side.

"Silly girl!" he answered. "Don't tell me that you are not enjoying it?"

"It is all wonderful," she whispered; "but can't you see that I am out of place? When could we go, Arnie?"

"Are you so anxious to get away?" he asked lazily.

"In a way, I should be content to stay here forever," she answered. "If you and I only could be here—why, Arnold, it is like Heaven! Just close your eyes as I have been doing—like that. Now listen. There isn't any undernote, none of that ceaseless, awful monotony of sound that seems like the falling of weary men's feet upon the eternal pavement. Listen—there is a bird singing somewhere in that tree, and the water goes lapping and lapping and lapping as though it had something pleasant to say, but was too lazy to say it. And every now and then if you listen very intently you can hear laughing voices through the trees there from the river, laughter from people who are happy, who are sailing on somewhere to find their city of pleasure. And the perfumes, Arnold! I don't know what the rose-garden is like, but even from here I can smell it. It is wonderful."

"Yet you ask me when we are going," he reminded her.

She shivered for a moment.

"It is not my world," she declared. "I am squeezed for a moment into a little corner of it, but it is not mine and I have nothing to do with it. She is so beautiful, that woman, and so gracious. She talks to me out of pity, but when I first came she looked at me and there was a challenge in her eyes. What did it mean, Arnold? Is she fond of you? Is she going to be fond of you?"

He laughed a little impatiently.

"My dear Ruth," he said, "she is my employer's wife. She has been kind to me, I think, because she is naturally kind, and because lately she has not found among her friends many people of her own age. Beyond that there is nothing, there is never likely to be anything. She mixes in a world where she can have all the admiration she desires, and all the friends."

"Yet she looks at you," Ruth persisted in a troubled tone, "as though she had some claim; as though I, even poor I, were an interloper for the tiny share I might have of your thoughts or sympathy. I do not understand it."

He touched her hand lightly with his.

"You are too sensitive, dear," he said, "and a little too imaginative. You must remember that she is half a foreigner. Her moods change every moment and her expression with them. She was curious to see you. I have tried to explain to her what friends we are. I am sure that her interest is a friendly one."

A motor horn immediately behind startled them both. They turned their heads. A very handsome car, driven by a man in white livery, had swept up the little drive and had come to a standstill in front of the hall door. From the side nearest to them Count Sabatini descended and stood for a moment looking round him. The car moved on toward the stables. Sabatini came slowly across the lawn.

"Who is it?" she whispered. "How handsome he is!"

"He is Mrs. Weatherley's brother—Count Sabatini," Arnold replied.

Sabatini came very slowly and, recognizing Arnold, waved his gray Homburg hat with a graceful salute. He was wearing cool summer clothes of light gray with a black tie. Even after his ride from London he looked immaculate and spotless. He greeted Arnold kindly and without any appearance of surprise.

"I heard that you were to be here," he said. "My sister told me of her little plot. I hope that you approve of my bungalow?"

"I think that it is wonderful," Arnold answered. "I have never seen anything of the river before—this part of it, at any rate."

Sabatini turned slightly toward Ruth, as though expecting an introduction. His lips were half parted; he had the air of one about to make a remark. Then suddenly a curious change seemed to come over his manner. His natural ease seemed to have entirely departed. He stood stiff and rigid, and there was something forbidding in his face as he looked down at the girl, who had glanced timidly toward him. A word—it was inaudible, but it sounded like part of a woman's name—escaped him. He had the appearance, during those few seconds, of a man who looks through the present into a past world. It was all over even before they could appreciate the situation. With a little smile he had leaned down toward Ruth.

"You will do me the honor," he murmured, "of presenting me to your companion?"

Arnold spoke a word or two of introduction. Sabatini pulled up a chair and sat down at once by the girl's side. He had seen the stick and seemed to have taken in the whole situation in a moment.

"Please be very good-natured," he begged, turning to Arnold, "and go and find my sister. She will like to know that I am here. I am going to talk to Miss Lalonde for a time if she will let me. You don't mind my being personal?" he went on, his voice soft with sympathy. "I had a very dear cousin once who was unable to walk for many years, and since then it has always interested me to find any one suffering in the same way."

There was a simple directness about his speech that seemed to open the subject so naturally that Ruth found herself talking without effort of her accident and the trouble it had brought. They drifted so easily into conversation that Arnold left them almost at once. He had only a little distance to go before he found Fenella returning. She was carrying a great handful of roses that she had just gathered, and to his relief there was no expression of displeasure in her face. Perhaps, though, he reflected with a sinking heart, she had understood!

"Your brother has just arrived," he announced. "I think that he motored down from London. He wished me to let you know that he is here."

"Where is he?" she asked.

"He is on the lawn, talking to Miss Lalonde," Arnold replied.

"I will go to them presently," she said. "In the meantime you are to make yourself useful, if you please," she added, holding out the roses. "Take these into the house, will you, and give them to one of the women."

He took them from her.

"With pleasure! And then if you will excuse us——"

"I excuse no word that is spoken concerning your departure," she declared. "Tonight I give a little fête. We change our dinner into what you call supper and we will have the dining table moved out under the trees there. You and your little friend must stop, and afterward my brother will take you back to London in his car or I will send you up in my own."

"You are too kind," Arnold answered. "I'm afraid——"

"You are to be afraid of nothing," she interrupted mockingly. "Is that not just what I have been preaching to you? You have too many fears for your height, my friend."

"We will put it another way then. I was thinking of Miss Lalonde. She is not strong, and I think it is time we were leaving. If you could send us as far as the railway station——"

"There are no trains that leave here," she asserted; "at least I never heard of them. I shall go and talk to her myself. We shall see. No, on second thought, she is too interested. You and I will walk to the house together. That is one thing," she continued, "that I envy my brother, that makes me admire him so much. I think he is the most charmingly sympathetic person I ever met. Illness of any sort, or sickness, seems to make a woman of him. I never knew a child or a woman whose interest or sympathy he could not win quickly."

"It is a wonderful thing to say of any man, that," Arnold remarked.

"Wonderful?" she repeated. "Why, yes! So far as regards children at any rate. You know they say—one of the writers in my mother's country said—that men are attracted by beauty, children by goodness and women by evil. It is of some such saying that you are thinking. Now I shall leave these flowers in the hall and ring the bell. Tell me, would you like me to show you my books?"

She laid her fingers upon the white door of her little drawing room and looked at him.

"If you do not mind," he replied firmly, "I should like to hear what Ruth says about going."

This time Fenella frowned. She stood looking at him for a moment. Arnold's face was square and determined, but there were still things there that she appreciated.

"You are very formal today," she declared. "You give too many of your thoughts to your little friend. I do not think that you are treating me kindly. I should like to sit with you in my room and talk to you of my books. Look, is it not pretty?"

She threw open the door. It was a tiny little apartment in which all the appointments and the walls were white, except for here and there a little French gilded furniture of the best period. A great bowl of scarlet geraniums stood in one corner. Though the windows were open the blinds were drawn, so that it was almost like twilight.

"You won't come for five minutes?" she begged.

"Yes!" he answered almost savagely; "come in and shut the door. I want to talk to you—not about your books.

Digitized by Google

Yes, let us sit down—where you will. That couch is big enough for both of us."

The sudden change in Arnold's manner was puzzling.

"What is it you want?" he asked. "Do you want to make me believe impossible things? You look at me from the corners of your eyes and you laugh. Do you want to make use of me in any way? You're not a flirt. You are a wife and a good wife. What is it you want?" He leaned toward her. "Do you want me to kiss you? I should like to do it. Only afterward ——"

"Afterward what?"

"I would do what I should have done if your husband hadn't taken me into his office—I would enlist," he said. "I mayn't be particularly ambitious, but I've no idea of hanging about, a penniless adventurer, dancing at a woman's heels. Be honest with me. At heart I do believe in you, Fenella. What is it you want?"

She leaned back on the couch and laughed. It was no longer the subtle, provoking laugh of the woman of the world. She laughed frankly and easily, with all the lack of restraint to which her twenty-four years entitled her.

"My dear boy," she declared, "you have conquered. I give in. You have seen through me. I am a fraud. I have been trying the old tricks upon you because I am very much a woman, because I want you to be my slave and to do the things I want you to do and live in the world I want you to live in, and I was jealous of this companion for whose sake you would not accept my invitation. Now I am sane again. I see that you are not to be treated like other and more foolish young men. My brother wants you. He wants you for a companion; he wants you to help him in many ways. He has been used to rely upon me in such cases. I have my orders to place you there"—she pointed to her feet. "Alas that I have failed!" she added, laughing once more. "But, Mr. Arnold, we shall be friends?"

"Willingly," he answered with an immense sense of relief. "I have spoken to you in a moment of sanity, but—well, you are the most compellingly beautiful person I ever saw, and compellingly beautiful women have never made a habit of being kind to me, so please ——"

"Don't do it any more," she interrupted. "Is that it?"

"As you like."

"Now I am going to put a piece of scarlet geranium in your buttonhole, and I am going to take you out into the garden and hand you over to my brother and tell him that my task is done, that you are my slave, and that he has only to speak and you will go out into the world with a revolver in one hand and a sword in the other, and wear any uniform or fight in any cause he chooses. Come!"

"It's a fact," Arnold said, as they left the room, "that I don't know of any man that I admire as much as I do your brother, but I am almost as afraid of him as I am of you."

"One who talks of fear so glibly," she answered, "seldom knows anything about it."

"There are as many different sorts of fear as there are different sorts of courage," he remarked.

"How we are improving!" she murmured. "We shall begin moralizing soon. Presently I really think we shall compare notes about the books we have read and the theaters we have been to, and before we are gray-headed I think one of us will allude to the weather. Now isn't my brother a wonderful man? Look at that flush upon Miss Lalonde's cheeks. Aren't you jealous?"

"Miserably!"

Sabatini rose to his feet and greeted his sister after his own fashion, holding both her hands and kissing her on both cheeks.

"If only," he sighed, "our family had possessed morals equal to their looks, what a race we should have been! But, my dear sister—a question of taste only—you should leave Paris gowns at home when you come to my bungalow."

"You men never altogether understand," she replied. "Nothing requires a little artificial aid so much as Nature. It is the piquancy of the contrast, you see. That is why the decorations of Watteau are the most wonderful in the world. He knew how to combine the purely, exquisitely artificial with the entirely simple. Now to break the news to Miss Lalonde!"

Ruth turned a smiling face toward her.

"It is to say that our fête day is at an end," she said, looking for her stick.

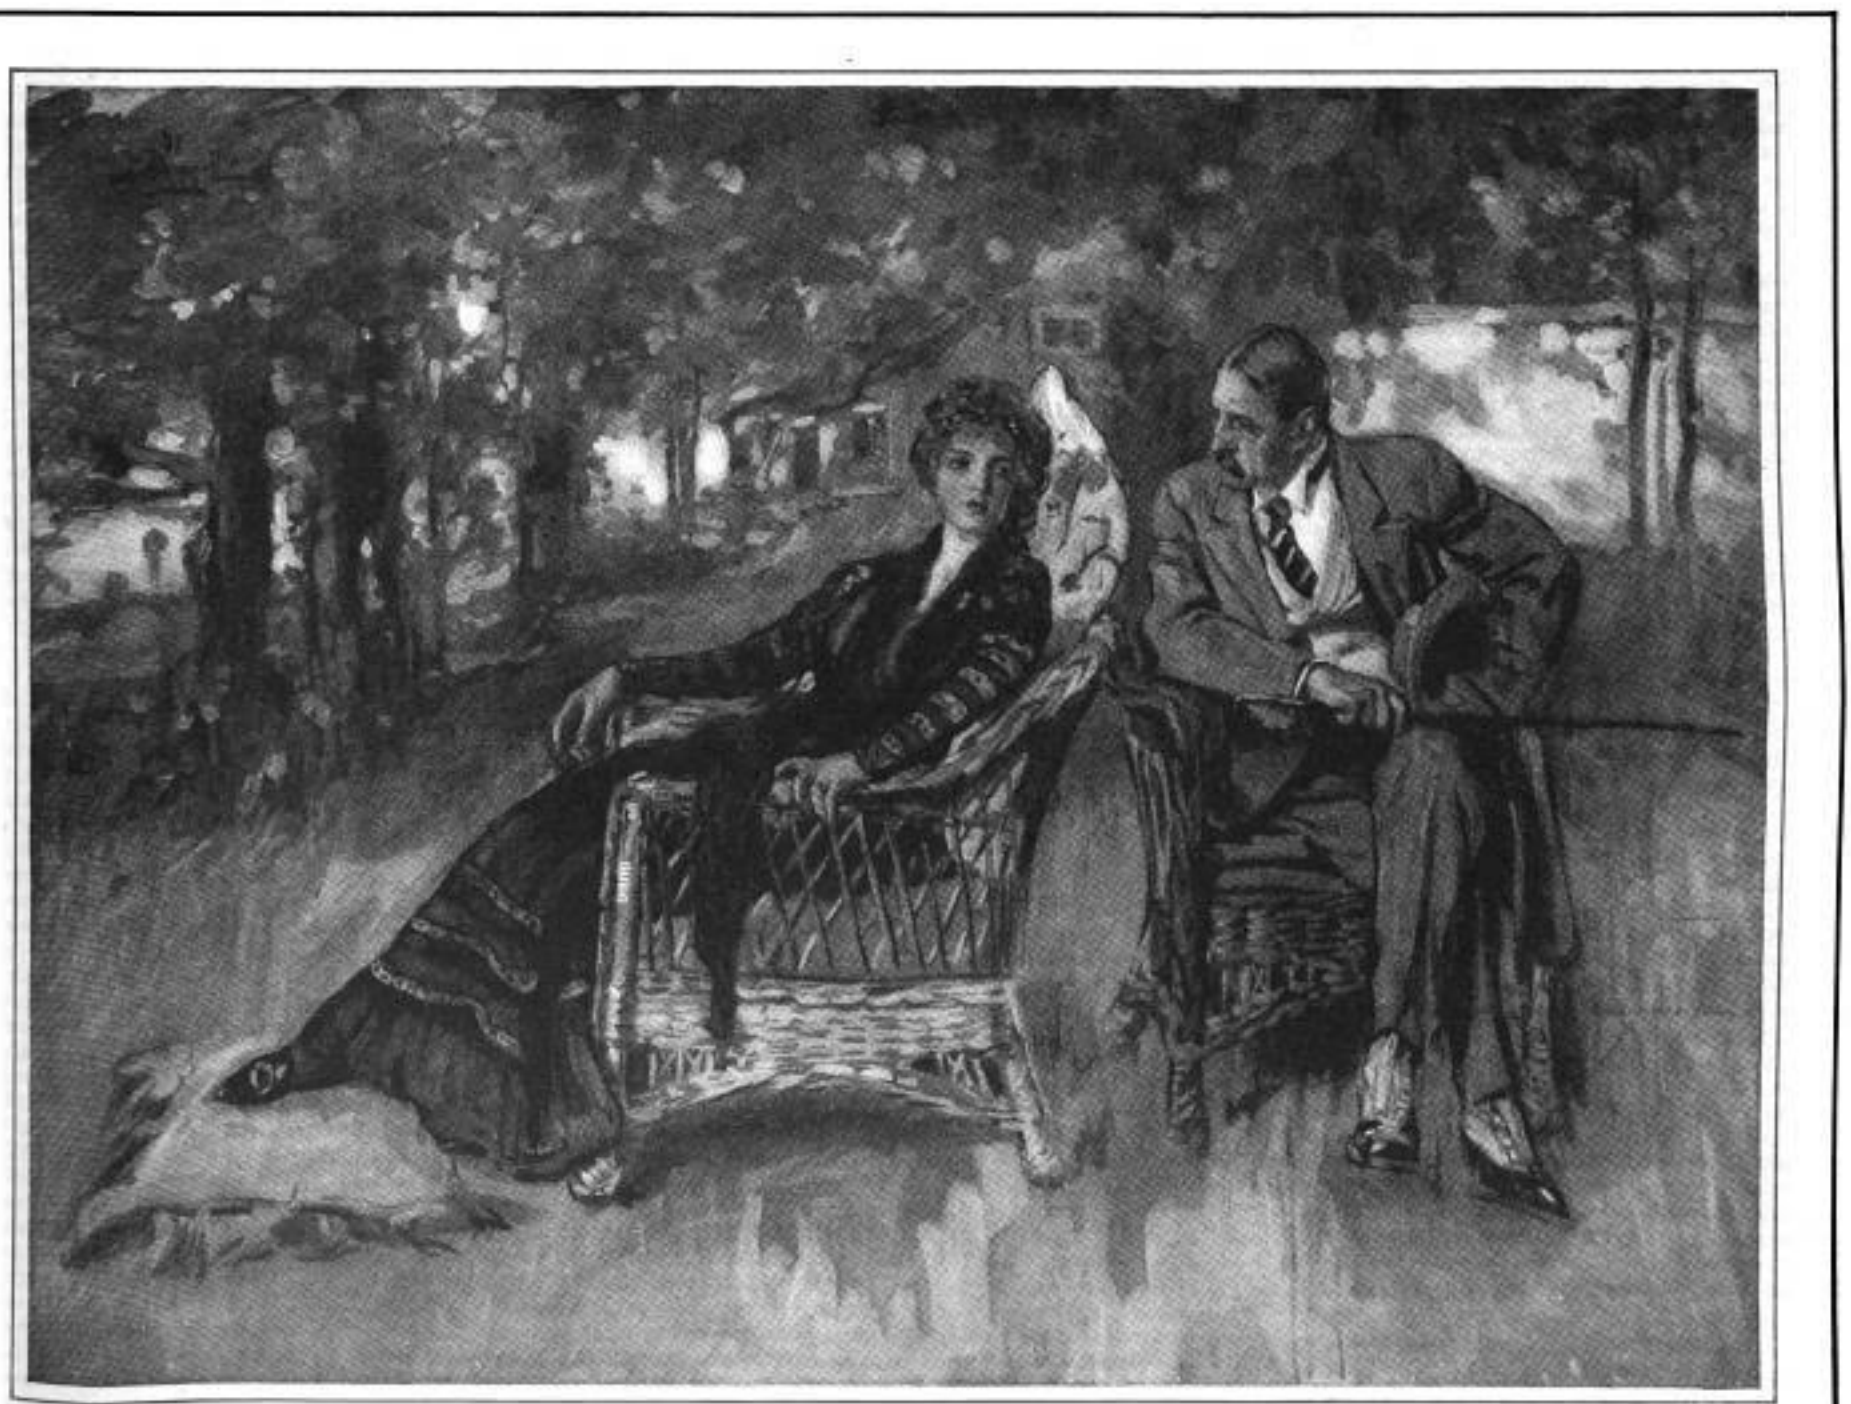
"Fête days do not end at six o'clock in the afternoon," Fenella replied. "I want you to be very kind and give us all a great deal of pleasure. We want to make a little party—you and Mr. Chetwode, my brother, myself and Mr. Weatherley—and dine under that cedar tree just as we are. We are going to call it supper. Then afterward you will have a ride back to London in the cool. Either my brother will take you or we will send a car from here."

"It is a charming idea," Sabatini said. "Miss Lalonde, you will not be unkind?"

She hesitated only for a moment. They saw her glance at her frock, the little feminine struggle, and the woman's conquest.

"If you really mean it," she said, "why, of course, I should love it. It is no good my pretending that if I had known I should have been better prepared," she continued, "because it really wouldn't have made any difference. If you don't mind ——"

"Then it is settled!" Sabatini exclaimed. "My young friend Arnold is now going to take me out upon the river. I trust myself without a tremor to those shoulders."



Arnold rose to his feet with alacrity.

"You get into the boathouse down that path," Sabatini continued. "There is a comfortable punt in which I think I could rest delightfully, or if you prefer to scull I should be less comfortable, but resigned."

"It shall be the punt," Arnold decided, with a glance at the river. "Won't any one else come with us?"

Fenella shook her head.

PHILADELPHIA, FEBRUARY 10, 1912

The Case of Morse

NEARLY five hundred thousand persons are now locked up in penal institutions of the United States on sentences ranging from one day to life. If each of them possessed money, influence and an energetic publicity bureau, so that his case was sympathetically exploited in the newspapers and pressed upon the pardoning powers, probably our prison population would be reduced by fifty per cent.

It is sad that an elderly, ailing man, who has already undergone bitter humiliation and who has but a short time to live, should be in prison. It is sad that his innocent family should suffer with and for him. But we suppose nobody ever regarded prisons as institutions calculated to promote joy. The same kind of sorrow emanates unceasingly from every one of them.

We don't know that punishment tends to prevent crime, and we don't think anybody else knows; but society must do something to express its disapproval of crime, and punishing the criminal is the universal method. Scarcely any statutory crime is more injurious to society than bank-wrecking—no other crime brings more suffering to innocent people. Pardoning Morse, the bank-wrecker, was a humane act; but he was able to get the pardon not because he had not been a great criminal, or because he was sick, or because he had an innocent family—but because his crime was of the genteel sort and he had influence. If he had blown open a post-office safe and abstracted the registered mail he wouldn't have been pardoned.

Sham Profit-Sharing

IN THE census year 1909 over six and a half million wage-earners were employed in manufacturing, and their average wage was five hundred and eighteen dollars a year. Take the total value of manufactured products, deduct the cost of raw materials used, the wages and salaries paid, the miscellaneous expenses, such as power, light, and so on; then deduct eight per cent of the capital invested and distribute all the surplus as increased wages or as profit-sharing among the wage-earners. The average wage would still be but a trifle over fifty dollars a month.

There is very little genuine profit-sharing with wage-earners in the United States or anywhere else. What is called by that name is often nothing more than an opportunity to invest in the stock of the company. In other cases it means only a modest distribution of profits above a certain amount, that really adds but little to the average income of the employees in the establishment.

However, no possible scheme of profit-sharing at present is sufficient to usher in immediately that Golden Age for labor which some enthusiasts imagine. The manufactures themselves must yield more. Goods must be made and distributed at lower cost before even a runabout is within the reasonable expectation of the average wage-earner.

Far-Fetched Fears

SENATORIAL objection to the arbitration treaties rests upon the following assumptions: That Great Britain or France, having solemnly ratified these compacts of peace and good will with us, will demand that we submit to arbitration three things which the whole world knows we do not consider arbitrable—these things being the Monroe Doctrine, our immigration laws, and assumption by the Federal Government of debts contracted by the Southern states during secession; and that, Great Britain or France having made these unconscionable demands, two out of the three eminent citizens of the United States whom the President appoints as our members of the joint high commission will decide against their own country and in favor of the unconscionable English or French claims.

Great Britain or France might as well object that, having entered into these treaties, the United States will demand that these countries submit their tariff laws to arbitration and that two out of three of their joint high commissioners will side with the United States in making that claim. No such objection was raised by those countries, because they were not looking for far-fetched, hypothetic and practically unimaginable cases of bad will on our part and of idiocy or treachery on the part of their own high commissioners. What they were looking for was a good opportunity of furthering the world's peace.

Gambling in Foodstuffs

THE usual bill has been introduced in Congress to prevent gambling in foodstuffs. It is a very drastic measure on its face, prohibiting the transmission or handling in any way of any message by mail or wire that refers to a speculative transaction in grain or provisions. If it were enacted and enforced a man who wished to take a flyer in May wheat would have to do business with his broker exclusively by word of mouth, pay over the margin in banknotes and receive his profits in currency—if by any possibility he had a profit to receive.

Undoubtedly the bill will not be passed. Undoubtedly it would never be enforced if it were passed. A great many bills to prevent or restrict gambling in foodstuffs and stocks have been framed, but it is exceedingly doubtful whether any of them will work.

New York's experience shows how gambling in stocks can be reduced to comparatively harmless proportions. Probably the same method could be applied to board-of-trade gambling—we mean it could be taxed out of existence. New York levies a very small tax on every transfer of stock—enough to raise a little revenue for the state, but not enough to shut out the great bulk of Stock Exchange transactions which amount simply to bets on the market. No doubt a transfer tax, high enough to accomplish that purpose but not so high as to impose any material handicap upon legitimate investment, could easily be devised. A very small transfer tax on grain would discourage the rank and file of operators who play for a rise or fall of a cent a bushel, without seriously handicapping the legitimate grain trade.

Nothing Venture, Nothing Gain

THE choicest British securities were cheaper last year than ever before in this generation. Government bonds sold below seventy-seven cents on the dollar. The Irish Land Loan fell to a discount of twenty-two per cent. India, London County Council and Transvaal bonds, all bearing three per cent interest, declined.

This was not due to any scarcity of investible capital, for England absorbed during the year nine hundred million dollars of publicly issued securities, excluding all mere refunding issues. Only one-sixth of this amount, however, went into securities issued in the United Kingdom. Over one-sixth went to Canada. Three hundred million dollars went into issues by governments or corporations in British colonies and dependencies. Five hundred million dollars went to foreign, non-British soil—issues by corporations in the United States alone taking a hundred million dollars.

In four years the publicly issued securities brought out and subscribed for in England have amounted to four billion dollars; but much the greater part of this sum has gone abroad. The reason, of course, is that the foreign securities on the whole pay better interest. In the last quarter-century England has lost a huge sum in poor foreign investments; but she still prefers to take some risk and get some interest, rather than invest at three per cent and be perfectly safe. England is, of course, the greatest investing country in the world. On the whole, she finds it profitable to venture with a chance of gaining.

Modern Methods in Washington

A YEAR ago last June, Congress appropriated a hundred thousand dollars for a commission to study the subject of efficiency in Government departments. By simply pointing out that some departments were spending several hundred thousand dollars a year for hand copying which could be done at one-fourth the cost by modern office devices, this commission saved more than the total sum appropriated to maintain it.

The commission found that in one department the cost of handling incoming mail was under six dollars a thousand pieces; in another department it was over eighty dollars a thousand pieces. These are the averages for the departments; but individual bureaus in the departments show a still greater variation in the cost of doing nearly the same kind of work in nearly the same volume.

The Government spends approximately a billion dollars a year and employs over four hundred thousand persons. In a private enterprise of anything like the same magnitude there is coördinated management. If a new device or method is tried in one office and works well its use is immediately required in all other offices doing the same sort of work; so the whole concern gets the benefit of any improvement that is invented or introduced anywhere along the line. In the Government there has never been anything even approaching this coördination. A bureau in the north wing of a building may be doing a given piece of work by improved methods at a cost of six dollars a unit, while a bureau in the south wing continues to do the same work by antiquated methods at a cost of sixty dollars a unit. It has never been anybody's business to find out what any other department or even any other bureau is doing. Nobody had any money to spend for that purpose.

Now genuine economy always costs something. It is something to be bought and paid for—whether in the Government or in a private concern. The Government has been buying a little of this commodity and finding it a highly profitable purchase.

Government Telegraphs

GOVERNMENT ownership of any public utility is, of course, purely a matter of expediency. Will the public get better service or a lower price? Will labor get better wages?

Twenty years ago the latter question would commonly have been answered in the affirmative. It was held that if the Government should take over the railroad and telegraph lines more men would be employed and higher wages paid than under private ownership, because the Government is always bidding for votes. More recent experience, both here and abroad, makes this theory decidedly less plausible. Our Government certainly is not a prodigal employer. Its largest employment of labor is in the Navy and Post-Office Departments, consisting of navy-yard mechanics, postal clerks, letter carriers, railway-mail clerks and rural-free-delivery carriers. Complaints of long hours and meager pay are frequently heard in those quarters. Abroad, both in France and Italy, the government has taken against strikers who were government employees far more drastic action than would have been used against strikers in private employment. If our Government owned the telegraph lines and the employees struck they would probably find themselves immediately confronted with bayonets. We do not think that labor, by and large, is any better off under government ownership than in private employment.

The question of rates and service to the public remains. Certain utilities, such as the express business, no doubt could be more advantageously operated by the Government than by private owners. In every case it is simply a question of expediency, to be studied on its merits. Government ownership in itself is neither a panacea nor a deadly upas tree. It is merely one method of performing a given piece of work, which may be advisable in some cases and not advisable in others.

The Competitive Doctor

EMINENT members of the medical profession sympathize with the theory which Robert Herrick eloquently supports in his latest novel, The Healer—namely, that the practice of medicine should be a function of the state or of endowed institutions; so that no doctor would need to depend for his livelihood upon private fees—and an opulent old gentleman whose only real ailment was a bad temper would no longer monopolize the services of two skilled practitioners while twenty indigent persons who actually needed medical attention went without it.

The theory cannot be universally popular in the profession, however, for it would leave a goodly number of physicians and surgeons without an occupation. Here is a city with not less than half a dozen medical schools, each more or less actively competing with the others for students. The best of them is not too good—the worst just manages to keep its head above the waterline of a complaisant state law which is laxly enforced. They are poorly equipped and have second or third rate faculties; but they are able to compete, after a fashion, and they turn out their quotas of graduates, duly authorized to compete to the best of their ability. Even in the matter of life and death we still think very highly, on the whole, of competition.

Probably the motive of social service, as contrasted with that of private gain, already obtains more largely in medicine and surgery than in any other profession; and the great triumphs of the profession in recent years usually have been achieved in pursuit of service rather than in pursuit of gain.

WHO'S WHO—AND WHY

Serious and Frivolous Facts About the Great and the Near Great

Saxophony and Success

UPON an occasion, some fleeting years ago, the late Daniel Webster made a speech at Rochester, New York. History does not record what the late Daniel had in mind originally to elucidate to the assembled multitude; but history does record that he devoted his brief oratory to an eloquent if somewhat inspissate discourse on the glories of the Falls of the Genesee then, as now, falling not far from the point of utterance which, if my reading serves me right, was a balcony in Reynolds Arcade.

The late Daniel, having been exhilarated by a view of the falls—and by a few other things—cast to the winds whatever of philosophy he had previously determined to impart to his avid hearers and concerned himself with the falls, telling his audience redundantly, but none the less effectively, that the glory that was Greece had no Falls of the Genesee, or eke the grandeur that was Rome. Hence, he concluded that Rochester, New York, had an edge on both Greece and Rome.

And, as time goes by, we are constantly discovering other things we proudly possess that neither Greece nor Rome had, nor any settlement of ancient days. We are a superior people—unique, one might say, when it comes to having things no nation, past or present, can put down in a recapitulation of advantages and increments. As proof, I could cite a hundred instances—nay, a thousand; but I shall content myself with one glittering citation—and I make this boldly and without fear of successful contradiction.

'Tis here: Since time began we have had lawmakers. The entire endeavor of one branch of every community has been to make laws to hamper the freedom of the remaining branches; but show me—and I hurl defiance to all the world—show me the nation that has or had a lawmaker who plays or played a saxophone in the band! Show me! Ransack history and scan the commentaries of the present day. I challenge all and sundry. There is none such—none such—save one! We've got one—one!—grand, melodious and expert. I refer, it is almost unnecessary to state, to the Honorable Carl Carey Anderson, representative in Congress, from Fostoria, Ohio, who confers this distinction on the United States of America.

Do you see it now? Imperial Rome, in her most imperious days, never had a lawmaker who played a saxophone; nor did glorious Greece or dusky Egypt, or any other nation, people, civilization, or cycle whatsoever. He stands alone—Carl Carey Anderson, saxophone soloist in the Fostoria Silver Cornet Band; a distinction, I should say, that merits and shall receive adequate celebration.

You remember the saxophone, of course—the convoluted, not to say anfractuous, instrument that the man on the extreme left of the lineup of the Musical Mokes uses for comedy effects. After the mokes have done Il Trovatore, the man with the saxophone invariably relieves the situation by saying: "I will now give you an imitation of a cow!"—which he does via the saxophone. Also, the saxophone is of great utility in supplying a background for the flautist—musical-critic slang for flute-player—in Titl's Serenade. So you can see it is a great instrument—the saxophone. And—just think—we have a member of Congress who plays one in the band!

Would Like to be a Giraffe

NOR is that his only achievement. Carl Carey Anderson does not depend on one accomplishment to justify his eminence in the councils of the nation. He was at one time the most successful salesman of union underwear in the country, and he has a record as a joiner that makes Representative Ezekiel Candler, of Mississippi, with his string of affiliations, look like a hermit with no social aspirations. Carl Carey Anderson is a member, as he points out in his autobiography, of the Odd Fellows, the Mystic Shrine, the Maccabees, Knights of Pythias, Modern Woodmen, Home Guards, Musicians' Union, and a delegate to the Fostoria Trades and Labor Council. In addition, he belongs to the Elks, the Moose, the Owls and the Eagles, and intends to join the Rabbits, the Bullfrogs, the Giraffes and the Hummingbirds as soon as those fraternities shall be organized.

Anderson's genius with the saxophone was first recognized, congressionally, in the Sixty-first, which was the Congress before the present one. He had been mayor of Fostoria for two terms, during which time he continued his efforts in the underwear line—which efforts, by-the-way, brought him recognition in the trade as the king of union-underwear dispensers. The Sixty-first Congress was a Republican institution, captained by one Uncle Joseph Cannon, since retired from the quarterdeck; and Anderson is a Democrat. Nevertheless, the man who can play the saxophone, and who can sell more union underwear than any other protagonist of that pleasing cult, charmed the majority with his music and his conversation to such an appreciable extent that he secured for his district as many pensions and increases of pensions as any other member of Congress—which is going some; and also he grabbed off three public buildings, while other less musical statesmen had to be content with two—and some received none.

The secret of continued political success in this great country of ours lies in getting things for the folks back home—in extracting from the Treasury money that shall be expended in the district. Young Mr. Anderson knew this; and, knowing, he counted that day lost that did not allow him to export a little small change from the big building at Fifteenth Street and Pennsylvania Avenue to the Thirteenth Ohio District. When it so happened that there was no small change, or large, to be had Anderson devoted his efforts to seeing to it that each voter in his district had garden seeds and copies of the horse book and other truck dear to the heart of the rural constituent.

Also, he wrote letters. Any voter in his district who did not hear, along affectionate "My dear Bill" lines, from Anderson at least once a month had a legitimate kick coming. The ordinary representative keeps one or two stenographers and typewriters busy; but the representative who plays the saxophone uses twelve—and then has to work nights to let all on his list hear from him. The result was a perfectly natural triumph of mail over matter, for the voters of his district turned in when it came time to send men to the present Congress and reëlected Carl Carey Anderson by a plurality of almost fifteen thousand, which is the greatest plurality ever given to a Democratic representative in Ohio, they say.

Carl Carey has a little precept that directs his movements, and that precept is as follows: "Be courteous and friendly with every one—but not modest. Modesty won't get any one anywhere!" And isn't that the truth? This world is stuffed with shrinking violets who might have grown to sunflowers but for their innate modesty. What this country needs is men who are not afraid to proclaim to the public their virtues of mind and character. There is too little of this projection of self into the arena. Our politics is speckled with men who are so diffident and verecund they never say a word about themselves or their achievements. Mr. Anderson is striving to bring about a change in this feature of our politics. "Modesty," as he well says, "won't get any one anywhere!"

Anderson, as he tells us in his biography, began life as a newsboy and bootblack, which occupations he followed from the age of seven or eight to ten or twelve. By the time he was sixteen he had earned and saved enough money to buy his mother a house. He worked in the railroad yard in Fremont, Ohio, when he was fifteen, and stayed in various railroad capacities until he began selling union underwear. That was the time he moved to Fostoria. As he well says, "Fostoria began to move ahead as soon as I went there, and it's been a good town ever since!"—which is a very good illustration of Mr. Anderson's idea of the futility of modesty in dealing with these larger problems.

He was mayor of Fostoria twice, in which capacity he acted as police magistrate. He refused to fine the drunks—or, when he did fine one, he sent the amount of the fine home to the drunkard's family.

"Pooh!" said a leading attorney of Fostoria. "A police court with Mayor Anderson on the bench is a farce comedy!"

"Better," retorted the mayor, with that readiness that characterizes all his utterances—"far better a farce comedy in the police court than a tragedy in a poor man's home!"

Which line of conversation and action and various other side and similar lines explain why the Thirteenth Ohio District is distinguished above all other districts in all other states by being so ably represented by a saxophonist; and also it helps a lot in ferreting out the reasons for that fifteen-thousand plurality.

Twelve Overworked Stenographers Write His Letters

Poor Teamwork

RECENTLY there was a little dinner in New York, given by the friends of Oscar S. Straus, the diplomatist, who was Secretary of Commerce and Labor for a time under President Roosevelt. Not many were present and all made speeches. When it came Colonel Roosevelt's turn he said:

"Mr. Straus was Secretary of the great Department of Commerce and Labor. I put him at the head of that department because I wanted the very best man in the country for the place. When I selected him I did not consider his race or his religion. I did not care whether he was French or German or a Jew, or what his politics was—or anything like that. I selected him because I thought he would make a great secretary, and was not influenced by any consideration of race or religion, or any political expedient. And he justified my choice."

Whereupon there were great cheers. The next speaker was Jacob H. Schiff, the financier. Mr. Schiff is quite deaf. He rose and said:

"I am glad to have had something to do with the selection of Mr. Straus as Secretary of Commerce and Labor. When Mr. Roosevelt was president he sent for me and told me he desired to name the most prominent and most able Hebrew citizen of New York for Secretary of Commerce and Labor, and asked me to help him select the man ——"

And Mr. Schiff does not know yet why he was interrupted with roars of laughter, in which the Colonel joined.

The Message to Nelson

THOMAS W. JOHNSTON, Junior, of the Kansas City Star, arrived safely at his hotel in Munich and desired to cable that fact to Baron Nelson, the owner of the Star, in Kansas City. So he wrote this cablegram: "Nelson, Kansas City. Safe; well. Johnston." Then he handed it in at the telegraph bureau in the hotel.

Half an hour later Johnston came downstairs and found a group of hotel employees surrounding the gold-laced head porter, who held the cablegram in his hand.

"What's the matter?" asked Johnston.

The head porter answered with much dignity:

"This telegram; yes; I understand not; yes; there is no state; yes; what state? yes; I know my America; yes; what state? yes; it must be so."

"Oh, that's all right," said Johnston. "Send it along. There's only one Kansas City. Kansas City, you know—just like New York and New Orleans."

There was another long and solemn discussion in German. Finally the telegraph operator seized the message and a look of great wisdom spread over his face.

"Ach!" he said. "I, the operator, now comprehend."

It was necessary for the operator to telephone the cablegram to the central office. He did so while Johnston listened, like this: "A cablegram; yes; I will read: 'Nelson, Kansas City—New York—New Orleans ——'"

Growing Little Folks

Require certain food elements for the best development of body and brain.

Sometimes these are lacking in every-day food, and many a child is thin and pale instead of plump and rosy.

Such children show quick improvement when given the right kind of food.

Grape-Nuts

FOOD

is especially helpful to growing children because it contains the needed elements, such as Phosphate of Potash—the vital tissue salt of brain and nerve matter—frequently lacking in the ordinary diet.

A regular morning dish of Grape-Nuts and cream is an ideal breakfast for growing little folks, supplying the right food elements in the right way.

Children like the sweet, nutty taste of Grape-Nuts food and thrive upon it.

"There's a Reason"

Read the "Road to Wellville" in packages of Grape-Nuts.

THE HEART EXCHANGE

(Continued from Page 11)

Wicks put out his hand and let it rest for a moment on her bright brown head.

"You poor little orphaned kid, you!" he said, and there was a world of sympathy and tenderness in his voice and in his gimlet eyes. "Never you mind, Annie—you mustn't mind my calling you by your first name. It's a habit we have in newspaper offices and shows that you belong to the sacred inner circle of the Up-Against-It Club. We're all failures here and members in good standing. I'm the honorary president. I'm just an old newspaper man. I'm harmless. You don't have to be afraid of me. And I'm not going to speak about your hard luck any more. But just remember this much: Any time the going gets heavy for you hoist the signal of distress and the boys in this office will see you over the rough spots in the road—that is, if I'm not here, or if I should die or something. Of course you'll come to me first. You know I throw my money away anyhow; and—by the way, where do you live?"

She told him.

"Walk home?" queried Wicks. "Of course—naturally," he continued, without waiting for her reply. "Carfare's an item. I'll graft a book of free tickets from the street-car company for you tomorrow. Can't have you walking home at one o'clock in the morning. Well, good night. . . . Don't mind me, Annie. I get mad forty times a day, but I'm harmless. . . . And any time you're up against it remember you belong to our club. You're entitled to full benefits. . . . Certainly; it's all right. . . . Good night."

At the foot of the stairs Wicks paused, looking sadly out into the deserted street.

Something splashed on his hand. It was a tear.

"Oh, I'm a dirty, low, good-for-nothing hound!" he snarled, apropos of nothing. "I'm a blooming, blasted cynic, with a shriveled soul; and I'm getting old and nobody cares—not even myself any more. I wish I was dead."

. . . . . .

A year dragged its slow course athwart the trail of human events. It found Mr. Wicks unchanged and still a total abstainer. The other men on the Herald were making a book on how long he would last. The end of the year found Annie Coyle still plugging in on the board with her left hand—and making good. Wicks, after that second interview, never spoke to her again save in the strict line of business. Their conversation was limited to such interchange as: "Get me the chief of police, Annie," and "There's your party, Mr. Wicks."

Every week for forty weeks Annie Coyle came to Mr. Wicks' desk and laid an envelope thereon. Mr. Wicks always swept the envelope savagely aside and never looked up from his work. Came a day when the last of the forty dollars was repaid and Annie Coyle reminded him that the debt was paid in full.

"More any time you want it," snapped Mr. Wicks, and didn't even look up from his work. She glanced at him a little sadly for a moment and went back to her board.

Another year passed; and on a day when all the world seemed bursting with the exuberance of spring Wicks came down to the job at one o'clock and found a note on his desk. It was from Annie Coyle, and this is what Mr. Wicks read:

Dear Mr. Wicks: My two-year contract expired yesterday and I am now free to get married. I will stay a month longer if you desire and break in my successor. Very sincerely, ANNIE COYLE.

"Suffering saints!" gasped Mr. Wicks weakly, and sat down very hard in his swivel chair. For fully ten minutes he was absolutely motionless; and when he rose finally the bitter, sneering expression round his mouth had intensified fifty per cent. He sought out the managing editor.

"I'm all in," said Mr. Wicks complainingly—"just simply worn to a razor edge. I can't stand another day of this grind, chief. I see big black spots when I read copy and I'm as jumpy as a bullfrog. I simply must have a few weeks off!"

"All right, Wicksy, old man," replied the managing editor. "Come back when you're feeling fit."

Mr. Wicks put on his hat, went downstairs and across the street to the nearest saloon, from which it will very readily be seen that the downhill pull had arrived once more.

At five o'clock Annie Coyle came on duty; and when she saw the new city editor sitting in at Mr. Wicks' desk she appeared worried.

"Is Mr. Wicks ill?" she asked. "This isn't his day off. What's the matter?"

Mr. Wicks' successor pro tem. grinned knowingly.

"No, Mr. Wicks is not ill—not yet. He's stood it as long as he could, but something had to give. He's fallen off the chariot."

"I don't understand," said Annie Coyle, beginning to be a little frightened. "Was he in a runaway?"

The city editor pro tem. laughed at her sweet innocence.

"Bless your heart, Annie," he said, "but you are unsophisticated. Mr. Wicks is on his annual spree."

"Oh! Oh!" gasped Annie Coyle, and fled to the telephone room. Scarcely had the door closed behind her when Mr. Wicks came up the stairs with a firm and steady tread. As he entered the room he started to pull off his coat, just as he had done every day for fifteen years. He hung it on the wall above his desk and when he was ready for business he spoke to the city editor pro tem. just a single word:

"Skip!"

The deposed one looked up in frank amazement.

"I thought you had gone away for a vacation!" he said.

"I've had my vacation. I've rested four hours. Let me have that assignment book—and go out and get your dinner. I have a big story to shoot you out on this evening."

Wicks sat in once more at his desk and fell furiously to work, fully conscious of the fact that the clicking of typewriters in the local room had absolutely ceased; that the staff was staring in open-eyed wonder at the phenomenon of his return—sober. Presently he looked up and his baleful eye swept from one end of the room to the other.

"Yes," he said sneeringly; "I'm back again—and back to stay! Now that we all realize the fact, suppose we proceed to get busy and get out a newspaper."

The crash of type-bars instantly testified to the efficacy of Wicks' hint, and the city editor permitted a cold, sardonic grin to flicker round the corners of his mouth. Wicks put his telephone receiver to his ear. A minute passed, but Annie Coyle did not answer. Mr. Wicks banged impatiently on the receiver hook—and another minute passed. Still no reply from the exchange operator. So Mr. Wicks crossed the floor with quick, incisive steps and burst like a cyclone into the telephone booth.

Annie Coyle was not visible, and Wicks paused in sheer amazement to contemplate the rapidity with which things went to the dogs the minute his back was turned.

Suddenly he heard a sound that made his blood run cold. It was a sob. Gingerly Wicks tiptoed to the exchange station and peered over the top of it. Annie Coyle was seated at her post of duty, but her arms were outspread over the keyboard; and with her head buried in her arms she was crying very softly, while the little signal lights on the board winked and blinked unheeded.

This, then, was the reason why Wicks could not get his number; and on the instant his tensed nerves slacked suddenly. Tears Mr. Wicks had seen a-plenty in his day. He was used to scenes of woe, but this was different. It was terrible to see Annie Coyle crying. Wicks couldn't bear it. So he stepped softly round the switchboard and gently patted her wet cheek where it loomed up through the maze of rebellious brown hair.

"Buck up now, Annie," he said clumsily. "Come now, Annie. Really, this is very tough. Indeed it is. What's the matter, Annie? Somebody been giving you a calling down? You tell your Uncle Wicks who did it, and if it was anybody but the chief himself I'll have his scalp served with onions. Cheer up, Annie—there's a good girl ——"

Annie Coyle raised her head very suddenly, wiped her eyes with a wisp of a handkerchief and stared hard at Mr. Wicks.

"Why—I—they—that is, I understood you'd left to ——"

"To get drunk—eh?" Wicks finished the sentence for her and smiled grimly. "Well, I didn't, Annie. I wanted to, and

"We will have a quiet little dinner; that's all."

YET that's quite enough in this case, because the informal 'phone invitation comes from a really clever hostess who knows how to make the most of moderate circumstances.

She will begin the meal with one of

Campbell's SOUPS

It may be one of our clear soups—transparent and dainty, or one of our fresh inviting vegetable "kinds" or perhaps one of our substantial meat soups—if a rather slender menu demands it. In any case, it will just fit the occasion and do its perfect part toward making a satisfying meal.

Why not find out today how much one of these wholesome soups can contribute toward a pleasing social result for *you?*

21 kinds
10c a can

Asparagus, Beef, Bouillon, Celery, Chicken, Chicken-Gumbo (Okra), Clam Bouillon, Clam Chowder, Consommé, Julienne, Mock Turtle, Mulligatawny, Mutton Broth, Ox Tail, Pea, Pepper Pot, Printanier, Tomato, Tomato-Okra Vegetable, Vermicelli-Tomato

Look for the red-and-white label

"Whoop la! Whoop!
For *Campbell's Soup!*
That's why I am a winner.
One luscious plate
For lunch I ate.
And I'll have more for dinner."

Are You Spending Five Times What You Need To?

Most carbon paper will make about 20 copies before the sheet is worn out. MultiKopy Carbon Paper is good for 100 letters per sheet.

That shows the economy of using MultiKopy; but its great claim on you is its *permanency*. MultiKopy copies are actually more permanent than the original, unless an extra good typewriter ribbon made that original.

TRADE MULTIKOPY MARK

CARBON PAPER

is the one you should use. You don't want faded, blurred, smudging copies in your files. Use MultiKopy and be *Sure* that your records are always ready for reference in a lawsuit, if need be.

MultiKopy is all that a good carbon paper should be, because it is scientifically made. Just think *how* carbon paper works and *what* it must do, and you will readily see the place science has in making carbon paper.

Write for a Sheet Good for 100 Letters FREE

Made in black, blue, purple, red and green; in six varieties to meet every requirement. Regular Finish MultiKopy, lt. wt., makes 20 copies at one time on onion skin paper; medium, 8; billing, 6. Hard Finish MultiKopy, lt. wt., 16; medium, 6; billing, 4.

guaranteed to make 75,000 impressions of the letters "a" and "e" without clogging the type so as to show on the paper.

for a few hours I thought I was going to; but—well, I didn't. I thought that, perhaps, if I stayed on the waterwagon you'd ask me to dance at your wedding, or let me give you away, or do something to please you. Now tell me what you've been crying about. Has Mr. Man been cutting up and worrying you?"

"Yes," said Annie Coyle faintly. Once more she hid her face on the keyboard.

"Going to marry him anyhow?" queried Wicks. "Of course you know your own business, Annie, and it's rude of me to interject myself into the matter; but—well, you must be careful, Annie. It wouldn't do for you to get a man who wouldn't be very tender and kind to you."

"No," replied the girl; "I'm not going to marry him."

"Why?" demanded Wicks.

"Because he doesn't love me," sobbed Annie Coyle. "Nobody could love a girl with one ——"

"Oh, yes, he could, Annie," interjected Wicks swiftly. "That's just where you're very badly mistaken. I love you, Annie—and I never think of your hands. I only know you've got a soul. However, I'm not going to bore you by forcing my regard on you; so cheer up and ——"

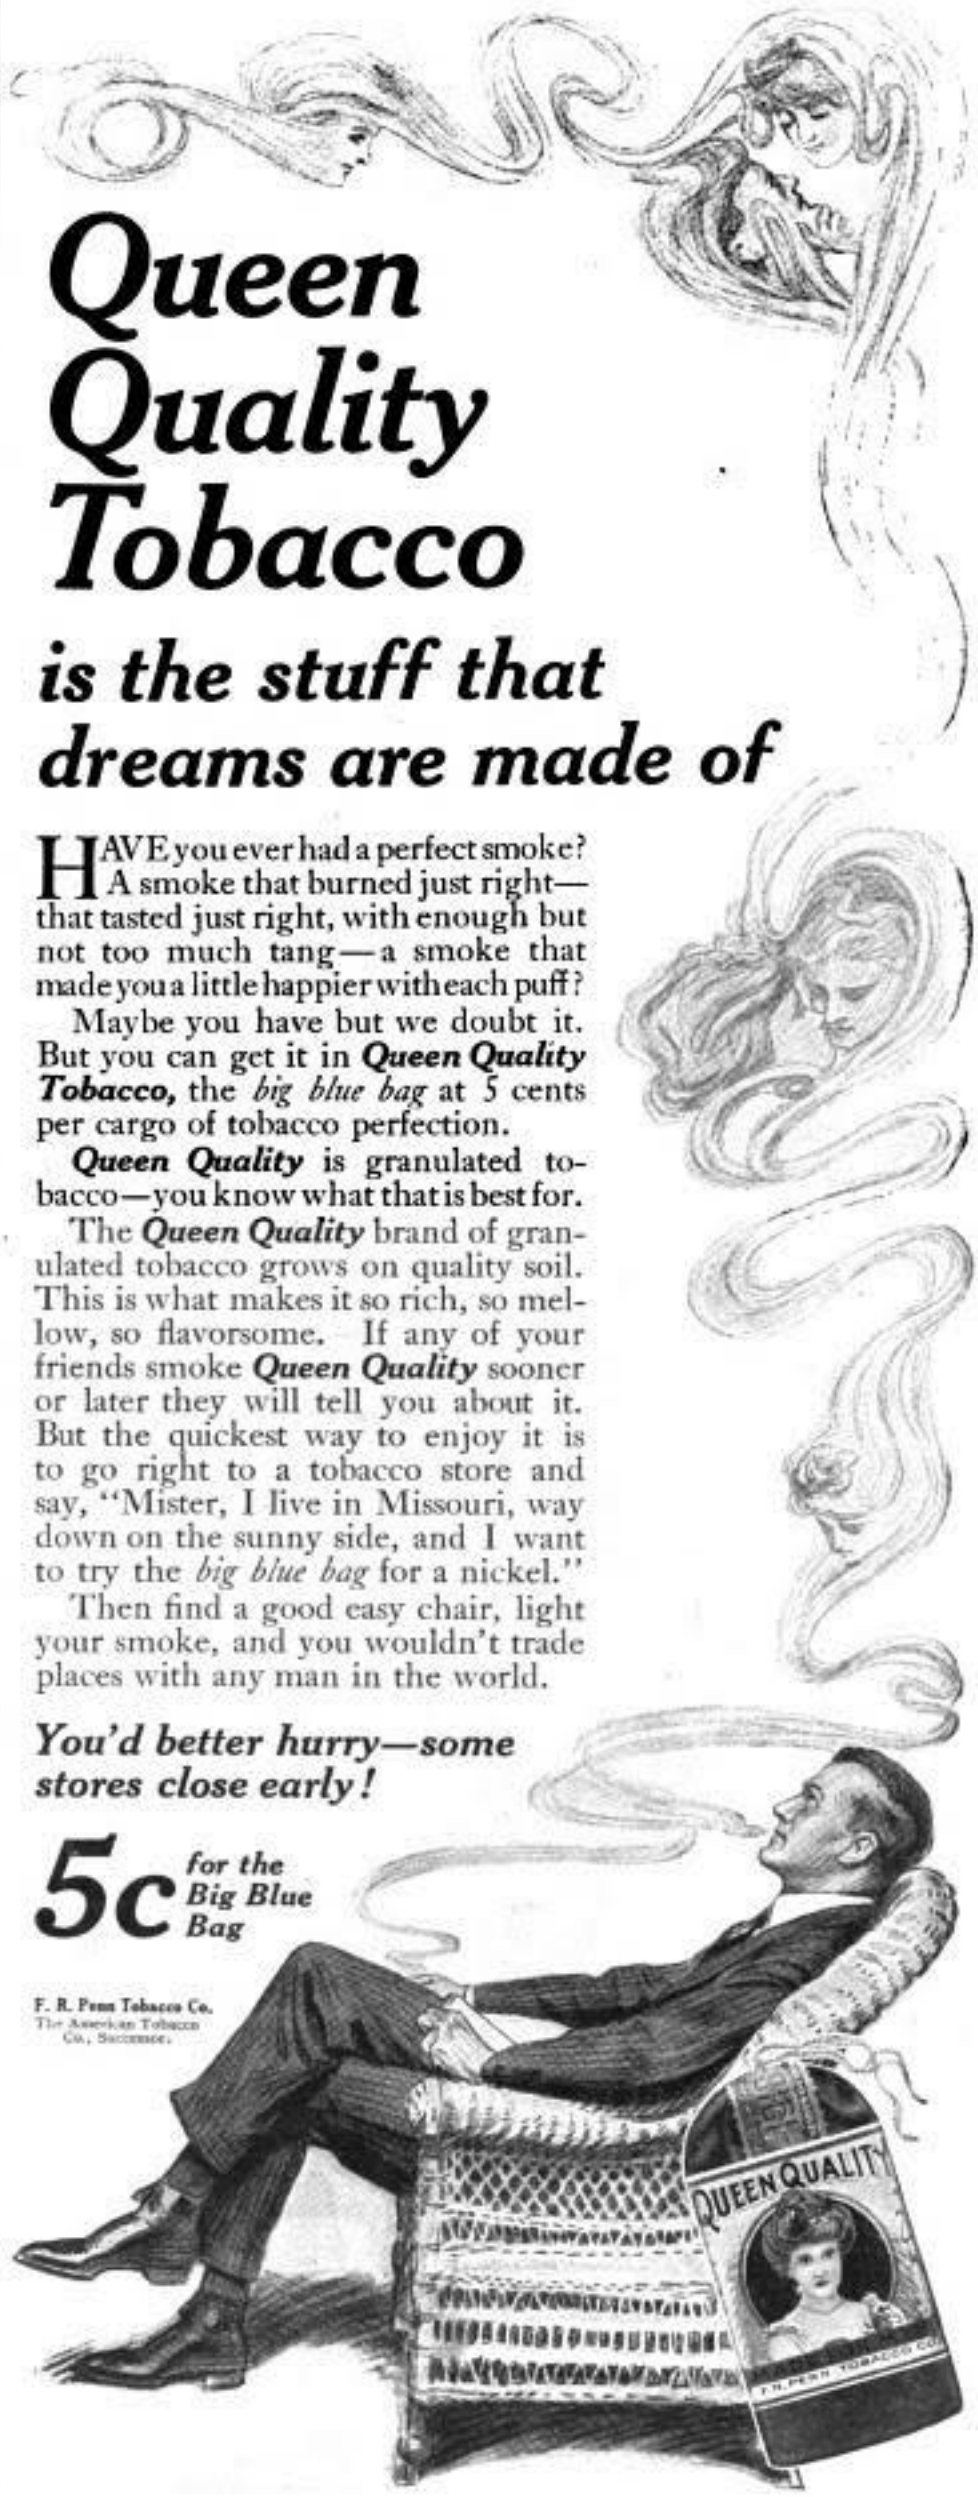
He was bending over her, striving in his man's fashion to instill some small measure of comfort into her unhappy heart. Unconsciously he lowered his head until it was almost on a level with hers; and, as he spoke, her arm—that poor little right arm—came swiftly upward and round his neck—oh, so tightly!

"I meant you," softly whispered the girl. "And I was—crying because you—wouldn't see—I loved you! You wouldn't pay any attention to me; and—they said you—that you ——"

It was too much for Mr. Wicks. That Annie Coyle, in the full possession of her senses, could descend to loving him was preposterous! His rough cheek was close to hers—so warm and soft and velvety; and to the man's hungry soul the touch seemed almost sacrilege.

Swiftly, almost savagely, his arms went round her, lifting her to her feet and pressing her to him.

"You poor little starved heart!" he breathed gently. "I've loved you—ah, Annie, how I've loved you!—from the moment I met you hungry in the street that night two years ago. I'm a kind of a lonesome, stray dog, Annie, and I didn't know—I didn't dare to dream ——"



He paused to kiss her, marveling much at the greatness and the wonder of it all. And as for Annie Coyle—well, Annie could understand. Out of the bitterness of her lot she had learned many things; but *she* had dared to dream—and now it had all come true.

"I love you so!" she whispered contentedly. "You are good and kind; and oh, I want somebody to be kind to me and pet me and say foolish little things to me, because I'm ——"

"Don't," pleaded Mr. Wicks—"Don't, Annie. I've learned to love you—that way—and I'm selfish. I wouldn't have it otherwise, I fear. There'll always be that little lost hand to draw me back to you, sweetheart; and God knows it drew me back tonight. I'm through, Annie. I'll never touch another drop while I live. I'll be too busy making you happy even to think about it." He took her little left hand in his and kissed it very reverently. "Anyhow," he whispered brightly, "the wedding ring belongs on this finger. I've got a few thousands saved up, and there's a little country daily upstate that I can take over. It's good for ten thousand a year under live management, with a job printing office attached. We'll both quit tonight and let somebody else break in the new operator. And tomorrow—suppose we turn that vacation of mine into a ——"

"Honeymoon?" queried Annie, her eyes wide with adoration.

Wicks beamed. The old, bitter, sneering expression was gone from his mouth forever, for in his soul there was the peace that passeth understanding. And as he went reluctantly back to his desk, leaving Annie Coyle to plug in on the belated calls, Wicks forgot that he was growing old—for somebody cared now! He sat in his old swivel chair and commenced to dream of love and life and the years of service stretching ahead, until he forgot all about the downhill pull and the big black spots on his copy; remembering only that God had been very, very good to him. And his heart was filled to overflowing.

Queen Quality Tobacco

is the stuff that dreams are made of

HAVE you ever had a perfect smoke? A smoke that burned just right—that tasted just right, with enough but not too much tang—a smoke that made you a little happier with each puff?

Maybe you have but we doubt it. But you can get it in ***Queen Quality Tobacco,*** the *big blue bag* at 5 cents per cargo of tobacco perfection.

Queen Quality is granulated tobacco—you know what that is best for.

The ***Queen Quality*** brand of granulated tobacco grows on quality soil. This is what makes it so rich, so mellow, so flavorsome. If any of your friends smoke ***Queen Quality*** sooner or later they will tell you about it. But the quickest way to enjoy it is to go right to a tobacco store and say, "Mister, I live in Missouri, way down on the sunny side, and I want to try the *big blue bag* for a nickel."

Then find a good easy chair, light your smoke, and you wouldn't trade places with any man in the world.

You'd better hurry—some stores close early!

The Biggest Selling 10c Cigar in the World

Why? —because the wonderful blend of La Preferencia has *just suited* the taste and aroused the enthusiasm of more smokers than has any other cigar.

And this blend, like most great discoveries, just *happened*—

—before the Spanish-Cuban war, La Preferencias were made with Havana wrappers. The blockade of Cuban ports made it impossible to get shipments of these wrappers, and a choice Connecticut Broad Leaf was used with the Havana filler. Success was immediate. Critical smokers everywhere endorsed the new and delightful flavor of

La Preferencia

Truly there is more cigar-satisfaction in La Preferencia than in any other brand.

Mild—rich in flavor and aroma—*different*, exceptional—a superb smoke!

You ought to know these cigars.

If hundreds of thousands of smokers enjoy them, isn't it a fair guess that YOU will like them, too?

—and So We Are Making this Suggestion to You—

La Preferencias are sold *in more places than any other brand.* If your dealer can't supply them, fill out this coupon, sending us the price of a box of any of the following sizes, *with your dealer's name*, and we will forward the box to you direct from factory, express prepaid:

Perfectos—box of 25—price $3.00
Conchas — box of 50—price 4.00
Victorias—box of 50—price 5.00

If for any reason the cigars are unsatisfactory, return them at our expense and we will refund your money.

Not a "Mail Order" Cigar.

We do not regularly sell La Preferencias direct to the consumer. We can send in this way only ***one introductory box.*** *Our object in asking for your dealer's name is to assure his having this cigar for you hereafter, and to enable us to send him his profit on your present purchase.*

HAVANA-AMERICAN COMPANY

Havana-American Co.

A GREAT AWARD
TO A GREAT PIANO

Its Meaning for the World of Music

The *Grand Prix* award at Paris in 1900 wrested classic honors from the old world and caused a new ranking of pianos in America.

The French Exposition excelled notably in arts and industries. Its *Grand Prix* was the most coveted honor that ever attracted piano-makers. Exhibits included the leading makes of the world.

On the jury were twenty eminent musical experts, internationally chosen. Decision was unanimous, *disinterested*, occupied solely with *merit*. It is of ever-vital interest to Americans that this greatest of *Grands Prix* (and sixteen additional awards) went to

The Baldwin Piano

This is the first and only time the *Grand Prix* has ever been conferred on an American piano. The award not only made the *Baldwin* the talk of musical Europe; it flashed a message of direct importance to every pianist and piano-lover in America.

The *Grand Prix* signifies that the piano receiving it *is*, in the opinion of undisputable authority, artistically foremost among the great pianos of the world. That henceforth it is *hors de concours*—"beyond competition." The Baldwin Piano created at Paris a new standard in piano-construction and piano-tone. It stands today an instrument of exquisite and complete distinction.

International prestige is but *one of many* reasons why the Baldwin Piano would attract you.

WHY WE LEFT THE FARM

(Continued from Page 18)

That one article I needed so badly and it would have cost so little comparatively. I went about my work without any of the high courage I had felt before. At such times, as I looked at myself in the mirror, a kind of shock passed through me at the change I was beginning to see there; and I turned away half ashamed.

The next summer I not only had the regular hands to feed and their rooms to care for—the room above the toolhouse was now occupied by unused machinery—but extra hayhands and threshers, sometimes as many as thirty at a time.

My brother and sister came to visit me that summer and their attitude toward me and my situation added to the humiliation I was already beginning to feel. After they had been with me a few days they began to treat me as we unconsciously treat a well-beloved member of the family suddenly stricken with an incurable malady. Their pitying glances followed me, though they instantly looked away when I caught them eying me. It was one thing to joke about my marrying a farmer beforehand—quite another to see me carrying out some of their wildest predictions.

When Ethel came into the hot kitchen one afternoon and discovered me over a steaming washtub of towels, the perspiration pouring from my face, she shut her teeth with a click and almost hissed:

"You have already done enough work today to exhaust a stevedore. And your husband is a ——"

I felt the blood leaving my face as I turned and faced her, trembling.

She gave me no chance to reply however; nor did she finish what she started to say. She literally rushed out of the room, her face flaming. No doubt the contrast between her dainty white frills and laces and my sober working garb only made her distress greater.

To me, all that the scene implied seemed suddenly intolerable. Scalding tears of self-pity would mingle with the perspiration for a little while.

I had been wild with delight when they wrote me they were coming. Truth compels me to state that, dearly as I loved them, I was glad when they went home.

Family Interference

Promptly after their return home mother wrote me a long letter begging me to come to visit her. She sent an invitation to Louis, too, of course, but said she knew he was very busy; and, if he couldn't come, she suggested that he stay with his mother a while and give his mother-in-law the great pleasure of seeing her only grandchild. Much more that was kind and sweet the letter contained; and I knew, as well as if I had been present, the conversation that had taken place among my family after Ethel and John had returned.

I handed the letter to Louis to read. His only comment, after completing its perusal, was:

"Much they know about farming—to ask us to visit them now!"

I promptly wrote an affectionate, cheerful reply, saying that we were much too busy now to visit her; "but, perhaps, later ——"

I am really at a loss to account for the peculiar state I now fell into. I grew nervous and self-conscious; when my old friends came to see me, which they still occasionally did in spite of the fact that I never returned their visits, I felt strangely ill at ease with them. I felt as if I was in a different world from other people—a world where nothing counted but rushing work. I grew alarmed and began to struggle against this feeling. As struggling seemed only to make the matter worse, I thought:

"I must get away from home more. I must try to get an afternoon occasionally to go to see somebody and take up neighborhood interests again."

But how? My horse was always used in the fields; and there is a strange prejudice among country people that would place a woman walking to see a neighbor in nearly the same class with a tramp. At least it was so where I lived. And, even if I had cared to brave public opinion in this way, baby had now grown so big I could not have carried her so far as our nearest neighbor's home.

A Telegram That Put It Pat

Here's an extract from a telegram sent to Farm Journal by Victor M. Grab & Co., Chicago:

"Instructed agency to renew copy in April number. Results most gratifying. In our opinion Farm Journal is not a publication but an institution with the Farmer."

Right! Farm Journal *is* an institution with the Farmer. It understands him and has been so successful in its efforts to give him what he needs and likes in the way of advice and entertainment that its paid subscription list exceeds three quarters of a million.

This tremendous circulation has been built up strictly on merit and not by catchpenny schemes. Moreover, it consists chiefly of long term subscriptions, two, three, four, five and ten years, with more than a few for twenty and thirty year periods.

There's Quality circulation for you—combined with quantity! And that's the rare combination that the wise advertiser is looking for.

Learn more about this Big Little Paper and about the substantial people who support it. Write for our book "Tests and Testimony"—a complete compendium of facts worth knowing about the agricultural field and those who till it. You can't get its equal at any price, but you can have it free, if you've a present or prospective need for it. Write on your letterhead, please.

All rooms evenly warm!

It is one thing to "heat" a house—another to warm it. It may be *heated* at 85 degrees, and money wasted for excess fuel. But, all rooms held evenly at 70 degrees in coldest weather means a *warm* home without fuel wastes—and you have that by using an

IDEAL SYLPHON **Regitherm**

for regulating heating boilers and furnaces. It is self-acting and self-contained—no electricity, no water- or air-pressure, no complex machinery; nothing to wear out.

REGITHERM control is very simple. The sensitive regulator (with the "everlasting" Sylphon brass bellows) goes on the wall of living room; you set indicator at any temperature wanted—(60° to 80°). Then keep hands off—the REGITHERM does the rest, day and night all winter, by opening and closing the heater draft and check dampers, as necessary. Rooms never get too cold, nor what you call "hot"—just evenly warm at a healthful degree.

No coal wastes—one winter's economy will pay for a REGITHERM and also save the energy of running down and up cellar stairs to regulate dampers.

Our free booklet "New Heating Aids" fully explains the REGITHERM, also tells about Norwall and Sylphon Valves and Regulators—the better heating they produce, with money and labor saved. Why not write to-day?

Est. 1852 Est. 1852

No; there was no help for it. I could not get away just now. Later, perhaps ——

That hope a farmer's wife has of things being better later on is often the only thing that keeps her out of the grave or the madhouse.

One Sunday afternoon, as Louis and I sat on the porch, Kitty, a magnificent mare never used for farm work, put her head over the gate and whinnied friendlily. An idea occurred to me.

"Why don't you let the men work Kitty sometimes and let me have Bird?" Bird was my horse.

Louis replied carelessly:

"Kitty is too valuable and raises too fine colts for me to risk hurting her with hard work."

A lump rose in my throat and a kind of despair seized me. I answered as lightly as I could, though my voice was not very steady:

"Then it is only the human female who runs no risk of hurting herself and her offspring by hard work?"

The thrust went home and Louis flushed angrily; but his reply was quietly spoken:

"If you did not want to work you should not have married a farmer." And he rose and walked off.

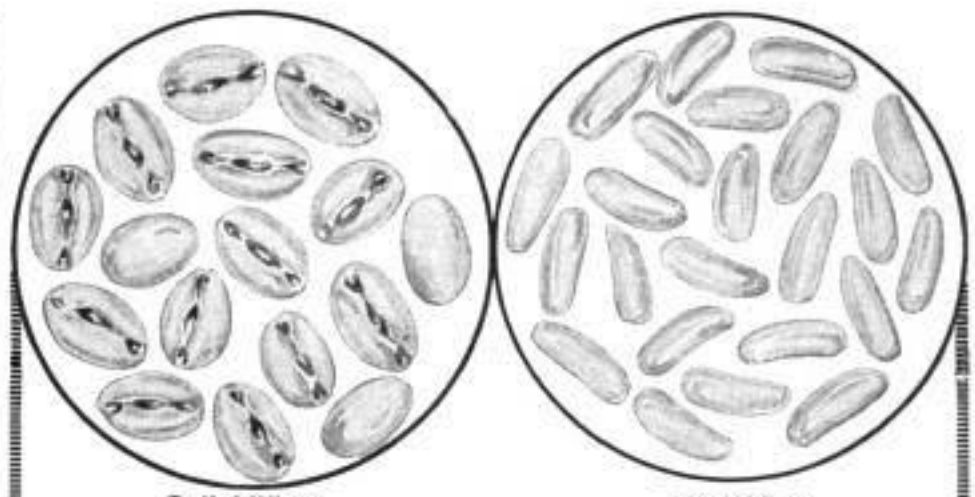
We had never quarreled. Quarreling and crying are two things in which I very rarely indulge. I am by no means meek and lowly inside, but it takes a very positive abuse to make me create a scene. Probably John was right when he said: "Eleanor is like dynamite. She seems perfectly harmless until you hit her just right; but when she does go off something is going to move!"

The new eighty acres being three miles from home made it necessary that the men should take their lunch with them when they worked there. Louis sometimes took his, too, and they all drank the water from the old well on that place. I had always felt pride in the fact that neither Louis nor the baby had ever been sick a day, for I secretly attributed that fact to my sanitary management of the house and premises; but now, in spite of my care, a horrible thing happened.

The Tables are Turned

Early in the fall Louis and one of the men were taken down with typhoid fever. The man was removed to his father's house and ultimately died there. Louis lay for many weeks hovering between life and death.

Of late I had felt—often bitterly—that I was worse off than the poorest woman of my acquaintance; but I found now that money counted for a great deal in a crisis like this. By paying her the wages of a trained nurse, I induced a competent woman to take charge of the kitchen and my child. The best doctors in the county, from our county-seat twelve miles away, were daily in attendance on Louis. Everything that could be done for his comfort and to make the chances for his recovery better was done.



As for myself, I never left his bedside except to do what was absolutely imperative for my child and to eat my meals. Such sleep as I got was snatched by minutes as I sat by his bed or lay on a couch in his room. I could not and would not trust him to other nursing than my own. I closed eyes and ears to everything outside of the sickroom. I refused to see anything that went wrong in the house or on the farm. I became almost a stranger to my own little child. My one thought was that my husband must be saved. No trained nurse can take the place of an ordinarily intelligent wife or mother, with her very soul staked in the battle with death.

The day was at last won. One frosty morning Louis came creeping down the stairs, a shadow of his former self—but alive, thank God!

Before he had recovered sufficiently to be his old self again, our second child was born.

The woman who had been engaged to nurse me and who was also making an attempt to do the housework—my high-priced cook was dismissed as soon as I was no longer needed at my husband's bedside—stayed two days. News came that her child was very sick—and, of course, she left with the messenger.

Everything to be done in the house now devolved on Louis. He had to care for me, care for the children and do what cooking was done. He had to wash clothes, and sweep, and bake, and clear away dishes.

Puffed Wheat Puffed Rice

Prof. Anderson Brought to Us This Invention

It was wheat and rice kernels exploded by steam—puffed to eight times normal size.

They tasted like toasted nuts.

They seemed to us like cereal confections—the most delightful foods ever created.

But we asked for the people's judgment.

We opened a lunch room in the heart of New York, to which hundreds of people came daily.

And we offered them there—all at equal price—all sorts of cereal foods.

Four out of five who took ready-cooked cereals chose either Puffed Wheat or Puffed Rice.

That settled the matter. We made the foods. And now 22,000,000 dishes monthly are consumed by delighted users

Please Let the Children Choose

We ask you to do likewise.

Submit to your children the various ready-cooked cereals. Tell them to pick their choice.

You'll find that these puffed grains—crisp, porous and nut-like—are selected nine times in ten.

That's a fortunate fact. For these whole-grain foods, with every food granule blasted to pieces, are the most digestible foods in existence.

Puffed Wheat, 10c
Puffed Rice, 15c
Except in Extreme West

These foods are not merely foibles.

They are scientific creations.

The grains are sealed up in bronze-steel guns. For an hour we revolve them in an oven heat of 550 degrees—until all the grains' moisture is changed to high-pressure steam.

Then that steam is exploded. And, by that explosion, the millions of food granules are literally blasted to pieces. Thus digestion can instantly act.

The puffed grains are four times as porous as bread. Yet the coats of the grain are unbroken.

Ways of Serving

In the morning serve them with cream and sugar. Or mix them with any fruit.

For luncheons, or suppers, or between-meal foods, serve like crackers in a bowl of milk.

Boys at play like to eat the grains dry. Girls use them in candy-making. In many such ways these nut-like grains take the place of nuts.

Let children eat them whenever they are hungry, for these puffed grains don't tax the stomach.

And begin today if you don't yet know how good these puffed foods are.

It is not the light you use, but the light you waste, which costs you money

Useful light brings tangible dollars-and-cents returns. It makes all the space you pay rent for more profitably usable; makes employes more efficient; makes output greater in volume, more uniform in quality, cheaper to produce and easier to sell; makes customers happier and trade better. Makes money every way.

Wasteful light does just the reverse. It wastes current; it wastes effort; it wastes materials; it wastes eyesight and health. And all these are money. It loses trade instead of winning it.

Study your lighting equipment. That will save money and make money. This is equally true, whether you are lighting a factory, a shop, a store, an office, a theatre, a club, a hotel, a restaurant, a railroad station, a train, a trolley car, or an art gallery. Or your home—that is very important, because poor light in the home means poor health in the family.

Help

This profitable subject has been neglected by most business managers because they "had nothing to start from." There was nothing printed on the subject but technical works until our Illuminating Engineering Department prepared "*Scientific Illumination*", an easy but thorough book written to help managers of all kinds of businesses on their lighting situation.

Write for "*Scientific Illumination*." It will show you how to start thinking right. Then the Illuminating Engineering Department is at your service to help make your light right if it is wrong, or to help plan a new lighting system correctly.

The Name Burpee

is known the world over as synonymous with The Best Seeds That Grow! Are You willing to pay a fair price for selected seeds of the choicest vegetables and most beautiful flowers? If so, it may prove of mutual interest if you **write today** (a postal card will do) for THE 1912 BURPEE ANNUAL. This is a bright new book of 178 pages that is intensely interesting to every one who gardens either for pleasure or profit. Shall we mail you a copy? If so, what is your address? Our address is, **W. Atlee Burpee & Co., Philadelphia**

I really think he tried to do his best; but, as day succeeded day, he grew crosser and crosser with our little girl and less and less attentive to me and the baby. I sometimes actually suffered for lack of the attentions that I needed, for I was very weak and helpless. His attitude was such that I ceased asking him to do for me anything that was not absolutely imperative.

Finally came the morning when, in frenzy at the continued crying of our oldest child—a mere baby—he slapped her flat on the floor and dragged her from my room. I lost all control of myself and broke into wild hysterics. My shrieks and the young baby's wails, mingled with the lusty howls of our oldest child, no doubt sounded to Louis like Pandemonium broken loose.

He did not come near to soothe or help me in any way, though it seemed to me my body was disintegrating with the horrible sobs that racked me. Instead, he buried his face in his hands and groaned in fierce despair.

My paroxysm gradually wore itself away; but so low had my vitality flickered in the outburst that it was hours before I could lift a hand or move myself in any way. My mind, however, was perfectly clear. I saw, as distinctly as things are supposed to be revealed in visions, that it had taken but five days of what I had stood for years to turn a good man into a brutal savage.

The next morning I crept from my bed and got breakfast. Though Louis shamefacedly protested a little, I could see that the relief it was to him to have me up and at work far outweighed any anxiety he felt as to the injury it might do me.

After breakfast he wiped the dishes for me, and then, politely asking if I thought I could get along without him, mounted his horse and rode to town, twelve miles away, not returning until nightfall.

As I moved weakly about, doing what I could that day, I caught my reflection in a mirror; and I faced it and the truth about my life as dispassionately as if I were somebody else. Wrinkled, hollow-eyed, worn to a shadow, was the sad, cowed-looking creature who stared back at me from the glass. Twenty years of ordinary living could not have done to me what less than five years on the farm had done!

The Fruits of Hard Labor

I might have told myself bitterly that I was disillusioned; that I had married an unfeeling and selfish monster who would soon work me into my grave to make way for a second Mrs. Louis. I am glad to say I was not guilty of that foolishness. Instead, I told myself that women on the farm today are caught between the upper millstone of present enlightenment and the nether stone of past necessity. In other words, an enlightened farm woman of the present day is trying to do the work of two generations. She must see that the members of her family are properly fed, clothed, bathed, and that they have pure air, attractive rooms and sanitary surroundings to live in. If, in addition to this, her home, like those of a hundred years ago, must be turned into a hotel, laundry, meat and soap factory, canning factory and poultry plant, with herself as sole manager and laborer, she stands small chance of not being ground out of existence in a few years.

I saw very clearly that in my own case there would be no betterment so long as we lived on the farm. Louis' mother had worked like a galley slave and borne a large family of children, while her husband lived in comparative ease—or, as he expressed it, "enjoyed the fruits of her labor." It was only natural that Louis should think that this was the inevitable position for men and women to occupy after the first flush of youth. His point of view would never change so long as his business could be made to dominate his home. He was so ambitious that everything would be sacrificed to his financial success.

I said aloud to that sad image in the glass: "I shall leave the farm—never to return—before another spring; with Louis if I can, without him if I must."

My mind being made up, nothing but death could have prevented my carrying out the resolution. Even yet I shudder to think that I might have died and never escaped from the farm.

Women are often compelled to "work in a mysterious way their wonders to perform." Had I delivered my ultimatum to Louis in the exact form in which I stated it to myself, it is quite within the possibilities that he would have let me go without a fight. I do not say that it was probable, but possible. I cannot help pleasing myself with the thought that, had it come to the actual test, he would have surrendered at discretion; but, even if he had, I am sure that he would never have forgiven me.

In casting about for a starting-point I determined to try an appeal to his strongest business instinct—the insatiable desire for more land. I wrote to dozens of addresses for circulars describing cheap Western lands. Every mail brought railroad folders, letters from real-estate men and chambers of commerce, with maps, beautiful booklets, and all the other things by which these people strive to interest the homeseeker. I took time to cull the choicest and read them aloud to Louis. I suggested that our farm would buy several thousand acres of this fertile Western land that would be worth as much an acre when the children were grown as our present farm was worth now. His ancestors for generations had been pioneers and I could see that he was really considering the thing. Fortune also favored me, for it was not long before he had a buyer for part of the farm, who offered him a much larger price than he had paid for it. As Louis could buy land closer home for less money, he said

Emancipation Well Won

I then urged, with every persuasion that I knew how to use, that we travel to this Western country and see what it had to offer before again investing in high-priced land. An unusually good renter he knew was looking for a place for the ensuing year. Louis rented the remainder of our farm to him and sold off his livestock and farming implements; and I knew I was free.

We traveled leisurely through a good many states and saw millions of acres of virgin land. Louis' shrewdness was proof against all real-estate blandishments, however, until we arrived at the thriving city where we now live. He was impressed with the surrounding country, both as to the quality of the land and the cheap price.

I suggested that we rent a house, store for our furniture, and that he should take his time looking for something that would be sure to suit him.

As he was naturally cautious, this plan met with his instant approval. He had already decided that this country was where he wanted to locate; but he believed he could buy cheaper from the landowners themselves than from their agents if he would take his time and look for bargains.

Frankly, I hoped he would be induced to take up some business in town without my showing any such desire. Knowing his energetic disposition and his horror of spending money without any source of immediate income, I really expected that he would be led into trying to "make our expenses" while in town. So I said nothing more. Instead, I attended strictly to the business of getting settled in a good neighborhood and making our new home as pleasant and attractive as possible.

My belief in what his disposition would lead him to do was eventually justified. He fretted a good deal about our expenses between the times when he was looking for land bargains. When a business opening in town offered he promptly took it.

From a small beginning, that business has grown to be very profitable. Louis now makes far more money than he ever did on the farm. He owns lands and houses and shares in various business enterprises in the town; in fact, he has full scope for his energy and ambition without turning his home into a workshop.

He no longer begrudges the money for conveniences—or luxuries, either, for that matter. He likes to live up to the standards of his neighbors and business associates—we did that in the country, you know. We have a beautiful home, even luxurious, and I can easily keep servants. When one does unexpectedly leave before another takes her place, the work is hardly more than play to me, compared with what I did on the farm.

I have recovered my old poise and something of my youthfulness. I have time to be a teacher and companion to my children. Louis and I both have time to be good friends and comrades. He says he would not care to go back to the farm. As for me, there is not money enough, or any other inducement in the wide world, to make me live on a farm again under the same conditions.

The Senator's Secretary

JOHN GARNER, of Texas, who represents in the House a district in the southern art of that state as big as several whole lorthern states that might be mentioned, omprising some twenty-eight counties, each ne about the dimensions of Delaware, and xtending along the Rio Grande River for iles and miles, was making an argument efore the Ways and Means Committee he other day relating to the subject of oats. They detached John from his appendix a time ago, and while he was in the ospital he had plenty of time to think on ne various outrages that are infesting the ody politic. Being an earnest and sincere inker, John thought some burning noughts. One line of his cogitation emraced goats. It seems that John's conituents raise a good many goats, large uantities of them, the climate and the oil and the surroundings being suitable r the cultivation of this humble but usesul animal. Likewise, John's constituents nake a good deal of money from the fleece, r hair, or fur, or whatever it is that these oats produce.

Now there are but three places in this world where the goat of the kind that rings in the money flourishes, the same being Turkey, South Africa and the United States—or certain portions thereof. Goat-raising seems to be a cinch, and some ime ago the Turks, desiring to raise all he goats, put a ban on the exportation of oats for breeding purposes. Lately South Africa did the same thing, or threatened to, inasmuch as the persons who raise goats n this country have not been at it long nough to have the strains just right, they eed breeding stock from places where he goat industry is in a better stage of levelopment.

The Goat Trust

This condition led Mr. Garner, who is quite set in his opinions, to suggest some suitable reprisal in the way of tariff restrictions. It led him, also, to ask what is the natter with having this Congress look into his important condition. Mr. Garner went so far as to designate this iniquitous affair as the Goat Trust, and he desired to know why Congress, or the Ways and Means Committee, should not investigate his Goat Trust for the purpose of determining what may be done to combat this combination in restraint of goats.

Though it may be true that there is a Goat Trust of the kind Mr. Garner attacks operating against the goat-raisers of this country, it must be said that Mr. Garner is too local and too utilitarian in his viewpoint. Speaking capra-hircusly, the real Goat Trust of this country is the Republican party. That organization, as at present constituted, has gathered all the goats into its fold, holds a monopoly on them, and will be subject to investigation for the same during the campaign that is coming, and to sentence on election day, for its contravention of the traditional right of all political parties to harbor an equitable number of goats.

Utterly regardless of custom, precedent, strategy and time-tried political acumen, the Republican party has gathered to itself all the political goats. It has created a monopoly of them, has flaunted its possessions in the face of an outraged people, and is now face to face with the inevitable moment when the public, in the guise of investigators, shall demand an accounting for these goats and shall press for a reason for this eager conspiracy to deprive other parties of their share of the goats.

The Goat Trust! Not since Mr. Taft became president has the Republican party overlooked an opportunity to annex a political goat. Not a goat, straying down the halls of Congress, or through the executive departments, or in any field of policy or issue or diplomacy, but has been herded promptly into the Republican corral and branded G. O. P. None has escaped. Every goat that shook his horns or waved his whiskers anywhere has been gathered in. The Republicans have them all—a Goat Trust for fair.

That megatherium goat, the Payne-Aldrich Tariff Law, is the exclusive property of the Republicans. They took it as a kid, fed it and nourished it and brought it to its complete goaty powers, and then drove it up to the White House and presented it to the President. He, not being wise as to goats, received it and gave it the official brand. Ever since that time this goat has been butting over Republicans, butting over majorities, and finally it became so rambunctious that it butted over the House of Representatives and butted the Democrats into power. Nor is its power as a butter decreased. It still has a butt or two left for use in the future.

Another goat that was flocking by itself and could have been kept out of the fold was the Ballinger-Pinchot goat. That was a measly little goat that deserved no consideration, but the President had to have it. So he got it—and he has it yet. Instead of shooing this goat off the premises by discharging both Ballinger and Pinchot instantly, the President only half shooed it off by letting Pinchot go, and thereby allowed Ballinger to grow into the enormous goat he finally became. And the goat is still there, frisking through the party lines and raising hob generally.

Acquisitions to the Flock

He seemed set on getting all the goats, the President did. When the mania for collecting—even goat-collecting—hits a man there is no way of heading him off. "Ah," said the President one day, "here is a specimen of goat we haven't in our fold. I must have that one." So he acquired the Reciprocity goat for the party, and that goat is still eating Republican hay and Republican tin cans and Republican woodpulp, and the Republican farmers are standing round and waiting for a chance to show what they think of this particular specimen—which chance they will have next fall. Of course it wasn't necessary for the party to have this goat, but when the spirit of monopoly gets in the blood there is no eradicating it. Reciprocity seemed such a sleek and harmless goat, but it turned into a holy terror, and now exhibits every trait of the most malignant of political goats that exceedingly extensive species affords.

Meantime quite a flock of tariff goats appeared and were promptly acquired. There was the wool-bill goat and the free-list goat and several other consanguineous goats, all of which would have ceased to be Republican goats and would have become Democratic goats had the President transferred title by signing the bills creating them; but the Republicans wanted all the goats there are and took these over promptly. They are still in the inclosure, and some more of the same flock are likely to be added before the present session of Congress is over.

Tariff goats are favored highly by the Republican collectors. The Tariff Board goat is the exclusive property of that organization, and though it is strictly a Republican goat it may be said to have duplex characteristics, for although it is a Republican goat in the sense of ownership it will also be used as a goat by the Republicans in the latter-day sense of the word goat. Still the Democrats in the House, considering the Tariff Board as too much of a goat, may stop its rations, and when it comes to the final accounting the Tariff Board goat may be but a memory, unless, perchance, it persists in keeping alive on its own statistics, of which there are plenty to sustain a large flock of goats for a long time.

An Advance Guard

There are plenty more, including the celebrated Norton patronage-letter goat, but these will undoubtedly suffice to prove the contention that when it comes to Goat Trusts the Republican party is the greatest Goat Trust that ever was—The Goat Trust. John Garner may have reason for his complaint against another Goat Trust, but that one is a mere pooling arrangement compared to the big one within the Republican party. They have gathered all the goats, and by their goats they shall be judged.

And, by way of a little forehanded judging, the Republicans in the Seventh Kansas District a time ago took a whack at it and sent to Congress a Democrat to take the seat left vacant by the death of Representative Madison. Madison was a Republican who won by about forty-eight hundred votes in the election of 1910. There were minor and local reasons for this victory by the Democrats, of course, but it had been plainly stated to the voters not only by the Republican, but by the Democratic orators, just what a Democratic victory would mean. It was pointed out that a repudiation of the regular Republican candidate would be held to be, in a way, a repudiation of the Taft Administration, but the voters didn't seem to mind that, and they went ahead and repudiated.

Moreover, the Democrats have won in about every special congressional election held since Mr. Taft became president, or, to be closer to the real cause, since he signed the Payne-Aldrich Tariff Law and defended it; and there have been great Democratic gains in other elections. The real facts of the situation are that the Republicans of this country are largely progressive, not in the sense of being tied to any particular exemplar of the progressive movement, but really progressive and sincere in their demands for a change in existing conditions. They are not in sympathy with their leaders and distrust them. They are voting the Democratic ticket and will keep on voting it, not because they are Democrats or have been converted to Democratic principles, but as a lesson and a warning and a punishment for the Republican party, and as a protest. Or they are staying away from the polls altogether and getting satisfactory results that way.

The strength of the Democratic party since the elections of 1910 is much more apparent than it is real. The Democratic party has gained no considerable number of recruits. Its seeming additional strength has come almost entirely from this spirit of protest in the Republican party and from the differences between the Standpatters and the Progressives. The Progressives are determined the party shall be reorganized, readjusted and revived. They are in active revolution, not against the Republican party *per se*, but against the men who have been in control of that party for many years. The easiest and most feasible way to get results that will be great enough to impress the sodden standpat intelligences of these old leaders seems to be to elect Democrats. They are getting in the habit of that, and it will be mighty hard to change them before the presidential election.

The Old, Old Bogey

The army trotted out the Japanese bogey again this year. Those army and navy people are sadly deficient in imagination. They apparently cannot think of anything except Japan to scare Congress into making what they think are proper appropriations. If these dogs of war had a spark of invention between them they would not go on year after year with the Japanese scare. It is getting old and worn now. It doesn't scare any more.

Still they use it continuously. This time they appeared before the House Committee on Military Affairs and solemnly scared that body with the statement that there are thirty-five or forty thousand Japanese in the Hawaiian Islands, most of whom were in the Japanese army formerly and all skilled in bearing arms, and that something is going to happen. They were a bit vague as to what it is that is going to happen, but they were certain of the fact, and they used the presence of these Japanese warriors in Hawaii to prove it.

In the name of the Nine Gods of War, those of us who are compelled to remain here and listen to this sort of thing year after year call on the army and the navy to show a little ingenuity. Why must Japan always be dragged in portentously when the appropriation bills are pending? Why not try some other nation? Let us get into quaking fear of Germany, or of France, or of Abyssinia, or of Persia, or of Monte Carlo—any country except this perennial Japan. The people who have to listen to these tales of woe have some rights. Variety is the spice of life, and it might be the spice of appropriation bills also, if the solemn warriors of the army and navy could be weaned away from their favorite war scare and induced to promulgate a new one. For, to be truthful about it, Japan has ceased to be a scare—if it ever was one—and the army and the navy need some new ideas if they expect more money.

Yours Instantly

Whitman's

Don't confound Whitman's Instantaneous Chocolate with cocoa—it isn't. It is made of cocoa beans and *there* the resemblance *stops*. Powdered Cocoa has most of the cocoa butter removed. All of the nutritious cocoa butter is *left in* Whitman's Instantaneous Chocolate. That's why it tops cocoa in flavor and deliciousness; and that's why it is such a nourishing *food-drink*. Nothing is added to the natural elements of cocoa but cane sugar.

is made *instantly* with boiling milk—no fussing and no waiting. It's the best cold-weather comforter; the finest first aid to "half-frozen" folks. Mixed in a jiffy and served steaming.

***Service*—if *Instantaneous* is not sold conveniently for you, we will send it, prepaid, on receipt of the retail price; half pound can 40 cents, one pound can 75 cents, five pound can $3.50. Sample tin mailed for ten cents in stamps.**

Whitman's Instantaneous Chocolate is distributed all over the world by jobbing houses and is sold by the best grocers everywhere, and by our sales agents who show the sign:

Whitman's

Our booklet, "Instantaneous Ideas" for desserts, beverages, candies, etc.—gladly sent free.

Seventy sorts of sweets in sealed packages (including the Fussy Package) are described in another booklet, "A List of Good Things"—sent on request.
If you *prefer* cocoa, then try Whitman's. Send 25 cents for half pound tin, postpaid.

THE MOB FROM MASSAC

(Continued from Page 7)

not hidin' our faces from the noonday sun. We air open and aboveboard about this thing. Every able-bodied, self-respectin' white man in our precinct is right here with me today. We've talked it over and we know what we air doin'. If you want to take down our names and prosecute us in the cotes you kin go ahead."

Somebody else spoke up.

"I'd admire to see the jury in this county that would pop the law to ary one of us for swingin' up this nigger!" he said, chuckling at the naked folly of the notion.

"You're right, my son," said the judge, singling out the speaker with his aimed forefinger. "I ain't tryin' to scare grown men like you with such talk as that. I know how you feel. I can understand how you feel—every man with white blood in his veins knows just what your feelin's are. I'm not trying to threaten you. I only want to reason with you and talk sense with you. This man ain't been identified yet—remember that!"

"We know he's guilty!" said the leader.

"I'll admit that circumstances may be against him," pleaded the judge, "but his guilt remains to be proved. You can't hang any man—you can't hang even this poor, miserable little darky—jest on suspicion."

"The dogs trailed him, didn't they?"

"A dog's judgment is mighty nigh as poor as a man's sometimes," he answered back, fighting hard for every shade of favor. "It's my experience that a bloodhound is about the biggest fool dog there is. Now listen here to me, boys, a minute. That boy in the jail is goin' to be tried just as soon as I can convene a special grand jury to indict him and a special term of court to try him, and if he's guilty I promise you he'll hang inside of thirty days."

"And drag that pore little thing—my own first cousin—into a cotehouse to be shamed before a lot of these town people—no!" the voice of the leader rose high. "Cotes and juries may do for some cases, but not for this. That nigger is goin' to die right now!"

He glanced back at his followers; they were ready—and more than ready. On his right a man had uncoiled a well-rope and was tying a slipknot in it. He tested the knot with both hands and his teeth, then spat to free his lips of the gritty dust and swung the rope out in long doubled coils to reeve the noose in it.

"Jedge Priest, for the last time, stand aside!" warned the beaky-nosed man. His voice carried the accent of finality and ultimate decision in it. "You've done wore our patience plumb out. Boys, if you're ready come on!"

"One minute!" The judge's shrill blare of command held them against their wills. He was lowering his umbrella. "One minute and one word more!"

Shuffling their impatient feet they watched him backing with a sort of ungainly alertness over from right to left, dragging the battered brass ferrule of his umbrella after him, so that it made a line from one curb of the narrow street to the other. Doing this his eyes never left their startled faces. At the far side he halted and stepped over so that they faced this line from one side and he from the other. The line lay between them, furrowed in the deep dust.

"Men," he said, and his lifelong affectation of deliberate ungrammatical expression was all gone from him, "I have said to you all I can say. I will now kill the first man who puts his foot across that line!"

There was nothing Homeric, nothing heroic about it. Even the line he had made in the dust waggled, and was skewed and crooked like the trail of a blind worm. His old figure was still as grotesquely plump and misshapen as ever—the broken rib of his umbrella slanted askew like the crippled wing of a fat bat; but the pudgy old hand that brought the big blue gun out of the right pocket of the old alpaca coat and swung it out and up, muzzle lifted, was steady and sure. His thumb drew the hammer back and the double click broke on the amazed dumb silence that had fallen like two clangs upon an anvil. The wrinkles in his face all set into fixed, hard lines.

It was about six feet from them to where the line crossed the road. Heavily, slowly, diffidently, as though their feet were weighted with the leaden boots of a deep-sea diver, yet pushed on by one common spirit, they moved a foot at a time right up to the line. And there they halted, their eyes shifting from him to the dustmark and back again, rubbing their shoulders up against one another and shuffling on their legs like cattle startled by a snake in the path.

The beaky-nosed man fumbled in the breast of his unbuttoned vest, loosening a revolver in a shoulder holster. A twenty-year-old boy, his face under its coating of dust as white as flour dough, made as if to push past him and break across the line; but the Massac blacksmith caught him and plucked him back. The leader, still fumbling inside his vest, addressed the judge hoarsely:

"I certainly don't want to have to kill you, Jedge Priest!" he said doggedly.

"I don't want to have to kill anybody," answered back Judge Priest; "but, as God is my judge, I'm going to kill the first one of you that crosses that line. If it was my own brother I'd kill him. I don't know which one of you will kill me, but I know which one I'm going to kill—the first man across!"

They swayed their bodies from side to side—not forward but from side to side. They fingered their weapons, and some of them swore in a disappointed, irritated sort of way. This lasted perhaps half a minute, perhaps a whole minute—anyway it lasted for some such measurable period of time—before the crumbling edge of their resolution was broken through. The break came from the front and the center. Their leader, the lank, tall man with the downtilted nose, was the first to give ground visibly. He turned about and without a word he began pushing a passage for himself through the scrouging pack of them. Breathing hard, like men who had run a hard race, they followed him, going away with scarcely a backward glance toward the man who—alone—had daunted them. They followed after their leader as mules follow after a bell-mare, wiping their grimy shirtsleeves across their sweaty, grimier faces and glancing toward each other with puzzled, questioning looks. One of them left a heavy can of coaloil behind him upright in the middle of the road.

The old judge stood still until they were a hundred yards away. He uncocked the revolver and put the deadly big blue thing back in his pocket. Mechanically he raised his umbrella, fumbling a little with the stubborn catch, and tilted it over his left shoulder; his turtlelike shadow sprang out again, but this time it was in front of him. Very slowly, like a man who was dead tired, he made his way back up the gravel path toward the courthouse. Jeff magically materialized himself out of nowhere, but of Dink Bynum there was no sign.

"Is them w'ite gen'l'men gone?" inquired Jeff, his eyes popping with the aftershock of what he had just witnessed—had witnessed from under the courthouse steps.

"Yes," said the judge wearily, his shoulders drooping. "They're gone."

"Jedge, ain't they liable to come back?"

"No; they won't come back."

"You kinder skeered 'em off, jedge!" An increasing admiration for his master percolated sweetly through Jeff's remarks like dripping honey.

"No; I didn't scare 'em off exactly," answered the judge. "They are not the kind of men who can be scared off. I merely invoked the individual equation, if you know what that means?"

"Yas, suh—that's whut I thought it wuz," assented Jeff eagerly—the more eagerly because he had no idea what the judge meant.

"Jeff," the old man said, "help me into my office and get me a dipper of drinkin' water. I reckin maybe I've got a tech of the sun." He tottered a little and groped outward with one hand.

Guided to the room, he sank inertly into his chair and feebly fought off the blackness that kept blanking his sight. Jeff fanned him with his hat.

"I guess maybe this here campaignin' has been too much for me," said the judge slowly. "It must be the weather. I reckin from now on, Jeff, I'll have to set back sort of easy and let these young fellows run things."

He sat there until the couching sun brought long, thin shadows and a false

I jedge it was what out call another case of mistaken y on the part of them fool hounds."

. . . . . .

e sure of getting the full party vote d to save the cost of separate staffs inct officers, the committee ordained he Democratic primaries should be n the regular election day. The rains ember turned the dusts of August to dged ridges of sticky ooze. Election me, wet and windy and bleak.

returns—county, state and na- —were received at the office of the Evening News; by seven o'clock ace was packed. Candidates and ent citizens were crowded inside the that marked off the business de- nt and the editorial department, utside the railing and stretching on s, into the street, the male populace town herded together in an almost mass. Inside, the air was streaky yers of tobacco smoke and rich with ious smells of a small printing shop mp night.

returns at large came by telegraph, returns of the primaries were sent the various precincts of town and by telephone; or, in cases where as no telephone, they were brought hard-riding messengers. At inter- om the telegraph office two doors a boy would dash out and worm his through the eager multitude that and overflowed the narrow side- and through a wicket he would fling ed yellow tissue sheets at the editor paper. Then the editor would read ut.

s on this night that there befell the I made mention of in the first ph of this story. The old County as smashed up. One by one the s were going under. A stripling not two years out of the law school aten old Captain Daniel Boone for representative; and old Captain had been representative so many thought the job belonged to him. ch longer was the race for sheriff t, or the race for state senator. r men snatched both away from the who held them.

far corner, behind a barricade of nd shoulders, sat Major J. Q. A. a spare and knotty old man, and 'riest, a chubby and rounded one. e old men, the judge seemingly had strongest race, and Major Pickett, been county clerk for twenty years r, had run close behind him; but ally grew nearer its completion the chances faded to nothing at all and e's grew dimmed and dimmer.

t do you think, judge?" inquired Pickett for perhaps the twentieth inging forlornly to a hope that was as gone already.

dink, major, that you and me are o be notified that our fellow citi- e returned us oncet more to private ," said the old judge, and there was smile on his face. For, so far back hated to remember how long it was, eld his office—holding it as a trust r. He was too old actively to the practice of law, and he had nighty little out of his salary as He would be an idle man and a e—perhaps actually needy; and the look out of his eyes by no means matched the smile on his face.

"I can't seem to understand it," said the major, crushed. "Always before, the old boys could be depended upon to turn out for us."

"Major," said Judge Priest, letting his wrinkled old hand fall on the major's sound leg, "did you ever stop to think that there ain't so many of the old boys left any more? There used to be a hundred and seventy-five members of the camp in good standin'. How many are there now? And how many of the boys did we bury this past year?"

There was a yell from up front and a scrooging forward of bodies.

Editor Tompkins was calling off something. The returns from Clark's River and from Lang's Store had arrived together. He read out the figures. These two old men, sitting side by side at the back, listened with hands cupped behind ears that were growing a bit faulty of hearing. They heard.

Major J. Q. A. Pickett got up very painfully and very slowly. He hooked his cane up under him and limped out unnoticed. That was the night when the major established his right of squatter sovereignty over that one particular spot at the far end of Billy Sherrill's bar-rail.

Thus deserted, the judge sat alone for a minute. The bowl of his corncob pipe had lost its spark of life and he sucked absently at the cold, bitterish cane stem. Then he, too, got on his feet and made his way round the end of a cluttered-up writing desk into the middle of the room. It took an effort, but he bore himself proudly erect.

"Henry," he called out to the editor, in his high, homely whine—"Henry, would you mind tellin' me—just for curiosity—how my race stands?"

"Judge," said the editor, "by the latest count you are forty-eight votes behind Mr. Prentiss."

"And how many more precincts are there to hear from, my son?"

"Just one—Massac!"

"Ah-hah! Massac!" said the old judge. "Well, gentlemen," he went on, addressing the company generally, "I guess I'll be goin' on home and turnin' in. This is the latest I've been up at night in a good while. I won't wait round no longer—I reckin everything is the same as settled. I wisht one of you boys would convey my congratulations to Mr. Prentiss and tell him for me that ——"

There was a bustle at the door and a newcomer broke in through the press of men's bodies. He was dripping with rain and spattered over the front with blobs of yellow mud. He was a tall man, with a drooping mustache and a nose that beaked at the tip like a butcher-bird's mandible. With a moist splash he slammed a pair of wet saddlebags down on the narrow shelf at the wicket and, fishing with his fingers under one of the flaps, he produced a scrawled sheet of paper. The editor of the Daily Evening News grabbed it from him and smoothed it out and ran a pencil down the irregular, weaving column of figures.

"Complete returns on all the county races are now in," he announced loudly, and every face turned toward him.

"The returns from Massac Precinct make no changes in any of the races ——"

The cheering started in louder volume; but the editor raised his hand and stilled it.

"——make no change in any of the races—except one."

All sounds died and the crowd froze to silence.

"Massac Precinct has eighty-four registered Democratic votes," went on Tompkins, prolonging the suspense. For a country editor, he had the dramatic instinct most highly developed.

"And of these eighty-four, all eighty-four voted."

"Yes; go on! Go on, Henry!"

"And all eighty-four of 'em—every mother's son of 'em—voted for the Honorable William Pitman Priest," finished Tompkins. "Judge, you win by ——"

Really, that sentence was not finished until Editor Tompkins got his next day's paper out. The old judge felt blindly for a chair, sat down and put his face in his two hands. Eight or ten old men pressed in toward him from all directions; and, huddling about him, they raised their several cracked and quavery voices in a yell that ripped its way up and through and above and beyond the mixed and indiscriminate whoopings of the crowd.

This yell, which is shrill and very penetrating, has been described in print technically as the Rebel yell.

The SPENCER HEATER positively reduces Coal Bills 1/3 to 1/2

THE "Spencer" does this because it successfully burns an equal tonnage of the small sizes of hard coal costing from $2 to $3 less per ton. This is possible because the

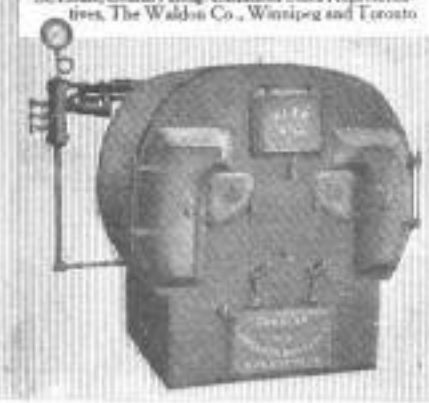
Steam or Hot Water
Heater

has a water-jacketed magazine feed and an entirely different grate construction.

Magazine Feed This device holds a 24 hours' coal supply in ordinary weather—12 in severe. Coal feeds automatically into the fire-box as needed. With a "Spencer" in the house, the "women folks" never need shovel coal under any conditions.

Even Temperature An even temperature can be maintained all day without attention and all night as well if desired.

Quickest Steaming Device The "Spencer" is a combination water-tube and return tubular boiler—the quickest and most efficient steaming device known.



For Apartments and Flats— the "Spencer" is ideal. Not solely for its remarkable coal economy, but it does away with the night fireman, keeping up steam for 12 hours at a stretch in the most severe winter weather, without attention.

The "Spencer"—an Investment In its coal savings alone, the "Spencer" will easily pay for itself in a few seasons. Many owners save $100 and more in fuel bills annually. Hundreds of "Spencers" installed 20 years ago are still saving a like amount each year. A heater being practically a lifetime investment, you should investigate its record carefully, including its coal consumption, before accepting *any* make. We want you to send for our two splendid

FREE BOOKS

One, our new 40-page catalog, tells how the "Spencer" is made and why it is the greatest money, time and labor-saving heater on the market. The other contains several scores of endorsements of "Spencer" users. Both will prove valuable in satisfactorily deciding the heater question.

THE SECRETS OF A RAILROAD EXECUTIVE'S RISE

(Concluded from Page 9)

thus took from the master mechanic another phase of his immediate power. In other instances I recast the scheme of organization and drew up exacting and definite outlines of duties.

"All this stirred up a lot of opposition under me and unpleasant comment on the part of other division superintendents. Some of them were fair enough to concede that I was working along the right lines, but others knocked me hard, declaring that I was merely trying to make myself strong without really accomplishing anything for the company. I had always been a four-flusher, they said, and had secured my advancements that way.

"I was pretty well used to this sort of thing—and so long as I had the general superintendent with me, as I did have, I wasn't worried; but just about that time the general superintendent resigned to become general manager of another road.

"The new general superintendent was recruited from outside. In those days we were sadly amiss in developing our own organizations. I, of course, felt that some one of the division superintendents should have been advanced or, at least, that the vacancy ought to have been filled from among our own executives. Today the tendency is strong in that direction; and the closer the management hews to the principle of self-perpetuation, the better the results. Down in my heart I felt that I was entitled to the job and capable of filling it. I had more logical reasons for this belief than some of the other division superintendents had for expecting advancement.

"For a time things went very badly with me. It looked as if my philosophy were all wrong—that being a cabbage in a turnip patch was about the worst possible policy. The other division superintendents were all inconspicuous chaps, without any pronounced ideas; and now, with a new chief over them, they hunted their holes, as it were. Every one of them was afraid to draw attention to himself, lest he be discovered and fired. My friends advised me to subside and quit stirring up new problems to worry the management."

The Time to Show Fight

"'It looks to me,' I said to my wife one day, 'that it's pretty nearly time to put that threat of mine into execution. I've either got to quit my job or else metamorphose myself back into a turnip. My enemies have been busy on the general superintendent, and he's turned against me. He isn't familiar with my history and he's not in touch with my ideas. He's upsetting the new scheme of organization I've been trying to install on my division and he won't listen to me.'

"'Then you'd better quit at once,' Mary advised.

"Next day, while I was still thinking about this advice, the master mechanic came into my office. He showed me an order from the general superintendent restoring the levermen to his immediate command. This bit of paper he thrust under my nose in an insulting manner and remarked: 'Here's one of your crazy schemes exploded—and it isn't the last!'

"So this, then, was a fine example of the organization I had created so studiously and with sole regard for the company's benefit! This was what I got for parading as a cabbage when I might have gone along very comfortably as a turnip, without attracting any attention.

"However, it was too late now to crawl into my hole, even had I felt so disposed. As a matter of fact, I never had felt less like it in all my life. I am something of a fighter in more ways than one. Thanks to the new general superintendent, my house was crumbling about me; but I was more confident than ever that I was right. I knew I had goods to sell that had a high market value; every man of ability has salable goods these days. Executive ability is at a premium; but no man ever sold his ability at its value by crawling into a hole.

"The master mechanic, however, did crawl into the gloom. He was a big chap and rather muscular—but so was I. Before he knew what was happening I had him by the slack in his trousers and by the neck, and literally threw him downstairs.

"'Now go ahead with your dirty work!' I called after him as I heard him hit the lower landing. 'But before you begin it, just go round to the paymaster and get your money. You're no longer in the employ of my division.'

"That night I got aboard the limited and went up to general headquarters. Next day the general superintendent and I had it out. The general manager came into the superintendent's office in the thick of it, accompanied by the first vice-president, who was in charge of the operating department of the whole system.

"There was nothing in the nature of a personal quarrel, but I confess that I reviewed with some heat the existing situation. I told the general superintendent that I had almost decided, at the time the master mechanic caused the scene in my office, to resign. I repeated what I had said to my wife about quitting rather than stultify my ability to serve the railroad.

"'But, sir,' I went on, 'I have changed my mind about resigning. If I quit this railroad I quit it under discharge. I go down fighting. And if I remain I shall claim the right to use my brains in every possible way for the benefit of the company. I shall not force my ideas on you, sir, but I shall not have you say to me that you don't want any ideas. I shall not have you treat me in utter contempt, as you did when you countermanded my orders and sent the master mechanic to disrupt the organization.'"

The New Boss Converted

"Then I calmed down somewhat, as he grew purple in the face, and outlined for him my scheme of what a railroad organization ought to be. I showed him where a hundred opportunities for profit lay concealed even in the most lowly switchman or shopclerk. I gave him my reasons for recasting the organization as I had done it and explained what I hoped to accomplish in the future if I remained. I was not doing all this specialized, laborious thinking for my own amusement, I assured him. I was doing it to make my division the ideal one.

"The first vice-president and the general manager heard all this without interfering. When I was through the general superintendent arose and, to my astonishment, offered me his hand.

"'You have put the whole problem of railroading in a new light,' he said. 'I confess that I didn't understand you. I had heard only the other side of the thing. Hereafter you and I will work in harmony for the benefit of the road.' He was really a broad-gauge man who had been led astray by designing men.

"When I told my wife about all this she laughed in a way that was almost hysterical. I couldn't just make out what she was laughing at until she sputtered: 'John, for a cabbagehead, you're certainly all right!'

"A couple of years later, when the general superintendent was made general superintendent of transportation, I knew that I was slated to succeed him. There wasn't another division superintendent on the line who had the ghost of a chance, though several of them thought they did, and howled 'favoritism' when I sat down at the general superintendent's desk.

"It was now about a decade since I rose above my brakeman's job, after my five years of stagnation there. Every step in my advancement I could trace to the definite philosophy I had been following—the philosophy which urged me on continually to get above the common level in whatever I undertook. At heart, I was not conceited enough to believe that I possessed any wonderful talents beyond those of my fellows. I had walked up over a lot of them only because I had consciously set myself apart from them. I had done this, too, in ways that invariably drew the attention of those who must advance me. It had all been a great game with me, studied out with as much labor as if I had been playing a long game of chess with big stakes. The hardest thing about it was the everlasting difficulty of holding it down to the fundamental principle that, no matter how I made myself conspicuous, it must be in some manner that benefited my employers primarily and not myself. I often had to strangle the temptation to do otherwise.

"Yes, that is the philosophy exactly. I made my employers want me and want to advance me. I gave them more than value received. Perhaps selfishly, I kept my mouth shut about having a philosophy. You see, I didn't want to have a lot of fellows imitating me. I had a magic powder—to use the language of the fairy story—which I sprinkled before me in the path that led always higher and higher. If I gave away the ingredients of that powder I'd find other chaps elbowing me aside. Well, I'm high enough now so that I don't care.

"And yet I often wondered, and do wonder today, that men are so blind about these matters. Success lies in being different from the fellows about you. Anybody ought to see that. Perhaps most people do see it in the abstract, but they can't analyze the thing into any definite philosophy of action. They are not willing to knuckle down to the hard, grubbing detail and planning necessary to work the thing out as I worked it.

"My success has been a constant building of brick upon brick, each brick selected with the one object in view. If I were to start again today as a young man, possessing the philosophy of succeeding as I do now possess it, I'd be willing to guarantee that I'd walk up mighty fast in any line of business, whether it were railroading or merchandising, contracting or manufacturing.

"Well, now that I was up among the cabbages, I followed my habitual policy. 'Mary, what would be most conspicuous in a cabbage field?' I asked as I carved the roast one day, soon after my appointment as general superintendent. We had moved again and were now living in a metropolitan apartment, which mode of life was not altogether to my liking. It did not seem homelike or just the sort of place in which to bring up the children. Already I was itching to get along higher.

"'Well,' returned my wife, as she fastened the bib about the neck of our youngest, 'I suppose, John, that a pumpkin would attract the most attention—or perhaps a squash.'

"'A pumpkin has a better shape than a squash,' said I; 'so I reckon I'll perform in the cabbage field as a big yellow pumpkin. Perhaps some of these railroad presidents about the country will see me and pick me.'"

Another Step Up

"Thereupon I proceeded to broaden my scheme for welding our whole operating department into a closely-knit organization, remodeled and strengthened at every weak spot I could study out. Now, for the first time, I was in a position really to look for high-grade executive ability and not mere mechanical ability. Instead of doing most of the detailed thinking myself, as I had done up to this point, I ferreted out men who could think and showed them how to do it. I applied this scheme even to the station-agents and section-gangs. I impressed upon everybody under me that our railroad must be better and more profitable than other railroads—a sort of pumpkin among cabbages.

"Before a year had passed, I received a telegram asking if I would accept the second vice-presidency of a railroad that touched the Far West. The salary almost staggered me. I knew there was no present vacancy on my own line that could offer such an inducement; so I wired back that I would take the job if the company would let me have free swing with my ideas of railroading.

"This, as I had surmised, was just what the company wanted me for, and we closed the bargain. I went to my new post as chief of operation and transportation.

"Since then I have shifted about a little; but I don't care to go into particulars because I am getting rather close to the present day. My identity, no doubt, would interest some people; but, after all, it's the philosophy of the thing I'd like to emphasize rather than my own individuality. I prefer to remain in the background. I have not given this in any sense as an autobiography, but merely as a sort of formula through which any man of sound commonsense and ability can achieve success—in some degree, at least. Varying conditions, of course, will have more or less effect; but don't fall into the common error of believing that any conditions—short of physical or mental inability—can hold a man down if he really goes about rising."

Editor's Note—This is the second of a series of articles by Edward Mott Woolley. The third will appear in an early issue.

Congress in the Twilight Zone

(Continued from Page 4)

means some work on Sunday. And almost fifty per cent work seventy-two hours or over a week—a minimum of twelve hours a day, six days a week."

These startling figures were taken from a report prepared by the Commissioner of Labor in pursuance of a resolution introduced in the Senate by Mr. Borah. I endeavored to get a copy of this report, but found that it had not been issued by the Government printing office. Senator Borah told me that he had been trying for some time to get it out, but that it was "held up"—why, he did not know. Perhaps Senator Smoot, chairman of the Printing Committee of the Senate, could tell why.

We have, however, the report of the Commissioner of Corporations on the earnings of the Steel Trust. As pointed out in this report, there has been earned on and above the returns paid upon the capital actually invested, liberally estimated, about six hundred and fifty million dollars. Of this amount, four hundred and thirty-five million dollars has been accumulated and applied in additions to the plants. And over two hundred million dollars represents the dividends paid out upon the common stock, which was all water, and upon that forty per cent of the preferred stock which the Commissioner of Corporations finds to be water.

Notwithstanding these enormous profits the Steel Trust works human beings twelve hours a day for seven days a week! Keeping this in mind, let us examine Mr. Gary's testimony. He does not refer at all to the hours of labor in the steel plants. He talks about the blessings enjoyed by the workingmen, as follows:

"We have established in our company conditions, relations and benefits for our workmen that we could not possibly have done if we had been small or had been comparatively poor. We have a voluntary relief association. . . . We have a pension system. We have spent millions of dollars . . . in making changes which are calculated to prevent accidents. We have done that because it is the right thing to do, and we have done it because it is good policy to do it. It is a great thing to have our men protected. It is a great thing to have pleasant and friendly relations with our men. . . . I think it is good policy and good morals both to pay good wages."

Big Industrial Units

An examination of the testimony* given by Messrs. Brandeis, Gary and Perkins will repay any person who is interested in the trust question. From this testimony one gets the best that can be said for the trusts by their promoters—and an exhaustive, if not a complete, answer by one of the great lawyers of the country, who has had opportunities to study combinations from both the inside and the outside. The writer went to Washington believing that there was much to be said in favor of large combinations of capital—primarily because of decreased cost of production and distribution and of efficiency in management. The writer came away believing that efficiency does not necessarily go with size; that monopoly is inefficient as compared with a competitive business—inefficient both economically and socially. It is true that a business unit may be too small to produce the highest efficiency, but it is equally true that a unit may be too large and that inefficiency results. The tendency today is toward the creation of too large units rather than too small units, not because larger units tend to greater efficiency, but because the owner of a business may make far more money if he increases the volume of his business tenfold, even if the unit profit is reduced one-half in the process.

Mr. Average Citizen is right in his contention that the great combinations of capital were not effected that methods of manufacture might be improved, or that the cost of production might be cheapened, but solely to give the men concerned enormous money rewards as organizers. The motive was neither economical nor industrial, but entirely personal and mercenary. And an equal amount of claptrap was heard—is heard today—about "capturing the markets of the world"—capture by the sale of a domestic article to a foreigner at a lower price than an American pays at home.

Another bit of foolishness is the misuse of the expression "natural monopoly." "By speaking of a natural monopoly," said Professor J. Laurence Laughlin, of the University of Chicago, "I mean one that is based upon superior industrial capacity." If that is what he means, and all he means, then there are no "natural" monopolies in industry. Transportation companies and public utilities, by reason of law and custom, are natural monopolies. Other monopolies are unnatural. When we consider "industrials," it is invariably found that their control and dominance are due to their monopolistic power *per se* and not to "superior industrial capacity."

All this has to do with the economic side of the trust question; the social side is not touched upon—and the problem should be solved primarily from the standpoint of the public welfare. If the officers of the Steel Trust could prove their case of economic efficiency there would still remain the awful spectacle of men working twelve hours a day for seven days a week—and when the shift comes, eighteen, sometimes twenty-four hours at a stretch. "He who seeks equity must do equity."

Before attempting to answer the question, What will Congress do in the matter of trust legislation?—or guessing at the answer—let us check up the views of a few of the legislators. In the first place there is a group of men, Democrats mainly, who without suggesting any constructive program say: "Enforce the law!" Senator Pomerene, of Ohio, a member of the Committee on Interstate Commerce, is one of these. The Speaker of the House of Representatives is another.

If Law Were Studied in Jail

"The first thing needed to protect the people against the trusts," said Senator Pomerene, "is to get an attorney-general of the United States who is in sympathy with the Sherman Law, which has both criminal and civil penalties. There has not been the slightest excuse for the non-enforcement of this law since the Supreme Court handed down its opinion in the trans-Missouri case in March, 1897—if there ever was any before that time.

"If the several heads of the Department of Justice since that decision was rendered had attempted to enforce the criminal penalties in my judgment there would be no trust question now to trouble the public. The statute is the product of the brains of Senators Edmunds, Hoar, George, Turpie, and other great lawyers who were in the United States Senate in 1890. There never was a statute more plainly written. Every American citizen understands it—unless it is the trusts and their highly paid lawyers, who have had more difficulty in misunderstanding it than in understanding it. When men permit themselves to be controlled by their selfish interests, without regard to the rights of others; when they combine together for the purpose of ruining their competitors and driving them out of business so that they may monopolize the trade of the community or of the world—all men who hold to the principle of 'live and let live' join in the belief that such conduct is reprehensible, that a free community cannot permit it, and that those who persist in such a course of combination and monopoly are violators of the law and ought to be punished.

"If one only of these men who violate the law and express so much doubt about its meaning should be sent to jail it would help to clear the mental and moral vision of all of them. The respect which some men have for the law depends upon their viewpoint. Those who cannot understand it from a point outside of the jail are better able to understand it from a point inside of the jail.

"I do not believe in promiscuous prosecutions, but where the evidence is as conclusive as in the Standard Oil and Tobacco cases there ought to be criminal prosecutions."

"Senator, you say in effect that no attorney-general since 1897 has attempted to enforce the criminal penalties of the Sherman Law. Is it not a fact that President Roosevelt's attorney-general prosecuted the Tobacco Trust criminally in the so-called licorice case, and that the jury

From a Photograph Showing the Last Step in Locating the Exact Center of Population of the United States.

"The Center of Population"

A Title that Fits Every Bell Telephone

From the census of 1910 it is found that the center of population is in Bloomington, Indiana, latitude 39 degrees 10 minutes 12 seconds north, and longitude 86 degrees 32 minutes 20 seconds west.

"If all the people in the United States were to be assembled in one place, the center of population would be the point which they could reach with the minimum aggregate travel, assuming that they all traveled in direct lines from their residence to the meeting place."

—*U. S. Census Bulletin.*

This description gives a word picture of every telephone in the Bell system.

Every Bell telephone is the center of the system.

It is the point which can be reached with "the minimum aggregate travel," by all the people living within the range of telephone transmission and having access to Bell telephones.

Wherever it may be on the map, each Bell telephone is a center for purposes of intercommunication.

To make each telephone the center of communication for the largest number of people, there must be One System, One Policy and Universal Service for a country of more than ninety million.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY
AND ASSOCIATED COMPANIES

One Policy ***One System*** ***Universal Service***

convicted the corporation but refused to find the individual defendants guilty?"

"That is a fact," said Senator Pomerene; "but that was the verdict of one jury in New York City."

"Don't you think that the unwillingness of the jury in the licorice case to convict the individual defendants naturally gave rise to the belief that violations of the Sherman Law were not regarded as criminal acts; in other words, that public opinion, which has crystallized very rapidly in the last two or three years, was not ready to send men to jail for acts that were not criminal in themselves but were proscribed by Federal statute?"

"I do not! Are you going to judge the juries in the whole country by the fact that the jury in the licorice case failed to do its duty?"

Perhaps not. But the fact remains that a jury in the Tobacco case was averse to convicting defendants for jail sentence; just as judges have shown themselves unwilling to impose such sentences on men of respectable standing in society for an offense regarded as merely statutory. The failure of the criminal case against the packers and the "conviction of the corporation" in the licorice case led President Roosevelt to seek a remedy in equity by dissolution against the Standard Oil and the Tobacco Trust. And as Senator La Follette has said, there were more prosecutions of the trusts during the Roosevelt administration than were instituted in all of the preceding administrations combined.

"There is no more reason why the Sherman Law should not be enforced," said Speaker Clark, "than that our law against horse-stealing should be permitted to go unenforced. The big criminals should pay the penalty just as well as the little criminals. Theoretically the law is no respecter of persons, and in practice it should be the same way. When the big insurance thieves who robbed widows and orphans all over the land and poured the proceeds of their thievery into the Republican campaign fund were permitted to go unwhipped of justice, everybody knew that it had a tendency to bring the courts into disrepute. To have sent that bunch of big rogues to the penitentiary would have done more good than to have sent a forty-acre field full of ordinary thieves to the pen. It's the same way with the Sugar Trust thieves, who stole millions from the Government and then escaped a felon's stripes and a felon's cell by paying back a small fraction of what they had stolen. There never has been a thief who would not have been glad to compromise that way. If the anti-trust law had been vigorously enforced in both civil and criminal features for the last ten years there would not be a trust in America today."

Champ Clark's Views

Had not politics been barred, Senator Pomerene would probably have added to his statement: "Nominate Harmon and elect him president of the United States, and he will appoint an attorney-general who will enforce the law."

Likewise, Champ Clark would possibly have said: "Nominate and elect me president, and I will appoint an attorney-general who will enforce the Sherman Law."

"But what about constructive legislation, Mr. Speaker?" I asked.

"I am in favor of making the Sherman Law stronger than it is at present, and if we cannot do that, then I am in favor of enforcing strictly the law as it now stands. But there will be no repeal of the present law if I can prevent it, unless it is for the purpose of making way for the passage of a stronger one."

Mr. Clark can "prevent it," if for no other reason than because no attempt will be made, either in the House or Senate, to repeal the anti-trust law; indeed, no congressman or senator would have the temerity to propose such action. But when it comes to supplemental legislation, Mr. Underwood, of Alabama, will have more to say about it than Mr. Clark, of Missouri. Mr. Underwood is Democracy's leader in the House of Representatives, and the chairman of Ways and Means is a Conservative, as witness his statement on the trust question:

"Personally I have no panacea for the trust problem," he said to me. "I am not in favor of the repeal of the Sherman Law. Perhaps there should be an act of Congress supplementary to that law. What I ask of the House is that the subject be taken up

deliberately—in its proper order—and legislation carefully considered. I think it wise, before we do much legislating, to see what the courts are going to do in enforcing the law and particularly in requiring corporations to conform to the law."

My guess is that Representative Underwood would prefer to leave to the courts the solution of the trust question—but it's only a guess. Certainly he will not permit the tariff question to be sidetracked and give trust legislation the right of way—as President Taft tried to bring about.

The only man I could find in the House of Representatives who was ready to legislate in regard to trusts was Representative Robert Lee Henry, of Texas. Mr. Henry is the second man on the Judiciary Committee, but more important, he is chairman of Rules—the committee that orders out the steamroller in legislative procedure. He has introduced a bill "for the purpose," he explained, "of clearly defining the legislative intent—[in the Sherman Law]—and making the penalty adequate." He has positive views on the trust question, and unlike the chairman of Judiciary he was willing to give expression to his ideas.

Mr. Henry on the Sherman Act

"When the Sherman Law was enacted," said Mr. Henry, "the framers had one principal aim in mind. They intended to pass an act that would prevent all combinations in restraint of trade or commerce among the states or with foreign nations, whether those restraints were reasonable or unreasonable as arising from the combinations denounced. In the Joint Traffic and Trans-Missouri cases the Supreme Court thus interpreted the act and overruled the dissenting opinion of Mr. Justice White, who, at that early date, undertook to insert the word 'reasonable' in the Sherman Act. Twenty years afterward the same justice, having become chief justice, finds the majority of the Supreme Court with concurrent minds favoring his view, overrules the original interpretation, and writes *reasonable* where unanimous Senate and House had denied it and where, for twenty years, his brethren on the bench had stayed his hand and said no 'rule of reason' should find lodgment there.

"The President in his message of December 4, 1911, defies any one to point out a single trust that cannot be reached by the law as 'amended' in the Supreme Court decision of last spring. I defy the President's criticism and mention the Joint Traffic and Trans-Missouri Freight Association cases of 1895 and 1897.

"Come, Mr. President, and deny, if you can, the proposition—that if Chief Justice White had those cases before him now, with the majority of his brethren on his side, he would declare the contract 'reasonable' and *legal* instead of 'reasonable' and *illegal*, as in 1895 and 1897. Those associations would now go scot free, instead of being outlawed as the Supreme Court decreed in those years. Here are two cases, Mr. President, and you are challenged to answer.

"At present the law is hazy and offenders pretend not to understand its meaning in order to violate its provisions. Let the Congress comprehend and clearly define by amendment the acts that constitute a combination, trust or conspiracy against trade and commerce. This can be done so clearly that he who runs may read and take warning. In the measure introduced by me these illegal acts are clearly specified. After carefully preserving the first sentence of the first section of the law of 1890, I have minutely set out the various methods of combination and trust organization that are prohibited.

"Again, trust magnates dread the penitentiary. The law should be amended and felony punishment provided. It is admitted that conspiracies against trade and commerce, combinations to destroy competition and agreements to engross the market, as typified by the Standard Oil and Tobacco Trusts, are crimes and should be punished. Hence they should be denounced by law in the same manner that penal statutes denounce highway robbery, embezzlement, swindling, theft and burglary, and the punishment made certain and adequate. Then only the debased heart and mind would seek to violate the criminal law."

Representative Henry's criticism of the Supreme Court's decision is an echo of the outcry that was heard last spring. Progressives in both parties seemed then to agree with the dissenting opinion of the late Justice Harlan. But many Progressives have changed their minds since that time, and it is doubtful if the views expressed by Mr. Henry would today receive indorsement in Congress.

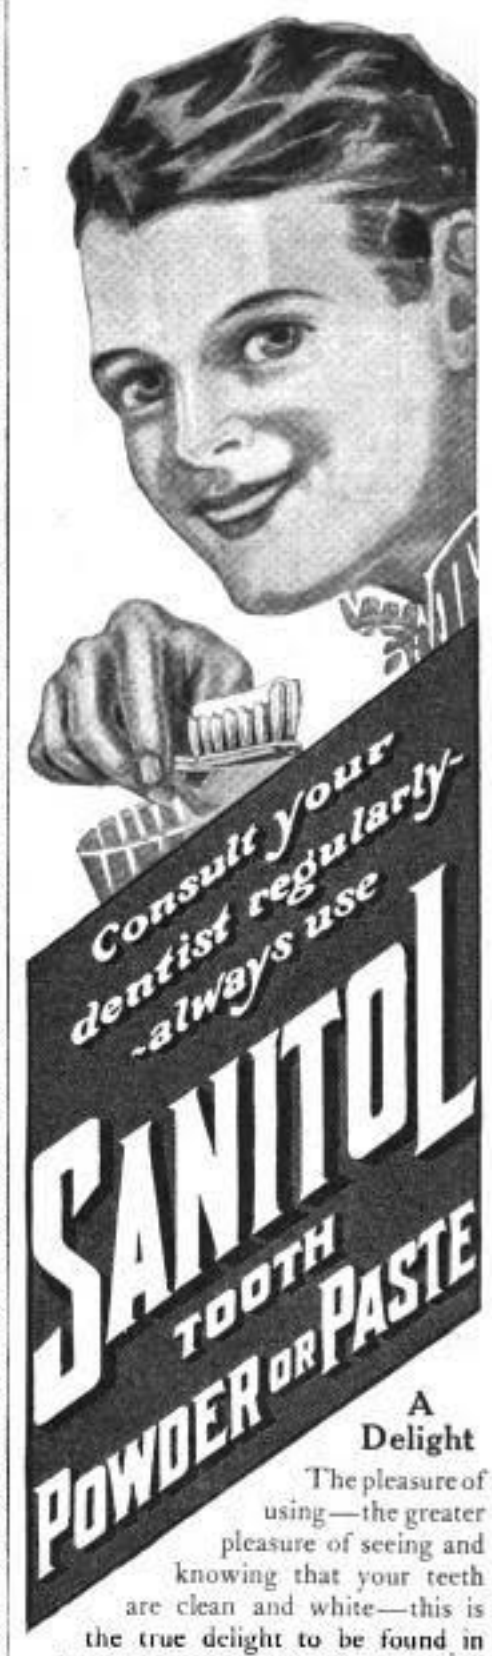
The bill introduced in the Senate by Mr. La Follette is a composite—that is to say, it embodies in legislative form the ideas of a number of Progressives in and out of Congress. It is a supplement to the Sherman Law. It changes no specific provision, it alters no word in the eight sections that make up the anti-trust act. But it adds to that statute eight other sections that seek to accomplish the following results:

1. To remove, as far as possible, the uncertainties said now to exist in respect to the application of the Sherman Law to facts as they arise, by declaring that restraints of trade attended by certain practices are to be deemed unreasonable. In this way the La Follette Bill would make certain that which business men and lawyers say is uncertain and, therefore, injurious to business.

2. To make easier the proceedings instituted on behalf of the Government to enforce alleged violations of the anti-trust law. This is accomplished by a provision that whenever it shall appear that a combination or conspiracy in restraint of trade exists, the burden of proof to establish the reasonableness of the restraint shall be upon the party who contends that the restraint is reasonable—not upon the Government.

3. To make the remedy adequate and actually effective in case of a finding of illegality in regard to a combination.

The La Follette Bill is a mighty good bill and it seems to be well regarded at the Capitol. Some modification of this bill—a bill probably embodying the similar ideas of Senator Cummins—may pass the Senate. Then if some modification of the Henry Bill should pass the House, legislation will depend upon the ability of the conferees of both Houses to harmonize these somewhat discordant legislative proposals.



Politics First and Foremost

There will be no Federal license, unless the views of leading Democrats are considerably modified. There will certainly be no Federal incorporation. Perhaps the solution of the trust problem may come only through Federal charter and incidental regulation, but the Progressives are of one mind that there should be a sincere attempt to enforce healthy competition, before Congress adopts the theory of regulated monopoly. When the step toward national regulation of interstate industrial business is taken—if it ever is taken—the English Companies' Act should be the guide. The start could be made with enforced Federal license and a permissive corporation law based on the English model. Publicity, with information to investors of the terms of any issue of stock or bonds; officers and directors separate and distinct; the rights of minority stockholders amply protected—these and other features of the English law should be followed. In other words, the corporation should be democratized and there should be "representative government."

But those who advocate Federal incorporation must know that nothing will be done to bring this about so long as the Democrats are in partial control of the Government. For some time Senator Newlands has advocated Federal charter for interstate railroads whose functions are largely national, but he has been able to make no headway with his party. He explains it by saying that the Democrats "cling to the exercise of state functions and guard against Federal encroachment." What the Southern Democrat is clinging to, as a matter of fact, is the "Jim Crow car," and he will not run the risk of having some authority in Washington order such cars from the railroads of the South and prescribe equal service, regardless of "race or color."

The outlook for immediate relief from the exactions of the trusts could be much brighter. Of what avail is a decision of the Supreme Court "dissolving" a trust when the lower court recreates the monopoly—or, to be fair to the court, gives back to the original stockholders the power to monopolize? And although Congress would like to do something, nobody seems to like what somebody else proposes. Also, Congress has much to do. Great questions are pressing for consideration, in this the order of their importance: Politics, tariff, Politics, trusts, Politics, currency, POLITICS.

And the only one of these important subjects that is assured of proper consideration is—politics.

A Delight

The pleasure of using—the greater pleasure of seeing and knowing that your teeth are clean and white—this is the true delight to be found in Sanitol Tooth Powder or Paste. Be introduced to what's best for the teeth.

Mouth acidity means that for one reason or another the saliva is acid—it should be alkaline. Acid mouth aids the growth of germs of disease and tooth decay. Sanitol Tooth Powder or Paste is antacid—it corrects mouth acidity—no germs can live in its presence. Its daily use will insure clean white teeth, a pure fresh mouth—and even better health.

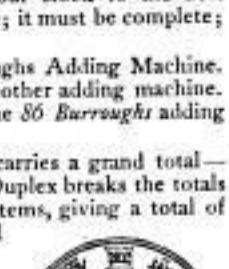
How Brownell Got What He Wanted

R. E. Brownell of the Brownell Shoe Co., Meadville, Pa., didn't know he could get a complete detailed statement of sales, purchases and expenses by departments, by salesmen and by classes of goods in eight stores, all with one bookkeeper—didn't know it until a few months ago.

Now he says: "If it had cost us thousands of dollars to find it out and to get the means of doing it, we would consider it money well spent."

Brownell wanted the information to give him an absolute check on the amount of goods necessary in each of the eight Brownell stores.



"In our business," he says, "this information is needed every day to enable us to buy our stock to the best advantage. It must be up-to-date; it must be complete; it must be accurate."

Brownell uses a Duplex Burroughs Adding Machine. The Duplex is different from any other adding machine. It is different from any other of the *86 Burroughs* adding machines.

The ordinary adding machine carries a grand total—the only total it can give. The Duplex breaks the totals up into any number of groups of items, giving a total of each item while carrying a grand total of all the groups.

You probably don't know what this means to your work. Brownell didn't. But he says he'd rather *know* than to have $10,000 in cash and *not* know.

Let us tell you what it means to your work, without a cent of cost or obligation to you.

Burroughs Adding Machine Co.
99 Burroughs Block, Detroit, Michigan

Makers of adding and listing machines, listing and non-listing calculating machines—86 different models—$150 to $950

Burroughs Duplex (Multiple total) Adding Machine which accumulates all kinds of groups of figures into totals, carrying a grand total of these totals at the same time. For the

Retailer and Wholesaler

Totalling sales of each clerk and the store's gross sales at one operation.

Summarizing cash and credit items at one operation, with separate totals of each.

Recapitulating purchases by departments, with a grand total of all at the same time.

Totalling simultaneously cost and selling price by clerks, departments, or classes of goods

Making monthly statements and final balance at one operation.

For the Manufacturer

Summarizing costs by items and by jobs at one operation.

Adding time and amount for both time and piece laborers at one operation.

Summarizing material, labor and overhead expense by jobs, carrying a grand total of all at the same operation.

For Every Business

Trial balance-adding and listing debits and credits at one operation.

Proving ledger postings by sections, with total of each section and grand total of all at one operation.

Figuring inventories, securing totals of each class of goods and totals of all classes at one operation.

Out of a Schoolboy's Desk

By J. W. FOLEY

HENRY BEGG and me were cleaning out our desks in school and we found a lot of things that we put in there at difrunt times and forgot about.

Henry found some dride-up apple-corpse, part of a paper of snuff, rubber for a bene shooter, two Red Ranger stories about Injuns with paper backs, and his aggut shooter with moons in it which he was afrade was lost for good.

I found some red pepper in a peace of paper for putting on boys' gum and into lunches when they are not looking, some gurls' hare ribbons which were sitting in frunt of us when we took them off, sevrel peaces of gum faded from old age, some peach stones partly wittled into baskets, a wissle made out of a willow stick, and a ten-cent baseball given to me once by a big boy lopsided.

Many of the things we found are not to be used in a school though they are part of a boy's ejication, but a teecher does not always know that when she takes them away in schoolhours and locks them in her desk and not always gives them back to you.

A teecher has the power to take things away from you but she has no rite to keep them; but she has mite makes rite, which doesn't even if she thinks it does.

We took the things out of our desk so we could get our books in, which are more importunt but not as valyubul to us. We do not know how valyubul schoolbooks are till we grow old and forget them.

It is an offle thing to forget our schoolbooks and fill a popper's grave.

We also found in our desks a lot of notes all rolled up in little balls which we passed back and forth at difrunt times and got from gurls. Most of the gurls' notes you can tell from being about love some way or anuther.

A note or a candy hart with sweet words on it is about the only way a boy has to make love until his bashful days are over.

It takes a lot of curridge sometimes to pass a sweet note or a candy hart with a loving messidge on it to a gurl you don't know how will take it.

Henry Begg told me a gurl sent him a candy hart with a sweet messidge on it once and he put it in his mouth to hide it and swallered it whole and nearly changed his whole life.

When we got the notes home out of the dinner-pales we smoothed them all out back of the barn on a bored and read them over again with the wrinkles out as well as we could get them.

Some of them were a year old and we both laughed; how difrunt things are now!

A year makes a lot of difrunce how what you rite looks to you. If we would wait a year we would not rite a great many things.

Henry and me coppied a good many of the notes before we threw them away and laughed at many a one for the sake of old times back of the barn after we got the wrinkles out of it.

Here are some of them now and then explaned a little:

If she won't excuse you at three oclock I got some sope to froth at the mouth with. Let's try it.

(Not good suxess with.)

Gimme your apple-corpse to put in Skinny Graham's inkwell when he goes out for a drink.

(Skinny was the best skollur.)

Got a blotter? I spilt ink on my jogafy and it's running all over the United States.

(Sevrel like this. Good sampul of quite a number.)

What did Washington die of in the second part of the ninth question where they bled him.

(Sampul of examinashun-day note.)

I ansurd the seventh question this way: When Captin John Smith was bound by the savvidges Pockahuntus rushed up and said, Why don't you speak for yourself, John? and he was released by Henry W. Longfellow. Is that the way you got it?

(Sampul of hisstery examination note.)

Bill Sims smoked half a sigguret last nite on the way home and is going to smoke the uther half on the way home from school through his nose this afternoon.

(Expeld from school afterward for smoking on the school grounds up a tree through his nose.)

Weren't They Delicious?

Educator Wafers buttered, as you would butter bread.

Of course you've tried them.

But I bake another **Educator Cracker** which I'm sure you'll enjoy just as much. It has that rich, sweet, nut-like flavor peculiar to all

EDUCATOR CRACKERS

The Cracker of Character and Economy

It is called the **Toasterette**—already buttered—with just a touch of salt and toasted to a delicate brown. Table butter, too, and table salt—with the whole wheat flour freshly ground by real old-fashioned mill stones.

And each day's baking I personally sample to make sure that everything is just right. That's why **Educator Toasterettes** are so unique, so delightfully different from any other cracker. You taste them once yourself.

Get them at your grocer's. Look for the name EDUCATOR. If he cannot supply you, send me a postal. Anyway, send 10 cts. in stamps for large tin (do not please mention your grocer's name.

Johnston's
MILWAUKEE

Who was Julus Cæsar and what did he die of and how long ago was B. C.?

(Note on hisstery examinasbun day.)

Henry Owens caught a two-pound sucker rite about fifty feet above the mildam Wenslay.

What bounds Vennazweela on the south and east?

(Sampul of jogafy examinashun note.)

Look at the boyle on teecher's nose.

Ben Wilson hid a big watermellun in the mangur of their barn and the cow et it, so there won't be a meeting of the Rangers tonite.

(Sampul of many notes about seacrut order.)

Don't rite that you love me on a note. Somebody mite see it besides us.

(Note from a gurl in ansur to one.)

Ime going to stay in recess and look in the duckshunary for Amy Jones.

(Early note when in love.)

Could you see the patch in my pants when I was up to the bored just now? I hurd some gurls snickering and I wundered if it was me.

Gimme your grammer under the seat. Mine's got ink on the verbs and I can't study them.

(Sevrel like this.)

I pinned a peace of red flannel on Skinny Graham's coattale. Watch him when he gets up to the bored the next time in rithmetick.

(The same Skinny—the good skollur.)

I got a vaxination scar loose to show you. Ast me at recess.

Look at the back of Tommy Briggs' neck. I put ink on and he doesn't know it.

(Also a good skollur.)

If she calls me up to the bored for the seventh example pertend to faint or something so I can run for some water and get out of it.

(Sometimes it worked.)

I got a tode in my pocket to put on Amy Jones' desk. Watch her in about a minute.

(Note after love turned to hate.)

I got some snuff if you want to sneeze so you can ast to go out for a while.

(Fare suxsess sometimes.)

Ime done with the Red Ranger story if you want to read it inside of your jogafy.

(Sevrel of these.)

Ast to go out for a drink and Ile have a faint spell and meet you outside.

(Good if not too often.)

What did you get for the fourth example about the five geese and the two turkeys which the old women sold partly drest?

(Rithmetick sampul.)

Did you rite the ansurs to all the rithmetick lesson on your shurtsleave? I forgot some of it on mine. Pass me what you rote on your sleave.

Was it Abrahm Lincoln or Columbus that split rales for his bored?

(Histery sampul again.)

What was the names of Columbus's uther ships that discovered America besides the Shem and Ham? It sounds like Jaffa.

(Ditto histery.)

I was only sixty in deportment on my report card, but I managed to make it ninety on the road home by scratching a little.

(Never found out.)

It ain't gum; it's tar out of a barrel on the way to school. But it chews splendid, but a little hot in your mouth. (Ansur to gum note.)

Do they know yet who rubbed the lard on the bored? Drop your slate if it was Billy Edwards.

I hurd Amy Jones was going to the party with that warty new boy in the A class in the second seat with the striped necktie and the blue shirt on, but it's something you could hardly see unless you beleaved it, isn't it?

They shot at us with salt and pepper last nite, but we're going to try again tonite if the moon doesn't come up. (Watermellun note again.)

Did you see Skinny Graham go for a drink just now? I put some red pepper inside of his desk where he keeps his gum when he isn't chewing it.

(Skinny the good skollur again.)

A good many good notes we et up at difrunt times when teecher was watching us, but we manneged to save some pretty good ones.

Skinny Graham the good skollur got the brane fever afterward, but not from us.

Bill Sims got expelled for smoking siggurets on the way to school through his nose.

Billy Price's father raised a pig every little while and they moved out in the country with Billy so they would have a chance to butcher him.

The rest of us are all well.

Sharp Tools cut the work in Half

They do *better* and *quicker* work—not only in the shop, but in the home, on the farm—anywhere and everywhere that edged tools are used.

PIKE SHARPENING STONES

The only line that includes every sharpening substance—natural or artificial—each the best for some sharpening purpose.

For both shop and home the most useful all-around sharpening stone is the PIKE INDIA Oil Stone. It cuts very fast, gives a smooth, keen edge, and stands up under years of severest service.

The PIKE INDIA is the only sharpening stone in existence—natural or artificial—with crystals so hard, so sharp, and so tough that it rapidly cuts the hardest tool steel, yet *holds its shape* almost indefinitely *without grooving or wearing down*—and that when properly oiled *positively will not glaze.*

An Electric Furnace Product

Made of Alundum'—wonderful artificial crystals produced by the immeasurable heat of great electric furnaces and unsurpassed in hardness and sharpness save by the diamond.

Made in all shapes and sizes—and in coarse, medium and fine grits, which are always *absolutely uniform* in each and every stone.

Among other Pike abrasives are the famous Pike Arkansas, Pike Washita and Pike Crystolon Stones.

Sold by dealers everywhere or sent direct

Every Pike Stone Guaranteed

Your dealer is authorized to replace any Pike Stone that proves defective.

Send for "How to Sharpen"

Few men know how to quickly put a keen edge on cutting tools. This book gives you the condensed experience of a host of experts. It shows how to select and care for a stone to get the very best results—tells why *no one* abrasive substance will do for *all* requirements, and why PIKE INDIA is the best for general purposes. Send for this book today.

THE LIGHTED WAY

(Continued from Page 21)

"I am going to talk to Miss Lalonde," she said. "After we have had an opportunity of witnessing your skill, Mr. Chetwode, we may trust ourselves another time. *Au revoir!*"

Fenella and Ruth watched the punt glide down the stream, Sabatini stretched between the red cushions with a cigarette in his mouth, Arnold handling his pole like a skilled waterman.

"You like my brother?" Fenella asked.

The girl looked at her gratefully.

"I think that he is the most charming person I ever knew in my life," she declared.

XXII

SABATINI'S attitude of indolence lasted only until they had turned from the waterway into the main river. Then he sat up and pointed a little way down the stream.

"Can you cross over somewhere there?" he asked.

Arnold nodded and punted across toward the opposite bank.

"Get in among the rushes," Sabatini directed. "Now listen to me."

Arnold came and sat down.

"You don't mean to tire me," he remarked.

Sabatini smiled.

"Do you seriously think that I asked you to bring me on the river for the pleasure of watching your prowess with that pole, my friend?" he asked. "Not at all. I am going to ask you to do me a service."

Arnold was suddenly conscious that Sabatini, for the first time since he had known him, was in earnest. The lines of his marble-white face seemed to have grown tenser and firmer; his manner was the manner of a man who meets a crisis.

"Turn your head and look inland," he said. "You follow the lane there?"

Arnold nodded.

"Quite well," he admitted.

"At the corner," Sabatini continued, "just out of sight behind that tall hedge, is my motor car. I want you to land and make your way there. My chauffeur has his instructions. He will take you to a village some eight miles up the river, a village called Heslop Wood. There is a boat-builder's yard at the end of the main street. You will hire a boat and row up the river. About three hundred yards up on the left-hand side is an old, dismantled-looking houseboat. I want you to board it and search it thoroughly."

Sabatini paused and Arnold looked at him, perplexed.

"Search it!" he exclaimed. "But for whom? For what?"

"It is my belief," Sabatini went on, "that Starling is hiding there. If he is I want you to bring him to me by any means that occurs to you. I had sooner he were dead, but that is too much to ask you. I want him brought in the motor car to that point in the lane there. Then, if you succeed, you will bring him down here and your mission is ended. Will you undertake it?"

Arnold never hesitated for a moment. He was only too thankful to be able to reply in the affirmative. He put on his coat and propelled the punt a little farther into the rushes.

"I'll do my best," he asserted.

Sabatini said never a word, but his silence seemed somehow eloquent. Arnold sprang on to the bank and turned once round.

"If he is there I'll bring him," he promised.

Sabatini waved his hand and Arnold sped across the meadow. He found the motor car waiting behind the hedge and he had scarcely stepped in before they were off. They swung at a great speed along the narrow lanes, through two villages, and finally came to a standstill at the end of a long, narrow street. Arnold alighted and found the boat-builder's yard, with rows of boats for hire, a short distance along the front. He chose one and paddled off, glancing at his watch as he did so. It was a quarter of an hour since he had left.

The river at this spot was broad, but it narrowed suddenly on rounding a bend about a hundred yards away. The house-boat was in sight now, moored close to a tiny island. Arnold pulled up alongside and paused to reconnoiter. To all appearance it was a derelict. There were no awnings, no carpets, no baskets of flowers. The outside was grievously in need of paint. It had an entirely uninhabited and desolate appearance. Arnold beached his boat upon the little island and swung himself up on to the deck. There was still no sign of any human occupancy. He descended into the saloon. The furniture there was mildewed and musty. Rain had come in through an open window and the appearance of the little apartment was depressing in the extreme. Stooping low, he next examined the four sleeping apartments. There was no bedding in any one of them, nor any sign of their having been recently occupied. He passed on into the kitchen, with the same result. It seemed as though his journey had been in vain. He made his way back again on deck and descended the stairs leading to the fore part of the boat. There were a couple of servants' rooms, and though there was still no bedding one of the bunks gave him the idea that some one had been lying there recently. He looked around him and sniffed—there was a distinct smell of tobacco smoke. He stepped lightly back into the passageway. There was nothing to be heard and no material indication of any one's presence, yet he had the uncomfortable feeling that some one was watching him—some one only a few feet away. He waited for almost a minute. Nothing happened, yet his sense of apprehension grew deeper. For the first time he associated the idea of danger with his enterprise.

"Is any one about here?" he asked.

There was no reply. He tried another door that led into a sort of pantry, without result. The last one was fastened on the inside.

"Is Mr. Starling in there!" Arnold demanded.

There was still no reply, yet it was certain now that the end of his search was at hand. Distinctly he could hear the noise of a man breathing.

"Will you tell me if you are there, Mr. Starling?" Arnold again demanded. "I have a message for you."

Starling, if indeed he were there, seemed now to be even holding his breath. Arnold took one step back and charged the door. It went crashing in, and almost at once there was a loud report. The cabin—it was little more—was filled with smoke, and Arnold heard distinctly the hiss of a bullet buried in the woodwork over his shoulder. He caught the revolver from the shaking fingers of the man, who was crouching on the ground, and slipped it into his pocket. With his other hand he held his prisoner powerless.

"What the devil do you mean by this!" he cried fiercely.

Starling—for it was Starling—seemed to have no words. Arnold dragged him out into the light and for a moment found it hard to recognize the man. He had lost over a stone in weight. His cheeks were hollow and his eyes had in them the hunted look of some wild animal.

"What do you want with me?" he muttered. "Can't you see I am hiding from you? What business is it of yours to interfere?"

Arnold looked at him from head to foot. The man was shaking all over; the cowardly fear was upon him.

"What on earth are you in this state for?" he exclaimed. "Whom are you hiding from? You have been set free. It is the Rosario business still? You have been set free once."

Starling moistened his lips rapidly.

"They set me free," he muttered. "Because one of their witnesses failed. They had no case; they wouldn't bring me up. But I am still under surveillance. The sergeant as good as told me that they'll have me before long."

"Well, at present I've got you," Arnold said coolly. "Have you any luggage?"

"No! Why?"

"Because you are coming along with me."

"Where?"

"I am taking you to Count Sabatini," Arnold informed him. "He is at his villa about ten miles down the river."

Starling flopped upon his knees.

"Oh! don't take me to him!" he begged.

"Why not?"

"He is a devil, that man," Starling whispered confidentially. "He would blow out my brains or yours or his own without a second's hesitation if it suited him. He hasn't any nerves or any fear or any pity. He will laugh at me—he won't understand—he is so reckless!"

Digitized by Google

"Well, we're going to him anyhow," Arnold said. "I don't see how you can be any worse off than hiding in this beastly place. Upstairs and into the boat, please."

Starling struggled weakly to get away, but he was like a child in Arnold's hands.

"You had much better come quietly," the latter advised. "You'll have to come, anyway, and if you're really afraid of being arrested again I should think the count would be the best man to aid your escape."

"But he won't let me escape," Starling protested. "He doesn't understand danger. I am not made like him. My nerve has gone. I came into this too late in life."

"Jump!" Arnold ordered, linking his arm into his companion's.

They landed somehow upon the island. Arnold pointed to the boat.

"Please be sensible," he begged—"now at any rate. There may be people passing at any moment."

"I was safe in there," Starling mumbled. "Why the devil couldn't you have left me alone!"

Arnold bent over his oars.

"Safe!" he repeated contemptuously. "You were doing the one thing that a guilty man would do. People would have known before long that you were there, obviously hiding. I think that Count Sabatini will propose something very much better."

"Perhaps so," Starling muttered. "Perhaps he will help me to get away."

They reached the village and Arnold paid for the hire of his boat. Then he hurried Starling into the car and a moment or two later they were off.

"Is it far away?" Starling nervously asked.

"Ten minutes' ride. Sabatini has arranged it all very well. We get out, cross a meadow and find him waiting for us in the punt."

"You won't leave me alone with him on the river?" Starling begged.

"No, I shall be there," Arnold promised.

"There's nothing would suit him so well," Starling continued, "as to see me down at the bottom of the Thames with a stone round my neck. I tell you I'm frightened of him. If I can get out of this mess," he went on, "I'm off back to New York. Any job there is better than this. What are we stopping for? Say, what's wrong now?"

"It's all right," Arnold answered. "Step out. We cross this meadow on foot. When we reach the other end we shall find Sabatini. Come along."

They turned toward the river, Starling muttering now and then to himself. In a few minutes they came in sight of the punt. Sabatini was still there, with his head reclining among the cushions. He looked up and waved his hand.

"A record, my young friend!" he exclaimed. "I congratulate you indeed. You have been gone exactly fifty-five minutes, and I gave you an hour and a half at the least. Our friend Starling was glad to see you, I hope?"

"He showed his pleasure," Arnold remarked dryly, "in a most original manner. However, here he is. Shall I take you across now?"

"If you please," Sabatini agreed.

He sat up and looked at Starling. Starling hung his head and shook like a guilty schoolboy.

"It was so foolish of you," Sabatini murmured; "but we'll talk of that presently. They were civil to you at the police court, eh?"

"I was never charged," Starling replied. "They couldn't get their evidence together."

"Still they asked you questions, no doubt?" Sabatini continued.

"I told them nothing," Starling replied. "On my soul and honor, I told them nothing!"

"It was very wise of you," Sabatini said. "It might have led to disappointments—to trouble of many sorts. So you told them nothing, eh? That is excellent. After we have landed I must hand you over to my valet. Then we will have a little talk."

They were in the backwater now, drifting on toward the lawn. Starling shrank back at the sight of the two women.

"I can't face it," he muttered. "I tell you I have lost my nerve."

"You have nothing to fear," Sabatini said quietly. "There is no one here likely to do you or wish you any harm."

Fenella came down to the steps to meet them.

"So our prodigal has returned," she remarked, smiling at Starling.

"We have rescued Mr. Starling from a solitary picnic upon his houseboat," Sabatini explained suavely. "We cannot have our friends cultivating misanthropy."

Mr. Weatherley, who had returned from the boat-builder's, half rose from his chair and sat down again, frowning. He watched the two men cross the lawn toward the house. Then he turned to Ruth and shook his head.

"I have a great regard for Count Sabatini," he declared, "a great regard; but there are some of his friends—very many of them, in fact—whose presence here I could dispense with. That man is one of them. Do you know where he was a few nights ago, Miss Lalonde?"

She shook her head.

"In prison," Mr. Weatherley said impressively—"arrested on a serious charge."

Her eyes asked him a question. He stooped toward her and lowered his voice.

"Murder," he whispered—"the murder of Mr. Rosario!"

XXIII

THROUGH the winding lanes, between the tall hedges, honeysuckle-wreathed and starred with wild roses, out on to the broad main road Sabatini's great car sped noiselessly on its way back to London. It seemed to pass in a few moments from the cool, perfumed air of the country into the hot, dry atmosphere of the London suburbs. Almost before the occupants realized that they were on their homeward way the fiery glow of the city was staining the clouds above their heads. Arnold leaned a little forward, watching, as the car raced on to its goal. This ride through the darkness seemed to supply the last thrill of excitement to their wonderful day. He glanced toward Ruth, who lay back among the cushions by his side as though sleeping.

"You are tired?"

"Yes," she answered simply.

They were in the region now of electric cars—wonderful vehicles ablaze with light flashing toward them every few minutes, laden with Sunday evening pleasure seekers. Their automobile, however, perfectly controlled by Sabatini's Italian chauffeur, swung from one side of the road to the other and held on its way with scarcely abated speed.

"You have enjoyed the day?" he asked.

She opened her eyes and looked at him. He saw the shadows and wondered.

"Of course," she whispered.

His momentary wonder at her reticence passed. Again he was leaning a little forward, looking up the broad thoroughfare with its double row of lights, its interminable rows of houses growing in importance as they rushed on.

"It is we ourselves who pass now along the lighted way!" he exclaimed, holding her arm for a moment. "It is an enchanted journey, ours, Ruth."

She laughed bitterly.

"An enchanted journey that leads to two very dreary attic rooms on the sixth floor of a poverty-stricken house," she reminded him. "It leads back to the smoke-stained city, to the four walls within which one dreams empty dreams."

"It isn't so bad as that," he protested.

Her lips trembled for a moment; she half closed her eyes. An impulse of pain passed like a spasm across her tired features.

"It is different for you," she murmured. "Every day you escape. For me there is no escape."

He felt a momentary twinge of selfishness. Yet, after all, the great truths were incontrovertible. He could lighten her lot but little. There was very little of himself that he could give her—of his youth, his strength, his vigorous hold upon life. He took her hand and held it tightly. Yet it was hard to know what to say to her. It was the inevitable tragedy, this, of their sexes and her infirmity. He realized in those few minutes something of how she was feeling—the one who is left upon the lonely island while the other is borne homeward into the sunshine and tumult of life. There was little, indeed, that he could say. It was not the hour, this, for protestation.

They passed along Piccadilly, across Leicester Square and into the Strand. The wayfarers in the streets, of whom there were still plenty, seemed to be lingering about in sheer joy of the cooler night after the unexpected heat of the day, the women in light clothes, the men with coats thrown open and carrying their hats. The car passed down the Strand and into Adam Street, coming at last to a standstill before

Good Taste in a Motor Car

STEPPING into the Alco closed car is like stepping into the room of a fine home. One finds here good taste, a harmony of color, an excellence of fabric.

For instance, the rug on the floor, though of coarser weave on account of the wear, has superior quality. It is the best carpeting obtainable for the use intended.

Good taste is apparent in the color scheme, the dominating French gray, the darker and lighter shades, the design woven into the fabric, the stretch of plain color across the ceiling, relieved by a narrow line effect.

One notes also the absence of little corners into which dust might collect. It is a sanitary interior. It is simpler than interiors of previous years, but in much better taste. The simple effect is stronger. The highly ornamental is passé.

Harmony is evident in the silk curtains, the soft seat upholstery, the card and toilet cases, even in the silk woven speaking tubes.

It is the work of an artist. A good treat to the appreciative eye—this study in interior beauty.

"POMPEIIAN BRONZE"
Permanent Screen Cloth

Reg. U. S. Pat. Office

LET ME TELL YOU SOMETHING ABOUT SCREEN CLOTH

"POMPEIIAN BRONZE," woven from fine bronze wire, is practically indestructible—never requires painting or renewing. It is a permanent investment and the most effective defense against flies and insects.

Because of its resistance to salt air and climatic influences "POMPEIIAN BRONZE" is the best screen cloth for cottages at the seashore, for city and suburban homes. Use it for anything you want to screen, and the initial cost, a little more than that of ordinary kinds, is the last cost.

Buy only "POMPEIIAN BRONZE," always identified by the removable red string in the selvage. If your regular dealer cannot supply it, write us direct. Send for booklet.

the tall, gloomy house at the corner of the terrace. Arnold stepped out on to the pavement and helped his companion to alight. The chauffeur lifted his hat and the car glided at once away. As they stood there for a moment upon the pavement and Arnold pushed open the heavy, shabby door, it seemed indeed as though the whole day might have been a dream.

Ruth moved wearily along the broken, tessellated pavement and paused for a moment before the first flight of stairs. Arnold, taking her stick from her, caught her up in his arms. Her fingers closed round his neck and she gave a little sigh of relief.

"Will you really carry me up all the way, Arnie?" she whispered. "I am so tired tonight. You are sure that you can manage it?"

He laughed gayly.

"I have done it many times before," he reminded her. "Tonight I feel as strong as a dozen men."

They climbed the flights of stone steps one by one. Curiously enough, notwithstanding the strength of which he had justly boasted, as they neared the top of the house he felt his breath coming short and his heart beating faster, as though some unusual strain were upon him. She had tightened her grasp upon his neck. She seemed, somehow, to have come closer to him, yet to hang like a dead weight in his arms. Her cheek was touching his. Once toward the end he looked into her face and the fire of her eyes startled him.

"You are not really tired," he muttered.

"I am resting like this," she whispered.

They stood at last upon the top landing. He set her down with a little thrill, assailed by a medley of sensations the significance of which confused him. She seemed still to cling to him and she pointed to his door.

"For five minutes," she begged, "let us sit in our chairs and look down at the river. Tonight it is too hot to sleep."

Even while he opened his door he hesitated.

"What about Isaac?" he asked.

She shivered and looked over her shoulder. They were in Arnold's room now and she closed the door. On the threshold she stood quite still for a moment, as though listening. There was something in her face that alarmed him.

"Do you know, I believe that I am afraid to go back," she said. "Isaac has been stranger than ever these last few days. All the time he is locked up in his room, and he shows himself only at night."

Arnold dragged her chair up to the window and installed her comfortably. He himself was thinking of Isaac's face under the gaslight as he had seen him stepping away from the taxicab.

"Isaac was always queer," he reminded her reassuringly.

She drew him down to her side.

"There has been a difference these last few days," she whispered. "I am afraid—I am terribly afraid that he has done something really wrong."

Arnold felt a little shiver of fear himself.

"You must remember," he said quietly, "that after all Isaac is, in a measure, outside your life. No one can influence him for either good or evil. He is not like other men. He must go his own way, and I, too, am afraid that it may be a troublous one. He chose it for himself and neither you nor I can help. I wouldn't think about him at all, dear, if you can avoid it. And for yourself, remember always that you have another protector."

The faintest of smiles parted her lips. In the moonlight, which was already stealing into the room through the bare, uncurtained window, her face seemed like a piece of beautiful marble statuary, ghostly, yet in a single moment exquisitely human.

"I have no claim upon you, Arnold," she reminded him, "and I think that soon you will pass out of my life. It is only natural. You must go on, I must remain. And that is the end of it," she added, with a little quiver of the lips. "Now let us finish talking about ourselves. I want to talk about your new friends."

"Tell me what you really think of them?" he begged. "Count Sabatini has been so kind to me that if I try to think about him at all I am already prejudiced."

"I think," she replied slowly, "that Count Sabatini is the strangest man I ever met. Do you remember when he stood and looked down upon us? I felt—but it was so foolish!"

"You felt what?" he persisted.

She shook her head.

"I cannot tell—as though we were not strangers at all. I suppose it is what they call mesmerism. He had that soft, delightful way of speaking and that gentle mannerism. There was nothing abrupt or new about him. He seemed, somehow, to become part of the life of any one in whom he chose to interest himself in the slightest. And he talked so delightfully, Arnold. I cannot tell you how kind he was to me."

"It's a clear case of hero-worship," Arnold declared. "You're going to be as bad as I have been."

"And yet," she said slowly, "it is his sister of whom I think all the time. Penella she calls herself, doesn't she?"

"You like her too?" Arnold asked eagerly.

"I hate her!" was the low, fierce reply.

Arnold drew a little away.

"You can't mean it!" he exclaimed. "You can't really mean that you don't like her?"

Ruth clutched at his arm as though jealous of his instinctive disappointment.

"I know that it's brutally ungracious," she declared—"it's a sort of madness even. But I hate her because she is the most beautiful thing I have ever seen in life. I hate her for that and I hate her for her strength. Did you see her come across the lawn to us tonight, Arnold?"

He nodded enthusiastically.

"You mean in that smoke-colored muslin dress?"

"She has no right to wear clothes like that!" Ruth cried. "She does it so that men may see how beautiful she is. I—well, I hate her!"

There was a silence. Then Ruth rose slowly to her feet. Her tone was suddenly altered, her eyes pleaded with his.

"Don't take any notice of me tonight, Arnold," she implored. "It has been such a wonderful day and I am not used to so much excitement. I am afraid that I am a little hysterical. Do be kind and help me across to my room."

"Is there any hurry?" he asked. "It hasn't struck twelve yet."

"I want to go, please," she begged. "I shall say foolish things if I stay here much longer, and I don't want to. Let me go."

He obeyed her without further question. When they had reached her door he would have left her, but she still clutched his arm.

"I am foolish," she whispered—"foolish and wicked tonight. And besides, I am afraid. It is all because I am overtired. Come in with me for one moment, please, and let me be sure that Isaac is all right."

"Of course I will come," he answered. "Isaac can't be angry with me tonight, anyhow, for my clothes are old and dusty enough."

He opened the door and they passed across the threshold. Then they both stopped short and Ruth gave a little start. The room was lit with several candles. There was no sign of Isaac, but a middle-aged man with black beard and mustache had risen to his feet at their entrance. He glanced at Ruth with keen interest, at Arnold with a momentary curiosity.

"What are you doing here?" Ruth demanded. "What right have you in this room?"

The man did not answer her question.

"I shall be glad," he said, "if you will come in and shut the door. If you are Miss Ruth Lalonde I have a few questions to ask you."

EASY MONEY

(Continued from Page 15)

d of don't go when it comes to tame inks on ships. What luck, son?"

'All set. Come on; I'll play you a game casino—and sweeps don't go."

. . . . . .

If you should care to go down into the ney belt, stand on the most prominent ner in that inflated district and whisper name of Peter K. Harding into the nosphere so that at least seven men could ar it, you might be surprised to find four n grab their trousers pockets and flee for nearest doorway, two more turn pale d gasp, and the seventh, who would be a ancial reporter, follow you for three blocks. Peter K. has offices where he can keep an on the Sub-Treasury and at the same watch the Assay Office next door. His also takes in the Stock Exchange, and combination is painfully aware of the ionage; for, to tell the truth, it is a orious fact that it will bear some watch- . Many men go in to see Peter K. Some by the guard and wish they hadn't; ers fail and envy the fortunate ones who failed, though they didn't know it. Not per cent of Peter's visitors are satisfied h what they get, but they all keep on ing just the same.

Two weeks after Mr. Simpson's plans been laid against the pocketbook and ase of mind of Mr. Harding, Mr. James rsythe Kingsley drove up to the offices the astute financier in a purple motor car was so absolutely correct in its ap- intments that it made the statue of orge Washington look guilty and self- nscious. Even his mother would have led to recognize Jimmie in the painfully liberate young Englishman who alighted m the car and lingered on the pavement affix his monocle more firmly in his eye. ide, to the clerk who inquired his wishes, merely said:

'Tell Mr. Harding that—aw—Viscount rlingham—aw—wishes to see him."

'Very good, sir," said the obsequious rk, and vanished behind the green baize r. He returned in a moment.

'Mr. Harding will see you. This way, ou please." And he ushered Jimmie to magic door and turned him over to the rd.

To be perfectly truthful, Jimmie was a le startled at getting to his man so easily he had quite expected to have to hec- his way through the barriers. However, followed languidly. Within the sacred incts of the great man's room, he strolled vard and dropped into a chair near the ed desk at which Peter K. wrote with- looking up. He waited a moment, then ped upon the polished rosewood with cane.

I say, you know!" he remarked, and r K. leaped in his chair.

What in blazes did you do that for?" manded fiercely, but Kingsley merely d him with his monocle and stared.

They brought you up awfully badly, 't they? My word, yes!" he remarked, Peter K. choked with a savage gasp. n he glared the glare that had turned r financiers into icicles and had been n to galvanize even office boys into entary activity.

What do you want here? Hey?" he anded fiercely.

mmie stared calmly at him and leaned his upon the head of his stick.

Money," he said finally.

Money?" echoed Peter K., doubting had heard aright. The word seemed thing strange.

That's it, old chap," smiled Jimmie. er see any? Eh, what?"

ter K. began to boil over.

Why, you—you ——" he began, when ie cut in:

Hurlingham's the name, my good sir. unt Hurlingham, of Brewster Hall. her to Lord Markdale, you know, and at sort of thing. Met your daughter Charmin' gell. Reminds me of you— Markdale's quite smitten. My word,

ter Harding stared at his visitor for al long seconds. Then he breathed a sigh that seemed like the exhaust of an harged siphon.

Well, I'll be ——" He hesitated, and sley filled in for him:

llowed—eh? Don't hurry, old chap." ord Markdale—eh?" said Harding at "And you want money—eh?"

mmie tapped him on the arm.

"That's two 'eh's' almost together. Mustn't do that, you know. Rotten bad form!"

Peter K. regarded him astoundedly.

"Whose money?" he finally asked in a querulous tone. "Whose—eh?"

"Yours," answered Jimmie promptly.

The financier watched him carefully for some moments and finally broke into a laugh, at which his secretary, seated at the desk in the corner of the room, shuddered. He believed his chief was breaking up and this was the first hint of weakness.

"They're all after my money," said Peter K.; "but they are all afraid to tell me so. By gad, yes! Markdale's brother—eh? Didn't know he had a brother—much less that he brought such a thing with him. Where is he?" he demanded suddenly, with the precision of a shot, just as if he expected to bring his man down at the first barrel.

"Shootin'," replied Jimmie instantly. "Next county. Rocky Mountains, you call 'em, I b'lieve. What?"

The secretary leaped from his chair in alarm, for Harding had first thrown his head back and then forward in the first hearty laugh he had enjoyed in years. It was not particularly successful from the standpoint of the listener, for it grated and creaked with much disuse—groaned on the curves and squeaked dismally as it went over the switches; but it was a laugh, and it caused the guard outside to project a worried face into the room. Judging from the speed with which he withdrew it, he must have been inexpressibly shocked, for laughs were uncommon in that corner of the world.

"'Rockies! Next county!' Oh-oh-oh!" wailed Harding, rocking back and forth in his swing chair, while Jimmie watched him stolidly over the top of his stick. Finally the financier shut his mouth like a steel trap.

"Come now. What can I do for you?" he demanded.

Kingsley regarded him with pleasant vacuity.

"Come somewhere and have a cup of tea," he proposed genially. "It's about four."

For a moment Harding turned a brick-red, tinged here and there with purple—but he failed to explode. It was a long day since any one had invited him to tea. The young man evidently meant it, he concluded, and the color faded as he condescended to explain.

"My time's worth about ten thousand an hour today, my young friend," he said. "I'm afraid the tea would be a little too expensive."

Jimmie looked at him solemnly and nodded his head.

"All right," he agreed. "Bit stiff—eh? Now, look here. Old Markdale's beastly hard up. I'm worse. Younger brother, an' all that rot, don't you know? Nothin' but what Markie allows me. Now he's tight; and when he's tight I'm stony. He's got to raise the wind, you see. He's ——" Mr. Kingsley looked over his shoulder at the secretary and then at Peter K. The latter took the hint.

"Chester, see if that cable has gone to Rio, will you? And you needn't hurry back."

Jimmie hitched his chair closer to the desk.

"You know the bally old Hall, of course," he went on. "Pictures—eh? What? You know. Some rippers too—what? All th' rest of the rummy heirlooms too. Well, Markie's brought three or four over with him."

Harding looked frankly puzzled.

"Heirlooms?"

"No—pictures."

"They must have cost him a neat sum to get through the customs."

Kingsley laughed.

"Not a copper—fact is, old chap, they're on the Minerva. Got 'em on the bally old yacht, right and tight-O."

"On the Minerva?"

"Right-O, old top. Stowed away in Markdale's quarters. Perfectly safe."

"Well?" queried the financier after a pause, during which Jimmie bored him through with the monocle and thereby made him as nervous as a cat.

"Buy 'em!" observed that young man.

Without a word Harding arose and walked to the door. He listened there a moment, then returned.

The UNDERFEED
CUTS COAL BILLS ½ to ⅔
and Insures Clean Even Summer Heat in Zero Weather

WHEN winter's blasts are fiercest, the UNDERFEED best proves its superiority over other systems in producing clean, EVEN heat at LEAST cost. If the hole in your coal pile is UNREASONABLY large and you are not enjoying even-heat-comfort at all times, you should interest yourself at once in the comfort-insuring, money-saving Underfeed. Send for the Underfeed Booklet and learn WHY your coal bill will be reduced ONE-HALF to TWO-THIRDS by the installation of

The Peck-Williamson Underfeed
HEATING SYSTEMS WARM AIR FURNACES-BOILERS STEAM-HOT WATER

The *principle* of Underfeed coal-burning is *right*. Coal is fed from below. *All fire is on top*. Smoke and gases, wasted in other heaters, must pass up through the fire in the Underfeed, are consumed and converted into heat. *Soft coal slack*, which would smother fire in other furnaces and boilers, and pea and buckwheat sizes of hard and soft coal yield as much heat in the Underfeed as *highest* priced coal in furnaces and boilers of the ordinary type. The few ashes are removed by shaking the grate bar as in other furnaces and boilers. The Underfeed System is adapted for ALL buildings—large or small—residences, offices, churches, halls, etc.

Frank C. Krueger, of Kalamazoo, Mich.—one of Jack Frost's favorite retreats—writes: "I am heating a ten-room house and every room is kept warm during the whole heating season. I burn West Virginia slack without smoke or soot and my coal bill has never been over $32 a year. The Underfeed Furnace does more than you claim it will do and is the best investment I can find."

Many fac-simile letters of appreciation like the above and our Underfeed Furnace Booklet or Boiler Catalog will be sent FREE. Plans of our Engineering Corps also are FREE. Write today—using coupon—giving name of local dealer with whom you prefer to deal.

Electric Soldering
Manufacturers and shops of all kinds—*write at once* for description of the wonderful VULCAN method of electrical soldering. Your workmen do more and better work and do it faster—at a much lower cost to you. Full information given.
VULCAN ELECTRIC HEATING CO.
Dept. A-3 Buffalo, N. Y.

Shreveport, Louisiana
has unusual openings for factories and jobbing houses in certain lines. Big opportunities exist for factories making wood or iron products. Shreveport dominates a big trade territory in rich farming district. Cheapest fuels in Southwest. Low freight rates on eight railroads; river navigation to Gulf. Farm lands cheap. Write at once for definite, tangible data about these opportunities. It will pay you. Address
Chamber of Commerce, Box 35, Shreveport, Louisiana

THIS IS NO ORDINARY FLAVOR
But something very different — very distinctive, so much so that we have called it
MAPLEINE
(*The Flavor de Luxe*)
To distinguish it from all other flavors.

It contains no maple sugar nor sap, yet some pronounce it similar to maple while others think it is better.

Try it for yourself—you be the judge. Use it in place of lemon or vanilla for custards, ices, icings and fillings for cakes, candies, puddings, and above all for flavoring white sugar syrup.

Grocers sell Mapleine 35c for 2-oz. bottle (Canada 50c). If yours does not, write Dept. E1

The 10 and 11 Models
of the
Remington
Typewriter
are Visible Writers—and more

These new Remington models supply visible writing ***under new conditions***—without loss of efficiency.

To realize what this means—the combination of Remington strength with visible writing—note the type bars. Note them specially. See how they are hung in a double row. This gives room for the broad pivot bearings. Note the bar itself, the strong, rigid bar, the Remington bar you have always known, made from a steel drop forging. Compare this bar with the ordinary thin bar, stamped out of sheet steel, and you will understand one reason why the very name "Remington" stands for Strength and Reliability in a Typewriter.

Remington Typewriter Company
(Incorporated)
New York and Everywhere

Ford

IF YOU knew what Vanadium Steel really is, if you knew the great significance of the scientific heat-treatment we give to Vanadium Steel; its tremendous importance in motor car construction, you would not buy a motor car built with any other material.

FORD Model T cars are made of Vanadium Steel intelligently heat-treated by original Ford processes.

Immediate delivery.

Ford Model T Touring Car, 4 cylinders, 5 passengers, fully equipped, f. o. b. Detroit	$690
Ford Model T Torpedo, 4 cylinders, 2 passengers, fully equipped, f. o. b. Detroit	$590
Ford Model T Commercial Roadster, 4 cylinders, 3 passengers, removable rumble seat, fully equipped, f. o. b. Detroit	$590
Ford Model T Town Car, (Landaulet) 4 cylinders, 6 passengers, fully equipped, f. o. b. Detroit	$900
Ford Model T Delivery Car, capacity 750 pounds merchandise, fully equipped f. o. b. Detroit	$700

Write for booklet, "Ford Factory Facts," and read it before you buy any motor car. Address Department P.

Ford Motor Company
DETROIT

"Do you know what the duty is on works of art?" he asked.

"Haven't an idea, really; but I'll bet it's rotten high," replied the sham Viscount Hurlingham.

"Do you know what that duty would cost me?" went on Peter K.

"Not a bally red," replied Jimmie quickly. "Tell the bally customs chaps to go to the devil! I'll bring 'em ashore for you. Blow me if I won't."

Harding glanced obliquely at him.

"Smuggle 'em?" he inquired in a low tone, and Jimmie nodded over the top of the desk at him.

"Know what they'll give you if you're caught?" went on Peter.

"Don't care, as they won't catch me. Beggars aren't sharp enough!"

Peter K. considered carefully—and, considering, fell.

"When and where can I see them—the pictures?" he asked. "Aboard the yacht?"

Jimmie frowned laboriously and heavily.

"Not good enough," he announced. "You couldn't get aboard without a lot of blighters seein' you. They'd smell a mice—'pon my word, they would. No end sharp, some of those chaps. Tell you what—I'll bring 'em ashore in the launch. How's that, umpire?"

"Where? You know you can't cart pictures round the waterfront in a yacht's launch without causing talk."

"There's a boathouse sort of affair at Ninety-sixth Street. We're lyin' off there, you know. I'll fetch 'em—let's see—tomorrow night at ten. What d'ye say, old chap? And don't bring your motor, you know. Better have a bit of a walk by yourself. You wait for me—eh?"

"What are they—the pictures?"

"One Murillo, one Tintoretto, one Velasquez, and another Spanish chap. Remember, if I'm not sharp on the nail hang about a bit—there's a good fellow. I'll have a key to the bally place and I shan't keep the launch. Run alongside, lift out the bundle; off again with the boat down the river—and there you are—eh? Hawkins—that's my man, you know—he'll run the boat and pick me up later."

Peter K. Harding looked at the young man with an added respect, and laid a gnarled hand upon his shoulder.

"When you came in here I thought you were a fool," he said. "I take it back."

Jimmie stared at him with a troubled expression.

"I say, you know!" he protested. "Bit rough on me, don't you think? I've always been a dab at this sort of thing, you know. They had me booked for a berth in the diplomatic service. Chaps all say I've a way of doin' things. No end of schemes in here," and he tapped his forehead. "Had an idea I'd go into finance over here. Nothin' small though. My word, no!"

Peter K. smiled a little grimly.

"There's always an opening in," he said, "but it's mighty hard to find a way to get out again. Never mind. I'll see you tomorrow at ten."

There was a stiff and somewhat chilly breeze blowing along the riverfront the next night, and Peter Harding wished he had brought at least a light overcoat. However, he paced up and down the little dock in an effort to keep the chill off, and waited anxiously. Five minutes later a slender craft had swept up to the little wharf, the bogus Viscount Hurlingham had stepped out and lifted after him a bundle done in a tarpaulin.

"Away you go, Hawkins!" said Jimmie Kingsley, and the little craft shot off again into the night. He turned to Peter K. "Here you are, old chap! Give us a hand, will you?" Together they picked up the package and carried it to the door of the boathouse. Jimmie took a key from his pocket, slipped it into the padlock, and a moment later swung back the door. "In we go," he said, and then groped about. "Beggar said there was a lamp here on a shelf. Here we are." A moment later the light flared up.

The remaining details are so trite that they become almost inconsequential. Peter K. purchased the four pictures after a most cursory examination, but one fraught with seeming technicalities. Jimmie turned admiringly to him.

"My word, you are a nailer at this sort of thing, aren't you?" he observed. "Know 'em like a book—eh? Big man in one thing, big man in all—eh?"

Peter looked self-conscious.

"I have gone in for this pretty well," he confessed. "It's my pleasure. I apply the same common-sense to it I do to my business—that's all. Application will make a success in any line."

When the negotiations had been completed Harding had borrowed a fountain pen from Kingsley and had filled out his personal check for one hundred and seventy-five thousand dollars. Together they rewrapped the pictures and placed them outside the door, after which Kingsley walked up the embankment.

"Coast's clear," he said, and they carried the four works of art up the hill to the driveway, where they waited in the vestibule of an apartment house until a taxicab hove in sight. Kingsley stood on the curb, smiling as Peter K. and his pictures departed.

A week later, when Peter K.'s check had been deposited, collected, diverted, divided and assimilated into the coffers of the firm of Simpson & Kingsley, and Peter K. himself had ceased to think of the transaction save with a satisfied glow of possession when he remembered the pictures he had come by so cheaply, the astute Mr. Simpson announced with his morning coffee that the final act was about to take place.

Whereupon Mr. Simpson disappeared into his own room, and only emerged at request that Mr. Kingsley procure for him five stamps. Wondering what he could want with stamps, Jimmie dutifully went out to get them, to find when he returned that his aged friend had gone out.

Forty minutes from the time Jeremiah Simpson left his apartment an elderly man, with a bristly iron-gray mustache and a semi-uniform cut of garments, entered Peter K. Harding's official portico and inquired for the financier himself. He asked that his card be taken to Mr. Harding unseen and passed it over. Ten minutes later he emerged from the office and walked to the subway. One hour later he entered the apartment on Riverside Drive, walked into the room where James Forsythe Kingsley reclined in an easy-chair, carefully removed the iron-gray mustache, took off the semi-uniform coat, reached into his inside waistcoat pocket, drew forth ten yellow-backed bills and laid them gently on the table.

"But—but where did you get 'em?" demanded Mr. Kingsley, with wide-open eyes.

Mr. Simpson was turning away, but looked about again.

"Get 'em? Them bills? Oh, a little memento from our good friend Peter K. Harding. Nice old party. Begged me to have a smoke on him. Gave me the address where he buys 'em too. A nice, generous old man—believe me, Larry."

Mr. Kingsley took his old friend by the shoulders and turned him about. "You tell me, you old sinner! What did you say to Peter to make him come across like that!"

"I believe it must have bin that, Larry," Mr. Simpson said, laying a card on Mr. Kingsley's palm. "I'm quite sure of it, now I think real hard. You see I just went down there and sent that in to him—not that, of course, but one like it. The bulldog that guards his door comes out and drags me in like I was his brother and wanted to lend him money. Peter looks at me an' I looks at him. Then I coughs an' lays another card on his desk. He looks at it an' at me—an' I looks at him an' grins; an' he reaches for a checkbook—an' I waves it back; an' he grins kind of greenlike an' looks inquirin' at me; an' I steps up close an' whispers in his ear. Later I come away."

Young Mr. Kingsley looked down at the card in his hand. It read:

JAMES S. GRAVENHURST
UNITED STATES CUSTOMS SERVICE

"Where did you get it?" he asked.

"Had 'em printed while I waited. Cost me a quarter too!" returned Mr. Simpson genially. "I forgot to tell you that I just wrote a line on the card with a lead-pencil while I was waitin' outside."

"What?" inquired Jimmie.

"Oh, just a few words—'It's right dear on the river at Ninety-sixth!' I'll say this for Peter: he's right quick to take a hint." Mr. Simpson looked longingly out on the river where Lord Markdale's yacht lay in the sunlight. "I'll bet I could sell Peter K. that boat if I was to try real hard. He's awful fond of things like that!"

He turned about to find Mr. Kingsley struggling in convulsions of mirth—and smiled genially.

THE GALLERY GODS

(Continued from Page 13)

unfamiliar difficulties. It is very much the same with pictures. The masterpieces of the Italian Renaissance exhibit qualities for the most part the result of immense physical and mental labor to overcome difficulties that today are scarcely felt.

For instance, the painting of the great picture by Leonardo da Vinci—La Gioconda—recently stolen from the Louvre, occupied the artist four years; and, in order to call up a sweet and smiling expression on his sitter's face, he caused her to be entertained with music and other diversions. Now, to be perfectly frank and honest, did he manage after all to paint a particularly beautiful and smiling woman? Would any man be tempted beyond his strength if brought into contact with a woman with a face like that? Scarcely. He did, however, invest his picture with an extraordinary quality of sincerity that was largely the result of the enormous pains he took.

Half a dozen snapshot photographs will enlighten the artist of today on many more points besides the movement of smiles on the face of a pretty woman than Leonardo learned in a twelvemonth. And the artist of today can paint a prettier and more charming woman than even the great Italian portrayed. Our artists know far more about art today than was ever known before. They, therefore, read into the Old Masters qualities which the painters of old never dreamed were there! The great fault of all modern art, in spite of the brilliant capabilities of individual painters, is lack of sincerity. We know too much and do too little.

Under the Influence of Hot Air

"Beauty," some wise man has said, "is in the eye of the beholder." This is to say that, if you see a picture and regard it as beautiful, you have probably contributed something yourself to the effect it has on you. Your perceptions are keen, and you look for and see beauty where others whose perceptions are not so keen would see nothing.

A man accosted me a year or two ago in a gallery in Paris. The exhibition contained modern works which I should have thought would have been easily understood by any one.

"I see you are interested," he began. "I know nothing about art. I suppose these are very fine. You appear to know something about it. Do you mind telling me—honestly—what qualities there are in these pictures to admire?"

So I explained as well as I could. We walked backward and forward in making comparisons. I pointed out in every picture referred to the qualities which struck me as being admirable. I even went into technicalities, for I saw that the intellectual side—or perhaps we should call it the phase of the subject which is materialistic—appealed with greater force to the stranger than the spiritual or imaginative. If I spoke of the size of a barn he seemed to catch hold; but if I told of emotion or passion in reference to the picture of a barn he never even got a glimmer of what I meant.

"I simply can't see it," he gasped out. "I see a house, trees, water, clouds, a bridge and a couple of cows; and then you tell me the whole canvas wouldn't be worth a cent if it were not for the sensation of movement in the picture. I simply can't experience the slightest sign of movement. I can't get it out of my head that the picture is just as dead as a doornail; and if it's dead how in snakes can it move?"

"But I told you before it's not the picture that moves. It is the sensation of movement which is conveyed by those hurrying clouds; that dry, wind-swept expanse; that rushing stream. When you look at that picture can't you feel the breath of cold wind coming up from the sea?"

"No; I can't," he said; "but I can feel the breath of hot air coming out of that register, and if you don't mind we'll move on."

I got to know that man. He was an interesting study. I walked every important gallery in Paris with him; and I am bound to say he never brought with him a single idea which enabled him to understand a picture, from the time I met him until we parted at St. Lazare. Neither was it for want of trying. I would leave him painfully studying a sunrise in tender pinks and grays, by Corot, and at the end of half

Lose Less Power

You can by installing belts that don't creep, climb their pulleys, slip or pull apart on a slight overload.

The question is simply that of putting the right Crown Belting on the different machines of your plant.

Crown Belting is uniform in thickness, is stretched and tested before it leaves the factory, and each kind of belting is designed for one particular use.

CROWN BELTING

To help you select the right belts for your plant and to help you with any unusual problems you may name in transmission, we have published a book, "Crown Belting." We will send this book, free, upon request. Address Department A.

"I Shall Never Paint Those Roofs!

"I shall simply leave them alone. It will not be necessary to spend a cent on them." They are covered with

Amatite ROOFING

AMATITE has a real mineral surface and therefore needs no painting. There have been other ready roofings in the past which had a mineral surface, but they were not practical. Amatite, however, is successful because the mineral matter is embedded in *pitch*. Pitch is very tough and has great adhesive power. Year after year those roofs will give faultless service without anybody giving a thought to them. This is the kind of roofing to have! The day of these smooth coated roofings that require a heavy coat of paint every year or two is past. They cost too much to maintain. You can spend more money on the paint alone during the ten years than a new Amatite roof would cost.

A free sample of Amatite Roofing and a booklet can be obtained on request by addressing the nearest office.

Everjet Elastic Paint

A very low-priced black paint—very tough and durable. Stands heat so well that it can be used on boilers. For wood or metal, ready roofings, fences, iron work, farm implements, tanks, etc.

Every Boy Wants

a pair of skates. He can have a splendid nickel-plated pair and his choice of hundreds of other things which every live boy desires by selling *The Saturday Evening Post*. The premiums are just extra payments to encourage good work. His real profit comes in the form of a liberal cash allowance on every copy sold.

Any bright boy over twelve years of age can get a lot of customers, and can earn all the money his parents are willing for him to have. And besides the training secured and the money earned he will, at the same time, be working for a list of hundreds of premiums, which will make any boy's mouth water.

Tell him to write and find out all about the plan and what other boys are doing. The work will not interfere with school duties. It can be done on Saturdays and after school hours on Thursdays and Fridays.

SALES DIVISION

THE SATURDAY EVENING POST

PHILADELPHIA

an hour the best I could get out of him was that the artist had evidently been sketching on a badly managed estate, because "that tree ought to have been grubbed up long ago. It was in the way and would prevent the proper navigation of the creek."

"But the sky, man—the sky! Look at the silvery light half penetrating the mist, and that touch of rose! Don't you feel——"

"No; I don't. But I'm not blind. I can see it's pink and gray; and it's so thick you can hardly make out whether those are trees or merely bits of bad weather left there from the night before. Why on earth couldn't the man paint the picture when it was a bit clearer and he could see what he was about?"

It was worse with portraits. They were no more to him than waxworks. Whistler's portrait of his mother in the Luxembourg he regarded with profound disgust. "If she looked like that, why perpetuate the fact? I've seen hundreds of old women sitting on chairs; but I never thought they looked interesting, and that picture only convinces me the more that my point of view was right."

The man who has a heart for the appreciation of landscape is he who sits all day long in a city office. For him the artist opens a window into Paradise when he shows a sweep of twenty miles of open country, with cloud battalions hurrying fast to the west.

How Beauty is Skin Deep

The writer was sketching on one occasion in the Valley of the Loire, in France. The subject embraced a view of the river, with brilliant bushes of flowering weeds in the foreground and dashes of vivid green where still water under a bank had allowed floating vegetation to accumulate. A peasant came by and stopped to look. He was interested, agreeable, and helpful in promising to accommodate paint-box, canvas and easel at his cottage until the next day. He did more than that. He got up earlier than usual in the morning, took down a scythe and cleaned up the whole of that foreground of weeds and set fire to them. Then he raked off the green scum from the water and set a boy to pull up the rushes along the edge. When I arrived the canvas was delivered up safe and sound, but the subject had disappeared for at least another twelvemonth.

However, if it be accepted that in order to understand and enjoy pictures one must possess powers of artistic perception, this would seem to imply no limit to the spectator's investing works of art with as great a degree of merit as he likes, according to the depth and acuteness of his own vision. If this be so—if, to repeat the formula, beauty is in the eye of the beholder—then the man who can see most beauty—or who says he can—may easily be accounted the best judge. If you doubt him he can always turn round and say you lack artistic perception.

This gives a splendid opportunity to two classes of connoisseurs—liars and lunatics. The first-named are to be found among those who are interested in the sale of pictures. The second are among the professional art critics. If a man wants to sell a picture, and is constantly engaged in advertising its good qualities, he will stick at nothing in praise of the canvas, for no one can prove him wrong. After a time, he not only persuades others that what he says he sees in the picture is actually there but he comes honestly to believe the story himself. On the other hand, the art critic—if he be an honest man—is sometimes possessed of hypersensitive nerves. He not only brings to his work a trained and highly developed perception, but is also liable to confound perception with imagination—a very easy thing to do. In short, he may perceive good qualities in a picture or he may imagine he perceives them. When he arrives at the latter point his judgment is on the wobble. Among the pictures which have been painted in recent years by certain groups of European artists are canvases resembling nothing so much as childish and crude imitations of German woolwork. Some established critics are praising these. Certain Americans in Paris are collecting them. Their imagination is getting the better of their perception. It is one of the hardest things in the world, however, to analyze one's own emotions, which are composed partly of what we feel and quite as much of what we think we feel. It is always a corrective, however, to remember that pictures, after all, are themselves actual matter. They are not of the stuff of which dreams are made.

Good-bye Paint Brushes and Daubs Use

LIQUID VENEER

and Cheer Up Things as You Dust

No dauby paint brush is necessary when you cheer up things with LIQUID VENEER. Simply moisten an ordinary cheesecloth duster and go over your furniture, metalwork and woodwork with it—

just as if you were dusting.

See the dust, scratches, blemishes and shabbiness all vanish like magic and the house cheered up and made to look like new from kitchen to garret. No trouble, no muss, no uncertain results. That's the LIQUID VENEER way—the "dust-with-it" way.

Trial Bottle Free

LIQUID VENEER is more than a furniture polish—it restores the original finish; doesn't create a *false* one. To learn how it will save time, money and furniture write to-day for a free trial bottle.

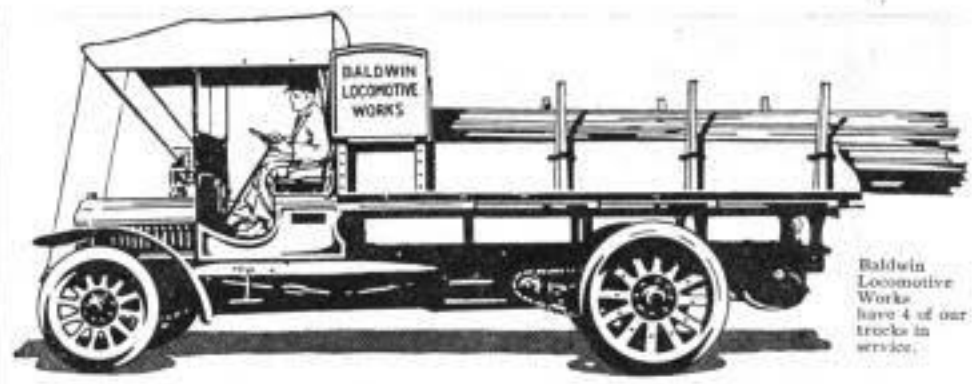
BUSINESS HELPS

THE old saying has it that "imitation is the sincerest flattery"; but imitation ought to be very much more than that, and in matters of business it is really so—for the right kind of imitation, the judicious and enlightened kind, is and ought to be a very high kind of wisdom. Imitation comes next to originality as a factor in business success. Even the very highest kind of originality would be sure to fail unless assisted by imitation. It is really surprising and it is much to be deplored that it has become common to decry imitation as something feeble and cheap—something to be ashamed of and avoided; but that is not the viewpoint of successful men, nor does it represent their methods at all. It is not only by following their own ideas but by being, at the same time, wise enough to copy what is excellent in the methods of others that men achieve any marked prosperity; and, in this, business men are precisely like men in every other department of life. The idea that imitation is to be avoided should be absolutely banished by any one who wants to advance.

There never lived a more original man than Napoleon. He was proud—and had the right to be—of his own genius. He used startlingly new plans and combinations, and boasted that he would make opposing generals burn their books of tactics; yet, without his own close preliminary study of those books and his absorption of all that was good in them, he could never have been a general himself. Had he not been able to copy the best from Cæsar and Hannibal, he would never have been Napoleon! And likewise any business man, no matter what his ability or the degree of his individual insight, must be ready to see the best in the work of other business men to imitate it, whether that best is excellent in the methods of a single individual or is set forth in the general body of business wisdom that represents the accumulation of generations of experience. One must imitate in order to be abreast of progress; and it is only after getting abreast that one's individuality may put one in advance.



Profitable Imitation

I have frequently been impressed by the imitation and the watchfulness of neighbors or competitors, with intent to profit by copying, which are displayed by the greatest business or manufacturing establishments; in fact, the greater a house is, the more closely watchful it seems to be of the methods of others. Readiness to imitate is one of the unfailing signs of largeness and breadth of view; and yet the right kind of imitation must never be confounded with the cheap and puny copying that is done by cheap and puny minds.

The very first time that the virtues of imitation came strikingly to me was in the case of a man who was not a business man at all, but an Ohio farmer—though, right here, I ought to say that the ordinarily accepted meaning of the term "business man" is all wrong, for every man who follows any kind of occupation for money is necessarily a business man, whose work is appraised and handled on business principles. A lawyer, making and vending his arguments, is precisely as much a business man as is the manufacturer or merchant. The doctor, the artist, the school-teacher—all are business men, who must do their work and handle what they have to sell on business principles. Napoleon himself was a business man, and a very keen one, who delivered to France services of a very high order and saw to it that he received an immense price for them.

This farmer, then—this business man of the soil—I came upon one day as he was crouched upon a hillock watching another farmer—his neighbor. It was not that the other man was doing anything that was either unusual or suspicious; so far from that, he was only doing ordinary farm-work in a freshly plowed field; and yet he was watched with such an eagerness as would seem to attach only to something extraordinary!

I had to speak to the man who was watching, though I disliked to draw him from his absorbed contemplation; and he turned toward me with a sort of shamefaced start. "But it's nothing I ought to be ashamed

Thos. Maddock's Sons Co.
Trenton, New Jersey

of," he said, realizing that his start must have been noticed by me; and he went on to say that, coming recently from a town where he had not made a success, to take over this farm, which had come to him by inheritance, he had found that he knew almost nothing of practical farming.

"I could not learn it all by reading books or asking questions; and I was afraid—being a stranger—of ridicule or of being told the wrong things if I let on how little I knew; but I've simply got to make a go of this place. And so, on top of what I could pick up in other ways, I just come out here and watch my neighbor, who is one of the best money-makers round here. I just watch his plowing and planting and cultivating every day to see what he is doing that day, and I follow him as closely as I possibly can." He paused a few moments and then added thoughtfully: "You can learn lots by copying some other fellow." This came back to me very forcibly the other day when the manager of a Chicago department store expressed himself in almost the same words: "I try to learn something every day from what my competitors are doing," he said.

The department stores, indeed, follow out the general idea of imitation to a surprising degree. Each big department store, in any of the big cities, has on its payroll men and women whose business is to watch for things to imitate or avoid—for it is the most ardent devotees of imitation who realize most fully that watching other people's methods will be profitable by showing what to keep away from as well as what to adopt.

Customer or Competitor?

The watchers of any department store keep in close touch with the stock and prices and methods of the other stores. They investigate and report, day by day, anything interesting in prices; anything new or suggestive in window arrangement or the display of stock; anything at all that is interesting or valuable. These people are known to very few connected with the establishments that employ them, while in the stores of competitors they are merely ordinary customers, who do a good deal of inquiring and who make more or less actual purchases—the actual purchasing being admirable on account of obviating any suspicion in regard to their real motives, and the purchases themselves being, as far as possible, of a kind to be illuminative, with their prices, to their own employers.

If any new detail in management is introduced, perhaps in the way of elevator service or some new device to make customers' waiting rooms agreeable, or in the method and scope of the delivery system—whatever, in short, it may be—the store that introduces it knows that competitors will at once be in full possession of the knowledge and that imitation will follow if the new detail seems a good one. "If you want arms take them from the enemy!" the dashing Bolivar loved to say; and successful North American business men follow in principle this idea of the successful South American general.

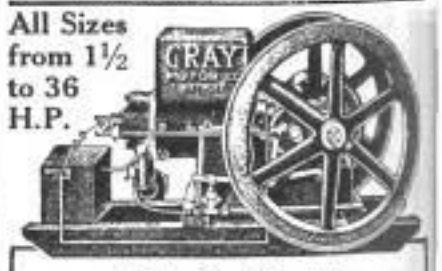
Advertisements—such a vital part of the business of today—are watched with the greatest closeness. Each manufacturing concern, each big store, studies closely every advertisement of those in the same line and is swift to follow up any suggestive hint. Whenever there are special prices offered on special goods the matter is gone into instantly; and there will be some very good reason for it if the prices are not met by the other houses and a special display prominently made of similar goods. The business man of today cannot hide his light under a bushel.

I know two Western business men, partners, who are so radically different that, whereas one absorbs the idea of any available new thing he sees, the other rarely finds in such a way any inspiration. One or the other must go to New York annually; but, though either can attend to the definite business there just as well as his partner, there is an immense difference between them otherwise. Though one always and inevitably returns with a mind enriched by suggestions of usefulness that are to be followed and emulated, the other always and just as inevitably returns with nothing that he has picked up. "Where do you find Indian arrowheads?—for you have so many of them," said a friend who was walking along a road with the famous Thoreau, the Nature-lover, whereupon Thoreau replied: "I find them everywhere!"—stooping and picking up one as he spoke.

Mixed To Your Order

With Carter White Lead and any good tinting colors, an experienced painter will produce any shade or tint you want, will spread a brushful on a board that you may see just how it will look, and if necessary, change it until it exactly suits your ideas.

More than this—some lumber is more absorbent than others; old paint is never in the same condition on the sunny side of a house as in the shade; atmospheric conditions also affect the life of paint. All these things are considered by the experienced painter, and he will mix his Carter White Lead paint to suit the condition of any surface.



CARTER
Strictly Pure
White Lead
"The Lead with the Spread"

is the pure white lead of our forefathers, only whiter, finer and more perfectly made by an improved, modern process. Pure Carter White Lead and linseed oil paint does not crack nor peel, but wears gradually, as paint should, and after years of service is ready for repainting without burning or scraping.

If you have buildings that need painting, now is the time to arrange for the work. Plan **now** to paint **right.** Begin by sending for our book, "Pure Paint." It is a text-book on house painting and includes a beautiful set of color plates showing houses attractively and tastefully painted. **FREE** to property owners, architects and painters.

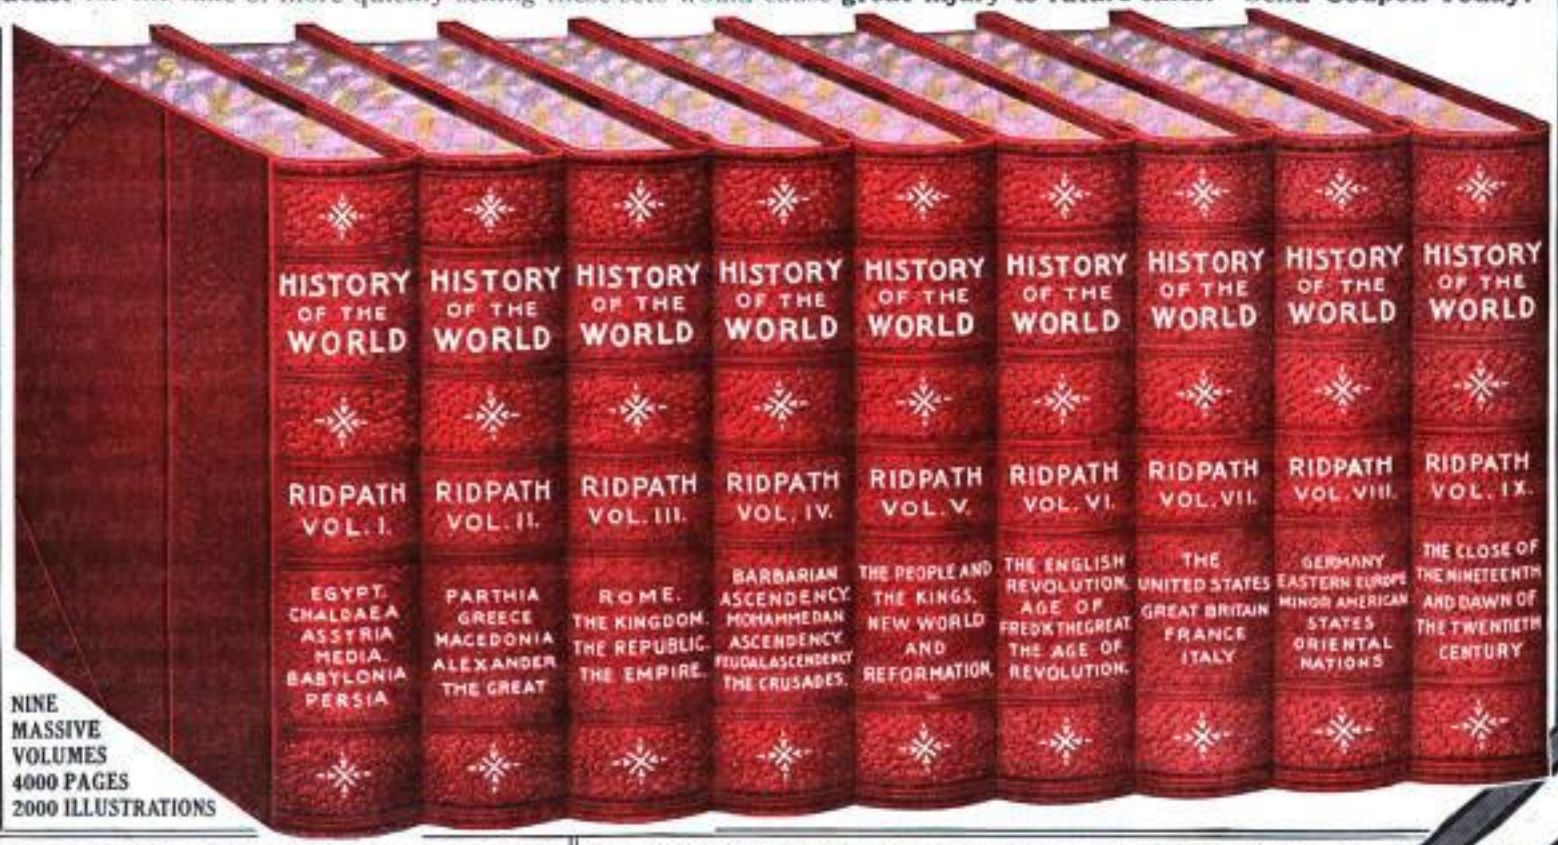
CHRISTIAN MARTYRS GIVEN TO THE LIONS

CHRISTIANITY is the greatest fact in history. The early Christians endured martyrdom rather than forsake Principle. The picture shown herewith, from Ridpath's History, depicts 87,000 people assembled in the Coliseum at Rome to witness the Christians given to the lions. In such a scene may be read the inevitable doom of the Empire that ruled the world. The blood of the Martyrs is the seed from which Christian civilization sprang. If you would know the history of mankind—every sacrifice for principle, every struggle for liberty, every conflict and every achievement, from the dawn of civilization down to the present time—then embrace this splendid opportunity to place in your home the world-famed publication,

Ridpath's History of the World

SATURDAY EVENING POST READERS have shown wonderful appreciation of our remarkable offer on this great history. We have shipped this splendid work to delighted readers living in every state of the Union, and to the far away islands of the sea, and every purchaser is more than satisfied. The sale is now nearing the end and it is certain the work will never be offered again at such a bargain. We offer the remaining sets of the last edition brand new, down to date, beautifully bound in half Morocco.



At LESS than even damaged sets were ever sold

We will **name our price** and easy terms only in **direct letters** to those **sending the Coupon** below. **Tear off the Coupon,** write **name** and **address** plainly and **mail now before you forget it.** Dr. Ridpath is dead, his work is done, but his widow derives her income from his History, and **to print our price broadcast** for the sake of more quickly selling these sets would cause **great injury to future sales. Send Coupon Today.**

FREE

We will mail free a beautiful 46-page booklet on history to every reader interested in our offer who **mails** us the **coupon** below. It contains Dr. Ridpath's Race Chart in colors, tracing all races of mankind back to the parent stock; the best map of the Panama Canal ever printed, two beautiful duotone reproductions of great paintings showing "Napoleon Before the Sphinx in Egypt" and "Queen Elizabeth Signing the Execution Warrant of Mary Stuart," together with portraits of Socrates, Cæsar, Napoleon, Shakespeare and Roosevelt and other great characters in history; also specimen pages from the History, giving some idea of the wonderfully beautiful style in which the work is written.

Mail Coupon Now

NINE MASSIVE VOLUMES
4000 PAGES
2000 ILLUSTRATIONS

RIDPATH takes you back to the dawn of history, long before the pyramids of Egypt were built; down through the romantic, troubled times of Chaldea's grandeur and Assyria's magnificence; of Babylonia's wealth and luxury; of Grecian and Roman splendor; of Mohammedan culture and refinement; of French elegance and British power; of American patriotism and religious freedom, to the dawn of yesterday. He covers **every race, every nation, every time,** and holds you spellbound by his wonderful eloquence. Nothing more interesting, absorbing and inspiring was ever written.

RIDPATH throws the mantle of personality over the old heroes of history. Alexander is there; patriot, warrior, statesman, diplomat, crowning the glory of Grecian history. Xerxes, from his mountain platform, sees Themistocles with three hundred and fifty Greek ships smash his Persian fleet of over a thousand sail, and help to mold the language in which this paragraph is written. Rome perches Nero upon the greatest throne on earth, and so sets up a poor madman's name to stand for countless centuries as the synonym of savage cruelty; Napoleon fights Waterloo again under your very eyes, and reels before the iron fact that at last the end of his gilded dream has come. Bismarck is there, gruff, overbearing, a giant pugilist in the diplomatic ring, laughing with grim disdain at France, which says "You shall not." Washington is there, "four-square to all the winds," grave, thoughtful, proof against the wiles of British strategy and the poisoned darts of false friends; clear-seeing over the heads of his fellow-countrymen, and on into another century, the most colossal world figure of his time. Mail the Free Coupon and find out all about our splendid offer on this great work.

RIDPATH'S enviable position as an historian is due to his wonderfully beautiful style, a style no other historian has ever equalled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman Senate; to march against Saladin and his dark-skinned followers; to sail the southern seas with Drake; to circumnavigate the globe with Magellan; to watch that thin line of Greek spearmen work havoc with the Persian hordes on the field of Marathon; to know Napoleon as you know Roosevelt.

RIDPATH'S History is strongly endorsed by Presidents Harrison, Cleveland and McKinley, Jefferson Davis, Lew Wallace, John L. Stoddard, Wm. J. Bryan, Bishop Vincent, Rabbi Hirsch, Presidents of Ann Arbor, Amherst, Brown, Dartmouth, Tufts, Trinity, Bates, Colby, Smith, Vassar, Yale, and other Colleges, and by the great American People, more than 200,000 of whom own and love it. The English-speaking world has pronounced this the only history of the world worth having. *Mail the Coupon.*

"My Daughter"

You can't blame Daddy for being proud of her! The rosy blush of youth is kept captive by cheeks that are cleansed and nourished by the imported palm and olive oils in Palmolive Soap — the best guardian for your daughter's complexion

Palmolive

Is More Than Mere Soap

Palmolive refreshes, invigorates, rests and delights as no other soap can. It brings healthy "life" to the skin—makes it soft, smooth and beautiful.

Oils From the Orient

The Orientals proved the value of Olive and Palm Oils as natural beautifiers.

These oils form the base of Palmolive Soap.

But we increase their value with our scientific blend—the result of hundreds of tests and experiments carried through 36 years.

Thus Palmolive does for the skin what no other soap can do—what these oils, by themselves, cannot do.

Palmolive Cream

A pure white cream, manufactured in our own laboratories after an original formula.

Penetrates and softens the skin, cleansing the deepest pores. Leaves the skin in the pink of condition.

Practically every drug store in the United States sells Palmolive Soap and Palmolive Cream! Your druggist will recommend it.

Send the hand from a cake of Palmolive Soap and we will send you a generous facsimile jar of Palmolive Cream, postpaid.

Price 50c

Do You Want These Oils?

—blended as only we know how to blend them?

Learn if any other toilet soap is one-half so delightful as this.

Thirty-six years spent in study—to find out what women like best and need most in their soap. Palmolive now embodies it all.

Pure Soap

The olive oil in this soap alone produces that fresh, cool, green hue. Palmolive is one soap that's perfectly pure.

The fact that it's best for baby's skin is ample proof that it is best for yours.

Palmolive Lasts Longer

During our process we bring to bear 30 tons pressure on each cake of Palmolive. This makes it last longer than ordinary soaps, for it gets more soap into each cake.

This process gives the soap very fine texture—makes the cake pleasant to touch. Palmolive never gets mushy—it remains solid and firm.

There's a certain refinement all through Palmolive.

An Oriental Perfume

Our perfume is the most faintly fragrant ever produced in a soap.

Yet it is well defined.

It is one that suggests perfect cleanliness—a fresh, Oriental fragrance—a dainty, wholesome perfume.

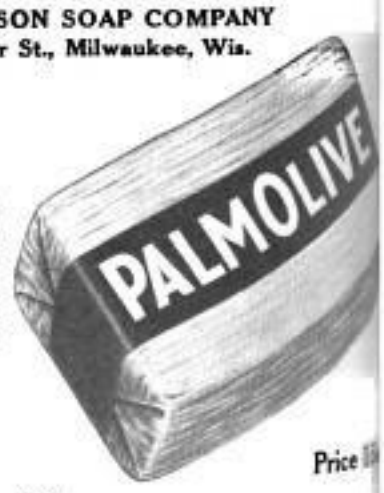
Palmolive in Hard Water

That alone will win you to this soap.

Palmolive lathers quickly and freely in either hard or soft water.

The lather is rich and creamy and it is perfectly pure. You can rub it right into the pores without the least harmful effect.

Learn What You're Missing



Get a cake of your dealer today.

Learn what is lacking in the soap you use now by comparing with Palmolive. See if you don't want that lack supplied as Palmolive supplies it.

The price is but 15c.

THE RECORDING ANGEL

By CORRA HARRIS

ILLUSTRATED BY WALTER H. EVERETT

IF YOU take a certain train at two o'clock in the afternoon, say, at Twenty-third Street Station, in New York, and travel steadily southward till you are an hour behind time, you come to the carmine hills of Georgia—round, soft hills that the grasses love. They are all dyed with the blood of heroes and divided by cotton fields, and broken down worm fences, and happy, disreputable-looking negro cabins and an occasional white folks' house. The hills do not notice you as you pass. They are suckling the grass. They are asleep in the golden sunshine. They are dreaming in the perfume of the cotton blooms. You would not be astonished if one of them should turn over and stretch, and show the other breast, they are so very comfortable, so very fertile and lazy. No wonder that every train coming southward in this direction loses time. You cannot stoke even a New England engine enough to make it hurry in such an atmosphere of repose and somnambulance. You have missed your dinner at Mount Airy, but it makes no difference. You are not hungry. You are breathing the manna-laden air of imaginary plenty. You begin to feel romantic and poetical. You hum some familiar old Southern tune. This, undoubtedly, is an indication that you are nearing Ruckersville, Georgia, where the scenes of this story are laid.

You will know when the train nears Ruckersville by the cotton warehouses in the suburbs; and the suburbs are only one block from the center of the town, which you will also recognize by the Daddisman Hotel on one side and the stores on every side, and by a curious duck-legged statue, dedicated to the Heroes in Gray, which squats in the middle of the square. It—the town—is admirably situated to have developed into a flourishing city. But your aristocrat never builds a city. He can ride against one and conquer it, and he can save it from an invading army, but he has neither the patience nor the energy to build one. It takes a parvenu, or at least a Yankee, to do that. And Ruckersville was settled by a Dublin aristocrat, who came over hurriedly with General James Oglethorpe to avoid offensive financial difficulties at home.

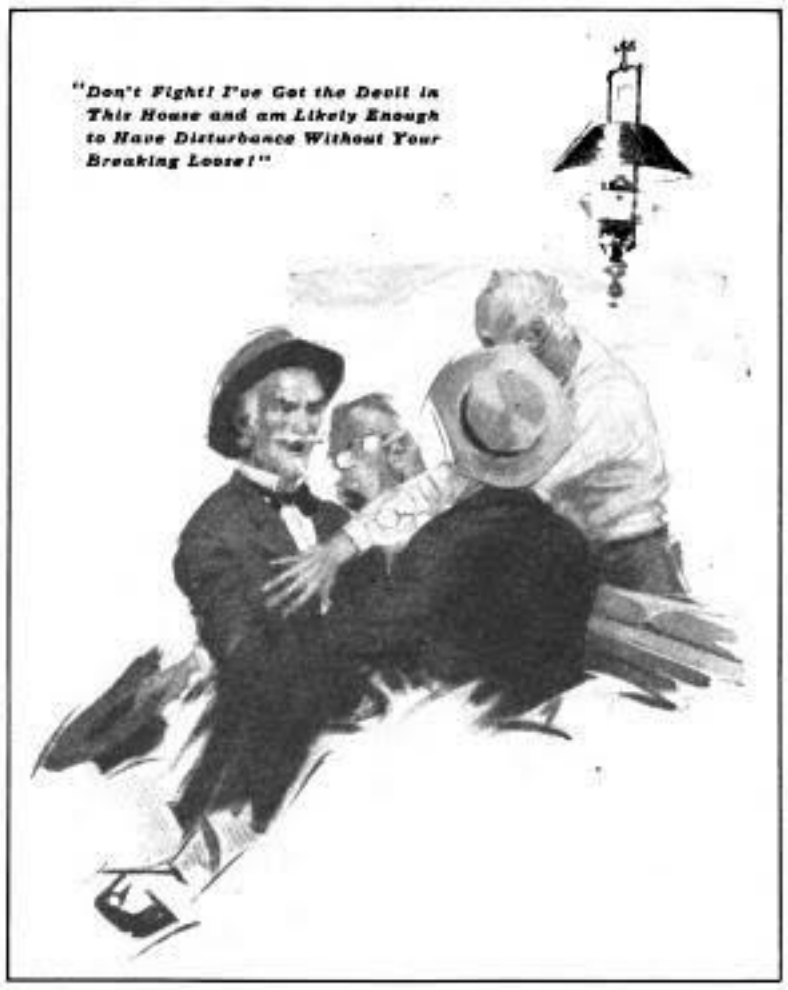
This is how the place grew for three generations, merely according to its birthrate. And it was an amazingly large town when you took that fact into consideration. No one moved into it from the outside, except by marriage, any more than a business man would move into a dream to speculate. It grew amazingly, like a pumpkin vine, in every direction except the one that led to factories and progress. The first thing a stranger notices is that it was evidently settled first by a set of headstrong families, and then laid off into streets to accommodate the east and west whims of their prejudice and pride. This was due to the fact that these families were nearly all related to one another, each asserting its independence, antagonism or contempt of the blood bond, after the manner of relatives, who are known to hate each other more than any other class of people in the world. Thus the Fanning-Rucker residence is built with its back door opening before the distant face of the Rucker-Martins' residence, on account of the fact that Mrs. Fanning-Rucker was a Fanning before her marriage, and took this means of expressing her contempt for all other Ruckers after the death of her husband, because they had objected to his marrying her on the ground that the Fannings "had nothing to recommend them but their money." This elevation of her back-door nose had, in turn, compelled the Rucker-Martins to add a side front to their house and change the direction of the street, so that they could go out of the front gate in the morning without smelling Mrs. Fanning-Rucker's breakfast dishes and without seeing her kitchen sink.

Every Young Man in Ruckersville Had Died for Her, Figuratively, in Vain

No street in Ruckersville ever knew the day or the hour when it would be changed to accommodate some outraged emotion. Marriage, in fact, inspired the geometrical topography of the town, and accounted for the amazing number of elbows in the streets and for the numerous long forearms between dwellings. You may live immediately next door to and on a straight fifty-foot line with a stranger or a friend; but when it comes to relatives the situation is different. The dominant Ruckersville instinct was to shrug its architectural shoulders, to build the verandas with averted gaze, and to keep enough distance between its habitations to discourage a gadabout hen, in case she fancied the crowing of the rooster in the next dooryard. No mixing of chickens was tolerated.

Thus the town stands, insufferably erect, supported by long-shanked verandas, showing a tribal reserve in its distances, shaded by immense trees at irregular intervals, divided by long, crooked white streets that are magnificently fringed with weeds and goldenrod. And in season it is pervaded by the perfume of cotton blooms from the surrounding cotton fields, and at all seasons by the male odor of tobacco smoke. The only truly busy inhabitants there, until quite recently, were the bees, who did a thriving business and created annually frightful family disturbances by swarming and deserting one Rucker's hives for another Rucker's hives. This was considered personal by the respective owners of the hives, and gave rise to bitterness, all the more lasting because the Ruckersville bees appeared to have inherited their stings from the original cavaliers and were too quick at the thrust and too fiercely tempered to be meddled with. They hived where they listed, and defended themselves with demoniacal frenzy when any effort was made to ding-dong them back home with their former owner's dinner bell. They were invariably supported in their determination to stay where they were by the Rucker whose hives were complimented by their migratory instinct.

There was a devilish old Brigham Young bee drone in the Ruckersville honey business, who had in this way alienated some of the best families and nearest relatives. He was said to have descended from an Italian queen bee imported in a cigar box by the grandson of the original settler of Ruckersville. This was



Digitized by Google

Colonel Joseph Rucker who, as I have already intimated, came over with Oglethorpe and built his mansion on a grant of land from the king. That is now the site of Ruckersville. Joseph Rucker was an Irishman and had a beam in his eye. He was gifted with courage, a genius for making love, and clear-blue optimism. Whatever may be said of Adam, I, for one, am convinced that Eve was of Irish descent. There was something so naïvely simple and iridescently witty in the way she managed to get Adam out of his innocuous state of innocency and idleness, and started in the decent labor of digging and sweating, like a proper man, for his living. And Colonel Joseph Rucker was undoubtedly descended from this maternal line. First, he is recorded as having had a genial genius for inducing others to work and to risk their substance and salvation for his sake. He died, full of honors, at a ripe old age, without ever having put his own hand to the plow; the husband, serially, of three devoted and industrious women, the father of three sets of children, and the promoter of certain water-power schemes—largely at the expense of others—on Broad River, which flowed like a sweet Jordan close to the town but which refused to be bridled, in spite of the fact that nearly every man in the town who was not a direct descendant of the Colonel had mortgaged his homestead in the effort to accomplish this.

Another proof of his optimism was the pattern of architecture he set, which was enthusiastically copied by his neighbors. The original Joseph-Rucker mansion still stands in a grove of live oaks upon a gentle eminence near the middle of the village, with its back turned hopefully upon the adjacent cemetery and its front facing the rising sun. It is an immense white house, with windy chimneys, many rattling windows, a wide veranda, and weather boarding so carelessly put on that it is a monument to the builder's belief in eternal summer. Not, you understand, that there is no winter weather in Ruckersville, but that there was nothing in the animation of the Colonel that corresponded to cold and inclemency, or that could forestall Providence with a blanket of storm sheeting. His god was a mint-julep deity of his own accommodating creation, who made the earth for the pleasure of man, for the cradle care of woman, for the beauty of every flower that blows, and for the joy of little children.

At the imminent risk of tiring that class of readers who are accustomed to being humored by the author with a duel or a scandal in the first chapter, I have been obliged to include this digression about the Colonel, because he was either the direct or indirect progenitor of so many of the characters who shall figure in this story, and because he left behind him a strain of morning-mindedness in them that they still retain. There is julep in their veins, the highest courage in their imaginations, and every sort of aimless improvidence in their deeds. It is when the leaven of industry, of accomplishment and of progress is dropped into such cake-dough humanity as this, that comedy, tragedy and queer adventure result; and it is of these that I shall write in this story.

I say on this particular day—it was Tuesday, the fourteenth of June, 18—, a stranger alighted from the train, who was obviously neither a drummer nor a politician; and no one recognized him for a relative. He had a long-horned-steer expression. He wore a wide-brimmed hat, with a leather band buckled around the crown. His eyes held you up like a brace of steel-blue pistol barrels. And the deep double crinkle of the skin above them added a steady directness to their aim. The bottom of his face showed through an ugly red stubble, like the jawbone of a pithecanthropus. His mouth was glued together in a straight line under a nose that insulted you by its mere shape. It was high, thin, and drawn back at the lower corners of the neatly, delicately-turned nostrils, as if he smelled you and found the odor disagreeable. His clothes were conventional, but scandalously ill-fitting like the loose brown hide of an erect animal. He was bow-legged, as it turned out, from having sat in the saddle for so many years. And he straddled in his gait, with his feet set wide apart like a person who has practiced walking straight even when drunk. Altogether he did not give the impression of being a good man, but at the same time one inferred that he would not brook having his virtues questioned, provided he was in the mood to claim them. If an immense bald eagle had alighted upon the station platform, with three inches of spurs sticking out from his feathery legs, it would not have created more excitement, more wondering amazement. He stretched himself, covered the row of idlers leaning against the wall of the station with a glance that left them immediately as if they were of no consequence, swept out over the town and took in the stores, the Bilfire saloon, the Daddisman Hotel, the squatty statue to the Heroes in Gray, in the center of the square beyond the station. It swept on down through the emerald twilight of oaks and poplars on every side, among which the long white legs of the piazzas gleamed and proclaimed the quality of the population. Then he undid his mouth, stretched it at the corners and snickered. This was the only comment he was ever heard to make upon Ruckersville.

"Don't Fight! I've Got the Devil in This House and am Likely Enough to Have Disturbance Without Your Breaking Loose!"

The next moment he lifted one thin, sunburnt hand, shoved back his hat brim till a thick lock of fine dark-red hair showed, drew forth an enormous gold watch that was attached to his waist-band by a miniature gold chain, looked at it, and straddled off along Elbert Avenue with the air of a man who knew where he was going.

As he turned the first corner and was lost to the view of the astonished group at the station he came upon Miss Mildred Percey. Their eyes met. He passed without lifting his hat. Miss Mildred pressed her hand to her heart. It was a gesture she had that expressed alarm. She always did it when she met a cow in the road, or went into a dark room at night where a man might be concealed under the bed. She went on, wondering who the stranger was. Also she wondered if he were married. This is the difference between men and women. When a man looks at a woman he knows instinctively at once whether or not she is married, and usually he does not concern himself to register the impression into anything so definite as a thought. But when a woman looks at a man old enough to have a beard on his face and young enough not to be gray, she cannot tell whether or not he is single, and she always wonders—especially if she is single herself. Miss Mildred was not married. But she was thirty-five. Therefore, she continued more and more to speculate, as she crimped along with her short mincing steps, concerning the rude stranger who had not lifted his hat to her.

Again she placed her hand upon her heart. She had fallen in love and did not know it. She had often fallen this way before, but no one had ever asked her to marry him. At the same time no man had ever passed her before without lifting his hat.

It is a fact that she was thirty-five, but she denied it with every art known to Ruckersville femininity. She wore an agonizingly tight corset, a severely firm bust supporter, and beautiful slippers too small for her feet. Her outer garments were loose and sweetly flowing, to deny the lacing within. An exquisite and expensive blond braid permitted a few of her own locks to escape negligently in waves about her naturally pretty ears, and they supported a gracefully youthful cherubim hat upon her head, the crown of which was naïvely garlanded with a wreath of wild roses. She had large, prayerful blue eyes, a tender, lonesome-looking mouth, good teeth and a lovely chin—round, soft, with a disposition to quiver when she was moved by any kind of emotion. Her nose was not her own. She had merely inherited it—without being strong enough to change it—from a distant male Rucker ancestor, and it really accounted for her not being married. It was too high, too thin, too long. It was a kind of physical libel upon the gentleness of her disposition, which she could not conceal as she did the natural ampleness of her bosom. This she did not want, or deserve either; and it had also been inherited from her habitual child-bearing forebears. On this particular afternoon she was powdered and painted a little. She was on her way to the regular weekly meeting of the Woman's Club.

The stranger did not know that he had passed Miss Mildred Percey. He was engaged with his own reflections. He advanced leisurely—insufferably so—along the shaded avenue, looking first at one house, then at another. Apparently he recalled the row of ancient boxwood in the Rucker-Martins' garden, or it may have been the ivy on the giant chimneys at either end of the house. He paused before the gate of the Misses Yancey's residence and squinted so insolently at the iron Juliet galleries that surrounded the upstairs windows, that the two sadly mature maidens within paused in the preparations they were making at their mirrors, before going to the Woman's Club, and stood trembling with alarm behind drawn curtains. An awful-looking man standing at their front gate in broad daylight, staring speculatively at their windows and doors, meant that they must look under every bed and in every closet for him before they retired that night. Also it meant that they would not sleep soundly for thinking about him.

Meanwhile, you will understand, of course, that the stranger at the gate was not thinking of anything so timid as an elderly maiden. He was looking at an immense rose vine that covered the Juliet galleries and flirted a thousand pink-hearted yellow blooms in the soft summer air. He was studying the delicate, feminine, many-branched symmetry of a row of pink crêpe trees behind the house, against which it rose like a picture upon an old, faded valentine. At last he lifted his folded arms from the gate frame and resumed his walk. The Misses Yancey let go their stifled breaths, resumed their toilets, and knew they would be late at the Woman's Club, not only because they had been interrupted in their dressing but because they must delay still longer to lock every door and bar every window lest the dreadful-looking character should return in their absence and enter the place, conceal himself and be ready to rob and kill them the minute night fell upon their defenseless state.

"The house will be like an oven when we return, if we close it," said Miss Agnes, the younger of the sisters, as she dabbled her nose afresh with powder, because the excitement through which she had just passed had caused it to perspire.

"Still, two unmarried women, living alone, cannot afford to take any chances with a person like that hanging around," said Miss Mary, the elder, as she slammed her wardrobe door and locked it.

"Of course not," returned Agnes sensitively, as if she thought that her sister thought she wished to take chances at some unimaginable adventure. She had once been secretly in love with an ungainly young blacksmith who was accustomed to pass the house, and she was always afraid her sister would discover her innocent romantic digression.

II

BY THIS time the stranger had reached the edge of the town. That is to say, he had entered a pasture through a sagging wagon gate and was walking along a path that led to a worm fence on the other side. Four red cows and a bull regarded him attentively. The cows held their heads up, but the bull lowered his and blew upon the ground through his nose. This not having the effect of hastening the intruder, he pawed it with his heavy hoofs and gave a deep, guttural bellow. The man condescended to observe him. This was in itself an offense. He horned the grass and bellowed again, with all the different notes of ferocity in bull-bellowing. The man refused to take to his heels. This convinced the bull that a rival had entered his preserves. There was nothing to do but curl his tail over his back and charge. He did it. The man side-stepped, stooped, caught the bull by the under jaw and the horn on the other side of his head and gave his neck a twist. The bull lost consciousness in the somersault that followed. When he recovered he was lying in the grass at full length, with a taste of tobacco on his tongue. The man was some distance farther down the path. The four cows had not moved or changed expression. They were feminine; they had been milked. They knew the man better than the bull did, who knew only himself. They were not indignant at the man, nor critical of the bull. They enjoyed the peculiar satisfaction of mere observers. You will have noticed the same silent satisfaction in a certain class of women when two men fight.

There was a crack in the fence sufficiently wide to admit the body of a man, and sufficiently narrow to exclude, say, that of a bull. The rails above and below it were sleek and indicated the hospitality of those, whoever they were,

Digitized by Google

that lived beyond. The stranger flung one leg over the lower rail, bent his body limberly through the crack and drew the other leg after him. He passed into an oat field, ruffled into green waves by the wind. The path was fringed with sassafras bushes and red sumac. He broke off a twig *of* sassafras and began to chew the sweetly scented bark. He was approaching another wagon gate that opened at the back of a house, of that peculiar gray that white paint turns when it has not been renewed in twenty-five years. There was the skeleton of an old carriage standing just *inside*, with the iron tires of its wheels lying in dark circles on the grass and its shafts elevated in a kind of horseless lament. A hen flew cackling off her nest under the seat. Then a dog began to bark somewhere out of sight. In front, the house, with the cornices and fluted columns, had the appearance of a fine old lady who has seen better days and remembers them. An immense elm stood in the foreground, like an elderly gentleman in waiting who had been left there ages ago for this purpose. You understood at once why the only gateway was at the back. It would have been an impertinence to approach such a house from the front. Only the sun did that, when it was rising in the morning over the opposite hill.

The stranger stood beside the old carriage frame, resting one hand upon it. The dog that had barked came forward and licked the other hand. It was a hound. He was like a man overtaken in a dream. This was really the case. He was suddenly hypnotized by the boy he had been in the old house so many years ago, by the shadows that lay unchanged upon the grass, by the little singing sound the brook made at the bottom of the hill. For the first time the sad consciousness of the prodigal invaded him—a sort of pang—as he remembered his mother, seen so often between the fluted columns of the old hooded porch as she called—always called him "back home," after the manner of mothers. Vaguely he began to wonder what would have happened if the first prodigal's mother had met him instead of his father. He felt that it would have been much more difficult for the prodigal. She would never have rejoiced, nor forgiven him with a ring on his finger; but she would have done it with tears, and in clinging to him would have reminded him of every sin he had committed. Man that is born of woman cannot help himself. So far there is no other way to get born. Otherwise, few of them would risk the long future obligations to be just good that it entails. Especially the prodigal would not risk it. When you have been in the far country, having a damned but a good time, it is easier to meet your father upon your return than your mother. A father is always so much nearer, more intelligently kin to a prodigal than any female relative can be. He discovered that, while he mourned the death of his father, he was glad his mother was dead and where she really belonged.

But life has a curious way of adding apocryphal passages to the ancient Scriptures which are quite as effective as if Moses had put them in. Suddenly he perceived what he had not observed before, the figure of a woman seated upon the porch—a woman who belonged, not to any scriptures but to far more ancient history, when the life of man was neither moral nor immoral, but merely life. She sat silent, serene, mysterious, with her eyes fixed upon him with that strange authority of the Delilahs, Jezebels and Cleopatras. And in the first instant of that imperative gaze he ceased to be the prodigal. He was a grotesquely modern giant, shorn of his other strength. He was a poor young buckram Anthony in top boots, who had forgotten his empire. When some men fall in love they discard civilization. They are of no service to the nation; their instincts belong merely to the race. But a peculiar kind of woman is required to inspire this ardent reversion to type. You will know them by this—their lovers never indite love sonnets to them, never sing troubadour songs beneath their casements, never confess their sins to them, never appeal to the maternal in them as men do when they are courting mere virgins that are always most easily reached through their cradle-rocking instinct. A woman of this kind invariably swaddles and nurses her lover and husband until she has an infant of her own composition to engross her attention. Then she neglects the husband and devotes herself more exclusively to the real baby. Fortunately for the good of the country, of any country, most women are of this class. They make merely faithful wives and devoted mothers. The other kind make faithful husbands and dangerous wives, and they do not often bear children. If Cleopatra had become a mother Anthony would have bundled her and the infant up and gone back home in time to save Rome. Or he would have left her to follow him, which she would surely have done.

The woman who sat upon the porch, holding the gaze of our hero, was one of those finished products of Nature. She was virgin and good, but the angels had had nothing to do with this circumstance. She willed her own righteousness to suit her own convenience. She was the feminine incarnation of red and gold that is indescribable. Her head was lifted like a graceful summit upon which the sun seemed to shine forever. This was due to an abundance of light-colored hair, arranged with insolent severity above a face which, in spite of its fairness, gave an impression of shade, of darkness, of the place where the sun did not shine. This may have been due to the fact that her eyes were very large, deep brown, and overhung by thick brows of the same color. The length of these brows was amazing and they curved like the wings of a swallow stretched in flight. The impression of mystery was given more particularly by the mouth. There was no revelation in it such as women usually make. The lips were beautiful, red, thick and firmly closed, as if she were determined to have it all from you and confess nothing herself. This was really the case. Every young man in Ruckersville for ten years had told her more than he knew about himself, had prayed to her and had died for her, figuratively, in vain. She did not even sympathize or offer to be a sister. She simply watched them through their romantic epilepsy like a trained nurse, feeling their pulses and charting their symptoms. It may be that she was interested, but certainly she had never been moved.

There is one thing some men never understand, that it is useless to appeal to the tenderness of a woman who is made and put together without a single dimple, and the lines of whose features are as regular and symmetrical as if she had been chiseled, instead of being born of flesh and blood. Such women have no tenderness. They have merely intelligence and passion. They never make the concession even of coquetry. They are singular human pyramids, full of the silent secrets of former creations. They are the deep hieroglyphics of femininity, undecipherable by either themselves or others—which is just as well. When a personality gets as ancient as that it does not belong to us and should be left to those archeologists of human nature, the psychologists. Lovers are the only people in the world who do not know this. Women abominate the mysterious in woman and show it. Children instinctively avoid them. But a man will wear himself to the bone in order to discover them. They appeal to the same spirit of adventure in him that makes him freeze to death trying to discover the North Pole. The difference in the hallucination is that your Peary does not expect to find a good fire and a warm resting-place awaiting him at the end of his journey, but your lover does.

The man who was now staring at the slim white figure of the woman on the porch, and was experiencing the distraction of having her gaze back at him with a frankness as old as life, resisted as long as he was able the temptation to advance and address her, for he felt sure she would not speak to him. Then he turned, went back to the gate, paused again with that indecision which blood sometimes makes, quite irrespective of one's brain, then took his way through the oat field. He was accompanied by the dog. A dog, particularly a hound, loves the vagabond in man.

As he passed through the pasture the bull turned his tail to him and pretended not to know he was going by. If you cannot kill your rival, the only self-respecting thing to do is not to recognize his existence. This accounts for the dignified indifference many a man shows to his enemy. We are all really ferocious in this particular. Civilization has only taught us the same intelligence of discretion that the bull practiced.

The man saw nothing—neither the tail of the bull nor the mildly inquisitive stare of the cows, nor the

THE SHIP'S JESTER

By Peter B. Kyne

ILLUSTRATED BY ANTON OTTO FISCHER

"Blacksmith for the Whaler Shandon Belle!" Bellowed Mr. Nye

THE steam whaler Shandon Belle, well found and ready for sea, with her wild, devil-may-care crew aboard and sober at last, lay in the stream off Meiggs Wharf, waiting for the turn of the tide to go outward with the ebb. Tom Nye, the chief mate, was standing beside the foremast, reading aloud from a long list of names. He was a short, squat, powerful man, with a smiling mouth and glittering eyes. Both of his hands were bent inward at the wrists until they seemed at least half an inch out of alignment with his forearms, furnishing indubitable evidence that Mr. Nye had fought his way up from the bottom to his present position as chief "kicker" of the Shandon Belle.

At the forward end of the port alleyway the crew had assembled. They were the usual types of a whaling crew—neither better nor worse—remarkable chiefly for bloodshot eyes and scraggly, blond mustaches; and as Tom Nye called each name aloud its owner growled "Here!" detached himself from the crowd and, under the keen scrutiny of Mr. Nye, crossed the deck for'd of the house and disappeared down the starboard alleyway. When the crowd in the port alleyway had slowly dwindled, one by one, until but two men remained, Tom Nye folded his list, stared at the two and chuckled pleasurably.

"And who might you two savages be?" inquired Mr. Nye.

"Green hands," replied both in chorus.

Tom Nye walked to the rail and spat overboard before he continued his cross-examination.

"Is that so?" he inquired sweetly. "So you two're green hands! I wonder, now, if I'd 'a' known that if you hadn't told me?" Here Mr. Nye's blue eyes glittered balefully and his smiling mouth expanded in a broad grin at his own little joke. "And you're so blasted new to your salt-water names that you've forgot them already, eh?"

The green hands seemed to indicate by their silence that such was undeniably the case; so Mr. Nye produced the list, scanned it a moment and settled the matter of identity after his own abrupt and characteristic fashion.

"Small man with gold teeth—Collins. Cock-eyed man—Lewis," he wrote opposite two names on his list. He thrust one powerful arm outward. It collided with the chest of the small man with the gold teeth and sent him reeling backward against the house.

"I christen thee Collins," said Mr. Nye cheerfully. "See that you remember who you are next time I pass the word for you. You're Lewis," he continued, making a dive for the cock-eyed man, who dodged nimbly out of harm's way. "A word of advice to you, Cocky Lewis: When the Old Man's on deck keep that bent lamp of yours to windward. He's sensitive and might think you're winkin' at him." And with this parting pleasantry Mr. Nye rolled aft to the skipper's cabin to report all hands present and accounted for, with the exception of the blacksmith.

Let us pause here long enough to reflect on the whimsicalities of that destiny which is currently reported to play such an important part in the affairs of men. At the precise moment the chief mate of the Shandon Belle discovered that the blacksmith was missing, a deputy sheriff presented himself before the proprietor of the Greatest Show on Earth and served him with sundry attachments preferred against the G. S. O. E. by certain outraged tradesmen who had maintained and supported the menagerie during a week of dull business. And, at exactly the moment when Tom Nye made due report to the skipper, a young man with a yearning look in his eyes and a shabby suitcase groped his way through the clouds of tobacco smoke in the office of a Jackson Street crimp and announced himself as a candidate for a job on the ocean wave.

We shall digress just long enough to present a verbatim report of the ensuing conversation between this young man and Scab Johnny, the crimp.

"Deep water or coastwise?" inquired Scab Johnny.

"The dark blue for mine. Liverpool would suit me fine."

"Green or ordinary?"

"What do you mean?"

Scab Johnny reached for a scratch-pad and wrote: "Green hand."

"Hang round the office for a couple of hours," said Scab Johnny politely, "and I'll land you a job. Got a steamer sailing for Liverpool this afternoon."

The young man sat down on a box in the corner of the office and began his wait for the promised job. Here we shall leave him for the present and get back aboard the Shandon Belle, with the remark in passing that the visit of Tom Nye to his skipper's cabin to report the blacksmith missing, the visit of the deputy sheriff to the proprietor of the Greatest Show on Earth, and the visit of the young man with the yearning look in his eyes and the shabby suitcase to Scab Johnny, jointly and severally combined to equip Tip McCune with a circus of his own.

Where were we? Oh, yes—back aboard the whaler Shandon Belle.

"The blacksmith's gone, sir," said Tom Nye.

Some people might attempt to tell you what the skipper said to this, but I shall not. He did remark that he had paid thirty dollars bloodmoney to Scab Johnny and three months' advance to the blacksmith—and this remark was mostly adjectives.

"Well, he's gone, sir," continued Mr. Nye. "All the rest of the men are accounted for; but Tubal Cain is missing."

The skipper fixed his accusing glance on Mr. Nye.

"How did he make his getaway?" he demanded.

"Probably dropped overboard on the flood tide and took a chance on swimming ashore. The watch found his shoes and overalls on the deck this morning. He's probably stuck some other skipper for a three months' advance by this time. The second mate reports that he heard a launch coughin' round the ship last night, and it probably laid off about a cable length in the dark and picked the hound up. I think that crimp, Scab Johnny, stands in and furnishes the launch for half the advance."

"All crimps are thieves!" replied the skipper bitterly. "As for this blacksmith, let us hope the villain's dead. I hope and pray that he may be thoroughly and effectually drowned, and that his soul roasts in h—l till the North Pole is subdivided into city lots! Clear away number one boat, Mr. Nye, and go ashore and rustle up another blacksmith—and be quick about it! Take the second mate with you to hold the boat-crew while you're uptown. Find a blacksmith somewhere. Promise him anything, but get him and come back in a hurry. The tide serves at three-thirty."

Evidently Mr. Nye appreciated the importance of haste, for half an hour later he swung up Jackson Street from East Street and thrust his wind-scarred face into the dingy office of Scab Johnny.

"Blacksmith for the whaler Shandon Belle!" bellowed Mr. Nye, and glared at the row of men of undoubted salt-water antecedents who sat smoking on a long bench that flanked one side of the crimp's office. "Cruise in Bering Sea and up into the Arctic. Winter at Herschel Island."

"Hello, Tom!" said Scab Johnny. "Come in."

Mr. Nye came in.

"I've got a blacksmith," said Scab Johnny, lowering his voice confidentially. "Young fellow and a first-class workman. The bulls are after him and he wants to make his getaway on a whaler. You step outside, Tom, and pretend you're going away disappointed. I'll send him after you in a few minutes and he'll follow you down to the wharf. He's leery of leavin' a trail the bulls can follow."

"Ah-hah!" replied Mr. Nye knowingly. "Which one is he?"

"Young feller sittin' on the box."

Mr. Nye glanced cautiously at the young fellow sitting on the box.

"Too light, I'm afraid," he told Scab Johnny. "Looks kinder pale, like he had a flock o' T. B. bugs chewin' on him."

"Scared stiff," corrected the crimp.

"Funny it shows in his hands," sneered Mr. Nye. "I hate to hire a man that ain't my own fightin' weight, and I haul ship every time when it comes to shippin' a blacksmith with hands like them. I want no lily-whites aboard the Shandon Belle. Is that the best you've got in blacksmiths?"

"Only thing in stock at present, Tom."

"Then," said Mr. Nye dryly, "keep it for a sample. I'll breeze along the front and see some other crimp who makes a specialty of keepin' blacksmiths with corns on their hands. No lily-whites for me!"

At the end of a three-hour search of crimps' offices, sailors' boarding houses, waterfront saloons and uptown employment offices, Mr. Nye was forced to the conclusion that it must be the closed season on blacksmiths. Apparently those migratory sons of Vulcan who preferred a job on the bounding main, with a portable forge on the deck of a whaler, were as scarce as radium in pound packages. There were dozens of the ordinary domestic variety, all eager for a job until Mr. Nye had unfolded his proposition. In vain did Mr. Nye, with glowing argument and specious lie, descant upon the delights of life on whalers in general and the Shandon Belle in particular. In vain he cited instances of blacksmiths who had grown rich by reason of the gambling instinct that had prompted them to sign on for a "lay" on the season's catch in lieu of wages. The blacksmiths were obdurate. They preferred *terra firma* and the local union scale; and in the end Mr. Tom Nye, filled with despair and disgust—not to mention certain other impedimenta which manifested their presence in a roving and uncertain eye and a pendent lower lip—returned to the Shandon Belle.

"I've raked the city with a fine-tooth comb—hic!" he reported to the skipper; "and—hic!—hic!—all the blacksmiths are workin', sir; and—hic!—hic!——"

"You lie!" thundered the skipper, wild with rage. "You're pickled to the eyebrows, you brute! You haven't tried to get me a blacksmith."

He struck Mr. Nye twice with great force, stepped over the prostrate mate and rushed out on deck. Until he had secured a blacksmith he dared not proceed on his cruise. Swearing horribly, he ordered the second mate to pipe the boat-crew overside, sprang into the sternsheets and embarked for Meiggs Wharf. On the way over he complained bitterly to the second mate of Mr. Nye's behavior.

Digitized by Google

"It's getting so nowadays," he stormed, "that a skipper can't even trust his mate. If he wants a thing well done he's simply got to do it himself!"

. . . . . .

Scab Johnny, standing in the door of his office, saw the skipper of the Shandon Belle coming up Jackson Street. Instantly he jerked his head over his shoulder, caught the yearning glance of the young man sitting on the box, and croaked hoarsely:

"Stick yer hands in yer pockets!"

Once more the peace at Scab Johnny's place was broken. Through the thick tobacco smoke a man bounded into the office, and an instant later a rasping, chain-locker voice made a vulgar demand for Scab Johnny.

Scab Johnny came from his desk, whither he had retreated under pretense of a rush of business, and took his prospective client aside. As he advanced he telegraphed a lightning wink to the skipper, who lowered his voice instantly; and the two went into executive session. Presently the skipper of the Shandon Belle threw a quick glance at the young man on the box.

"That's the only blacksmith I know of," whispered Scab Johnny; "and you can't get him unless you shanghai him. He wants a job on some tramp bound for Liverpool; but we can job the feller and get him aboard before he discovers he's on a whaler. Then—up hook and let him holler his head off. He'll have signed the articles before he's wise to the game; and ——"

The crimp paused significantly. The skipper understood.

"How much bloodmoney?"

"Thirty dollars."

"You're a thief; but I'll take him at the figure."

The crimp crossed the room and spoke to the young man on the box.

"I've landed a job for you," he said in a guarded voice. "You're to have charge of the pantry on the steamer King George, sailing for Liverpool this afternoon. That's the skipper over there. I'd heard he was shy a man in the steward's department, and the minute I saw him comin' up the street I knew I had your job located. That's why I told you to put your hands in your pockets. The Old Man's a stickler on the men in his steward's department keepin' their nails manicured and their hands as clean as a whistle, and I wasn't takin' no chances. You're to get fifty a month and found—and you're to go with the Old Man out to the vessel. And—whatever you do—don't speak to him unless he speaks to you. He's the surliest brute afloat or ashore. All you've gotter do is to mind your eye and do what you're told to do—and do it quick! The deputy shippin' commissioner'll be here in ten minutes and sign you up; and you'll land in Liverpool as flush as a dook!"

The young man winked wisely and a grateful smile lit up his rather sad features. He was to have charge of the pantry! Pretty good job that, particularly when one hasn't had breakfast or luncheon. Hence, when the deputy shipping commissioner obligingly called, in response to the crimp's telephone message and the certainty of a five-dollar fee for his trouble, the young man signed where they told him to and the job was finished. He was a green hand indeed—otherwise he must have realized the incongruity of signing articles before a United States deputy shipping commissioner for a job on a British tramp.

On their way down to the boat at Meiggs Wharf the skipper questioned him regarding his bag. The young man indicated his suitcase; whereupon the skipper muttered something about rigging him out from the slop-chest. The young man wondered why they used a slop-chest instead of a slop-bucket in the pantry! The whole matter was extremely vague; but it was a new life for him and he trusted to time to imbue him with a quick understanding of the vocabulary of the sea. Still, he was aware that he had shown his ignorance by carrying a suitcase instead of a bag; so he said apologetically:

"I made up my mind to go to sea in somewhat of a hurry."

"So I understand," replied the skipper, and chuckled a little.

Everything progressed nicely until the boat shot under the quarter of the Shandon Belle. Then the young man read the name on her stern, towering above him, and recalled the incident of the man who had invaded the "employment office" earlier in the day, looking for a blacksmith for the whaler Shandon Belle. Moreover, his nostrils were assailed by an unmistakable odor—even a landlubber could tell she was a whaleship by that; and a vague apprehension began to manifest itself in his countenance.

"Up you go, my hearty!" said the skipper cheerfully, indicating the companion-ladder.

"But this is a whaler," protested the young man, "and whalers don't run to Liverpool."

"This one does," snapped the captain.

"But I don't want to ship on a whaler. You've double-crossed ——"

A hand closed over the back of his neck and he was rushed up the companionway before he could even think of physical resistance.

Arrived at the head of the ladder, the skipper helped the young man to a kick and a violent shove, which sent him sprawling halfway across the deck and into the arms of a short, powerful man whose breath, when he gasped at the impact of the new arrival, savored somewhat strongly of a distillery.

"Steady, my lad!" said the alcoholic one, whom the reader has of course recognized as none other than Mr. Tom Nye, the chief mate. "Stead-y-y-y! You'll roll worse than that with a nor'west gale on your counter and a—— Shoot me for a junk-thief if it ain't the lily-white!"

The skipper approached Mr. Nye, puffing slightly from his late exertions.

"There's a blacksmith for you," he growled triumphantly. "I'll have you understand, Tom Nye, that when I go after a blacksmith I get a blacksmith, even if I do have to shanghai him. Don't stand there staring at me with your teeth in your mouth! Go for'd and tend to your business gettin' up the hook."

Mr. Nye opened his mouth twice to speak, but seemed to choke each time. "Aye, aye, sir!" he gurgled presently; and, herding his savages before him, he ran for'd to the fo'castle head where the harsh, metallic grinding of the winch proclaimed presently that the anchor-chain was paying in on the drum. The boat was swung into the davits, the skipper mounted the bridge, and as the dripping, mud-incrusted anchor swung clear of the water the Shandon Belle quivered slightly, gave one long farewell blast from her siren and slipped easily down the bay with the tide.

As for the young man with the yearning look in his eyes and the shabby suitcase, he leaned up against a sticky, oily stanchion and laughed very quietly to himself. Thus Mr. Nye found him.

"Well, lily-white," said the mate, "what's the big joke?"

"It's on the captain," gurgled the young man.

"Huh!" said Mr. Nye, and smiled himself. "What's your name when supper's ready?"

"Tip McCune."

"All right, Tip McCune. See that door there? Well, it leads to the fo'castle. Stow your suitcase in there and pick out a berth for yourself, and be sure you always come a-runnin' when I send for you."

"Aye, aye, sir!" replied Tip McCune.

Mr. Nye looked sharply into Tip McCune's sad countenance and was certain he detected a deep-seated sense of humor there. He had a haunting suspicion that Tip McCune was, in some vague way, poking fun at him.

"I'm a pleasant man myself, McCune, and easy to get along with," he said, apropos of his suspicions; "but if I was you I wouldn't try no jokes on the skipper."

Whereupon Tip McCune winked boldly at Mr. Nye. "I've got my fingers crossed," he said. Mr. Nye choked and walked away, pretending he had not heard; and his glittering eyes glittered more than usual as he thoughtfully rubbed a dark-blue abrasion on the point of his chin.

"Somethin's goin' to happen," said he to himself. "Somethin's goin' to happen. But it's the skipper's funeral; and come what may, I'll stick by that young man."

. . . . . .

The Shandon Belle was three days at sea before Mr. Nye, now entirely recovered from the strain of securing a blacksmith for the cruise, decided that he might just as well overhaul the whaling gear in order to keep the crew busy. Under his direction they set to work, and it was presently evident to the mate's practical eye that a little blacksmithing here and there would not be amiss. A portable forge, an anvil, hammers and a long bar of steel were accordingly brought on deck, and a temporary smithy established on the main deck for'd; which being accomplished, Tom Nye desired that the word be passed for the blacksmith. Presently he appeared, very pale and wobbly.

"What's wanted?" he inquired shortly.

"Say 'sir' when you speak to me!" said Mr. Nye firmly.

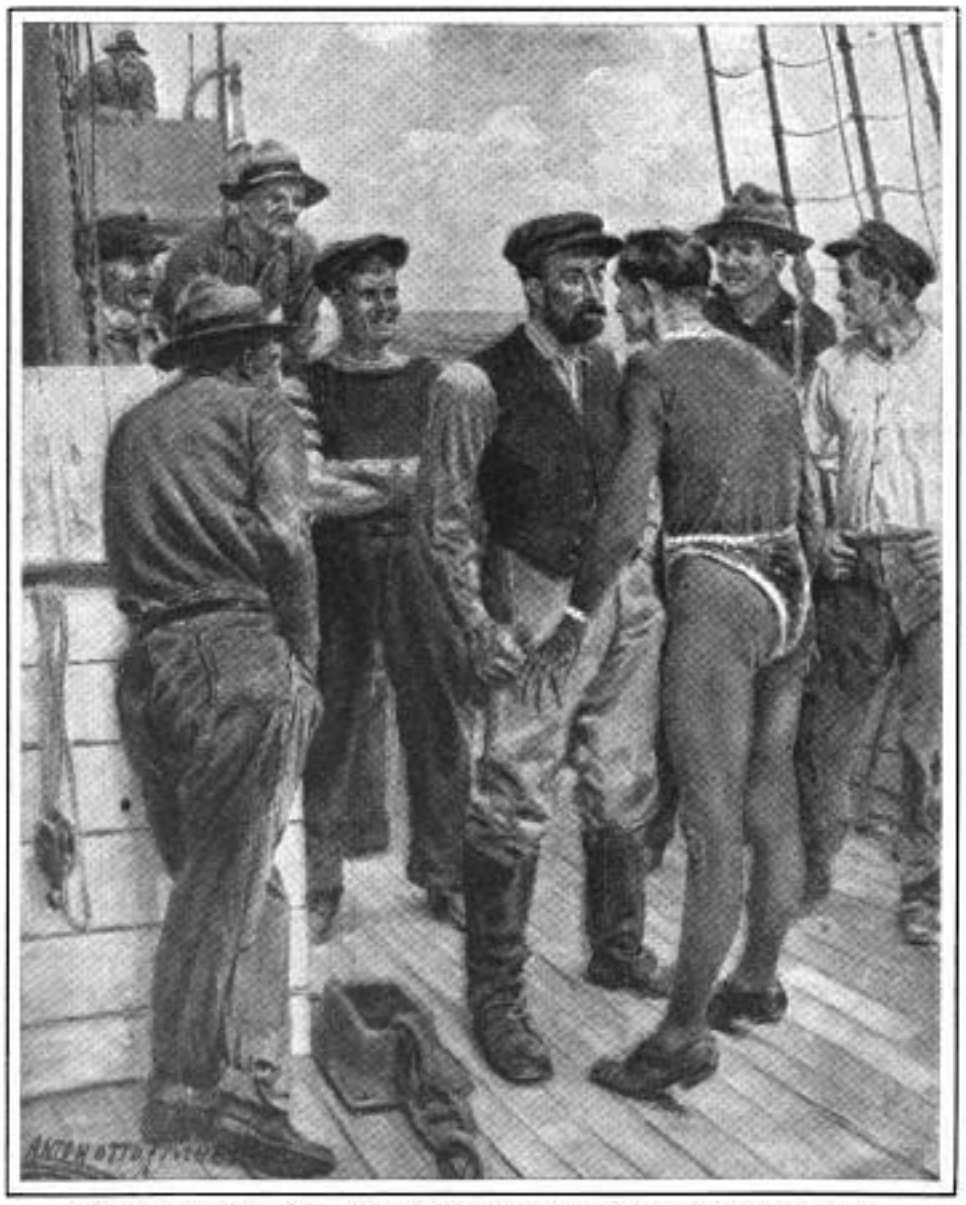
"What's wanted, sir?" repeated the blacksmith.

"You're coming on very nicely. A little blacksmithing, if you please. Get busy and forge out a couple of deadeyes and half a dozen extra boathooks. Some of them cargo hooks need touchin' up. Besides that, the chief engineer has a few small jobs for you down below."

"But I can't do it today," quavered the blacksmith. "I'm too seasick. And besides, I'm not a ——"

"In the bright lexicon of youth," said the skipper, coming up at that moment, "there ain't no such word as 'can't.' You do a little work to earn your keep, McCune, and you'll forget you're sick. Fall to lively now—and no back talk."

"If you'll pardon the suggestion, sir," said Tom Nye respectfully, "I'll ask that this job go over a few days until the blacksmith gets his sea legs. He does look frightful green, sir; and if he should faint and fall into the forge, or burn himself with a hot iron, now, sir ——"



"Very well, Mr. Nye," said the skipper, somewhat surprised. "Since you suggest it, we'll give the young man three days to resume his natural color. Three days, mind you!" He glowered at the blacksmith and walked aft.

"Thank you, sir," said the blacksmith when the skipper had departed. Mr. Nye endeavored to appear quite fierce as he answered.

"What for? For beggin' off for you? Stow it, young man—stow it! If I'd 'a' hired you you'd been working now, my bully boy—and don't you forget it. If you must know why I begged off for you, however, I'll tell you. If you're a blacksmith, then I'm the Archbishop of Canterbury; and if the skipper wasn't a fool he'd see it too. I could 'a' had you first, but I wouldn't take you—and I got my crown-block mighty well punched because I didn't. The skipper thinks he's a smart man—and it ain't up to me to explain. Let him find out how smart he is after we've been at sea a week and no blacksmith. You know what'll happen, Tip McCune? He'll have to get in and do the blacksmith work himself. He was a helper once, before he took to sea."

"Of course I'm not a blacksmith," replied Tip McCune. "I never said I was and never represented myself as one in any way. The man that got me the job told me the steamer was bound for Liverpool and that I was to be in charge of the pantry."

"The thievin' crimp!" raved Mr. Nye. "I don't doubt a word of your yarn, McCune. Crimps is the curse of life! They're always doin' us up."

"Ain't He a Bird, Sir? Just Think o' Shanghaing a Blacksmith and Having Him Turn Out a Acrobat in Red Tights!"

Digitized by Google

"But how about me?" quavered the pseudo blacksmith.

"You?" queried Mr. Nye. "Who are you? It's the likes of me that suffers for the likes of you."

Very sadly Tip McCune staggered to his bunk in the fo'castle and remained there two days, at the end of which period he was aware of a gnawing in his stomach and a revival of his interest in life. The following day, in answer to a query from the skipper, the cook reported the blacksmith out of danger, and the skipper sent for him.

"You'll work today, McCune," said the skipper.

"Blacksmithing or at the job I signed on for—in charge of the pantry?"

"Forget the pantry, McCune," said the skipper pleasantly. "You're aboard a whaler now and I'm the king. You'll follow your trade, you lazy swine!"

"Why, I'm not a blacksmith, sir!" said Tip McCune.

"Of course not," snapped the skipper. "I know that. Don't bother telling me. Nevertheless, you'll do the blacksmithing work on the whaler Shandon Belle, and don't forget it! Call yourself a shoemaker if you like. I don't care."

"But I assure you, captain, I am not a blacksmith. Why, look at my hands! This Scab Johnny person tried to palm me off on Mr. Nye for a blacksmith, but he looked at my hands and refused to take me. He could see right off that I'd never swung a sledge."

A quick, startled look came into the skipper's eyes. He looked at Tip McCune's hands.

"Is that really the truth, McCune?" he asked.

"Surest thing you know, cap," came the answer.

"Then," replied the skipper, with that sweet smile that always presaged a swift punch upward from the hip, "you're a dirty, deceiving, beachcombing hound, and you stood in on the play. Take that!"

The skipper struck, but Tip McCune was not on hand to receive the blow. To the skipper's amazement Mr. McCune bounded straight into the air, turned a double somersault and landed on the deck six feet away. He alighted smiling.

"Bust my bobstay!" gasped the skipper, while from the bridge came an involuntary burst of applause. Tom Nye and the helmsman had been witnesses to the skipper's disappointment and Tip McCune's remarkable escape.

"He ain't no blacksmith, sir," volunteered Mr. Nye.

"Hell's bells! I should say he ain't," sputtered the master of the Shandon Belle admiringly. "Do you often get taken that way, my man?" he inquired of the bogus blacksmith.

"Easiest thing I do," replied Tip McCune. "And since I'm not a blacksmith, and you don't need me in the pantry, perhaps you wouldn't mind telling me what you're going to do with me."

"Not the slightest objection, Mr. McCune," replied the skipper. "I'm going to put you to work in the stokehole, shoveling coal."

"I can't shovel coal," wailed Tip McCune. "It'd kill me."

"I hope it does; but what would Your Highness suggest? If there's anything else you can do well, speak up. A fair-minded man should always be open to a suggestion from a subordinate."

"Do you really want to see me do something I can do well?" asked Tip McCune eagerly.

"I do," said the skipper grimly, "provided you can do it well."

Thus encouraged, Mr. McCune promptly shed his overshirt and trousers, and a howl of admiration went up from Tom Nye and those members of the crew who happened to be near—for what they saw was a perfectly proportioned young man, arrayed in bright red silk tights and silver spangles. The blacksmith had disappeared with the rough shirt and trousers, and before them stood an undoubted hero of the circus ring.

"Lord bless my mildewed heart!" gasped Mr. Nye. "If that chap ain't one of the Tincano Trio from Sholto's Circus I'm an Eskimo! I took in that circus the night before we left Frisco. It's the prize tumbler for a thousand!"

For a moment Tip McCune stood gracefully at his ease, hands on hips, smile on face. Presently he bowed slightly as if to a great audience, after which he jumped six feet in the air, turned a double somersault and alighted with all the ease of a butterfly. A rapt expression came over his face. He threw his head back and a dreamy look crept into his eyes as he shuffled the opening steps of a singularly graceful and delightful buck-and-wing dance. For perhaps a minute he seemed to be feeling himself out; but presently he got down to business. He jigged, he clogged, he sidestepped, his agile feet tapping the deck so fast and rhythmically as to charm the senses and delight the soul. Never, in all their adventurous lives, had Tom Nye and the skipper seen such dancing. They watched Tip McCune, fascinated until presently, having executed every step known to the profession and a few extemporized on the spur of the moment for the special edification of his audience, he bounded once more into the air; and, still turning somersaults until he seemed merely a bright red blur coming onward with the speed of a comet, he executed one grand, final flipflop and landed on the deck so close to the skipper that they stood facing each other, toe to toe.

"Rot me and grind my bones!" said the skipper admiringly.

"Did I do that well?" demanded Tip McCune.

"I'll agree, you did," admitted the skipper when the storm of applause had subsided. "Who in blazes are you?"

"I'm a circus tumbler out of a job," complained Tip McCune. "The show went broke and I wasn't eating; and I thought if I could work my way back to Liverpool I could go on to London, pick up an engagement in the music halls there for a few months and come back to the U. S. A., billed as a headliner in vaudeville—The Eccentric English Acrobat, Tip McCune. Gee, but it sounded good just to think of it! However, you and that Jackson Street porch-climber have spoiled it all; so what's the use of talking about it?"

"Ain't he a bird, sir?" cried Mr. Nye from the bridge. "Just think o' shanghaing a blacksmith and having him turn out a acrobat in red tights!"

The sarcasm was not lost on the skipper, who turned livid with fury.

"I wonder what we'll do for a blacksmith now!" continued Mr. Nye musingly. "I'm mighty sorry I never studied for the job before I took to going to sea."

The skipper's malevolent glance commenced wandering about the deck in search of a missile to hurl at the mate, who continued blandly:

"Still, as the poet says, every cloud has a silver linin', sir. Just think what a drawin' card the young man'll be in the bull rooms at Herschel Island this winter! I tell you, sir, he's a find. We'll be the envy o' the fleet. With a spry young feller like McCune jiggin' an' tumblin' round, just think how quick the nights'll pass, even if they are six months long!"

"By the gods of war, Nye," snapped the skipper, eagerly seeking an opportunity to escape the cutting sarcasm of his mate, "you give me a bright idea. In ancient times every king had a court jester. Now I'm the king of the Shandon Belle, and what's the matter with me havin' one too? Nothin' at all the matter. Therefore, Tip McCune, you will be known hereafter as the ship's jester. That's your job. You're to furnish amusement throughout the cruise; and any time me or my mates speak to you and you don't come back quick with a good fly joke you're out of luck. How's that for a bright idea, Nye? If he keeps us amused he's excused from work and messes in the cabin. If he don't keep us amused—into the stokehole he goes."

"Nothin' could be fairer," replied Mr. Nye heartily. "All fine as a fiddle—with two exceptions. One of 'em is Comox, where we coal, and the other is Skagway, where we dump that jag of freight the owners made you accept. If this bird ever sets foot on the wharf at either port we're shy the ship's jester."

"I'll make you responsible for him," answered the skipper tartly. "You see to it that he trains regular and keeps in condition." And laughing heartily at his little pleasantry the skipper disappeared in his cabin.

At Comox, on Vancouver Island, the Shandon Belle coaled heavily for her long cruise, while the ship's jester, locked in Mr. Nye's room, peered sorrowfully through a porthole and reflected on the indiscretion of his failure to look before he leaped. If he had only taken the trouble to read the articles he signed in Scab Johnny's place he would not have been in his present predicament. Too late he realized that the skipper of the Shandon Belle had him legally. He must finish the voyage.

He was destined to finish it much sooner than he expected. Notwithstanding the fact that the Shandon Belle was a whaler, bound for Bering Sea and the Arctic Ocean, the attractive freight rates to Skagway, owing to the Klondike excitement then at its height, had induced the grasping owners of the whaler to divert the vessel long enough to deliver a thousand tons of freight at that port before continuing on to Sitka for more coal. With the privilege that went with his job as ship's jester, Tip McCune had succeeded in extracting this information from Mr. Nye, and the knowledge caused his spirits to rise perceptibly. If the Shandon Belle entered the harbor at Skagway during the night she would not move into her berth at the wharf until the following day. Until they moved in to the wharf Mr. Nye would permit him the freedom of the ship; so Tip McCune made up his mind to buckle a life-preserver round him, drop overboard and swim ashore in the dark.

The Shandon Belle was loafing along at about a nine-knot gait, though she could do thirteen under pressure; and the ship's jester, after secretly consulting with the bo'sun, ascertained that at her present rate of speed the vessel would arrive off Skagway late in the afternoon. The information pleased him so greatly that at supper that night he unfolded a long string of ancient jokes, at which the skipper and Mr. Nye laughed uproariously. Later, when the second mate pressed him for a song, Mr. McCune expanded in a shrill falsetto rendition of They All Love Jack; and the skipper was so impressed that he ordered the cook to brew a kettle of hot grog for all hands.

By the time the vessel drew out of Clarendon Straits and into the Lynn Canal, Tip McCune's popularity was such that he could have started a mutiny had he so desired. He was as quick with his tongue as he was with his feet, both brands of speed being heritages of his Celtic forebears; and when the skipper wasn't laughing at the fund of droll stories which Tip McCune appeared to have on tap perennially, the skipper was continually remarking to Mr. Nye that if ever he—Mr. Nye—so much as presumed to lay a finger on the ship's jester he—the skipper—would shoot Mr. Nye like a dog.

The Shandon Belle was abreast Battery Point, nosing her patient way up into Chilkoot Inlet the fifth day after leaving Comox, when Mr. Nye, who was on duty at the time, called to the bo'sun to pass the word for the ship's jester. When Tip McCune appeared in answer to the summons Mr. Nye presented him with a cigar stolen from the skipper, and bade him perform the duties of his office.

"You've been springin' a lot of stale guff, Tip, my lad," said Mr. Nye, "and it's high time you told me somethin' new and original. Nothin's interested me all day, and I'm in danger, as the feller says, of being bored to death."

"All right," replied the ship's jester soberly. "I'll tell you something new and original. As I was passing along the main deck a minute ago I happened to look down at a seam in the deck. You know those seams are caulked with pitch; and as I looked at this particular seam it winked and bubbled at me."

"Under the skipper's rulin' in your case, Tip," said Mr. Nye, "I could hit you for that. It don't amuse me none."

"It didn't amuse me any, either," was the reply, "because when I looked round all the other seams were winking and bubbling, and I wondered if the ship could be afire!"

"Great grief, Tip!" gasped Mr. Nye. "Is this a joke?"

"No," said Tip McCune; "it is not a joke. Isn't that a little wisp of smoke curling up from the corner of the hatch-coaming?"

Mr. Nye turned, gave one quick glance and dashed down on to the main deck. Half a minute later he bounded into the pilot house and began a furious and continuous ringing of the ship's bell.

THE PANAMA PLUM TREE

Will Europe Get the Fruit?—By A. C. Laut

DRAWN BY EDWARD A. WILSON

IF YOU happen to want to build a house, and buy Washington lumber for it, the freight rate on a carload of that lumber to terminal points round Boston and New York will be from three hundred and ninety-five to four hundred and twenty-five dollars, according to your distance from those main terminal points. If you had that lumber shipped by way of Panama, instead of the transcontinentals, the freight would be eight dollars a ton, or one hundred and sixty dollars for a carload of forty thousand pounds. By schooner instead of steamer, in time of cut rates you can get a quotation of even four dollars and fifty cents a ton, or ninety dollars a carlot. Yet you can talk yourself black in the face and you cannot get an Easterner or Middle-Westerner to see how the opening of the Panama Canal is going to benefit him one continental—not to mention two hundred and fifty dollars saved on one carload of lumber!

The same condition obtains in regard to your Easterner's or Middle-Westerner's breakfast orange. He is paying freight—though he does not know it—at the rate of ninety cents plus on a box of his breakfast oranges. By Panama the freight on those oranges will be nearer forty cents than ninety cents. To be explicit, instead of the consumer paying twenty-three dollars a ton on oranges and lemons from the West, he is going to pay only ten dollars a ton by Panama. Yet if you ask the Easterner what personal interest he has in Panama, he goes plumb-glum—dumb-silent—hasn't any interest; doesn't care one hoot—and so on.

New York is on a straight line with Panama and on a shorter line than is Los Angeles or San Francisco or Portland or Tacoma or Seattle. It takes from fifteen to eighteen days to steam from the Pacific Coast ports down to Panama. It takes from six to ten days to go from the Atlantic ports down to the canal. Yet the Pacific Coast ports are spending a hundred million dollars on preparations for the canal. The papers are full of it; and you can't meet a most casual acquaintance who hasn't hopes and plans of what Panama means to him. In New York—well, with the exception of about four papers—you'll find more about the Turkey Dance or Mr. Somebody's last attack of the tender passion than you will about Panama.

After the Fashion of Little Jack Horner

"OF AMERICA'S billions of international commerce," wailed the chief proponent of the sudsidy propaganda at the Merchant Marine Congress of 1911—"of the billions"—and it may have been trillions, for all I know—"of the total international commerce of the United States, ninety-one per cent is carried by foreign vessels; only nine per cent by a domestic marine." And do you know to what a frenzied pitch that statement—which is not only a statement but a fact—worked up the Merchant Marine Congress of 1911? Nearly all the promised speakers failed to turn up; and the Merchant Marine Congress of 1911, "with the completion of the Panama Canal only nineteen months away," broke up a dismal failure—a plain, flat fiasco. The East wasn't interested—that's all; and the press was bored to the extinguishing point of suppressing any publicity.

However, don't you run away with the idea that because of all this the East is dead to Panama. New York is a big, noisy place, where the biggest things aren't always making the biggest noise. The ashcart man emptying a tin can makes more noise than a train running in and out of the new Pennsylvania Station; and that comparison is largely true of what's going on about Panama. The general Eastern public isn't awake yet to what it all means; but "the call" is on the wire that is going to waken the public up to one of the biggest booms, biggest world developments, biggest diversions of wealth and opportunity that have occurred in America in a hundred years! No—not a campaign of muckraking and spring-tooth-harrowing and steam-rollering the railroads! That is all past. When the steam roller comes the railroads are going to be on top—not under. To be sure there was a million a year spent in suppressing isthmian traffic long ago, and there was a fight for the harbors on the Pacific Coast, and all that; but that is all past. Today the railroads are not fighting free harbors. They are building five and six and ten million dollar steamship slips and piers and wharfs. They are applying to have obsolete navigation laws changed that hamper the operation of steamship lines. To be sure it would please them if that toll on Panama traffic were put so high—say, as high as Suez in its first years, two dollars a ton, or ten francs—that Panama rates would come only slightly under transcontinental rates; but the railroad men of America are not fools.

If Panama pours twenty million immigrants into the Pacific states that means more to them in local traffic than all the Panama Canal can divert! Also, the railroad men see that if Panama is properly handled it may mean the diversion back to America of more annual wealth than the conquerors of Mexico and Peru ever carried back to Spain!

Says Lewis Nixon, an authority on shipping and steamship building in America: "Three hundred million dollars a year are now paid to foreigners in connection with the transfer of our freight and people 'by foreign steamships.' This drain, in the last thirty years, has caused the export of six billion dollars of our gold." Take a good look at these figures! They would have looked big to the old Spanish conquerors, wouldn't they? They would have maintained Spain as the most opulent nation in Europe for another century. Well, that's the prize the big transportation men hope to save to America; and they hope to save it through the stimulus Panama is to have on an American merchant marine.

Under all the noisy indifference on the part of the general public toward Panama, let's see what is doing; and don't fly off the handle if the opinions of the biggest men contradict each other, and if a higgledy-piggledy of obsolete navigation laws, dating back to 1789 and 1812 and 1840 and 1871, also contradict one another and can only be observed in the breaking—as one was, not many weeks ago, up on the lakes, when, under stress of storm and accident, a foreign passenger excursion boat put in and disembarked her United States passengers at a United States port, thereby breaking the law that forbids a foreign ship to ply from port to port in the United States. According to law, the fine was one hundred and eighty-three thousand dollars. The Government took cognizance of the impossibility of the law and the fine was compromised for a few hundred dollars. Conflicting views and conflicting laws will be set down here; and before Panama opens, the public will have to decide which views and laws shall be maintained.

What is doing under the apparent indifference to Panama? "There is a worldwide boom in steamship traffic," declares a foremost authority on traffic matters of the Atlantic Coast. "A remarkable revival has occurred in the ocean-carrying trade. Boats are wanted for the West Indies, for South America, for long-voyage business. Inquiry for cargo room in New York is met by the answer there is no space in any port vacant and rates have doubled." This boom may not be entirely in anticipation of Panama; but, with the prize of Panama traffic in the very near future stimulating plans and rates, the boom is one of the factors making for big development when Panama does open. This, of course, affects only the nations that have the ships; and of the sixty-four hundred steamers docking in New York in 1910 only seven hundred were American. Of the remaining hundreds marked "foreign," some are not so foreign as they seem; for they are financed by American capital, though they fly a foreign flag owing to our impossible navigation laws. The point to remember is that the world is entering on an era of revived ocean traffic. The United States' share of this will be just in proportion to the number of her ships engaged in it.

Within the past few months New York has witnessed harbor dredging to the extent of five million dollars, and pier enlargements to the total plan of twenty-four millions to take care of the extended traffic that has sprung up.

Indifferent Uncle Sam

GRAIN rates from New York to Buffalo have been reduced a cent a bushel. Why? Because Montreal has been shipping three times as much grain as New York. And Western shippers are preparing to send grain via Panama. To appreciate what a saving Panama will effect in grain rates, one has only to compare rail rates, Chicago to New York—ten cents a bushel—versus New York to Liverpool—three cents a bushel; or one-third as much for three times the distance by water as by rail.

A few weeks ago the Belgian ensign was hauled down from two of the big liners and the Star-Spangled Banner run up in its place. How can this be done if the navigation laws forbid the registry under the American flag of foreign vessels? These two vessels happened to have been built in the first place in America. Now that Panama is near completion and an enormous coast-to-coast trade anticipated, these two vessels are going into commission as American merchant marine; for the same navigation laws which forbid the registry of foreign-built vessels under the American flag also forbid traffic of a foreign vessel from port to port in the United States.

Simultaneous with this change in the Red Star liners, the United Fruit Company, which has a fleet of thirty vessels from New York, Boston, Baltimore, Philadelphia and New Orleans to Central America, and which is owned by American capital but compelled to fly a foreign flag owing to the United States navigation laws, asked permission to place seventeen of its largest vessels under American registry. The vessels could be built cheaper under foreign registry. As these vessels were foreign-built, they have been, up to the present time, refused registry under the American flag.

It is only a few seasons since Bates and Cheeseborough put the California-Atlantic line on between Atlantic and Pacific ports, at present breaking bulk at Panama; and this line has taken five million dollars' worth of business from foreign carriers and the railroads.

BELOWSTAIRS IN A HOTEL

"He Couldn't Have Sworn at Me Worse if He'd Been My Own Husband!"

By Maude Radford Warren

ILLUSTRATED BY HY. J. WATSON

BETWEEN abovestairs and belowstairs in a hotel there is as wide a difference as there is between the stage and the dressing rooms, or the classroom and the football grounds, or a dress suit and the unwilling, unedited human being who incases himself therein. We demand smooth service and we receive it—at a price—whether we go to a small hotel where a bellboy takes our bags, coming back later with an avid smile to bring us a totally unnecessary pitcher of ice-water; or whether, as at another house, a bellboy "rooms" us and departs forever, leaving a floorwaiter to hover about us until our bags are packed for leaving. Belowstairs we look upon mainly as machinery for our needs; but it is really a seething, unrelated, casual mass of humanity, kept in order by highly paid experts, whose business it is to secure efficiency.

We realize that there must be a little stress belowstairs—indeed the sense of hurry there may contrast agreeably with the sense of repose and ease abovestairs; for even in the dining rooms, where ravenous men consult their watches unbelievingly five minutes after they have ordered, there is an intention to secure serenity in softly shaded lights, pleasant and quiet—if swift—waiters, and in the solicitous and soothing expressions of the head waiters and captains.

Few of us, however, realize what an inferno of sound and activity there is behind the swinging doors that separate abovestairs and belowstairs!

How Service Waits on Appetite

HERE the waiters, having got a checker's stamp on their order bills, lose their even gait as they burst into the huge kitchen. They do not see its mosaic floor; its deal tables piled with dishes and silver; the sharply marked departments for hot meats and for cold meats; for entrées and for soups and vegetables; for salads and fruits; for tea, coffee, milk, butter and eggs; and for bread and pastry. They do not see the splendid dishwasher and the tense-faced men who operate it, or the checkers, or the watchful stewards who keep the disorder orderly. Their eyes are fixed on the long, hot ranges, where work scores of driven and sometimes hot-tempered cooks, their white caps composing nicely against the great copper vessels which hang above them.

The faces of the waiters are fierce. They appreciate nothing of the din about them. Despite it—despite the hundreds of workers—the effect is of isolation, for each man is a concentrated egoist, determined to get what he wants from the person or object that has it. Those on the floor, whatever their work, dart from point to point, miraculously avoiding collision with other darting people. If a collision does ensue each speaks his mind freely.

Each waiter sees only the face of the cook at whom he shouts his order, or perhaps the face of the fat, earnest go-between who moves up and down in front of the range, repeating orders which he thinks have been imperfectly heard, conducting his work largely by instinct, since mere intelligence would not take him very far. With frowning brows, glazed eyes and slightly dropped jaw each waiter collects the food for his tray, races to the checker and shows what he carries as well as the items on his bill, pausing watchfully here, for if he loses his stub he will have to pay the hotel for it; then he dashes to the door, enters abovestairs and once more becomes a pleasant-faced waiter, composedly bearing a meal to a valued patron.

Thus we receive our expert service, and because we pay for it we do not marvel at it. We are accustomed to great hotels; we take it as a matter of course that they have their private laundries and icehouses—and, for all we know, dairies and greenhouses. We are accustomed, also, to expert management in America—we have seen it in great business offices, great department stores; and, if anything, we assume that special efficiency of method should be brought to bear in handling the great primitive matter of feeding and housing people.

It is an axiom that a great hotel has its several departments: its general manager and his assistants; the housekeeper and her chambermaids, scrubwomen and housemen; the maître d'hôtel—so called when he receives more than a hundred dollars a month—and his waiters; the steward and his assistant stewards, dishwashers and silvermen; the chef and his cooks, bakers, vegetable women and salad girls; the engineer and his corps; the carpenters, painters, decorators, upholsterers and their corps; the controlling department, which manages the office force; and the highly important auditing department and its efficient checkers.

It is an axiom, too, that every department must be subdivided—must have not only responsible heads but responsible subheads. It is axiomatic again that these heads must be the best that money can buy; that they must have perfected their system through experience in great hotels all over the country, and that they must go on improving their methods if the executives are to survive.

What is not axiomatic—what makes the business problem of a hotel different from that of a department store or a great office—is the human nature it must handle both abovestairs and belowstairs. Abovestairs is comparatively easy—the creatures demanding to be fed and housed must be treated with perfect deference, promised everything they want and given it through the efforts of the army beneath. Belowstairs is as different as it is difficult. It is human nature not confined behind desks and counters and trying—if it is wise—to protect its nerves; but it is human nature, unable by the nature of its work to protect its nerves, unleashed, volcanic, in perpetual action.

To take only the kitchen phase: on the floor there may be—of the steward's staff, chef's staff and maître d'hôtel's staff—perhaps eight hundred people. A few of these are skilled laborers; the others are unskilled, often unpracticed, frequently foreign and, above all, undowered with any special sense of loyalty to or affection for the kitchen. Working, as they do, at an astounding rate of speed—usually by electric light—isolated, looking on their fellow workers largely as trees walking, they cannot get the sense of attachment that a stenographer has for the office even of the most soulless corporation, that the shopgirl has for her special niche behind the counter. The kitchen corps have the habit, indeed, of several hours of rushing work; but the circumstances are such that they can scarcely get the habit of a place in the sense that the stenographer and the shopgirl do. This condition being so, most of them are about as casual as sparrows.

The World's Real Cosmopolitans

THE heads may see some greatness—if not some romance—in their business; for, after all, the feeding of the people has something inspiring about it. A steward who must buy food for ten thousand people daily; who walks into the shellfish department and sees eight barrels of oysters opened for the day's consumption; who walks into his storeroom and sees five hundred cans of French peas carried off for one banquet; who knows that sixty thousand pieces of china are washed every day by his men—may feel that he is working for more than money.

As the chef looks at his oven that produces thousands of rolls daily; as he walks beside his range, many feet long, supervising the cooking, showing a new man here how to broil a chop perfectly, cautioning an old hand dizzy with the heat that too many orders are getting past, the chef has reason to feel that his work is of great importance; but the underling naturally cares only for his money and for having as good a time as he can. It is a question whether the work does not affect body and mind with a tendency to perpetual motion. At any rate many of these underlings go on to other places as consistently as a London belle goes on to different house parties. Your real cosmopolitan is not the European traveler who sees the outside of Paris and London—it is your unmarried laboring class, with the same restlessness in its blood. It is not only outdoor laborers, such as miners and bridgeworkers, who are the real cosmopolitans, but the indoor workers, who see certain vital phases of life from the inside, since their vantage point is close to the kitchen.

A "permanent" in a great hotel gives a generous Christmas gift to a bellboy; on New Year's Day he comes with fresh asking in his eyes.

Few of Us Realize What an Inferno of Sound and Activity There is Behind the Swinging Doors That Separate Abovestairs and Belowstairs!

Digitized by Google

"I come to tell you-all goodby'm; I cert'n'y am mighty sorry to leave the hotel 'count of you," he explains.

"Don't you like this hotel, John?"

"Oh, yes'm. I like it; but I been here three months now, and it's time to leave. I'm goin' to Hot Springs; they is *mighty* generous there with they tips."

"But the season is only two months there. Will you come back here then?"

"Law! No'm; I'm jest honin' to tell the head clerk what I think of him. I jest plain got to do that, so I cain't come back no mo'. But I ain't plannin' on it anyway. I'm goin' to Detroit and travel the boats."

"Travel the boats?"

"Yes'm. I go wherever they tote me; it ain't no difference to me, 'cause the ge'mens is always the same. I have fo' little tables to take care of, and some of 'em done sit there all the time; and when they sit there a while they don't care how much they give me. Yas'm; money sure do come on those boat trips. Reckon I'll go West next fall when the boat stops. You-all won't see me no mo'. Got a letter you'd like me to post—or cain't I do somethin' fo' you before I go?"

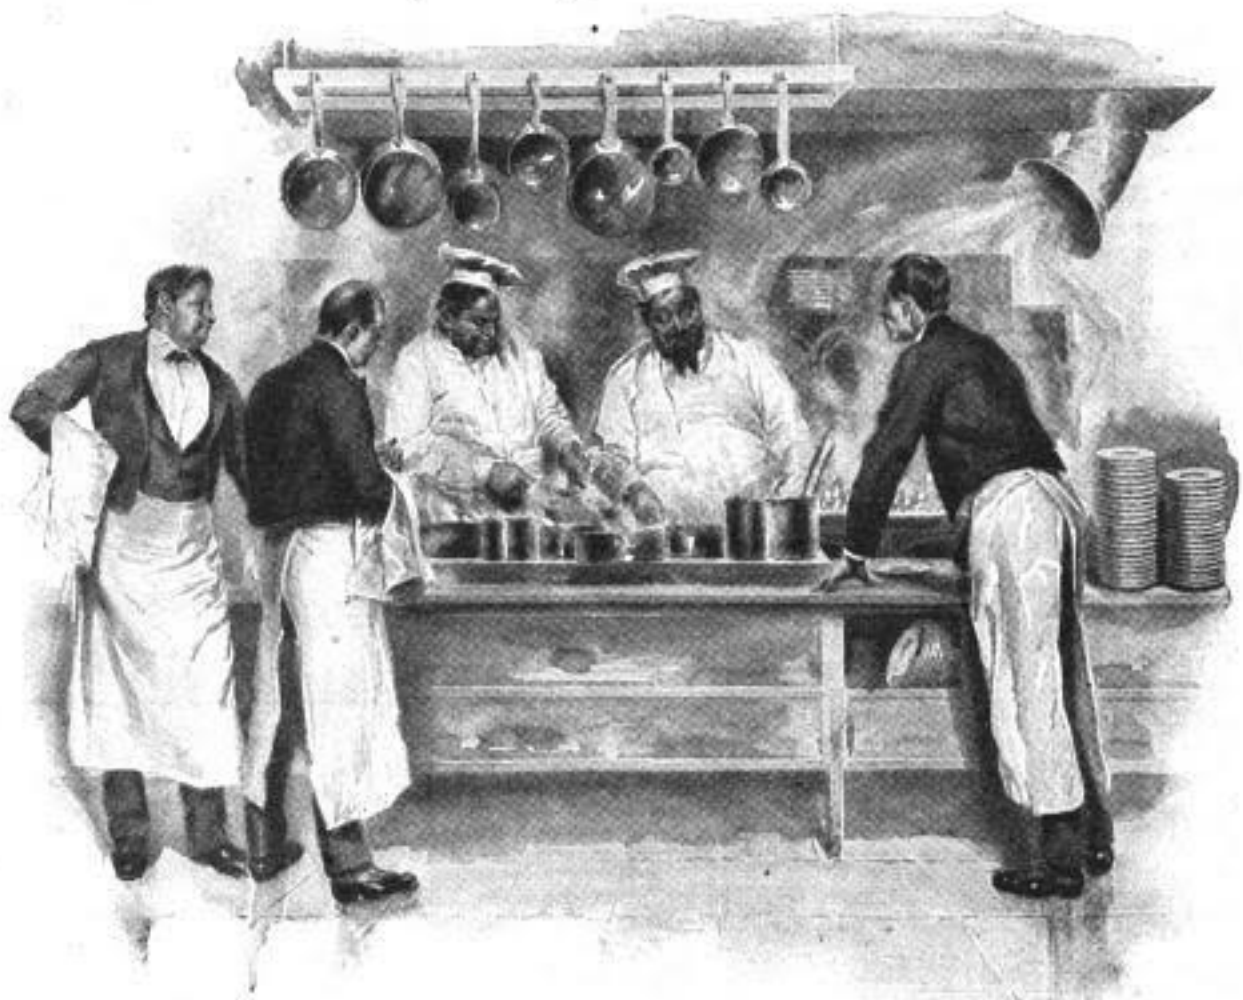
Motives for Moving

THE waiters and waitresses are scarcely less casual—the ones who are free. Those who have others dependent on them—children or parents—know the terror common to other people who also give hostages to fortune. They are afraid to resent slights or injustices, they must ignore all disadvantages, for to be out of work a week would be a misfortune too heavy to be faced; but the free ones have no such reluctance. It would be quite possible for an abovestairs traveler to be served by the same waiter in New York, in Chicago and in Los Angeles. The waiter might like the New York seabreezes for August, the Chicago autumn and the California winter. Numbers of waiters go South or West when the Northern winter comes, and many of them are so much desired that their traveling expenses are paid—at least one way; for among these casual persons there are those so gifted at their work that they are worth the price they cost.

And the women are almost as full of initiative as the men. Hundreds of waitresses take a summer vacation at Bar Harbor or Cape Cod, looking forward to the change, buying their new clothes, hoping to meet new friends, quite in the same fashion as the sheltered young women they wait upon. They hope just as strongly and secretly that the summer flitting is going to bring into their lives a romance—or romances—that will really be worth while.

One never can tell what is going on behind the composed faces of the black-gowned, white-aproned young persons standing in the dining room of a family hotel. The head waitress may have gone to the pantry for a moment and, as if on signal, two of the young women sidle up to each other.

"I'm going to duck tonight, Minnie," says one.



"What's up, Sara—found a better job?"

"I have, Minnie—believe me—in a hotel where there ain't so many transients. The transients that come here hang on to their change like they thought it would cripple them if they let go. Besides, I don't like the trick that family of cousins has at my other table there. They came in of a Tuesday. Well, if they had been real ladies they would each of passed over the next Tuesday. Did they? No; the four of them loosened up on Wednesday. The next week, Thursday—and so on. They pinched four days a month off me. Well, Minnie, I don't stand for that—believe me!"

"Have you told her, Sara?" asks Minnie with a glance at the head waitress who has reëntered and, with a flick of her eyes, has appreciated the position of each of her subordinates. Sara picks up the napkin of one guest and pours fresh water for another. Then, by careful indirection she drifts back to Minnie.

"Told her! Well, I guess not! I want to leave her in the lurch after the way she called me down yesterday! That's why I went out and got a new job."

"Well, you know you were neglecting your work," said Minnie reasonably. She is negotiating for the position of head waitress in a restaurant and her point of view is shifting. "I'm thinking of leaving myself. I can't stand the chef. Last night all I did was eat Mrs. Brown's chop in the pantry. She'd had a nip out of it and it really was not of much account; but, of course, he thought it could of been made into a stew for the chambermaids. Such cursing I never heard! He couldn't have sworn at me worse if he'd been my own husband! I ain't going to stand for it. I don't have to take anything off anybody."

Each Waiter Sees Only the Face of the Cook at Whom He Shouts His Order

Minnie is a fine, radiant creature—one of the sort bound to survive anywhere. She has no money, no position, no education, and she never thinks of restraining her feelings—unless her pocket would suffer from the explosion. She has magnificent health, which will always carry her through the world with her head high.

"Mattie is coming back on account of the chef's swearing," said Sara after going through some motions for the edification of the head waitress. "She's been to a big hotel where they don't just have three cooks like we have, but a whole lot of them, each for a different thing; and they're so far off from the waitresses you can't hear a thing they say. It was awful lonely—so many people you never met! She says she missed the chef's cursing. She felt like it herself when it was so hot out here and every one wanting to be waited on at once, and them in the bedrooms telephoning down for trays—why, she would of liked to swear herself, and she pretended to herself that he was just doing it for her. And then she enjoyed it when the grease flew up and stung his face—he had a special swear for that. I suppose it's a difference between a man swearing right at you or at something else. Here she comes to butt in."

One type is not casual: the foreigners who have not been long in this country, who belong to the corps of the steward, dishwashers and silvermen, and who belong to the corps of the housekeeper, chambermaids—and especially the scrubwomen. Security is given in the case of the scrubwomen because there are three applicants to every one position, and because most of these women are middle-aged mothers of families who have known the double edge of want both for themselves and for those belonging to them. They have seen their husbands out of work, or crippled, or dead; and they would not risk change of work for fear it might mean loss of work. Fear has too long been their bosom companion and they do not know how to do anything but scrub.

The foreign chambermaids stay partly because they have brought with them the Old World patience and partly because they have inherited from their forebears an instinct to remain in the same place. Need has driven them to a foreign land indeed; but with the first satisfaction of the need of daily bread they settle down just where they are to learn the habits of the new country. If they are alert, quick to assimilate, they move on some day to something better if it is our spirit of progress they have caught, or to something different if they have only absorbed our spirit of change. Many of them have others dependent on them. A guest gives her chambermaid a much-desired present of towels with pink borders.

"What's the matter, Velma?" she asks, as the little girl's brown eyes fill with tears. "Don't you like them?"

"Oh, sure, I like them; but I don't get married yet. Oh, I don't know when I get married—a man he won't wait too long! My mother dies last Tuesday; and what can my father do, with nothing but the old grandmother that eats so much yet, and all the childrens learning to be American in schools?"

"Are they little children, Velma?" Velma's point of view about size differs from her questioner's.

"Oh, not little—five and seven, eight and nine years old; and one eleven, working in the box factory that we tells she is fourteen. But funerals cost so much in this country and my father ain't got health; and now my mother can't work for him. I got to give all my wages for shoes and dresses for the childrens in school. My father works when the coughing lets him. But I ain't able to get married till the nine-year-old can go working in the box factory."

The foreign chambermaids come more into contact, through housekeeper and guests, with American life than the dishwashers and the silvermen in the kitchen. These foreign men are singularly isolated. Several of them work near the great new dishwashers—or perhaps the dishwashers of an older fashion. It may consist of a cage of dishes as big as half a cask, collected from a dumbwaiter or a pick-up table, as the case may be, by a foreigner who is perhaps a Bohemian. Another foreigner, perhaps a wiry-armed Russian, with the help of a derrick, lifts this huge cage from one vat of whirling, soapy water into another, and still another. It may be that the two men who receive it are French and Scotch—they may be of any nationality. Near them are Swiss and Germans, who are wiping silver with incredible deftness and speed. Here is double isolation—foreigners having for their outer environment the deafening clash of dishes and silver and the roar of the waiters shouting their orders across the room to the cooks. From this outer circle of abnormal life, this unnatural high pressure of work, they absorb impressions of American life, if, indeed, they have energy left over from their own work for absorption. Their closer environment consists of other foreigners whose point of view they find is as hard to understand as the American.

Keeping the Underlings in Line

IT SEEMS strange that people confined within the same space of a few hundred cubic feet can be so unrelated. One would naturally expect a servants' dining hall to be a social place; for, though only four meals are served, yet relays eat them and the seats are vacant only for a few hours. When the men file in, however, they drop into the nearest vacant seat—here again there is no sense of attachment to a special place—and they feed for the most part without talk or laughter, rarely speaking except to ask a waitress for more food. They are just long lines of hunched-over backs, resting from a severe strain and recuperating for another.

The duty of the highly skilled managers has its paradoxical phase—to change their seething mass of humanity into machines which give every last ounce of energy possible the heads must be unrelenting in discipline, the hardest kind of martinets; and on the other hand they must bind their subordinates to them with bonds of love and loyalty. They are sure of plenty of applicants for vacant places, but they dread breaking them in. The heads have subheads or understudies who have been thus employed for years and to whom is allowed plenty of latitude as one means of keeping them. These subheads usually have sub-subheads whom the subheads have personally trained and whom somehow—but usually without raising wages—they must manage to

HIGHGRADE LINES

How Young Elkan Lubliner Tried to Break Into Them

By MONTAGUE GLASS

ILLUSTRATED BY J. J. GOULD

"First I Was a Salesman; Second I Was for Myself in the Infants' Wear Business"

SURE, I know, Mr. Scheikowitz," cried Elkan Lubliner, junior partner of Polatkin, Scheikowitz & Company, as he sat in the firm's office late one February afternoon; "but if you want to sell a highgrade concern like Joseph Kammerman you must got to got a highgrade line of goods."

"Ain't I am telling you that all the time?" Scheikowitz replied. "*Aber* we sell here a popular-price line, Elkan. So what is the use talking we ain't ekvipt for a highgrade line."

"What d'ye mean we ain't equipped, Mr. Scheikowitz?" Elkan protested. "We got here machines and we got here fixtures, and all we need it now is a highgrade designer and a couple really good cutters like that new feller which is working for us."

"That's all right, too, Elkan," Marcus Polatkin interrupted; "but it ain't the ekvipment which it is so important. The reputation which we got for selling a popular-price line we couldn't get rid of so easy, understand me, and that *Bëtzimmer* buyer of Kammerman's wouldn't got no confidence in us at all. The way he figures it we could just so much turn out a highgrade line of goods here as you could expect a feller which is acting in a moving pictures to all of a sudden sing like Charuso."

"Besides," Scheikowitz added, "highgrade designers and really good cutters means more capital, Elkan."

"The capital you shouldn't worry about at all," Elkan retorted. "Next week my Yetta gets falling due a second mortgage from old man Flixman for five thousand dollars, and ——"

Polatkin made a flapping gesture with his right hand.

"Keep your money, Elkan," he said. "You could got lots of better ways to invest it for Yetta as fixing ourselves up to sell big *Machers* like Joseph Kammerman."

"But it don't do no harm I should drop in and see them people. Ain't it?"

"Sure not," Scheikowitz continued as he swung round in his revolving chair and seized a pile of cutting clips. "They got an elegant store there on Fifth Avenue which it is a pleasure to go into even; and the worst that happens you, Elkan, is you are out a good cigar for that Mr. Dalzell up there."

Elkan nodded gloomily, and as he left the office Polatkin's face relaxed in an indulgent smile.

"The boy is getting awful ambitious lately, Scheikowitz," he said.

"What d'ye mean, ambitious?" Philip Scheikowitz cried angrily. "If you would be only twenty-three years of age, Polatkin, and married to a rich girl, understand me—and also partner in a good concern, which the whole thing he done it himself, Polatkin—you would act a whole lot more ambitious as he does. Instead of knocking the boy, Polatkin, you should ought to give him credit for what he done."

"Who is knocking the boy?" Polatkin demanded. "All I says is the boy is ambitious, Scheikowitz—which if you don't think it's ambitious a feller tries to sell goods to Joseph Kammerman, Scheikowitz, anyhow what is it then?"

"There's worser people to sell goods to as Joseph Kammerman, Polatkin, which he is a millionaire concern, understand me," Scheikowitz declared; "and you could take it from me, Polatkin, even if you would accuse him he is ambitious *oder* not, that boy always got idees to do big things—and he works hard till he lands 'em. So if you want to call that ambitious, Polatkin, go ahead and do so. When a loafer knocks it's a boost every time."

With this ultimatum Scheikowitz followed his junior partner to the rear of the loft, where Elkan regarded with a critical eye the labors of his cutting-room staff.

"*Nu*, Elkan," Scheikowitz asked, "what's biting you now?"

Elkan winked significantly—and a moment later he tapped an assistant cutter on the shoulder.

"Max," he said, "do you got maybe a grudge against that piece of goods, the way you are slamming it round?"

The assistant cutter smiled in an embarrassed fashion.

"The fact is," he said apologetically, "I wasn't thinking about them goods at all. When you are laying out goods for cutting, Mr. Lubliner, you don't got to think much—especially pastel shades."

"Pastel shades?" Elkan repeated.

"That's what I said," the cutter replied. "*Mit* colors like reds and greens, which they are hitting you right in the face, so to speak, you couldn't get your mind off of 'em at all; but pastel shades, that's something else again. They quiet you like smoking a cigarette."

Elkan turned to his partner with a shrug.

"When I was working by B. Gans," the cutter went on, "I am laying out a piece of old gold crêpe *mit* a silver-thread border, and I assure you, Mr. Lubliner, it has an effect on me like some one would give me a glass of schnapps already."

"*Steigen*, Max," said Elkan, moving away, "you got too much to say for yourself."

Max nodded resignedly and continued the spreading of the goods on the cutting table while Elkan and Scheikowitz walked out of the room.

"That's the new feller I was telling you about," Elkan said. "*Meshugganeh* Max Merech they call him."

"Why, the Last Time I Seen That Show I Says I Wouldn't Sit Through it Again for a Hundred Dollars"

"*Meshugga* he may be," Scheikowitz replied, "but just the same he's got a couple of good idees also, Elkan. Only this morning he makes Redman the designer pretty near crazy when he says that the blue soutache on that new style 2060 kills the blue in the yoke, y'understand; and he was right too, Elkan. Polatkin and me made Redman change it over."

Elkan shrugged again as he put on his hat and coat preparatory to going home.

"A lot our class of trade worries about such things!" he exclaimed. "So far as they are concerned the soutache could be crimson and the yoke green, and if the price was right they'd buy it anyhow."

"Don't you fool yourself, Elkan," Scheikowitz said while Elkan rang for the elevator. "The price is never right if the workmanship ain't good."

II

THAT Elkan Lubliner's progress in business had not kept pace with his social achievements was a source of much disappointment to both Mrs. Lubliner and himself; for though the firm of Polatkin, Scheikowitz & Company was still rated seventy-five thousand dollars to one hundred thousand dollars—credit good—Elkan and Mrs. Lubliner moved in the social orbit of no less a personage than Max Koblin, the Raincoat King, whose credit soared triumphantly among the A's and B's of old-established commission houses.

Indeed it was a party at Max Koblin's house that evening which caused Elkan to leave his place of business at half-past five; and when Mrs. Lubliner and he sallied forth from the gilt and porphyry hallway of their apartment dwelling they were fittingly arrayed to meet Max's guests, none of whom catered to the popular-price trade of Polatkin, Scheikowitz & Company.

"Why didn't you told him we are getting next week paid off for five thousand dollars a second mortgage?" Yetta said, continuing a conversation begun at dinner that evening.

"I did told him," Elkan insisted; "but what is the use talking to a couple of old-timers like them?"

Yetta sniffed contemptuously with the impatience of youth at the foibles of senility, as exemplified by the doddering Philip Scheikowitz, aged forty-five, and the valetudinarian Marcus Polatkin, whose hair, albeit unfrosted, had been blighted and in part swept away by the vicissitudes of forty-two winters.

"You can't learn an old dawg young tricks," Elkan declared, "and we might just so well make up our minds to it, Yetta, we would never compete with such highgrade concerns like B. Gans *oder* Schwefel & Zucker."

They walked over two blocks in silence and then Elkan broke out anew.

"I tell you," he said, "I am sick and tired of it. B. Gans talks all the time about selling this big *Macher* and that big *Macher*, and him and Mr. Schwefel gets telling

Digitized by Google

about what a millionaire like Kammerman says to him the other day, or what he says to Mandelberger, of Chicago, *y'understand*—and I couldn't say nothing! If I would commence to tell 'em what I says to such customers of ours like One-Eye Feigenbaum *oder* H. Margonin, of Bridgetown, understand me, they would laugh me in my face yet."

Yetta pressed his arm consolingly as they ascended the *stoop* of Max Koblin's house on Mount Morris Park, West, and two minutes later they entered the front parlor of that luxurious residence.

"*And* do you know what he says to me?" a penetrating barytone voice announced as they came in. "He says to me, 'Benson,' he says, 'I've been putting on musical shows now for fifteen years, and an idee like that comes from a genius already. There's a fortune in it!'"

At this juncture Mrs. Koblin noted the arrival of the last of her guests.

"Why, hello, Yetta!" she cried, rising to her feet. "Ain't you fashionable, getting here so late?"

She kissed Yetta and held out a hand to Elkan as she spoke.

"Ain't you ashamed of yourself, Elkan, keeping Yetta's dinner waiting because you claim you're so busy downtown?" she went on. "I guess you know everybody here except Mr. Benson."

She nodded toward the promulgator of Heaven-born ideas, who bowed solemnly.

"Pleased to meet you, Mister ——"

"Lubliner," Elkan said.

"Mister Lubliner," Benson repeated, passing his begemmed fingers through a shock of black, curly hair. "And the long and short of it is," he continued, addressing the company, "tomorrow I'm getting a scenario along them lines I just indicated to you from one of the highest-grade fellers that's writing."

Here ensued a pause, during which B. Gans searched his mind for an anecdote concerning some retailer of sufficiently good financial standing, while Joseph Schwefel, of Schwefel & Zucker, cleared his throat preparatory to launching a verbatim report of a conversation between himself and a buyer for one of the most exclusive costume houses on Fifth Avenue; but even as Schwefel rounded his lips to enunciate an introductory "Er," Benson obtained a fresh start.

"Now you remember The Diners Out, Ryan & Bernbaum's production last season?" he said, addressing Elkan. "In that show they had an idee like this: Eight ponies is let down from the flies—see?—and George DeFrees makes his entrance in a practicable airyoplane—I think it was George DeFrees was working for Ryan & Bernbaum last year, or was it Sammy Potter?"

At this point he screwed up his face and leaning his elbow on the arm of his chair he placed four fingers on his forehead in the attitude known theatrically as Business of Deep Consideration.

"No," he said at last—"it was George DeFrees. George jumps out of the airyoplane and says: 'They followed me to earth, I see.'"

Benson raised his eyebrows at the assembled guests.

"Angels!" he announced. "Get the idee? 'They followed me to earth, I see.' Cue. And then he sings the song hit of the show: Come Take a Ride in My Airyoplane."

B. Gans shuffled his feet uneasily and Joseph Schwefel pulled down his waistcoat. As manufacturers of highgrade garments they had accompanied more than one customer to the entertainment described by Benson; but to Elkan the term "ponies" admitted of only one meaning, and this conversational arabesque of flies, little horses, aeroplanes and George DeFrees made him fairly dizzy.

"And," M. Sidney Benson said before B. Gans could head him off, "just that there entrance boomed the show. Ryan & Bernbaum up to date clears a hundred and twenty thousand dollars over and above all expenses."

"Better as the garment business!" Max Koblin commented—and B. Gans nodded and yawned.

"Ain't we going to have no pinocle?" he asked. Max rose and threw open the sliding doors leading to the dining room, where cards and chips were in readiness.

"Will you join us, Mr. Benson?" he asked.

"That'll make five with Mr. Lubliner," Benson replied; "so supposing you, Gans and Schwefel go ahead, and Mr. Lubliner and me will join you later. Otherwise you would got to deal two of us out—which it makes a pretty slow game that way."

"Just as you like," Max said; and after Mrs. Koblin and Yetta had retired abovestairs to view the most recent accession to Mrs. Koblin's wardrobe Benson pulled up the points of his high collar and adjusted his black stock necktie. Then he lit a fresh cigar and prepared to lay bare to Elkan the arcana of the theatrical business.

"Yes, Mr. Lubliner," he said, "the show business is a business like any other business. It ain't like you got an idee it is—opening wine for a bunch of chickens, understand me, and running round the streets till all hours of the morning."

"I never got no such idee," Elkan protested.

"You ain't, Mr. Lubliner," Benson continued, "because it's very evidence to me that you don't know nothing about it; but there's a whole lot of people got that idee anyhow, y'understand; and what I am always trying to tell everybody is that the show business is like the garment business *oder* the drygoods business—a business for a business man, not a loafer!"

Elkan made an inarticulate noise which Benson took to be an expression of interest and encouragement.

"At the same time art has got a whole lot to do with it," he went on—"art and idees; and when you take a feller like Ryan, which he could write a show, write the music, put it on and play the leading part all by himself, y'understand, and a feller like Bernbaum, which used to was Miller, Bernbaum & Company in the pants business—you got there an ideel combination!"

Elkan nodded and looked helplessly round him at the Circassian walnut, of which half a forestful had gone to make up the furnishings of Koblin's front parlor.

"But," Benson said emphatically, "you take me, for instance—and what was I?"

He told off his former occupations with the index finger of his right hand on each digit of his left.

"First I was a salesman; second I was for myself in the infants' wear business; third I was *noch einmal* a salesman. Then I become an actor, because everybody knows my act, which I called it Your Old Friend Maslowsky. For four years I played all the first-class vaudeville circuits here and on the other side in England. But though I made good money, Mr. Lubliner, the real big money is in the producing end."

"Huh-huh!" Elkan ejaculated.

"So that's the way it is with me, Mr. Lubliner," Benson continued. "I am just like Ryan & Bernbaum, only instead of two partners there is only just one; which I got the art, the idees and the business ability all in myself!"

"That must make it very handy for you," Elkan commented.

"Handy ain't no name for it," Benson replied. "It's something you don't see nowheres else in the show business; but I'll tell you the truth, Mr. Lubliner—the work is too much for me!"

"Why don't you get a partner?" Elkan asked.

Benson made a circular gesture with his right hand.

"I could get lots of partners with big money, Mr. Lubliner," he said, "but why should I divide my profits? Am I right or wrong?"

"Well that depends how you are looking at it," Elkan said.

"I am looking at it from the view of a business man, Mr. Lubliner," Benson rejoined. "Here I got a proposition which I am going to put on—a show of idees—a big production, understand me; which if Ryan & Bernbaum makes from their Diners Out a hundred thousand dollars, *verstehst du*, I could easily make a hundred and fifty thousand! And yet, Mr. Lubliner, all I invest is five thousand dollars and five thousand more which I am making a loan at a bank."

"Which bank?" Elkan asked—so quickly that Benson almost jumped in his seat.

"I—I didn't decide which bank yet," he replied. "You see, Mr. Lubliner, I got accounts in three banks. First I belonged to the Fifteenth National Bank. Then they begged me I should go in the Minuit National Bank. All right. I went in the Minuit National Bank. H'afterward Sam Feder comes to me and says: 'Benson,' he says, 'you are an old friend from mine,' he says. 'Why do you bother yourself you should go into this bank and that bank?' he says. 'Why don't you come to my bank?' he says, 'and I would give you all the money you want.' So you see, Mr. Lubliner, it is immaterial to me which bank I get my money from."

Again he passed his jeweled fingers through his hair.

"No, Mr. Lubliner," he announced after a pause, "my own brother even I wouldn't give a look-in."

Elkan made no reply. As a result of Benson's gesture he was busy estimating the value of eight and a quarter carats at eighty-seven dollars and fifty cents a carat.

"Because," Benson continued, "the profits is something you could really call enormous! If you got the time I would like to show you a few figures."

"I got all evening," Elkan answered, whereat Benson pulled from his waistcoat pocket a fountain pen ornamented with gold filigree.

"First," he said, "is the costumes."

And therewith he plunged into a maze of calculation that lasted for nearly an hour. Moreover, at the end of that period he entered into a new series of figures, tending to show that by the investment of an additional five thousand dollars the profits could be increased seventy-five per cent.

"But I'm satisfied to invest my ten thousand," he said, "because five thousand is my own and the other five thousand I could get easy from the Kosciusko Bank, whereas the additional five thousand I must try to interest somebody he should invest it with me. And so far as that goes I wouldn't bother myself at all."

"You're dead right," Elkan said by way of making himself agreeable, whereat Benson grew crimson with chagrin.

"Sure, I'm dead right," he said; "and if you and Mrs. Lubliner would come down to my office in the Siddons Theater Building tomorrow night, eight o'clock, I would send one of my associates round with you and he will get you tickets for the Diners Out, understand me; and then you would see for yourself what a big house they got there. Even on Monday night they turn 'em away!"

"I'm much obliged to you," Elkan replied. "I'm sure Mrs. Lubliner and me would enjoy it very much."

"I'm sorry for you if you wouldn't," Benson retorted; "and that there Diners Out ain't a marker to the show I'm putting on, Mr. Lubliner—which you can see for yourself, a business proposition which pans out pretty near two hundred thousand dollars on a fifteen-thousand-dollar investment, is got to be right up to the mark. Ain't it?"

"You Got Your Choice to Go to a Popular Show Like the Diners Out or to a Really Highgrade Show, Mr. Lubliner"

"I thought you said ten thousand dollars was the investment," Elkan remarked.

"I did," Benson replied with some heat; "but if some one comes along and wants to invest the additional five thousand dollars I wouldn't turn him down, Mr. Lubliner."

He rose to his feet to join the pinocle players in the dining room.

"So I hope you enjoy the show tomorrow night," he added as he strolled away.

III

FROM six to eight every evening Max Merech underwent a gradual transformation, for six o'clock was the closing hour at Polatkin, Scheikowitz & Company's establishment, while eight marked the advent of the Sarasate Trio at the Café Román, on Delancey Street. Thus at six Max Merech was an assistant cutter; and, indeed, until after he ate his supper he still bore the outward appearance of an assistant cutter, though inwardly he felt a premonitory glow. After half-past seven, however, he buttoned on a low, turned-down collar, with its concomitant broad Windsor tie, and therewith he assumed his real character—that of a dilettante.

Digitized by Google

At the Café Román each evening he specialized on music; but with the spirit of the true dilettante he neglected no one of the rest of the arts, and was ever to be found at the table next to the piano, a warm advocate of the latest movement in painting and literature, as well as an appreciative listener to the ultramodern music discoursed by the Sarasate Trio.

"If that ain't a winner I ain't no judge!" he said to Boris Volkovisk, the pianist, on the evening of the conversation with Elkan set forth above. He referred to a violin sonata of Boris' own composition which the latter and Jacob Rekower, the violinist, had just concluded.

Boris smiled and wiped away the perspiration from his bulging forehead, for the third movement of the sonata, marked in the score *Allegro con fuoco*, had taxed even the technic of its composer.

"A winner of what?" Boris asked—"money? Because supposing a miracle happens that somebody would publish it nobody buys it."

Max nodded his head slowly in sympathetic acquiescence.

"But anyhow you ain't so bad off like some composers," he said. "You've anyhow got a good musician to play your stuff for you."

He smiled at Jacob Rekower, who plunged his hands into his trousers pockets and shrugged deprecatingly.

"Sure, I know," Rekower said; "and if we play too much good stuff Marculescu raises the devil with us we should play more popular music."

He spat out the words "popular music" with an emphasis that made a *Tarrok* player at the next table jump in his seat.

"*Nu*," said the latter as the deal passed, "what is the matter with popular music? If it wouldn't be for writing popular music, understand me, many a decent, respectable composer would got to starve!"

He turned his chair round and abandoned the card game the better to air his views on popular music.

"Furthermore," he said, "I know a young feller by the name Milton Jassy which last year he makes two thousand dollars already from syncopating *Had gadyo* and calling it the Wildcat Rag, and this year he is writing the music for a new show and I bet yer the least he makes out of it is five thousand dollars."

"Yow! Five thousand dollars!" Merech exclaimed. "Such people you hear about, but you *oser* see 'em."

"Don't you?" said the *Tarrok* player, drawing a card-case from his breast pocket. "Well, you see one now." He laid face upward on the table a card which read:

For a brief interval Volkovisk, Rekower and Merech regarded Jassy's card in silence.

"Well," Merech said at last, "what of it?"

Jassy shrugged and waved his hand significantly.

"Nothing of it," he said, "only your friend there is knocking popular music; and though I admit that I didn't got to go to the Wiener conservatory so as I could write popular music exactly, y'understand, still I could write sonatas and trios and quartets and even concerti and symphonies till I am black in the face already and I couldn't pay my laundry bill even!"

For answer Volkovisk turned to the piano and seized from the pile of music a blue-covered volume. It was the violin sonata of Richard Strauss, and handing the violin part to Rekower he seated himself on the stool. Then with a premonitory nod to Rekower he struck the opening chords, and for more than ten minutes Jassy and Merech sat motionless until the first movement was finished.

"When Strauss wrote that he could *oser* pay his laundry bill either," Volkovisk said, rising from the stool. He sat down wearily at the table and lit a cigarette.

"So you see," he began, "Richard Strauss ——"

"Richard Strauss nothing!" cried an angry voice at his elbow. "If you want to practice practice at home. I pay you here to play for my customers, not for yourselves, Volkovisk; and once and for all I am telling you you should cut out this nonsense and *spiel* a little music once in a while."

It was the proprietor, Marculescu, who spoke, and Volkovisk immediately seated himself at the piano. This time he took from the pile of music three small sheets, one of which he placed on the reading desk and the other on Rekower's violin stand. After handing the other sheet to the cellist he plunged into a furious rendition of Wildcat Rag.

In the front part of the café a group of men and women, whose clothes and manners proclaimed them to be slummers from the upper West Side, broke into noisy applause as the vulgar composition came to an end, and in the midst of their shouting and stamping Jassy rose trembling from his seat. He slunk between tables to the door, while Volkovisk began a repetition of the number, and it was not until he had turned the corner of the street and the melody had ceased to sound in his ears that he slackened his pace. When he did so, however, a friendly hand fell on his shoulder and he turned to find Max Merech close behind him.

"*Nu*, Mr. Jassy," Max said, "you shouldn't be so broke up because you couldn't write so good as Richard Strauss."

Jassy stood still and looked Max squarely in the eye.

"That's just the point," he said in hollow tones. "Might I could if I tried; but I am such an *Epikouros* that I don't want to try. I would sooner make money out of rubbish than be an artist like Volkovisk."

Max shrugged and elevated his eyebrows.

"A man must got to live," he said as he seized Jassy's arm and began gently to propel him back to the Café Román.

"Sure, I know," Jassy said; "but living ain't all having good clothes to wear and good food to eat. Living for an artist like Volkovisk is composing music worthy of an artist. *Aber* what do I do, Mister ——"

"Merech," Max said.

"What do I do, Mr. Merech?" Jassy continued. "I am all the time throwing away my art in the streets with this rotten stuff I am composing."

IV

"WELL, I tell you," Max said after they had reëntered the café and had seated themselves at a table remote from the piano, "composing music is like manufacturing garments, Mr. Jassy. Some one must got to cater to the popular-price trade and only a few manufacturers gets to the point where they make up a highgrade line for the exclusive retailers. Ain't it?"

Jassy nodded as the waiter brought the cups of coffee.

"Now you take me, for instance," Max continued. "Once I worked by B. Gans, which I assure you, Mr. Jassy, it was a pleasure to handle the goods in that place. What an elegant line of silks and embroidery they got it there! Believe me, Mr. Jassy, every day I went to work there like I would be going to a wedding already, such a beautiful goods they made it! *Aber* now I am working by a popular-price concern, Mr. Jassy, which, you could take it from me, the colors them people puts together in one garment gives me the indigestion already!"

Again Jassy nodded sympathetically.

"And why did I make a change?" Max went on. "Because them people pays me seven dollars a week more as B. Gans, Mr. Jassy; and though art is art, understand me, seven dollars a week ain't to be coughed at neither."

For a few minutes Jassy sipped his coffee in silence.

"That's all right too," he said; "but with garments you could make just so much money manufacturing a highgrade line as you could if you are making a popular-price line."

Max nodded sapiently.

"I give you right there," he agreed, "and that's because the manufacturer of the highgrade line does business in the same way as the popular-price concern. *Aber* you take the composer of highgrade music and all he does is compose. He's too proud to poosh it, Mr. Jassy; whereas the feller what composes popular music he's just the same like the feller what manufacturers a popular-price line of garments—he not only manufacturers his line but he pooshes it till he gets a market for it."

"There ain't no market for a highclass line of music," Jassy said hopelessly.

"Why ain't there?" Max demanded. "Did you ever try to market a symphony? Did Volkovisk ever try to get anybody with money interested in his stuff? No, sirree, sir! All that feller does is to play it to a lot of *Schnorrers* like me, which no matter how much we like his work we couldn't help him none. Now you take your own case, for instance. You told us a few minutes ago you are writing some music for a new show. Now, if you wouldn't mind my asking, who is putting in the capital for that show?"

"Well," Jassy replied, "a feller called Benson is putting it in and part of the capital is from his own money and the rest he borrows."

"Just like a new beginner would do in the garment business," Max commented. "*Aber* who does he borrow it from? A bank maybe—what?"

"Some he gets from a bank," Jassy replied, "and the rest he is trying to raise elsewheres. Tonight he tells me he is getting an introduction to a business man which he hopes to lend from him five *oder* ten thousand dollars."

"Five *oder* ten thousand dollars!" Max cried. "*Shema beni!* For five thousand dollars Volkovisk could publish all the music he ever wrote and give a whole lot of recitals in the bargain. One thousand dollars would be enough even."

"That I wouldn't deny at all," Jassy rejoined. "*Aber* who would you find stands willing he should invest in Volkovisk's music a thousand dollars? Would he ever get back his thousand dollars even, let alone any profits?"

"It's a speculation, I admit," Max commented; "but you take Richard Strauss, for instance, and if some feller would staked Strauss to a thousand dollars capital when he needed it, understand me, not alone he would got his money back but if we would say, for example, the thousand dollars represents a ten-per-cent interest in Strauss' business, today yet the feller would be worth his fifty thousand dollars, because everybody knows what a big success Strauss made. Actually the feller must got orders at least six months ahead. Why for one song alone they pay him a couple thousand dollars!"

"Well," Jassy asked, "if you feel there's such a future in it why don't you raise a thousand dollars and finance Volkovisk?"

Max laughed aloud.

"Me—I couldn't raise nothing," he said; "*aber* you—you are feeling sore at yourself because you are writing popular stuff. Here's a chance for you to square yourself with your art. Why don't you help Volkovisk out? All you got to do is to find out who is loaning this here Benson the ten thousand dollars and get him to stake Volkovisk to a thousand."

Jassy tapped the table with his fingers.

"For that matter I could say the same thing to you," he declared. "You consider Volkovisk's talent so high as a business proposition, Merech, why don't you get some business man interested—one of your bosses, for instance?"

He rose from his chair as he spoke and placed ten cents on the table as his share of the evening's expenses.

"Think it over," he said; and long after he had closed the door behind him Max sat still with his hands in his trousers pockets and pondered the suggestion.

"After all," he mused as Marculescu began to turn out the lights one by one, "why shouldn't I—the very first thing in the morning?"

It was not, however, until Polatkin and Scheikowitz had gone out to lunch the following day, leaving Elkan alone in the office, that Max could bring his courage to the sticking point; and so fearful was he that he might regret his boldness before it was too late he fairly ran from the cutting room to the office and delivered his preparatory remarks in the outdoor tones of a political spellbinder.

"Mr. Lubliner," he cried, "could I speak to you a few words something?"

Elkan rose and slammed the door.

"Say, lookyhere, Merech," he said, "if you want a raise don't let the whole factory know about it, otherwise we would be pestered to death here. Remember, also," he continued as he sat down again, "you are only working for us a few weeks—and it don't go so quick as all that."

"What d'ye mean, a raise?" Max asked. "I ain't said nothing at all about a raise. I am coming to see you about something entirely different already."

Elkan looked ostentatiously at his watch.

"I ain't got too much time, Merech," he said.

"Nobody's got too much time when it comes to fellers asking for raises, Mr. Lubliner," Max retorted; "*aber* this here is something else again, as I told you."

"Well, don't beat no bushes round, Merech!" Elkan cried impatiently. "What is it you want from me?"

"I want from you this," Max began huskily: "Might you know Tschaikovsky maybe *oder* Rimsky-Korsakoff."

"Tschaikovsky I never heard of," Elkan replied, "nor the other concern neither. Must be new beginners in the garment business—ain't it?"

"They never was in the garment business, so far as I know," Max continued; "*aber* they made big successes even if they wasn't, because all the money ain't in the garment business, Mr. Lubliner, and Tschaikovsky and Rimsky-Korsakoff, even in the old country, made so much money they lived in palaces yet. Once when I was a boy already Tschaikovsky comes to Minsk and they got up a parade for him—such a big *Macher* he was!"

"I don't doubt your word for a minute, Merech; *aber* what is all this got to do *mit* me?"

"It ain't got nothing to do with you, Mr. Lubliner," Max declared—"only I got a friend by the name Boris Volkovisk, and believe me or not, Mr. Lubliner, in some respects Tschaikovsky and Rimsky-Korsakoff could learn from that feller, because you could take it from me, Mr. Lubliner, there's some passages in the Fifth Symphony, understand me, which I hate to say it you could call rotten!"

Elkan stirred uneasily in his chair.

"I don't know what you are talking about at all," he said.

"I am talking about this," Max replied; and therewith he began to explain to Elkan the aspirations and talent of Boris Volkovisk and his—Max'—scheme for their successful development. For more than half an hour he unfolded a plan by which one thousand dollars might be judiciously expended so as to secure the maximum benefit to Volkovisk's career—a plan that during the preceding two years Volkovisk and he had thoroughly discussed over many a cup of coffee in Marculescu's café. "And so you see, Mr. Lubliner," he concluded, "it's a plain business proposition; and if you was to take for your thousand dollars,

Digitized by Google

say, for example, a one-tenth interest in the business Volkovisk expects to do, understand me, you would get a *big return* for your investment."

Elkan lit a cigar and puffed away reflectively before speaking.

"*Nu*," he said at last; "so that is what you wanted to talk to me about."

Max nodded.

"Well, then, all I could say is," Elkan went on, "you are coming to the wrong shop. A business proposition like that is for a banker, which he is got so much money he don't know what to do with it, Merech."

Max' face fell and he turned disconsolately away.

"At the same time, Max," Elkan added, "I ain't feeling sore that you come to me with the proposition, understand me. The trouble ain't with you that you got such an idee, Max; the trouble is with me that I couldn't see it. It's like a feller by the name Dalzell, a buyer for Kammerman's store, says to me this morning. 'Lubliner,' he says, 'I couldn't afford to take no chances buying highgrade garments from a feller that is used to making a popular-price line,' he says, 'because no matter how well equipped your factory would be the trouble is a popular-price manufacturer couldn't think big enough to turn out expensive garments. To such a manufacturer goods at two dollars a yard is the limit, and goods at ten dollars a yard he couldn't imagine at all. And even if he could induce himself to use stuff at ten dollars a yard, y'understand, it goes against him to be liberal with such high-priced goods, so he skimps the garment.'"

He blew a great cloud of smoke as a substitute for a sigh.

"And Dalzell was right, Max," he concluded. "You couldn't expect that a garment manufacturer like me is going to got such big idees as investing a thousand dollars in a highgrade scheme like yours. With me a thousand dollars means so many yards piece goods, so many sewing machines or a week's payroll; *aber* it don't mean giving a musician a show he should compose highgrade music. I ain't educated up to it, Max; so I wish you luck that you should raise the money somewheres else."

V

WHEN M. Sidney Benson entered his office in the Siddons Theater Building late that afternoon he found Jassy seated at his desk in the mournful contemplation of some music manuscript.

"*Nu*, Milton," Benson cried, "you shouldn't look so *ruchmonos*. I surely think I got 'em coming!"

"You think you got 'em coming!" Jassy repeated with bitter emphasis. "You said that a dozen times already—and always the feller wasn't so big a sucker like he looked!"

"That was because I didn't work it right," Benson replied. "This time I am making out to do the feller a favor by letting him in on the show, and right away he becomes interested. His name is Elkan Lubliner, a manufacturer by cloaks and suits, and tonight he is coming down with his wife yet, and you are going to take 'em round to the Diners Out."

"I am going to the Diners Out *mit* 'em!" Milton ejaculated with every inflection of horror and disgust.

"Sure!" Benson replied cheerfully. "Six dollars it'll cost us, because Ryan pretty near laughs in my face when I asked him for three seats. But never mind, Milton, it'll be worth the money."

"Will it?" Jassy retorted. "Well, not for me, Mr. Benson. Why, the last time I seen that show I says I wouldn't sit through it again for a hundred dollars."

"A hundred dollars is a lot of money, Milton," Benson said. "*Aber* I think if you work it right you will get a hundred times a hundred dollars before we are through, on account I really got this feller going. So you should listen to me and I would tell you just what you want to say to the feller between the acts."

Therewith Benson commenced to unfold a series of "talking points" which he had spent the entire day in formulating; and as he proceeded Jassy's eyes wandered from the title page of the manuscript music inscribed "Opus 47—Trio in G moll," and began to glow in sympathy with Benson's well-laid plan.

"There's no use shilly-shallying, Milton," Benson concluded. "The season is getting late, and if we're ever going to put on that show now is the time."

Milton nodded eagerly.

"*Aber* why don't you take 'em to the show yourself, Mr. Benson?" he asked hopefully. "Because, not to jolly you at all, Mr. Benson, I must got to say it you are a wonderful talker."

Benson shrugged his shoulders and smiled weakly.

"I am a wonderful talker, I admit," he agreed; "but I got a hard face, Milton, whereas you, anyhow, look honest. So you should meet me at Hanley's afterward, understand me, and we would try to close the deal there and then."

He dug his hand into his trousers pocket and produced a modest roll of bills, from which he detached six dollars.

"Here is the money," he added, "and you should be here to meet them people at eight o'clock sharp."

On the stroke of eight Milton Jassy returned to Benson's office in the Siddons Theater Building and again seated himself at his desk in front of the pile of manuscript music. This time, however, he brushed aside the title page of his Opus 47 and spread out an evening paper to beguile the tedium of awaiting Benson's "prospects." Automatically he turned to the department headed Music and Musicians, and at the top of the column his eye fell on the following item:

Ferencz Lánczhid, the Budapest virtuoso, will be the soloist at the concert this evening of the Philharmonic Society. He will play the Tschaikovsky Violin Concerto, Opus 35, and the remainder of the program will consist of Dvořák's Symphony, *Aus der Neuen Welt*, and the ever-popular Meistersinger Overture.

Jassy heaved a tremulous sigh as he concluded the paragraph and leaned back in his chair, while in his ears sounded the adagio passage that introduces the first movement of the New World Symphony. Simultaneously the occupant of the next office slammed down his rolltop desk and began to whistle a lively popular melody. It was Wildcat Rag, and Milton struck the outspread newspaper with his clenched fist. Then rising to his feet he gathered together the loose pages of his Opus 47 and placed them tenderly in a leather case just as the door opened and Elkan and Yetta entered.

"I hope we ain't late," Elkan said.

"Not at all," Milton replied. "This is Mr. and Mrs. Lubliner—ain't it?"

As he drew forward a chair for Yetta he saluted his visitors with a slight, graceful bow, a survival of his conservatory days.

"Sit down," he said; "we got lots and lots of time."

"I thought the show started at a quarter past eight—ain't it?" Elkan asked.

"It does and it doesn't," Milton replied hesitatingly; "that is to say, some shows start at a quarter past eight and others not till half past eight."

"But I mean this here Diners Out starts at a quarter past eight—ain't it?" Elkan insisted.

"The Diners Out!" Milton exclaimed as though he heard the name for the first time. "Oh, sure, the Diners Out starts at a quarter past eight, and that's just what I wanted to talk to you about."

He turned to Yetta with an engaging smile which, with his black hair and his dark, melancholy eyes, completely won over that far from unimpressionable lady.

"Now, Mrs. Lubliner," he began, "your husband is a business man—ain't it? And if some one comes to him and says, 'Mr. Lubliner, I got here two garments for the same price—say, for example, two dollars. One of 'em is made of cheap material, *aber* plenty of it *mit* cheap embroidery on it, understand me; while the other is from finest silk a garment—not much of it, y'understand, but plain and beautiful.'"

"What for a garment could you got for two dollars?" Elkan asked—"especially a silk garment?"

"He's only saying for example, Elkan," Yetta interrupted.

"Garments I am only using, so to speak," Milton explained. "What I really mean is: You got your choice to go to a popular show like the Diners Out or to a really highgrade show, Mr. Lubliner. So I leave it to you, Mr. Lubliner. Which shall it be?"

Once again he smiled at Yetta.

"Why, to the highgrade show, sure," Yetta replied, and she seized her husband by the arm. "Come along, Elkan!" she cried; and after Milton had secured the leather portfolio containing his Opus 47 they proceeded immediately to the elevator.

"We could walk over there from here," Milton said when they reached the sidewalk, and he led the way across town toward Carnegie Hall.

"What for a show is this we are going to see?" Elkan asked. "Also a musical show?"

Milton nodded.

"The best musical show there is," he declared. "Do you like maybe to hear good music?"

"I'm crazy about it," Yetta replied.

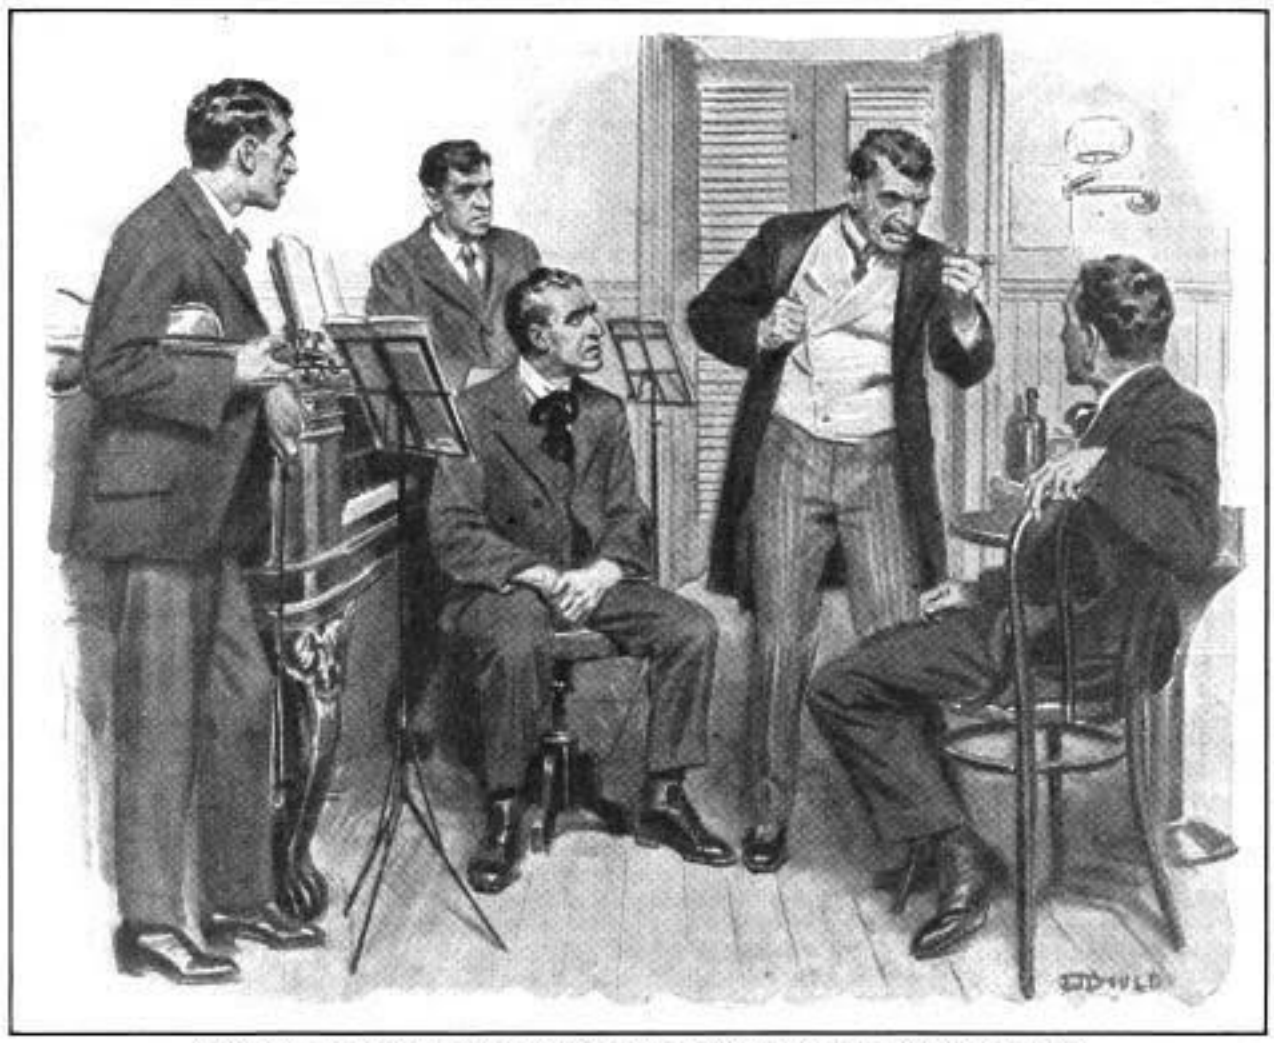
"Symphonies, concerti and such things?" Milton inquired.

"Symphonies?" Elkan repeated. "What is symphonies?"

"I couldn't explain it to you," Milton said, "because we ain't got time; *aber* you would see for yourself. Only one thing I must tell you, Mr. Lubliner—when the orchestra plays you shouldn't speak nothing—Mrs. Lubliner neither."

"I wouldn't open my mouth at all," Elkan assured him solemnly; and a few minutes later Milton seated himself in the last row of the parterre at Carnegie Hall, with Elkan and Yetta—one each side of him.

"So you ain't never been to a symphony concert before?" Milton began, leaning toward Elkan; and, as the latter shook his head, a short, stout person in the adjoining seat raised his eyebrows involuntarily. "Well, you got a big pleasure in store for you," Milton went on; "and another thing I must got to tell you: Might you would hear some pretty jumpy music which you would want to keep time to *mit* your foot. Don't you do it!"



Elkan's neighbor concealed a smile with one hand, and then he, too, turned to Elkan, who had received Milton's warning with a sulky frown.

"You're friend is right," he said. "People always have to be told that the first time they go to a symphony concert; and the next time they go they not only see the wisdom of such advice, but they want to get up and lick the man that does beat time with his foot."

He accompanied his remark with so gracious a smile that Elkan's frown immediately relaxed.

"A new beginner couldn't get too much advice," he said, and his neighbor leaned farther forward and addressed Milton.

The A B C of Unscrambling Eggs

An Interview With Senator Albert B. Cummins

By Henry Beach Needham

DECORATIONS BY JOHN R. NEILL

IN THE late seventies the farmers of the Middle West were all fenced in by the Barb-Wire Trust, and their position was exceedingly uncomfortable and restrained. The trust had gathered in all patents on barb wire and on machines for making barb wire, and the farmers were getting the barb at every turn. Fence wire was selling at ten, eleven or twelve cents a pound. Unwilling to be gouged any longer, the Farmers' Protective Association, of Des Moines, Iowa, started a factory to manufacture barb wire. Of course the trust got after them, charging infringement of patents. In the first litigation the trust won. The farmers blamed their own attorneys. Finally they determined to make one last try to beat the trust. A delegation of farmers came to town one day and put this question to a disinterested person of wide acquaintance and fair understanding:

"Is there an honest lawyer in Des Moines?"

"I believe there is one down in Judge Wright's office," was the reply. "Hasn't been practicing long. His name is Cummins—A. B. Cummins."

The farmers went to Cummins and laid their case before him. He took the papers and mulled over them for two days and two nights. Then he returned the documents with this memorandum:

"This is simple.—A. B. C."

And today the farmers of Iowa ascribe to that incident the genesis of the expression, "As simple as A B C."

Cummins took up the cause of the farmers against the trust and won a complete victory. When he began the fight he had never tried a patent case. Opposed to him were the best patent lawyers of the country, among them Ben Thurston, of Providence, Rhode Island, and Fred Lehmann, who is now solicitor-general of the United States. In the final decision, rendered by Justice Brewer, afterward a member of the United States Supreme Court, every machine patent controlled by the trust was knocked out and all but one of the patents on barb wire, the exception being of no great importance. Cummins had fought for five years. During that time he neglected all other practice for the farmers' litigation. But in the end he saw the trust beaten—dissolved forever. And instead of paying eleven cents the farmers of Iowa and elsewhere got their fence wire for three cents a pound. A. B. C. proved himself to be some trust-buster.

Cummins and the Blind Goddess

IT WAS in this litigation that John W. Gates discovered Cummins. Gates had organized a company to manufacture fence wire in St. Louis in opposition to the trust. The company was operating on nerve; the capital was next to nothing, and Gates himself was as poor as the turkey that scratched round in Job's back yard. But Gates was keenly interested in the wire litigation, because he expected hourly to be sued by the trust. So he traveled to Keokuk, Iowa, where Cummins was fighting an application for a temporary injunction against the Farmers' Protective Association. At the conclusion of the arguments in court Gates had to borrow money to get back home. But he took with him a promise from Cummins to act as his counsel.

Some time after this John W. Gates conceived the idea of forming a steel and wire combination. He took Cummins to New York to meet the men who had agreed to finance the undertaking. This was A. B. C.'s first plunge into high finance—and his last. He saw properties valued at thirty-two million dollars merged in a combination and the capitalization placed at ninety million dollars. He saw a banking house, which assumed no responsibility, take common stock to the par value of eleven million six hundred thousand dollars—stock that was quoted at fifty-nine, soon after the combination was launched, and that was therefore worth over six millions—and merely because the transaction passed through its office. But he saw nothing done in violation of law, nothing that was regarded as irregular in business circles.

"Those who know Cummins best," said a friend, "declare that it was not Cummins the lawyer who rebelled, but Cummins the carpenter." You see, his father was a carpenter, and in his early youth A. B. C. learned the carpenter's trade. It was by his skill with tools that he paid his way through preparatory school and college and obtained his legal education.

Cummins might have remained in New York, but instead he returned to Iowa—to become leader of the bar, thrice governor of his state, United States senator, and a public man who is seriously mentioned for the presidential nomination. He is a man of unusual legal attainments. His is a mind that can grasp and grapple with complex economic problems. His is a moral mind, and he can view each Government question from the standpoint of the public welfare as well as from the angle of commercial expediency. Cummins knows. He knows, because his preparation for the job he now holds by virtue of popular choice was as complete as the highbrow reformer or the lowbrow politician or the "high-low" Wall Street business man could reasonably ask. In Congress today there is no man who has given so much careful and intelligent study to the trust problem as Senator Cummins has devoted to this great question, no man whose experience and training so well entitle him to offer a solution. His views are set forth in the following interview, which I obtained from him in the holiday recess of Congress.

"The anti-trust law has had a checkered career," said Senator Cummins. "It was despised and disregarded in its infancy, but hated and feared as it grew toward its majority. It was a weak absurdity as exemplified in the Knight case, but a sword of Damocles as interpreted in the Standard Oil case. No law save this one ever recovered from such a blow as was administered to it in the opinion of the Supreme Court in the Sugar Trust suit; and its convalescence through almost twenty years of intermittent fever to complete health in the oil and tobacco litigation is the most wonderful evidence of the power and persistence of the will of the people working through the rational forces of civilization, that this country has ever seen. It is apparent, however, that its vicissitudes are not over, for the Circuit Court in New York has taken the righteous opinion and explicit mandate of the Supreme Court in the American Tobacco Company case and has approved a plan of reorganization which leaves the independent tobacco manufacturers and the general public in worse plight than they were in before the Government attacked the monopoly; and the utterly inexplicable thing is that the attorney-general refuses to take an appeal so that the Supreme Court may have a chance to say whether the reorganization is in harmony with the law and with its opinion, and publicly announces his approval of the action of the Circuit Court.

"Without going into details the effect of the plan which now has judicial approval is to divide the business of the American Tobacco Company among fourteen corporations, three very large ones which take substantially all the business and property, and eleven comparatively small ones which take what remains; and the old stockholders of the American Tobacco Company own or control all these corporations and have practically the same proportionate interest in each of them which they had in the old company. The purpose of the Supreme Court was to create a condition which would restore competition. The man who says there is likely to be or will naturally be competition among these fourteen corporations needs either a brain or a conscience; he can take his choice. If it were not known to be in truth a tragedy the whole performance would be accepted by any audience as a screaming farce."

Competition the Fair Regulator of Prices

HERE we have a commentary on the Tobacco decree that is disheartening to all who have sought relief from the oppressions of the trusts. A Republican senator characterizes the outcome of one of the Government's three great suits against illegal monopolies as a "tragedy" with the elements of a "screaming farce"!

More temperate—or, let us say, diplomatic—was the opinion expressed by Elbert H. Gary. Asked if the "decrees will restore competition between the integral companies which formerly constituted the Tobacco and the Standard Oil Trusts," Judge Gary replied:

"I hope so; but the question is involved in some doubt."

"If we find that this is all that the law will do for the people," continued Senator Cummins, "if this is the final outcome of the superb theoretical construction of the statute, reached through weary years of labor, we must do all the work over again, for I believe that it is a fundamental tenet of our economic faith that in our private industries reasonable, healthful competition shall be the regulator of prices; and, further, that it is within our power to create and maintain conditions under which competition must and will exercise its proper influence.

"It is hard to tell just now whether the anti-trust law is suffering more from the attacks of its unreasonable enemies or from the defense of its unreasonable friends. The former are endeavoring to create a hysteria among the business men, imputing to the law and its enforcement all the commercial ills which are known to exist, as well as all the troubles which a morbid imagination can conceive. The latter in their zeal for correct principles insist that the authors of the law had a degree of wisdom and a degree of foresight which human beings never had and never will have. These defenders of the anti-trust law are so devoted in their worship that they proclaim everybody who thinks even of attempting better to fit the law to conditions which have developed since its passage, as engaged in a conspiracy to weaken and destroy it. Between these two extremes there is, I believe, a body of men who, holding fast to the real spirit of the law, believe that the experience of twenty years of interpretation and application of the statute, coupled with the experience of the same period

Digitized by Google

with the forms which industry and commerce have assumed, not only enable but require the men of this time to make the law a juster and more efficient instrument to carry into effect the exact purpose which the Congress of 1890 desired to accomplish."

The extremists are of two classes: those who would undo and those who would do nothing. Between the two are the *men,* like Senator Cummins, who would fit the law to modern conditions and make it more effective. "Strict constructionists" may quarrel with this program. They're reminded of Woodrow Wilson's epigram, that certain provisions of the Federal Constitution are outgrown and "if you button them over the belly they split up the back."

"Aside from its remedies and penalties," said Senator Cummins, "the anti-trust law prohibits just two things:

"First, restraint of trade, or possibly, as now understood, undue restraint of trade through contracts, combinations or conspiracies.

"Second, monopolies or attempts to create monopolies, however brought about.

"There is not a man in the country, whatever his relations to business may be, who will say that he believes that there should be any unreasonable restraint of trade, or that there should be monopolies or attempts to establish monopolies; and therefore it seems to me perfectly clear that the prohibitions of the statute must remain just as they are, with undiminished force. Indeed, I think it may be said that it will be difficult to find a man who believes that we ought to permit any restraint of trade."

The Need of Legal Definition

"THE Supreme Court interpreted the law finally, and since then many men of differing minds have been interpreting the court's interpretation. As a natural result, haven't we become a little confused on that point of restraint of trade?" I asked the senator.

"I think so," replied Mr. Cummins. "It is generally supposed that the Supreme Court has qualified the prohibition of the statute by construing it to mean that only unreasonable or undue restraints of trade are forbidden; but I think that when all the Supreme Court has said is fairly analyzed, what the court really means is that there may be restraints upon competition which are not unreasonable, and that when the restraints upon competition are not unreasonable there is no restraint of trade. What I have said must be, in the very nature of things, the conclusion of all sober-minded men, because the common law of the English-speaking race, which is a part of our civilization, denounces all restraints of trade and all unreasonable restraints of competition, as well as all monopolies of an industrial character.

"It does not follow that because we must hold untouched the prohibitions against restraints of trade and monopolies therefore the statute should not be amended or supplemented. When our ancestors in the building up of the common law brought into existence the phrase 'restraint of trade' and the word 'monopoly,' as applied to industrial situations, life was very simple and business very small as compared with the complexity of modern industry and the volume of modern business. Formerly it was not difficult to understand just what restraint of trade meant and just what monopoly included; but as the world has developed, as the new instrumentalities of intercourse and communication have been discovered, as new economies which inhere in large industries have become known, and especially since the corporation with all its possibilities has substantially taken possession of production and commerce, it is not so easy to tell just what arrangements, contracts or combinations are in restraint of trade or create a monopolistic power. We know vastly more about the subject than Congress did in 1890, and I think it is entirely practicable to define legislatively these terms with far greater accuracy than they could have been defined when the law was passed. Moreover, the law-making power establishes the policy of a nation. Restraints of trade and monopolies relate to a public policy, and there would be no prohibition against either were it not that they are believed to be contrary to the general welfare of the people. It seems to me, therefore, after studying the subject over carefully, that Congress ought to describe certain combinations that have taken place or that are likely to take place in the future, and say whether they shall be regarded as reasonable or unreasonable restraints of trade. Congress ought to do this not only for the protection of all men engaged in business and for those who are in these combinations, but for the protection of the general public especially."

Define the terms "restraint of trade" and "monopoly" in the light of modern ideas and present-day industrial conditions, Senator Cummins recommends.

Describe a type of combination already effected and a type likely to be effected, and let Congress declare: "We sanction this twentieth-century business model," or "We are legislating against this particular type of monopolistic enterprise." Do this for the protection of all men engaged in business; do it for the enlightenment of those who are connected with combination; but do it particularly for the benefit of the general public.

"In one respect the law is so uncertain that its application to a given state of facts can never be foretold," insisted Senator Cummins, "but must be awaited until the instance actually reaches the Supreme Court of the United States—and no one instance would be an unerring guide in any other. I put this case for illustration: Suppose there were twelve business concerns doing all the business in a certain field of commerce or industry, and doing it in substantially equal proportions. If an association of enterprising persons were to combine eleven of these concerns into one management, which would take in about ninety-two per cent of the business done, it is perfectly clear that the combination would be a restraint of trade and would be condemned as a monopoly or an attempt to create a monopoly. Suppose again that two of these concerns were to combine in a single management, doing sixteen or seventeen per cent of the business, and if we assume that the methods of this combination are fair and honest it is just as clear that such a combination would not be either in restraint of trade or a monopoly. Suppose, however, that four or five or six of these concerns want to combine in one management, doing thirty-five, forty-five or fifty-five per cent of the whole volume of the business, and assuming that its methods are fair and honest, there is no lawyer in the United States who would dare risk an opinion, to be acted upon, as to the lawfulness or unlawfulness of such a combination. The innocence or guilt of the persons involved in such a transaction could never be known until proceedings were instituted, and a trial had, and the case had dragged its weary length to the Supreme Court of the United States; and a decision there would depend upon the individual economic views of the members of the court rather than upon their legal learning."

"Does not this constitute an objection which business men of the country may reasonably urge against the Sherman Law?"

"As I look at it," replied Senator Cummins, "this is the most serious objection which the business men of the country can make against the anti-trust law."

"What, in your judgment, ought to be done to relieve business men of this uncertainty?"

"If I had my way about it," said the senator, "I should organize an industrial commission composed of men of the highest fitness, clothed with the authority and charged with the duty, among other things, of determining whether any such proposed combination of existing independent establishments was or was not a restraint of trade or the creation of a monopoly. If such a proposed organization were held by the commission to be in and of itself objectionable under the law, then it could by the process of the courts be immediately arrested. If, on the contrary, the commission held that the combination of such separate establishments was not a restraint of trade and was not a monopoly in and of itself, then a determination to that effect ought to preclude any future inquiry into that question. It, of course, would not preclude a prosecution for violation of the law if the combination pursued such unfair or dishonest or oppressive practices in carrying on its business as constituted a restraint of trade. If this plan were adopted business men could know at least whether they were beginning lawfully, and in my judgment this would greatly allay the apprehensions of honest men and at the same time it would effectively protect the general public. There are many other things that such a commission could well do toward preventing the continuance of unlawful practices in business by insuring publicity and by admonitions which, if disregarded, would be followed by prompt prosecution.

"I must not, however, continue these questions of detail. My sole object is to emphasize my belief that, without weakening the anti-trust law in the slightest degree, but on the other hand giving it additional strength, we can make it a better guide to honest business men and a more adequate safeguard of the public welfare."

"You are not one of those who believe that the day of competition has gone, never to return?"

"No," replied the senator, "I am not. A great many unthinking people, as well as a great many thinking people, seem to have reached the conclusion that competition has gone and that we must resort to regulated monopoly. I am not one of these people. I believe that the maintenance of healthy, sound, fair competition is essential not only to the prosperity of the business world, but to the maintenance of the institutions under which we live. I understand perfectly that as far as common carriers and public-utility companies are concerned we have in great measure abandoned competition, and in abandoning competition we have necessarily undertaken as a Government to fix the prices at which these public companies shall render their service. I understand, also, that in so doing we have adopted as to that part of our business life the doctrines of socialism. I am heartily in favor of that measure of regulation as applied to public and quasi-public business, but I am exceedingly reluctant to see any approach toward that system of government in our private industrial affairs. It goes without saying that the people will not tolerate private monopoly, and there are but two methods remaining through which the distribution of wealth produced in industry can be effected. The first is competition, the second is Government direction. The former has been the law of the world and, as I think, ought to remain the law of the world. The latter is socialism—not a tendency toward socialism, but socialism itself."

How People Have Become Progressive

"WHENEVER the Government undertakes the supervision and approval of agreements among producers to fix prices, or the regulation of monopolies, it at the same time has undertaken to fix prices; and whenever it fixes prices it determines how the proceeds of industry shall be distributed—and that is the essence of socialism. I am not scouting the socialistic theory. We may sometime adopt it, but I am an individualist and believe that the progress of the people in all ages is the result of rivalry—that is, competition. There is a sense in which all government is a restriction upon competition, and I am of course in favor of fair and reasonable restrictions upon the competitive force, to the end that we may not witness that dishonest and ruinous strife which is sometimes called competition but which has for its purpose the mere destruction of a rival.

"Summing it all up, I believe in regulated competition and cannot accept regulated monopoly or monopolistic power. In the work before us in Congress I intend to do everything in my power to preserve competition as a regulator of prices and as the force that determines the distribution of wealth."

Senator Cummins would deal with the trust question constructively. His views as to new legislation, announced after careful study and consideration of the complex subject, are progressive but not radical. His viewpoint is threefold—legal, economic and social—and to him the social side of the question is of paramount importance. Specifically he proposes:

1. To supplement the Sherman Law with a statutory definition of the terms "restraint of trade" and "monopoly." This is in line with a suggestion made to the committee by George H. Earle, Junior, lawyer and banker of Philadelphia. Mr. Earle would have Congress define restraint of trade from the definition of the English cases in which the common law was laid down, because the Supreme Court has now held that the Sherman Law is but an application of the common-law principles to our national questions

THE CALF-PATH

By Kennett Harris

ILLUSTRATED BY H. T. DUNN

Rickey Raymond Applies the Doctrine of Non-Resistance

ROSES and sunshine. A blue sky above and green turf below; the musical tinkle of falling water in the depths of the arroyo and a distant rim of pink-and-purple hills; a desert oasis, with only modified desert beyond and china-berry and pepper in place of waving palm—an oasis renovated and cultivated, yet with pleasant possibilities of future improvement and no deadly note of primness in the bounds of its fertility.

"Dog isn't any name for it," Rickey Raymond declared with entire absence of modesty. "Dog seems to me a peaked, knock-kneed, narrow-chested expression; and I ain't like a person that don't know a certain amount of dog when I see it. Maybe you've heard rumors and caynards that me and the madam done Galveston to sort of top off with? Well, it's true. Sure, we did. And you take them hostelries in Galveston —— Still, yet and again, I may be mistaken. The first time I toted my paintcan into El Paso I thought she was some, and by the time I've seen New Orleans and New York I may get plumb disgusted with this little old shack and tear it down and build me a five-story brick, with a private bath. Sit down, you two-yards-and-a-quarter of homeliness, and make your miserable life happy."

The unusually tall man, with the melancholy, drooping black mustaches, smiled tolerantly as he complied with the invitation and tilted his chair back against the clapboards of the neat new cottage.

"It's dog for a common waddie like you, anyway," he observed gently.

"That's what I'm telling you," said Rickey, still beaming with pride. "For a boy like me, that a blanket or a tarp was aplenty good habitation for, I reckon I haven't got no kick to register. I doubt whether you took in all the fine points of this here abode of mine, Bob. You seen the walls was plastered; but did you notice they was hard-finished? No? I allowed you didn't. Yes, sirree—hard-finished; and you're leaning your head against two coats of paint besides the priming right this minute. Don't move; you can't rub 'em off."

"I take it them poles is genuine solid cottonwood," remarked the tall man, nodding at the corral. "You ain't trying to make a bluff with cheap mahogany stained up to imitate it, are you?"

"Josh on," said Rickey with a sigh of content. "Kid all you've a mind to; but if I ever gambled I'd bet you a bale of kale against a blind-bridle that you never seen a better put-up corral than what that is. I'll hobble down and show it to you after a while and I'll let you feast your eyes on the dandiest roothouse in the territory. Dog!"

"You ain't gambling any more, then?" queried Curran curiously.

"Not if it was ever so," replied Rickey. "It's the aim of my earnest young life to get away from it. I quit riding for the Bar T because of my weakness thataway. Says I: 'I'll go to mining, which is safe and sane, and ain't got no element of risk to it.' Then I get blowed into seventeen pieces, which was only held together by my skin; and when I come to I find you've bought me rich and more acoming. So I quit mining. Then I get married."

"No gamble about that, ever," drawled Curran.

"It's a cinch," agreed Rickey. "I hear something aclinking in the kitchen right now," he continued. "I wouldn't be surprised a particle if —— What did I tell you?"

Mrs. Raymond came toward them from the kitchen, bearing something that was still "aclinking."

"Rickey, You Did Me a Good Turn Once and I've Been Looking for a Chance to Do You One for Four Years"

She was a highly personable young woman, with deep blue eyes and a smile that flatly contradicted a hint of firmness in her chin. And when Rickey answered that smile he looked quite handsome too.

"Lemonade!" Rickey exclaimed, feigning disgust as he peered into the pitcher. "But she means well, Bob. One of the best-hearted girls you ever seen when you get to know her, is Maggie."

"See that he doesn't drink it all, Mr. Curran," the young matron cautioned; and before the blushing visitor could disentangle his legs from the rungs of his chair and make an apt response she was back in the kitchen.

"Lemonade!" Rickey continued. "Say, Bob, if you're dry, and you want to amble sort of casual along to the toolshed and reach your hand up under the eaves at the northeast corner, maybe you'll find something. And then again you might get fooled up a mess," he added as Curran looked at him disapprovingly. "No, Bob; I don't drink and I don't gamble, and I don't smoke not above from twenty to twenty-five cigaroots a day now. I've give up all that makes life worth living—and, what's mighty strange, I don't seem to mind it."

"How about fighting?" asked Curran, wiping his mustaches with a large handkerchief of superfine cambric.

Rickey looked at him queerly.

"I thought you'd come to it if I talked long enough," he said after a pause. "Why, as to fighting, I don't say, but if there was some just cause or impediment ——"

"There's an impediment, all right," said Curran. "His name's P. J. Cruser, which same you may recall as the gentleman who skinned us out of the Top-Notch mine, and tried to skin you and Jimmie Orr out of the Lady Lou."

"I skinned him first," remarked Rickey, his gaze fixed on the purple hills. "It was the bridge of his nose. Yes, I recall him, now you mention him. What particular deviltry is he up to now?"

"Trying to box us up," Curran replied. "Working a bill through the legislature to make the old Escobedo Trail to White Crow Pass a toll road. Of course he widened it some and leveled it off; but it stood him in hand to do it to get his connection with Sentinel Butte. Now he wants to hog it all and, particular, keep us from getting out."

Rickey hardly seemed impressed.

"How can he?" he asked. "I reckon we can pay a reasonable toll like other folks if we have to."

"It won't be a reasonable toll. He'll soak us all the traffic will bear and then what your daddy-in-law calls a 'modeecum'—and it's the only way out of Garnet Basin. I tell you, young fellow, it's a mighty serious situation; and that old four-eyed son-of-a-gun is going to spend money to rush the thing through." Curran was speaking very earnestly now, and he would have proceeded at some length in the same strain if he had not noticed that Rickey's face was working in an alarmingly spasmodic manner. As the elder man stopped, Rickey burst out in an explosive snort, strangled, choked and then abandoned himself without restraint to a fit of wild hilarity.

"Take your time," suggested Curran mildly at the end of the outburst. "Just get through and then tell me the joke so's I can have my turn."

"I was thinking of some poetry I've been reading," explained Rickey, dabbing the moisture from his eyes. "It was right comical. And then there's this here Paul Jarley Cruser. First I lick him and he plays even by leaving me afoot ninety-nine miles from nowhere on the desert; then I meet up with him again and ride the gizzard out of him over that same Escobedo Trail, and he digs in and comes close to beating me out of my best girl; next thing I scare him so's he falls out of his chair and he comes back by shutting off my grub and freezing Jimmie's feet so bad we was within one of leaving the Lady Lou for him to jump. He's powerful bad medicine, P. J. is! Leave him alone."

Mrs. Raymond Came Toward Them, Bearing Something That Was Still "Aclinking"

"Sure not," disagreed the other. "I'm agoing to give him company at Santa Fe. I aimed to take you along with me, account of your standin' with Lucas and some of them Greaser members; but if you're sort of dubersome about mixing in with Mr. Cruser we won't say nothing more about it. Of course it may cut down on the royalties we was figuring on paying you; but you don't care nothing about royalties so long as you can set here and look at that corral of yours."

"The corral ain't the onliest thing I've got that's worth looking at," said Rickey.

"I know," said Curran. "I wouldn't want to let her out of my sight, either, if I was in your place. Of course you couldn't do it; I told Jimmie that. 'There's no use you depending on Rickey, under the circumstances,' I says."

Rickey chuckled again with an enjoyment that his friend's transparent insinuation hardly seemed to warrant.

"You knew that would fetch me, didn't you?" he said. "Well, I'm a cripple, and the trip will probably set me back so I'll never get over it; but if you can square me with the madam I'll go and try P. J. a whirl or two. Now come and look at them chicken coops of mine."

That night Bob Curran having mounted to the guest chamber upstairs, Rickey and Mrs. Raymond talked him over, according to the immemorial custom of hosts and hostesses who live in sweet accord—that is to say, Mrs. Raymond talked and Rickey listened, sitting at her feet, his head very comfortably pillowed.

"He's a nice man, but tiresome," the lady remarked.

"How do you mean tiresome, honey?"

"Well, I think he might have gone to bed before. And then he blushes and stammers so much. He's a very timid man, isn't he?"

Owing to his position she was unable, without bending over, to see Rickey smile.

"He's right timid," agreed the young man. "He's the startled fawn who walked into Gib Lemmon's shack and dragged him out, single-handed."

"Who was Gib Lemmon?"

"The Curly-Headed Cauliflower from San Simon. That's what I done heard him call himself."

Mrs. Raymond tweaked a strand of the black hair in her lap.

"Do you know it will take me a weary while to get used to you, my dear?" she said. "But will he be a good man? I know he's honest, but —— You say you are going to Santa Fe to fight. Perhaps I'm too Scotch to see the joke, but I'm sure you'd not let him lead you ——"

"I ain't halter-broke, darling," Rickey interrupted; "and it's just to fight a bill. You see, I know old Lucas, and Bob thinks I might be of some use." He went into some detail, to which she listened attentively. "But you're going along," he concluded. "I made up my mind to that."

Digitized by Google

Suddenly he was seized with the same fit of laughter that had shaken him four or five hours before. It was the more violent by reason of the necessity for subduing it.

"What is it?" asked Maggie, laughing out of sympathy.

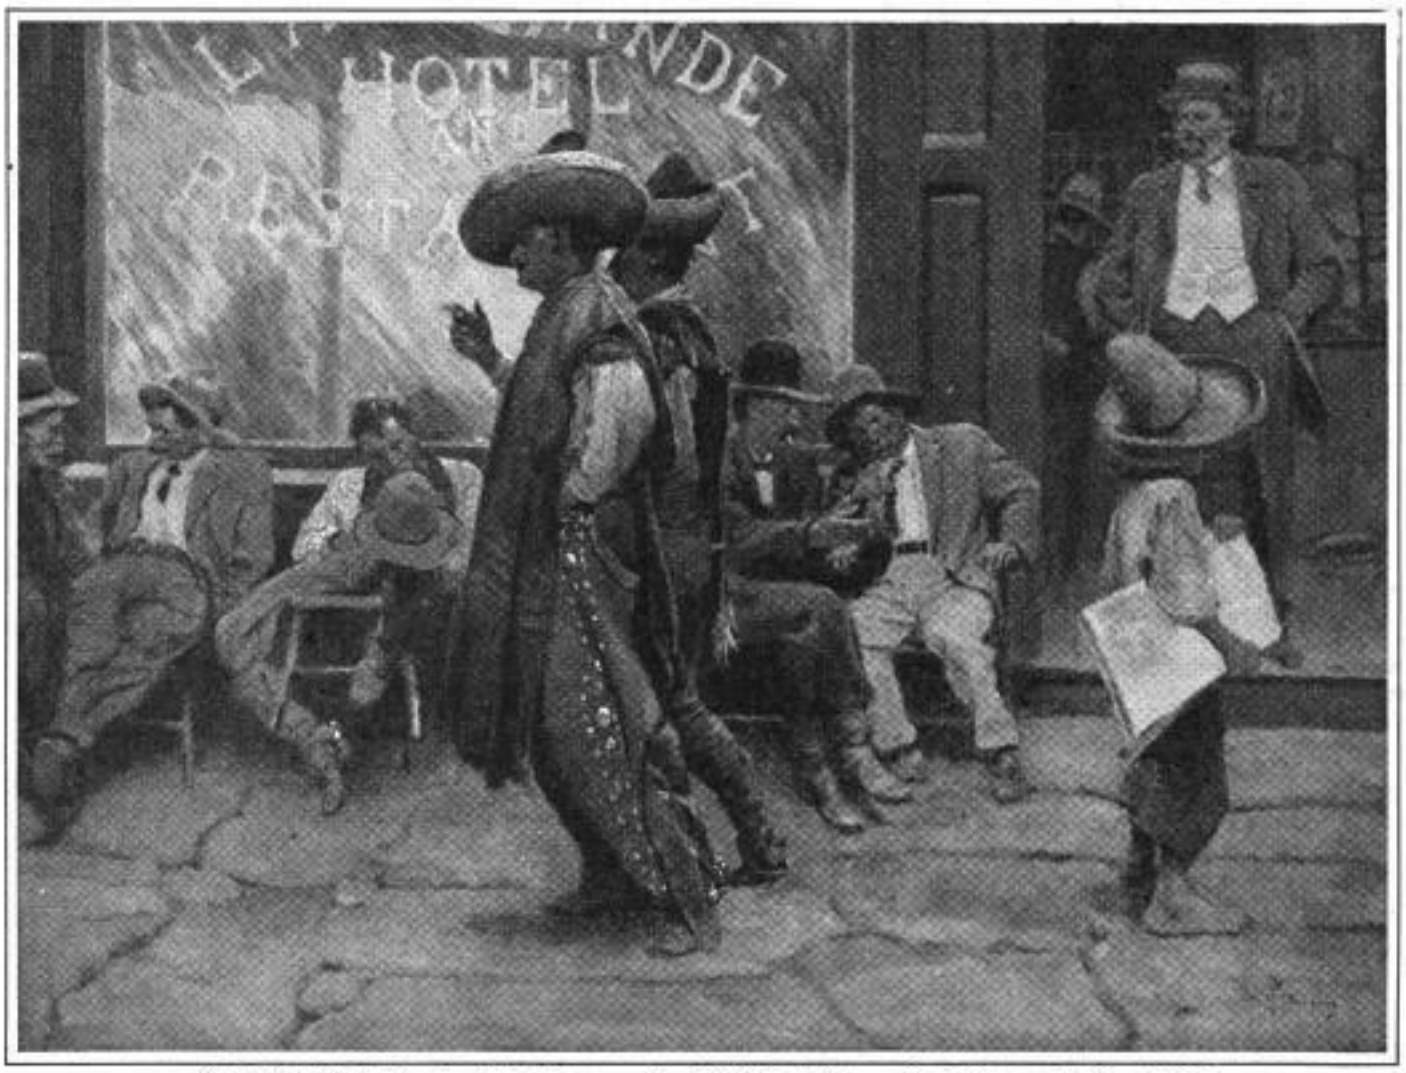
"It's ——" Rickey controlled himself with an effort. In an unsteady voice he began to quote:

"One day, through the primeval wood,
A calf walked home, as good calves should."

"I'm sure I don't see anything to laugh at, you absurd *man,*" said Mrs. Raymond.

"Then how does this strike you?" inquired Rickey. "Listen!

"But made a trail all bent askew—
A crooked trail, as all calves do."



"The moon is too strong for you, poor boy!" said his wife commiseratingly. "But now you listen: I'm not going to Santa Fe. You will go with Mr. Curran by your ainsel' and I will be doing very well here at home. I'll have no one saying I dare not let my husband out of my sight."

Rickey assumed no air of injured innocence. He knew that reformation which was a matter of mere months would be open to general question, and his heart swelled within him in humble gratitude for his wife's trust. He took the hand that was stroking his hair and pressed it against his cheek; but it was a minute or two before he spoke.

"It's going to be mighty tough away from you, hon!" he said; "but," he added with symptoms of returning merriment, "it's going to be too good to miss."

. . . . .

Santa Fe was busy—busy and blethering, busy and bland, busy in secret and silent ways, and in vociferously eloquent, flaming and fervid fashion. Francisco Street was thronged, the plaza blotched with black, consulting groups—all busy. The dark-skinned and the white mingled, confidentially buttonholing, or shirtsleeving where buttons and their concomitant holes were wanting. Even in the shadow of the old cathedral there was an unwonted activity, and the black-coated spiritual advisers and monitors of the faithful took a gesticulating hand in the political game that was being played. The legislature was in session and the axbearers were in from all over the territory, with a not inconsiderable few who privily carried large, sharp, gleaming knives. In Colorado Charlie's, which is not a hundred miles from the palace of the *conquistadores,* sat a heavy man with a placid, almost cherubic countenance, and with a plaited-leather watchguard stretching entirely across his stomach.

"But This White Crow Pass Road Incorporation Bill, Al. What are You Going to Do About It?"

Round him were half a dozen or more men who caught at the monosyllabic nothings that fell from his lips as if they were very pearls of wisdom, as perhaps they were. The most startling relations of assumed fact, the most eager questions of the little court, met with no further response from the heavy personage than these monosyllables, which sometimes did not attain the dignity of words; but every slow, kindly smile and every shake or nod of his head seemed to them to be significant. Yet Pap Lucas' chaff, like royalty's of old, was better than other folks' corn.

Now and then Lucas rolled his eyes leisurely, incuriously about the room or rested them in an abstracted manner upon some conversing group, and in one of these apparently listless excursions his gaze fell upon a young man who had just limped into the saloon, assisted by a cane and the arm of an unusually tall individual with drooping mustaches.

"Oh, Rickey!" called Lucas suddenly—and brutally, as concerned the olive-hued person who was whispering at his ear.

The young man who had just entered turned, and his white teeth flashed in a smile of relief.

"Here he is now," Rickey said to his long friend.

"I always did say you couldn't ride nothing like as well as you thought you could," remarked the political potentate with bovine pleasantry as he extended his pudgy, freckled hand to the cripple.

"What I rode would have come mighty nigh hoisting you, and that would be a considerable hoist," Rickey retorted. "It was a charge of dynamite. I'll make you acquainted with Mr. Curran, Mr. Lucas. Sometime in the next month or two, when you ain't too busy, we'd like to speak with you in private—Mr. Curran and me."

"You won't find a better time than right now," said the heavy man. He waved his hand; and at the majestic signal the group melted, or was melting, when he checked them for an instant. "You go to Tannahill and tell him it will be all right, Collins. Beach, I'd like to have you find out for sure whether that's so about the Glorieta bunch; and you, José, don't you worry. I'll tend to that. Now!"

"It's my belief that if Pap stood out by the Apache Cañon monument and waved a blanket to that effect, everybody'd leave town," declared Rickey, drawing a chair to the vacant table. "Bob, you keep tally on me while I explication a few lines."

"Hold your horses," commanded Lucas, and crooked a finger at an attendant. "What will it be?"

"I'll take ginger ale," replied Curran gravely as he lit an oily black cigar.

"Make mine lemonade," ordered Rickey; and as Lucas puffed out his expanse of clean-shaven cheek and emitted a whistle: "It's a notion of my wife's. It pleases her and the harm it does me ain't scassly worth mentioning. Bob here, he's just naturally capping her game."

"Bring me—bring—bring me an ice-cream soda," gasped Lucas. "Now go ahead, boys."

"There's a gentleman in town by the name of Cruser," Rickey began—"a large gentleman—almost as large as you are, Pap. And one time when Curran and his crowd wasn't looking Cruser bore down his whole cussed weight on Top-Notch stock, whereby the aforesaid Curran and his heretofore mentioned crowd lost Top-Notch—which is a mighty good mine—and P. J. Cruser owns it. Got that?"

Lucas nodded. "Met him," he said.

"I allowed you'd meet him," smiled Rickey. "Well, he puts in new machinery—smelter and all that—and hauls it in over the Escobedo Trail through White Crow Pass."

"Know all about it. Go on."

"What's the use?" demanded Rickey plaintively. "If you know the situation and what we want, you go right ahead and do the white thing."

"Where do you come in?" asked Lucas.

"We've got the Lady Lou mine; and the Lady Lou has got more copper to the square foot than Top-Notch has got to a square acre," Rickey explained. "I done discovered the vein myself by the simple and easy method of being on the spot when the blast went off. That's why I'm walking with a cane. Well, Bob here figures and Jimmie Orr figures—you know Jimmie—and other interested parties figure that if Cruser gobbles that Escobedo road he's got us by our respective tails, with a right good foothold and a downhill pull."

Lucas nodded.

"Consequentimentally we come to see you about it."

Lucas nodded again.

"Well?" Rickey inquired.

"The trouble is that he seen me first," Lucas sighed. "Rickey, you did me a good turn once and I've been looking for a chance to do you one for four years now; and you never gave me a chance. And here ——"

Curran had taken his cigar from his mouth and was blowing a puff of smoke at the ceiling—perhaps as a symbol of the transitory and ethereal nature of human hopes. He had that air. Decidedly his natural melancholy was deepened.

"I suppose that settles it," he observed.

"I don't say that," the Power admitted with some reluctance.

"Then you haven't passed your word to the other fellow," said Rickey with certainty. "That's all right, then."

"What in blazes is this!" exclaimed Lucas in sudden wrath, surveying the glass before him.

"It's ice-cream soda," Rickey informed him. "I reckon Manuel went to the drug store for it. But, nevertheless and notwithstanding, allowing for argument that it's a nut sundae, you haven't passed your word—no?"

"Not exactly," Lucas conceded.

"Then I'll give you your chance right now," said Rickey. "Bob, you move them lower extensions of yours to the hotel and see what P. J. is doing—if anything. I'll be over there myself inside of ten minutes or more."

As soon as Curran had departed, Rickey hitched his chair a little closer to the table and smiled reassuringly at his vis-à-vis.

"Here's the way I've got the situation sized up, Pap," he said. "You put me right if I'm wrong. You've seen Cruser and he's about got you convinced that now is the time for us wolves to howl together. You've settled about how much a howl it's going to cost, but you ain't convinced him? No? Yes? We'll let her flutter thataway. Next thing, there's Sabadel, Andorra, Benito and—well, no need of mentioning names; but they've got to be encouraged—and from what I hear there ain't much meat on the bones this session, so if Cruser's toll road ain't right juicy it might help fill up some. You'd like to help me out, and if I lay down on you real hard you'll help me anyway; but the boys are going to be disappointed and sort of lose confidence in you, more or less, and you won't be the influence for good you might be."

"Well?" said Lucas.

"I'm going to lay down on you hard," Rickey replied.

"You're entitled to, Bud," allowed the big man; but he sighed.

"So, to begin with and end up with, we'll let Mr. Cruser have his little old road."

Lucas almost raised himself from his chair in his amazement.

"But," continued Rickey—"b-u-t—but! Now listen with both ears while I whisper soft and low." He drew his chair closer still and whispered; and as he proceeded

ON MAIN STREET

The Frenzied Eleventh Hour

ILLUSTRATION BY PETER NEWELL

ACCORDING to the best information on the subject, a considerable number of repentant souls are saved at the eleventh hour. In an even greater degree the same thing applies to theatrical productions. Especially does it apply to the variety known as musical comedies, which are so called because it is customary to kill out the comedy to make room for the music, and then kill out the music to make room to put the comedy back. Practically all musical comedies are saved at the eleventh hour—or, to be exact, at the eleventh hour and from then on. Sometimes they are saved at half past the eleventh hour, or at fifty-nine minutes and fifty-nine seconds past it; and sometimes, after having been thus saved, salvaged, reclaimed and jettisoned, they refuse to stay saved and are lost beyond recall.

A casual observer might suppose that the process of salvation would be undertaken a few weeks ahead of time, but such a procedure would not be in accord with the best traditions. Almost everything about the stage is in contradiction of the life it is presumed to reflect. If the stage holds the mirror up to Nature, as the late Bard once said, it does so after the fashion of a photographic plate, with the picture reversed and black showing as white and white showing as black. In theatrical undertakings the risks are greater, the losses bigger and the profits greater than in almost any other business; and yet in a business so complex and so intricate the principles that control ordinary businesses are promptly chucked overboard. Perhaps the reason for this is the fear that common business methods might cripple up or kill off the artistic side of it. Anyhow, nearly everything in the actual production of a musical comedy is done upside down; and though the producer often loses his head there's no excuse for it, because most of the time he's standing on it.

Ready for the Patient Towser

WITH these few explanatory remarks we shall now return to our subject which was, I believe, the eleventh hour of a musical show. Any musical show almost will do for an example. This show has passed through all the early preliminary stages. It has been written and rewritten, composed and decomposed. It has been taken apart, put back again, pulled out, shoved in, done over, twisted, turned inside out, altered, amended, shortened, expanded, beheaded, dehorned, trimmed, pruned and grafted. The stage manager has been changed; the lines have been changed until their author has to be reintroduced to his own work at each rehearsal; and the chorus, which never changes, but like Tennyson's brook goes babbling on forever, has been drilled until the tongues of its members hang out on their chests and look like pink plush badges of their calling. New musical numbers have been interpolated and disinterred with great rapidity. Costumes have been made, tried on, thrown away and new ones ordered. Scenery has been painted, looked at and put into the discard. Various members of the cast have walked out of their own accord or by invitation. The habit of walking out is very common in the early stages of a musical show. It must be a legacy that has come down from the good wildcatting days of the drama, when everybody walked but the ghost; and he who was not a good walker could never hope to be a good actor.

From the very first everything has gone wrong—which from the theatrical standpoint means that it has gone very well indeed. And so finally, after nine thousand small items have been forgotten and then remembered and then forgotten again, the piece is ready to be played and it is taken by train to be tried on the patient theatrical Towser at Providence, or Peoria, or Painted Post. After the first performance it is remade all over. Slabs of dialogue are chopped out and songs that didn't seem to go are beaten to death with a club. The poor thing is hacked and haggled and hamstrung in twenty places; the cast is changed some more; new finales are tried and found guilty. By now the plot has practically disappeared, only coming up about every ten minutes to breathe and then going right back down to the bottom.

By these signs it is made evident that the stage manager is whipping the production into shape. Still he isn't quite satisfied; he knows something is still lacking—he may not know what it is, but he knows it is. As for the owner, he cannot make up his mind whether he ought to put out a number-two company or take a running jump off the nearest dock. If there is an angel traveling along with the troupe he is apt to be in a similar frame of mind, provided he has any mind to be in a frame. Angel, you know, is the tradename for any financially gifted but mentally shy person who is breaking into the theatrical profession by furnishing the backing for a new show; and nearly always a pillbox or a medicine dropper would be a better thing to hold his mind in than a frame.

If the production be in the hands of one of the big established producers there will be no angel; but if a new and struggling producer is at the helm there will frequently be found lurking in the immediate offing somewhere an angel measuring, say, five feet six from tip to tip and wearing a chastened expression of countenance and carrying a depleted bankroll handy. Little Eva has nothing on certain struggling producers when it comes to starting up in the air after a touching death-scene on a stage and meeting a flock of angels coming down.

So the manager and the angel—if there be one—are in a state of ostensible mind. However, it is decided to keep the show out a few weeks and work on it, meanwhile offering it evenings to small-town audiences, who will stand for almost anything—and what they won't stand for they'll sit through. After a month or so of this fevered existence they take it into New York or Chicago, since every musical show must have a metropolitan run before it can expect to draw on the road. Back it comes then to the big city; and then there is a layoff of a week or two weeks, in order that it may be tuned up and freshened up and brightened up. A consultation having many of the essential aspects of an autopsy is held. Something must be done to the book, which is weak—and to the score, which is weaker. The owner now calls in a wrecking crew of those talented gentlemen who hang out in New York and Chicago and make a living by doing over the dramatic works of other men. In this instance the salvage corps will probably include a funny man to rewrite the book, a song writer to do some jingles, and a composer to provide new music. This is the usual number, though there is nothing to prevent the producer from hiring as many of these chaps as he can afford, so long as he keeps on paying the customary and specified royalties to the original authors.

There is one recent and notable instance of a piece that started out to be a straight comedy, but was made over into a farce and wound up as a sort of musical hodgepodge, with singing and dancing and a chorus. In its original shape it failed to draw on the road; whereupon all hands decided that it would be just the thing for New York—the invariable diagnosis in such cases being that if a show doesn't go on the road it will kill 'em dead on Broadway—but if it fails to please on Broadway it will surely set 'em wild on the road. So when, in the third and final reincarnation, this piece reached Broadway it had been tinkered at by so many collaborators and dramatic specialists that the producers billed it as a new piece by "a number of well-known authors," which was indeed a modest way of putting it since, first and last, there were said to have been twelve of them—or maybe it was thirteen.

On the opening night the practiced eye roving over the house could distinguish an author at a glance—he being one who remained quiet most of the time, yet at rare and remote intervals burst into hearty laughter. This would stamp him as an author—he laughed when he recognized one of his own wheezes. Despite the weight of literary talent, however, the play did not succeed—perhaps it had too many fond fathers for one brain child to support. It languished, as the word is. On the second night the audience was small—mainly authors and their wives. On the third night the attendance fell off nearly fifty per cent—the wives stayed away. And at the end of a few more nights the owners called up the storehouse and ordered suitable head and foot stones. The interment, though private and without flowers, was largely attended—all the authors came.

However, getting back to the musical show that returns to town to be touched up, we shall note as we go along farther that it is touched up to a fare-you-well. The producer rents a hall or borrows a stage from a brother manager and starts rehearsals all over again. It is highly probable that he also engages another star comedian, and another stage manager, and another man to mount and remount the dances. This is not the invariable rule, but it is customary to do something of the sort.

Beginning All Over Again

THE new star drops in and looks the situation over, meanwhile maintaining that air of haughty aloofness which a popular comedian always maintains on such an occasion. He goes through his first rehearsal and at the end of it he calmly annexes for his own every line, by whomsoever spoken, that sounds as though it might get a laugh. This naturally necessitates more alterations in the book. The chances are that he also brings along a hack dramatist of his own selection who will write into the show those favorite scenes, situations and passages by means of which he has heretofore pleased his public. These are slapped in anywhere—regardless. They may not match the rest of the material, but nobody objects. To object would not be etiquette; and besides, the comedian would take his foot in his hand and walk out. He'll walk out several times, anyhow, as time passes.

The new stage manager also looks things over. In nine times out of ten he begins his share of the entertainment by cutting out all the stage business of his predecessor and substituting his own notions. This means that everybody, from the principal down to the humblest chorus man, must learn over again in a new way what all of them already know in another way. Having thus mapped out his course of action, the stage manager removes his coat and instantly materializes from a mild-mannered man in noseglasses into a despot, alongside of whom Herod, Henry the Eighth and Tiberius, all rolled into one, would look like a charter member of the Band of Hope. From that moment the stage and all upon it belong to him. He is monarch of all he surveys—and he is a great little surveyor too. If he didn't have eyes all over him like a spider—or is it a fly that has eyes all over?—and a brain to comprehend a thousand and one things at one and the same time, he wouldn't be a success as a stage director. Everybody stands back and gives him room according to his strength. Nobody dares talk back at him—not even the authors—when he brutally carves a few more of the gizzards and other in'ards out of their stuff. Nobody must grumble or complain.

Only stars of the first magnitude may dare to take liberties with him; and even they, by the ironbound rules of the craft, may not argue with him. The comedian may stroll through his scenes with the

XXIV

ARNOLD had a swift premonition of what had happened. He led Ruth to a chair and stood by her side. Ruth gazed round the room in bewilderment. The curtained screen that divided it had been torn down and the door of the inner apartment, which Isaac kept so zealously locked, stood open. Not only that, but the figure of a second man was dimly seen moving about inside, and a light shining out indicated that it was illuminated.

"I don't understand who you are or what you are doing here," Ruth declared, trembling in every limb.

"My name is Inspector Grant," the man replied. "My business is with Isaac Lalonde, who, I understand, is your uncle."

"What do you want with him?" she asked.

The inspector made no direct reply.

"There are a few questions," he said, "that it is my duty to put to you."

"Questions?" Ruth repeated anxiously.

"Do you know where your uncle is?"

Ruth shook her head.

"I left him here this morning," she replied. "He has not been outdoors for several days. I expected to find him here when I returned."

"We have been here since four o'clock," the man said. "There was no one here when we arrived, nor has any one been here since. Your uncle has no regular hours, I suppose?"

"He is very uncertain," Ruth answered. "He does newspaper reporting and he sometimes has to work late."

"Can you tell me what newspaper he is engaged upon?"

"The Signal, for one," Ruth replied.

Inspector Grant was silent for a moment.

"The Signal newspaper offices were seized by the police some days ago," he remarked. "Do you know of any other journal on which your uncle worked?"

She shook her head.

"He tells me very little of his affairs," she faltered.

The inspector pointed backward into the farther corner of the apartment.

"Do you often go into his room there?" he asked.

"I have not been in there for months," Ruth assured him. "My uncle keeps it locked up. He told me that there had been some trouble at the office and he was printing something in there."

The inspector rose slowly to his feet. On the table by his side was a pile of articles covered over with a tablecloth. Very deliberately he removed the latter and looked keenly at Ruth. She shrank back with a little scream. There were half a dozen murderous-looking pistols there, a rifle and a quantity of ammunition.

"What does your uncle need with these?" the inspector asked dryly.

"How can I tell?" Ruth replied. "I have never seen one of them before. I never knew that they were in the place."

"Nor I," Arnold echoed. "I have been a constant visitor here, too, and I have never seen a firearm of any sort before."

The inspector turned toward him.

"Are you a friend of Isaac Lalonde?" he asked.

"I am not," Arnold answered. "I am a friend of his niece here, Miss Ruth Lalonde. I know very little of Isaac, although I see him here sometimes."

"I should like to know your name if you have no objection," the inspector remarked.

"My name is Chetwode," Arnold told him. "I occupy a room on the other side of the passage."

"When did you last see Isaac Lalonde?"

Arnold did not hesitate for a moment. What he had seen at Hampstead belonged to himself. He deliberately wiped out the memory of it from his thoughts.

"On Thursday evening, here."

The inspector made a note in his book. Then he turned again to Ruth.

"You can give me no explanation, then, as to your uncle's absence tonight?"

"None at all. I can only say what I told you before, that I expected to find him here on my return."

"Was he here when you left this morning?"

"I believe so," Ruth assured him. "He very seldom comes out of his room until the middle of the day, and he does not like my going to him there. As we started very early I did not disturb him."

"Have you any objection," the inspector asked, "to telling me where you have spent the whole of today?"

"Not the slightest," Arnold interposed. "We have been to Bourne End and to a village in the neighborhood."

The inspector nodded thoughtfully. Ruth leaned a little forward in her chair. Her voice trembled with anxiety.

"Please tell me," she begged, "what is the charge against my uncle."

The inspector glanced over his shoulder at that inner room, from which fitful gleams of light still came. He looked down at the heap of pistols and ammunition by his side.

"The charge," he said slowly, "is of a somewhat serious nature."

Ruth was twisting up her glove in her hand.

"I do not believe," she declared, "that Isaac has ever done anything really wrong. He is a terrible Socialist and he is always railing at the rich, but I do not believe that he would hurt any one."

The inspector looked grimly at the little pile of firearms.

"A pretty sort of armory, this," he remarked, "for a peace-loving man. What do you suppose he keeps them here for in his room? What do you suppose ——"

They all three heard it at the same time. The inspector broke off in the middle of his sentence. Ruth, shrinking in her chair, turned her head fearfully toward the door that still stood half open. Arnold was looking in the same direction. Faintly but very distinctly they heard the patter of footsteps climbing the stone stairs. The sound was as though a man were walking upon tiptoe, yet dragging his feet wearily. The inspector held up his hand, and his subordinate, who had been searching the inner room, came stealthily out. Ruth, obeying her first impulse, opened her lips to shriek. The inspector leaned forward and his hand suddenly closed over her mouth. He looked toward Arnold, who was suffering from indecision.

"If you utter a sound," he whispered, "you will be answerable to the law."

Nobody spoke or moved. It was an odd little tableau grouped together in the dimly lighted room. The footsteps had reached the last flight of stairs now. They came slowly across the landing, then paused, as though the person who approached could see the light shining through the partly open door. They heard a voice, a voice almost unrecognizable, a voice hoarse and tremulous with fear, the voice of a hunted man.

"Are you there, Ruth?"

Ruth struggled to reply, but ineffectually. Slowly and as though with some foreboding of danger the footsteps came nearer and nearer. An unseen hand cautiously pushed the door open. Isaac stood upon the threshold, peering anxiously into the room. The inspector turned and faced him.

"Isaac Lalonde," he said, "I have a warrant for your arrest. I shall want you to come with me to Bow Street."

With the certainty of danger Isaac's fear seemed to vanish into thin air. He saw the open door of his ransacked inner room and the piled-up heap of weapons upon the table. Face to face with actual danger the courage of a wild animal at bay seemed suddenly vouchsafed to him.

"Come with you!" he cried. "I think not, Mr. Inspector. Are these the witnesses against me?"

He pointed to Ruth and Arnold. Ruth clutched her stick and staggered tremblingly to her feet.

"How can you say that, Isaac!" she exclaimed. "Arnold and I have only been home from the country a few minutes. We walked into the room and found these men here. Isaac, I am terrified. Tell me that you have not done anything really wrong!"

Isaac made no reply. All the time he watched the inspector stealthily. The latter moved forward now as though to make the arrest. Then Isaac's hand shot out from his pocket and a long stream of yellow fire flashed through the room. The inspector sprang back. Isaac's hand, with the smoke still curling from the muzzle of his pistol, remained extended.

"That was only a warning," Isaac declared calmly. "I aimed at the wall there. Next time it may be different."

There was a breathless silence. The inspector stood his ground, but he did not advance.

"Let me caution you, Isaac Lalonde," he said, "that the use of firearms by any one in your position is fatal. You can shoot me if you like, and my assistant, but if you do you will certainly be hanged. It is my duty to arrest you and I am going to do it."

Isaac's hand was still extended. This time he had lowered the muzzle of his pistol. The inspector was only human and he paused, for he was looking straight into the mouth of it. Isaac slowly backed toward the door.

"Remember, you are warned!" he cried. "If any one pursues me I shoot!"

His departure was so sudden and so speedy that he was down the first flight of stairs before the inspector started. Arnold, who was nearest the door, made a movement as though to follow, but Ruth threw her arms round him. The policeman who had been examining the other room rushed past them both.

"You shall not go!" Ruth sobbed. "It is no affair of yours. It is between the police and Isaac."

"I want to stop his shooting," Arnold replied. "He must be mad to use firearms against the police. Let me go, Ruth."

"You can't!" she shrieked. "You can't catch him now!"

Then she suddenly held her ears. Three times quickly they heard the report of the pistol. There was a moment's silence, then more shots. Arnold picked Ruth up in his arms and, running with her across the landing, laid her in his own easy-chair.

"I must see what has happened!" he exclaimed breathlessly. "Wait here."

She was powerless to resist him. He tore himself free from the clutch of her fingers and rushed down the stairs, expecting every moment to come across the body of one of the policemen. To his immense relief he reached the street without discovering any signs of the tragedy he feared. Adam Street was deserted, but in the gardens below the terrace he could hear the sound of voices, and a piece of torn clothing hung from the spike of one of the railings.

Digitized by Google

Isaac had evidently made for the gardens and the river. The sound of the chase grew fainter and fainter and there were no more shots. Arnold, after a few minutes' hesitation, turned round and reclimbed the stairs.

The place smelt of gunpowder and little puffs of smoke were curling upward.

Arrived on the top landing, he closed the door of Isaac's room and entered his own apartment. Ruth had dragged herself to the window and was leaning out.

"He has gone across the gardens," she cried breathlessly. "I saw him running. Perhaps he will get away after all. I saw one of the policemen fall down, and Isaac was quite a long way ahead then."

"At any rate, no harm was done by the firing," Arnold declared. "I don't think he really shot at them at all."

They knelt side by side before the window-sill. The gardens were still faintly visible in the dim moonlight, but all signs of disturbance had passed away. She clung nervously to his arm.

"Arnold," she whispered, "tell me, what do you think he has done?"

"I don't suppose he has done anything very much," Arnold replied cheerfully. "What I really think is that he has got mixed up with some of these disturbers, writing for this wretched paper, and they have probably let him in for some of their troubles."

They stayed there for a measure of time they were neither of them able to compute. At last with a little sigh he rose to his feet. For the first time they began to realize what had happened.

"Of course, Ruth, Isaac will not come back," he said.

She clung to him hysterically.

"Arnold," she cried, "I am nervous. I could not sleep in that room. I never want to see it again as long as I live."

For a moment he was perplexed. Then he smiled.

"It's rather an awkward situation for us attic dwellers," he remarked. "I'll bring your couch in here if you like, and you can lie before the window where it's cool."

"You don't mind?" she begged. "I couldn't even think of going to sleep. I should sit up all night anyhow."

"Not a bit," he assured her. "I don't think it would be much use thinking about bed."

He made his way back into Isaac's apartments, brought out her couch and arranged it by the window. She lay down with a little sigh of relief. Then he dragged up his own easy-chair to her side and took her hand in his. They heard Big Ben strike two o'clock, and soon afterward Arnold began to doze. When he awoke with a sudden start her hand was still in his. Eastward over the city a faint red glow hung in the heavens. The world was still silent, but in the delicate pearly twilight the trees in the gardens, the bridge and the buildings in the distance—everything seemed to stand out with a peculiar and unfamiliar distinctness. She, too, was sitting up, and they looked out of the window together. Five o'clock was striking now.

"I've been asleep!" Arnold exclaimed. "Something woke me up."

She nodded.

"There is some one knocking at the door outside," she whispered. "That is what woke you. I heard it several minutes ago."

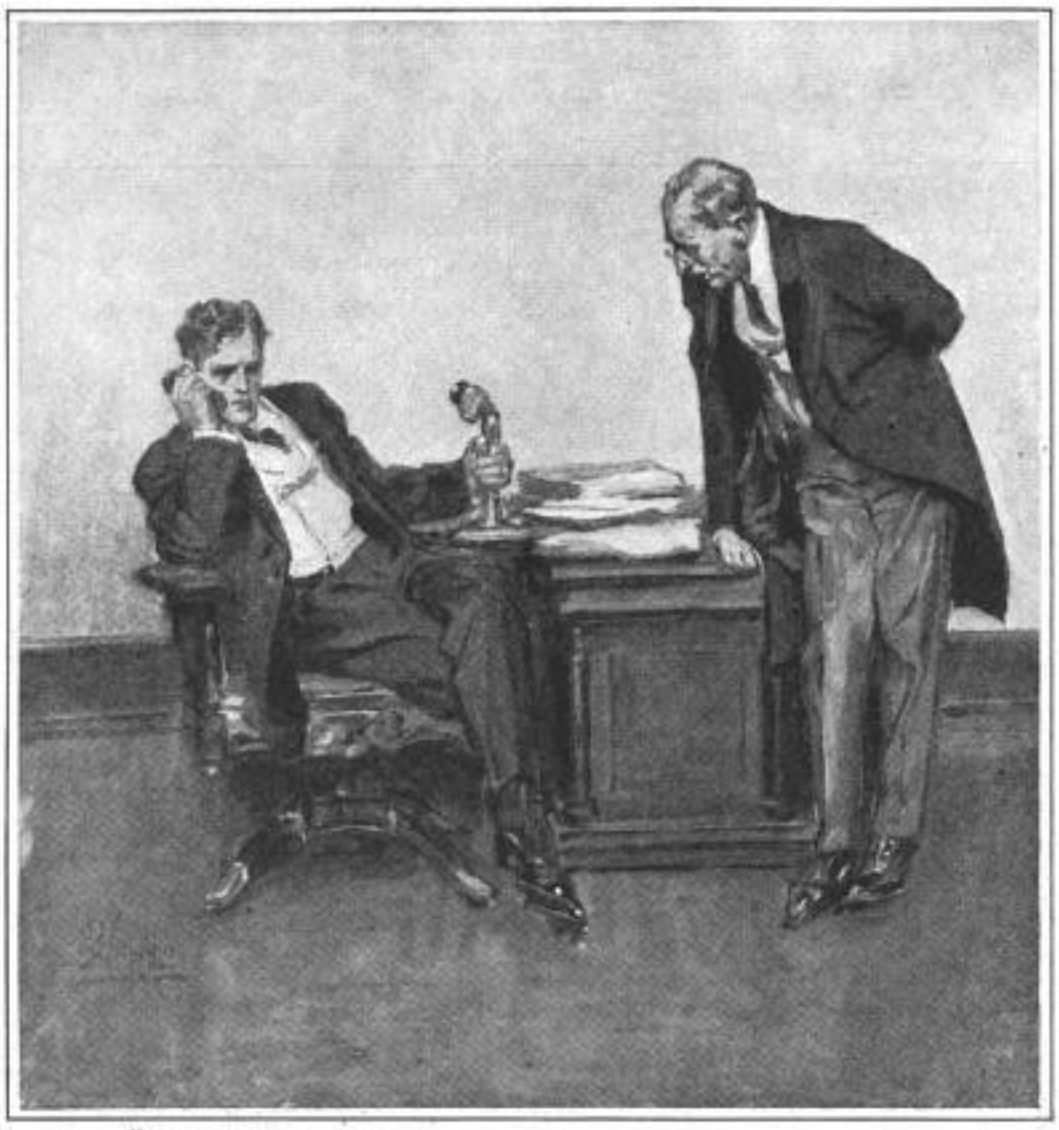
He jumped up at once.

"I will go and see what it is," he declared.

He opened the door and looked out on to the landing. The knocking was at the door of Isaac's apartment. Two policemen and a man in plain clothes were standing there.

"There is no one in those rooms," Arnold said. "The door shuts with a spring lock, but I have a key here if you wish to enter."

The sergeant looked at Arnold and approved of him.



"I have an order to remove some firearms and other articles," he announced. "Also, can you tell me where the young woman—Ruth Lalonde—is?"

"She is in my room," Arnold replied. "She was too terrified to remain alone over there. You don't want her, do you?" he asked anxiously.

The man shook his head.

"I have no definite instructions concerning her," he said, "but we should like to know that she has no intention of going away."

Arnold threw open the door before them.

"Most Extraordinary Thing. I Can't Say That I've Ever Known the Governor to be as Late as This Unless He Was Ill"

"I am sure that she has not," he declared. "She is quite an invalid; and besides, she has nowhere else to go to."

The sergeant gave a few orders respecting the movement of a pile of articles covered over by a tablecloth, which had been dragged out of Isaac's room. Before he had finished Arnold ventured upon the question that had been all the time trembling upon his lips.

"This man, Isaac Lalonde—was he arrested?"

The sergeant made no immediate reply.

"Tell me, at least, was any one hurt?" Arnold begged.

"No one was shot, if you mean that," the sergeant admitted.

"Is Isaac in custody?"

"He very likely is by this time," the sergeant said. "As a matter of fact, he got away. A friend of yours, is he?"

"Certainly not," Arnold answered. "I have an attic on the other side of the landing there, and I have made friends with the girl. My interest in Isaac Lalonde is simply because she is his niece. Can you tell me what the charge is against him?"

"We believe him to be one of a very dangerous gang of criminals," the sergeant replied. "I can't tell you more than that. If you take my advice, sir," he continued civilly, "you will have as little as possible to do with either the man or the girl. There's no doubt about the man's character, and birds of a feather generally flock together."

"I am perfectly certain," Arnold declared vigorously, "that if there has been anything irregular in her uncle's life Miss Lalonde knew nothing of it. We both knew that he talked wildly, but for the rest his doings have been as much a mystery to her as to me."

The sergeant was addressed by one of his subordinates. The two men stood whispering together for a few moments. The sergeant turned finally toward Arnold.

"I shall have to ask you to leave us now, sir," he said civilly.

"There's nothing more you can tell me about this affair, I suppose?" Arnold asked.

The sergeant shook his head.

"You will hear all about it later on, sir."

Arnold turned reluctantly back to his own room, where Ruth was anxiously waiting. He closed the door carefully behind him.

"Isaac has escaped," he announced, "and no one was hurt."

She drew a sigh of immense relief.

"Did they tell you what the charge was?"

"Not definitely," he replied. "So far as I could make out from what the sergeant said it was keeping bad company as much as anything."

"The police are in the rooms now?" she asked.

"Three more of them," he assented. "I don't know what they want, but evidently you'll have to stay here. Now I'm going to light this spirit-lamp and make some coffee."

He moved cheerfully about the room and she watched him all the time with almost pathetic earnestness. Presently he brought the breakfast things over to her side and sat at the foot of her couch while the water boiled.

"I shouldn't worry about Isaac," he said. "I don't suppose he is really very much mixed up with these fellows. He'll have to keep out of the way for a time, that's all."

"There were the pistols," she faltered doubtfully.

"I expect they saddled him with them because he was the least likely to be suspected," Arnold suggested. "There's the water boiling already. Now for it."

He cut some bread and butter and made the coffee. They ate and drank almost in silence. Through the open window now the roar of traffic was growing every minute in volume. Across the bridge the daily stream of men and vehicles had commenced to flow. Presently he glanced at the clock and, putting down his coffee-cup, rose to his feet.

"In a few minutes, dear, I must be off," he announced. "You won't mind being left, will you?"

Her lips trembled.

"Why should I?" she murmured. "Of course you must go to work."

He went behind his little screen, where he plunged his head into a basin of cold water. When he reappeared a few minutes later he was ready to start.

"I expect those fellows will have cleared out from your rooms by now," he said, throwing open the door. "Hello, what's this?"

A trunk and a hatbox had been dragged out on to the landing. A policeman was sitting on a chair in front of the closed door, reading a newspaper.

"We have collected the young lady's belongings so far as possible, sir," he remarked. "If there is anything else belonging to her she may be able to get it later on."

"Do you mean to say that she can't go back to her own rooms?" Arnold demanded.

"I am sorry, sir," the man replied, "but I am here to see that no one enters them under any pretext."

Arnold looked at him blankly.

"But what is the young lady to do?" he protested. "She has no other home."

The policeman remained unmoved.

"Sorry, sir," he said, "but her friends will have to find her one for the time being. She certainly can't come in here."

Arnold felt a sudden weight upon his arm. Ruth had been standing by his side and had heard everything. He led her gently back. She was trembling.

"Don't worry about me, Arnold," she begged. "You go away. By the time you come back I—I shall have found a home somewhere."

He passed his arm round her. A wild flash in her eyes had suddenly revealed her thought.

"Unless you promise me," he said firmly, "that I shall find you on that couch when I return this evening I shall not leave this room."

"But, Arnold ——"

"The business of Samuel Weatherley & Company," he interrupted, glancing at the clock, "will be entirely disorganized unless you promise."

"I promise," she murmured faintly.

XXV

ARNOLD arrived at Tooley Street only a few minutes after his usual time. He made his way at once into the private office and commenced his work. At ten o'clock Mr. Jarvis came in. The pile of letters upon Mr. Weatherley's desk was as yet untouched.

"Any idea where the governor is?" the cashier asked. "He's nearly half an hour late."

Arnold glanced at the clock.

"Mr. Weatherley is spending the week-end down the river," he said. "I dare say the trains up are a little awkward."

Mr. Jarvis looked at him curiously and said:

"How do you happen to know that?"

"I was there yesterday for a short time."

Digitized by Google

Mr. Jarvis whistled softly. "Seems to me you're getting pretty chummy with the governor," he remarked—"or is it Mrs. Weatherley, eh?"

Arnold lifted his head and looked fixedly at Mr. Jarvis. The latter suddenly remembered that he had come in to search among the letters for some invoices. He busied himself for a moment or two sorting them out.

"Well, well," he said, "I hope the governor will soon be here anyway. There are a lot of things I want to ask him about this morning."

A telephone bell at Arnold's desk began to ring. Arnold lifted the receiver to his ear.

"Is that Mr. Weatherley's office?" a familiar voice inquired.

"Good morning, Mrs. Weatherley," he replied. "This is the office and I am Arnold Chetwode. We were just wondering what had become of Mr. Weatherley."

"What had become of him?" the voice repeated. "But is he not there?"

"No sign of him at present," Arnold answered.

There was a short silence. Then Mrs. Weatherley spoke again.

"He left here," she said, "absurdly early—soon after seven, I think it was—to motor up."

"Has the car returned?" Arnold asked.

"More than an hour ago," was the prompt reply.

"I can assure you that he has not been here," Arnold declared. "You're speaking from Bourne End, I suppose?"

"Yes."

"Will you please ask the chauffeur," Arnold suggested, "where he left Mr. Weatherley?"

"Of course I will," she replied. "That is very sensible. You must hold the line until I come back."

Arnold withdrew the receiver for a few minutes from his ear. Mr. Jarvis had been listening to the conversation, his mouth open with curiosity.

"Is that about the governor?" he asked.

Arnold nodded.

"It was Mrs. Weatherley speaking," he said. "It seems Mr. Weatherley left Bourne End soon after seven o'clock."

"Soon after seven o'clock!" Mr. Jarvis repeated.

"The car has been back there quite a long time," Arnold continued. "Mrs. Weatherley has gone to make inquiries of the chauffeur."

"Most extraordinary thing," Mr. Jarvis muttered. "I can't say that I've ever known the governor to be as late as this unless he was ill."

Arnold put the receiver once more to his ear. In a moment or two Mrs. Weatherley returned. Her voice was grave.

"I have spoken to the chauffeur," she announced. "He says that they called first at Hampstead, to see if there were any letters, and that afterward he drove Mr. Weatherley over London Bridge and put him down at the usual spot just opposite to the London and Westminster Bank. For some reason or other, as I dare say you know," she went on, "Mr. Weatherley never likes to bring the car into Tooley Street. It was ten minutes past nine when the chauffeur set him down and left him there."

Arnold glanced at the clock.

"It is now," he said, "a quarter to eleven. The spot you speak of is only two hundred yards away, but I can assure you that Mr. Weatherley has not yet arrived."

Mrs. Weatherley began to laugh softly. Even down the wires that laugh seemed to bring with it some flavor of her own wonderful personality.

"Will there be a paragraph in the evening papers?" she asked mockingly. "I think I can see it now upon all the placards: 'Mysterious Disappearance of a City Merchant.' Poor Samuel!"

Arnold found it quite impossible to answer her lightly. The fingers, indeed, that held the receiver to his ear were shaking a little.

"Mrs. Weatherley," he said, "can I see you today—as soon as possible?"

"Why, of course you can, you silly boy," she laughed back. "I am here all alone and I weary myself. Come by the next train or take a taxicab. You can leave word for Mr. Weatherley, when he arrives, that you have come by my special wish. He will not mind then."

"There is no sign of Mr. Weatherley at present," Arnold replied, "and I could not leave here till I had seen him. I thought that perhaps you might be coming up to town for something."

He could almost hear her yawn.

"Really," she declared after a slight pause, "it is not a bad idea. The sun will not shine today; there is a gray mist everywhere and it depresses me. You will lunch with me if I come up?"

"If you please."

"I do please," Mrs. Weatherley emphatically declared. "I think we will go to our own little place, the Café André—and I will be there at half past twelve. You will be waiting for me?"

"Without a doubt," Arnold promised.

She began to laugh again.

"Without a doubt!" she mocked him. "You are a very stolid young man, Arnold."

"To tell you the truth," he admitted, "I am a little bothered just now. We want Mr. Weatherley badly, and I don't understand his having been within a few hundred yards of the office nearly two hours ago and not having turned up here."

"He will arrive," she replied confidently. "Have no fear of that. There are others to whom accidents and adventures might happen, but not, I think, to Mr. Samuel Weatherley. I am sorry that you are bothered, though, Mr. Arnold. I think that to console you I shall wear one of my two new gowns that have just arrived from Paris."

"What is she talking about all this time?" Mr. Jarvis, who was itching with curiosity, broke in.

"I am called away now," Arnold said into the telephone. "I shall be quite punctual. Goodby!"

He heard her laugh again as he hung up the receiver.

"Well, well," Mr. Jarvis demanded, "what is it all about? Have you heard anything?"

"Nothing of any importance, I am afraid," Arnold admitted. "Mrs. Weatherley laughs at the idea of anything having happened to her husband."

"If nothing has happened to him," Mr. Jarvis protested, "where is he?"

"Is there any call he could have paid on the way?" Arnold suggested.

"I have never known him do such a thing in his life," Mr. Jarvis replied. "Besides, there is no business call that could take two hours at this time of the morning."

They rang up the few business friends whom Mr. Weatherley had in the vicinity, Guy's Hospital, the bank and the police station. The reply was the same in all cases. Nobody had seen or heard anything of Mr. Weatherley. Arnold even took down his hat and walked aimlessly up the street to the spot where Mr. Weatherley had left the motor car. The policeman on duty had heard nothing of any accident. The shoeblack at the top of the steps leading down to the wharves remembered distinctly Mr. Weatherley's alighting at the usual hour. Arnold returned to the office and sat down facing the little safe that Mr. Weatherley had made over to him. After all it might be true, then, this thing Mr. Weatherley had sometimes dimly suspected. Beneath his very commonplace exterior Mr. Weatherley had carried with him a secret.

At half past twelve precisely Arnold stood upon the threshold of the passage leading into Café André. Already the people were beginning to crowd into the lower room, a curious, cosmopolitan mixture, mostly foreigners, and nearly all arriving in twos and threes from the neighboring business houses. At twenty minutes to one Mrs. Weatherley's beautiful car turned slowly into the narrow street and drove up to the entrance. Arnold hurried forward to open the door and Fenella descended. She came to him with radiant face, a wonderful vision in her spotless white gown and French hat with its drooping veil. Arnold, notwithstanding his anxieties, found it impossible not to be carried away for the moment by a wave of admiration. She laughed with pleasure as she looked into his eyes.

"There!" she exclaimed. "I told you that for a moment I would make you forget everything."

"There is a good deal to forget too," he answered.

PHILADELPHIA, FEBRUARY 17, 1912

Democratic Harmony

IT IS a pleasant and commendable custom of the Democrats to hold an annual Jackson Dinner, at which eminent members of the party affectionately express their unfaltering trust in one another, and otherwise bear eloquent testimony to a united, harmonious and soon-to-be triumphant Democracy. At this year's Jackson Dinner Colonel Bryan, as usual, was a harmonious and persuasive speaker. The dinner was immediately followed by a sad row between Colonel Harvey and Governor Wilson, commenting upon which, Colonel Bryan expressed the opinion that it clarified the Democratic situation and "illustrated the impossibility of coöperation between men who look at public questions from different points of view." At the yearly dinner we hear from eminent Democrats that what the party needs is harmony among its leaders; but directly before and immediately after the dinner we hear from some leaders that what the party really needs is that the other leaders get out.

The Republicans are in the same situation, but are not quite so frank about it.

Amazed in Gotham

WE ARE pleased to know, upon the unimpeachable evidence of a unanimous metropolitan press, that the Duke of Connaught was amazed by the rush of traffic in the streets of New York. The height of the buildings and their architectural excellence amazed him. The size, dignity and pulchritude of the crossings-policemen filled him with amazement. He found the Stock Exchange, the Metropolitan Tower and the Elevated Railroad equally amazing. The extent of Central Park and the number of trees in it amazed him; while, as to Brooklyn Bridge, he considered it simply amazing!

The Duchess of Connaught and the Princess Patricia were amazed at the beauty and charm of New York society women; amazed at the elegance and distinction of the gowns they wore; amazed at the magnificence of their jewels; and amazed at the wit and learning displayed in their conversation. The royal ladies were also amazed at the graceful dancing of New York society men; amazed at the food set before them; amazed at the apartments in which they found themselves.

The New York journalistic mind seems to have labored under an impression that the royal visitors came from Starved Dog, New Mexico, and had never before been farther from home than Albuquerque. When New York sets out to be provincial—which is a fair share of the time—she can beat Starved Dog a mile!

Borrowing From Your Widow

FIVE years ago two of the largest old-line life-insurance companies had outstanding loans to policyholders amounting to seventy-five million dollars. At the close of 1911 the same companies' loans to policyholders amounted to almost two hundred million dollars. It is the experience of life-insurance companies that, about nine times out of ten, a loan on a policy is never repaid, but remains as a liability, to be deducted from the policy at the death of the insured. About nine times out of ten, therefore, a man who takes a loan on his policy is simply borrowing from his own widow and orphans.

Old-line life insurance is carried almost exclusively by people whose incomes considerably exceed their actual needs—people who are regarded by their less fortunate neighbors as in quite easy circumstances. So far as life-insurance men can judge, a large number of the loans on policies come under the head of luxuries. They are not made for business purposes or to meet an emergency which could not be overcome by some self-denial on the part of the policyholder.

Extravagance in the United States is not a vice of the rich, for they can afford it. It is not a vice of the poor or of farmers. It is the special vice of that large middle, urban class with incomes ranging from twenty-five hundred dollars up to fifteen thousand, that is trying to live just a notch or two beyond its means.

When Women Voted

MILLIONS of urban voters probably are under the impression that something in the Constitution of the United States requires that citizens shall exercise their electoral right in the most obscure, dirty and generally disagreeable spots in their respective precincts. Under this impression the urban voter patiently threads his way up the alley to the old-rags shop where he voted last year, and there learns that the voting-place this year has been established in the rear of a livery stable.

Recently—and for the first time in history, it is said—an American city did its voting in schoolhouses, churches and libraries. Some published snapshots of that event show people filing over clean cement walks—even with pretty shrubbery at the sides!—into edifices of such pleasant appearance that a prudent person in passing them would not instinctively take to the opposite side of the street. The city is Los Angeles, and in some of the precincts more than half of the voters were women. Not only the voting-places but the people round them look strange—they look, that is, like persons whom a respectable citizen would be perfectly willing to meet, and not as though they had issued from the back door of a saloon.

Female suffrage overthrows many fine old mossgrown traditions—one being the livery-stable voting-place.

Confusing the Proxy Committee

FOR some years, at about this season, there has been a notable migration from the lower end of Manhattan Island to the opposite Jersey shore. You might see squad after squad of prosperous-looking gentlemen, with bundles of papers under their arms, hurrying down to the ferries and the tubes. These gentlemen were the proxy committees of our great industrial corporations on their way to Jersey City to hold the annual meetings of their companies, at which meetings it was their agreeable duty to vote practically the entire capital stock of the corporations, by proxy, for whatever motions and resolutions the corporations' attorneys had drawn up and handed to them.

Hereafter this little yearly jaunt to Jersey City will not suffice. Under the new dispensation, with our big corporations broken up into several units, the proxy committee will have four or five sets of proxies to vote at different places. Having voted the white ones at Jersey City, they can no longer return to New York in time for luncheon as before, but must proceed to Cleveland and there vote the green proxies; thence to Indianapolis, where the red ones will be voted, and on up to Chicago to vote the buff ones. It will take an active proxy committee nearly a week to get round; and until custom has habituated them to the change they will be in danger of getting the Toledo proxies mixed up with those for Fort Wayne. The new arrangement will be more vexatious and expensive. That will be the only difference.

The Money Trust Abroad

THE downfall of the Caillaux Ministry in January, it will be recalled, was brought about by Clémenceau's charge that the Prime Minister had entered into secret negotiations with Germany over the Morocco affair, unknown to the French ambassador at Berlin or to the President of the Republic. There was evidently some ground for the charge. The Journal des Débats declared that, in return for a free hand in Morocco, Caillaux offered to give Germany certain French territory in equatorial Africa and to have German securities listed on the Paris Bourse. What led the Prime Minister to depart from the constitutional method of negotiating with a foreign country has been a subject of much speculation; but recently it has been alleged in all seriousness that the move was inspired by international banking interests which were anxious to bring about harmonious relations between the Governments.

Attributing any disagreeable happening to the machinations of the Money Trust is even more a fashion in France than with us; and it is often declared there that European policy is really shaped by the great banks, among which there is the best of understanding; but the Money Trust admittedly works for peace. It was only yesterday, as history goes, that European policy was shaped by secret negotiations that were inspired by dynastic and personal ambitions, and that pretty constantly worked for war.

Spoiling the Joke

ALONG in January all the humor seemed to ooze out of the Insurgent proposition. When the Republican National Committee met at Washington the Insurgents were enough to make a horse laugh! By careful computation, Mr. Taft's managers ascertained that at least two-thirds of the delegates to the national convention—none of whom would be chosen for some months to come—were already securely tied to his bandwagon. That, of course, was the essence of the joke. The Insurgents were going into a fight when the managers had it perfectly arranged, six months ahead, that they were to be overwhelmingly defeated. Mere mention of Insurgency in any popular hotel corridor provoked spasms of laughter; and the ridiculous Insurgent proposal that Republican voters be permitted to select the candidate at primary elections made the humor of the situation simply irresistible.

Along in January, however, the laughter began to sound like that of a man who is sitting upon a bent pin and trying to appear amused. There began to be serious talk of Roosevelt as a candidate, with Hitchcock marshaling the Southern delegates under his banner. There began to be solemn misgiving that the hitchings of those six hundred-and-odd cocksure Taft delegates would be fearfully tampered with before June. Going into a convention with unhitched delegates is no laughing matter for anybody. No doubt some conservative minds recalled that Insurgency has always been ridiculous until it came to the showdown, and suspected that history might repeat itself.

How Uncle Sam Runs a City

THE District of Columbia appropriation bill is up in the House. One item appropriates three hundred and sixty dollars for maintenance of the motor cycles that Washington's two elevator inspectors use in the discharge of their duties. This item precipitates an impassioned debate—filling three and a half columns of the Record—during which a gentleman from Kentucky invites a gentleman from Illinois to accompany him outside, presumably for the purpose of having his head punched!

Nobody seriously contends that fifteen dollars a month is too much for the maintenance of a motor cycle; nobody disputes that two inspectors, by using motor cycles, can perform work that would require three without motor cycles. The objection is that the inspectors will "wear out the tires and other parts of the machines on Sundays and holidays, when not engaged in public business."

That is how Uncle Sam runs his national capital. Day after day and page after page of the Record are taken up with jangling over the different items of the city's budget. Hundreds of cities have adopted the commission form of government and found that a small, select body can run the municipality much more efficiently and economically than the old-fashioned council containing anywhere from a score to a hundred members. Washington, however, is run by a council containing four hundred and eighty-three members—a considerable part of whom feel in duty bound to stick a finger in the pie. Five men, whose recommendations Congress would ratify without division and without debate, would give far better results.

Doing Nothing About Strikes

IN 1905 a quarrel occurred between the National Erectors' Association, comprising the leading concerns in steel construction, and the principal labor union in that field. The "labor war" that ensued continued with growing bitterness up to the time of the McNamara confession. Newspapers have published lists of sixty or more destructive explosions alleged to be incidental to this war. We don't recall that, prior to the Los Angeles explosion, anybody representing the public did anything about this war except to make some more or less desultory efforts to find the persons responsible for the explosions.

Usually a strike in the United States settles nothing whatever except the question as to which side, in that particular place and time, can starve out the other.

In the latter part of December a strike and lockout of a hundred and sixty thousand cotton-mill operatives in Lancashire occurred. It lasted only about three weeks, the mills reopening and the men returning to work under a six months' truce, during which the differences are to be worked out by arbitration. Meanwhile six hundred thousand Welsh and Scottish coal miners voted to strike on March first; but the Conciliation Board of the Board of Trade intervened, with good prospects of a peaceful settlement. The railway strike of last August was soon ended, and the investigations that have been going on much of the time ever since promise to furnish a better basis of understanding between employers and workmen.

WHO'S WHO—AND WHY

Serious and Frivolous Facts About the Great and the Near Great

Poet's Corner

ONE might think of Jim Guffey as a poet—that is, one might think this hard thing of Jim if one based one's thoughts on a superficial examination of Jim's regalia, contented oneself with the testimony of the outward and visible signs, with the insignia and portents, so to say.

You see, Jim makes up for a poet. He wears a Byronic collar, a Tennysonian tie and a wistful Keatsistical smile. Also, he has an eery look in his eyes—at times—and a sad and soulful expression, not mentioning a poetic slouch hat and some poetic hair. He has all the outcroppings of a poet. A stranger would pick him for a bard almost every time.

Poetry, as all must know, consists largely of imagination and elision. You first get your imagination and put the language that is the natural striving for the expression of the same down on paper, carefully eliding syllables here and there to make the language conform to the rules of prosody, which are very strict. Now, albeit Jim is remarkably strong on both imagination and elision, he is no poet. That might just as well be understood at the beginning. He produces no poetry. Instead, Jim produces oil and reduces politics. And in his case, as elsewhere, oil and politics go hand in hand—and so does Jim; meaning, of course, that when anybody hands it to Jim he hands it right back again. On this point, Mr. W. J. Bryan is qualified to testify expertly.

Let us not stray away from these imagination and elision leads, however. When you come to test Jim it really is surprising how much imagination he assays to the pound. Roughly figuring, I should say Jim weighs about one hundred and sixty-five and that about one hundred and forty-two pounds of the whole is imagination. One hundred and forty-two pounds of imagination is a heap—more, indeed, than is possessed by any other politician extant, except John Hays Hammond, who imagines he will be nominated for vice-president.

Years ago Jim sate him down in his cozy Pennsylvania home and let that imagination run riot. He started with an imaginary proposition—the Democratic party in Pennsylvania—and imagined himself as boss of that mirage. Now it takes a great deal of imagination to imagine a Democratic party in Pennsylvania, and about all there is to dope out any nourishment in being boss of that party; but Jim had the required ideality and he made the boss-ship a reality. Year after year he turned up at Democratic National Conventions with his flock of hand-picked delegates, just as happy as if he were participating with them in a convention that was going to lead to something more tangible than oratory and obliteration—and always safe and sane. Mark that!

Coincidently with his flights of political imagination, Jim flew a few in the oil business. Nothing ever was more satisfying, from the viewpoint of imagery, than Jim's oft-repeated statement that he was—maybe is—the largest independent oil producer in the United States. Analyzing that statement for its beauties, we come first to the word "largest," which, of course, is absurd; for there's Barnsdell, for example, who weighs twice as much as Jim. So we must pause with that second descriptive term—"independent." There is a wealth of imagination in that musical word—a wealth of it! It fairly drips with imagery, picked out with idealism; albeit Jim is accustomed to say "Fie! Fie!" to those who insist he has close-enough connections with the Standard Oil to respond promptly at 26 Broadway every time the buzzer buzzes.

A Refined Specialty at Denver

HOWEVER, that is neither here nor there. This is an essay on certain aspects of the imaginative qualities of a man who seems to be a poet, dresses like a poet, has the fancy of a poet—but is not a poet. It also is an essay on a few other things. Reverting, therefore, to that leadership of the Democracy in Pennsylvania, I have pointed out that it required a remarkable development of the powers of conceptualism to find anything nourishing in it. Jim found the nourishment. Not in a material sense—oh, no! Jim is rich and doesn't need the money. The advantages came, however, in the gratifying position in which it placed him. He, being a man of the finer emotions and tendencies, was enabled to extend to certain of his friends, also rich, some of those pleasing little political attentions that help so greatly to smooth the rough pathway along which many of our captains of finance are compelled to pass through this worrisome world. Jim saw that by annexing the Democracy of Pennsylvania he could be kind to his friends, and Jim is of a kindly nature. Never let it be said of him that he refused to offer a helping political hand to any friend, especially a friend who had his habitat in the lower end of Manhattan Island—never let it be so said!

Thus Jim's life proceeded pleasantly. He never held an office or wanted one. Modest, self-effacing, he was content to be Democratic National Committeeman from his beloved Pennsylvania—there to labor unobtrusively for the good of the cause. He enjoyed politics. He contributed liberally. He attained a place in the inner councils. Had he been a Republican—had he allied himself with that Grand Old Party—he might have had almost any honor within the gift of the people, for Pennsylvania Republicans have been wont to be grateful to men like Jim, as a list of those who have been elevated to office will show. Jim did not so ally himself. He continued as a Democrat—not, of course, without friendly relations to the rulers of the Republican party in his state, but still a Democrat.

Then came the advent of Mr. Bryan. Naturally Mr. Bryan was on terms of no particular friendship with those on whom Jim had been lavishing his pleasant little political attentions; nor did Jim embrace Mr. Bryan within the scope of his vision. He could not see Mr. Bryan at all. So it culminated at the Denver convention, where Mr. Bryan went down, with a low, gurgling cry, for the third—and last?—time. Jim was there, at the head of his hand-picked delegates; but others, jealous, mayhap, or non-imaginative—or possibly highly imaginative—were there also. And came the clarion cry from Lincoln, Nebraska: "Throw him out!"—meaning Jim.

To hear was to obey. They threw him out—again and yet again. Each of several sessions of that noteworthy convention was marked by the rough ceremonies of ejecting Jim, casting him without the pale—the convention hall at Denver having a new, modern and fireproof pale among other conveniences. It came to be that the spectators in the galleries murmured and protested they were being deprived of the show if there was a session when Jim Guffey was not hurled through the portals. Every wire that came from Lincoln said the Peerless Leader was sitting on his porch with his thumbs inexorably turned down for Guffey; and they put the boots to Jim oft and oft again, alleging that Jim represented the special interests—in short, that he was a creature of the predaceous plutes.

So Jim remained out until a time ago. Then came a meeting of the Democratic National Committee; and then came Mr. Bryan also—and Jim. "Throw him out!" demanded Mr. Bryan; but times change and the hurling facilities of the committee were not being demanded by a candidate to be, but asked by a candidate that was.

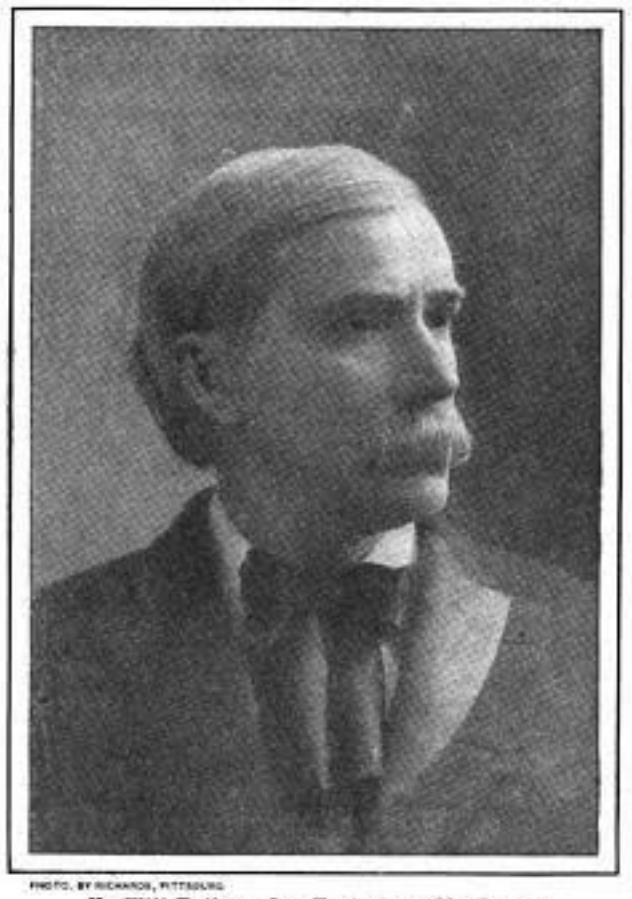

PHOTO. BY RICHARDS, PITTSBURG

He Will Talk on Any Topic Save Mr. Bryan

The National Committee listened to Mr. Bryan, listened to others and listened to Jim. "Good old Jim!" said a sufficient number—and Jim remained. Still, the spectators at the next Democratic National Committee need not despair. Mr. Bryan will be there, and again he will insist that Jim be expelled; and those pleasing ceremonies, now so completely a part of the ritual of a Democratic National Committee, may be observed again by the fortunate holders of tickets.

During all these years Jim, who was born in Pennsylvania in 1839 and who went into the oil business in the early seventies, has had his fun in politics—and he is still having it. Likewise, he has accumulated oil wells, gold mines and other nutritious appendages coincident with the membership of the committee. A kindly and genial man, he will talk pleasantly on any topic save Mr. Bryan. He has had his fights and he is as good a loser as he is a winner. And his powers of compensatory imagination are almost beyond belief.

The Last Straw

A COUNTY KERRY man, about seventy years old, who had spent most of his life in Ireland, finally came to Chicago. He had a job as night watchman at a North Side house.

One day the daughter of the house had a talk with the old man. He told her his life story. He longed for Ireland. "Why, miss," he said, "I'm so lonesome I can't even go to a funeral and enjoy it!"

The Cardinal and the Terrapin

CARDINAL GIBBONS was once a guest at a dinner in New York where there was much restraint among the other guests because of his presence. The dinner promised to be a dreary affair, for all the guests were evidently in awe of the Cardinal and none thawed out, but each spoke in subdued tones to his neighbor.

Things were at a desperate pass when the terrapin was served. The Cardinal rapped on the table with the handle of his knife.

"Friends," he said, "the present situation and this terrapin remind me of a dinner I attended in Baltimore at which an Englishman and his wife were also guests. The Englishman rather balked at the terrapin, not knowing what it was. 'Eat some of it, John,' urged his wife. 'It is not so nasty as it looks!'"

And after that everybody cheered up.

Not Afraid to Fight

WHEN the fleet went round the Horn to the Pacific and had reached that ocean there was great interest concerning it in the City of Mexico. A local prizefighter, half Mexican and half American, was in a resort one day and listened for a long time to what was being said about Fighting Bob Evans. "Huh!" he said. "What about this man? Who is this Fightin' Bob Evans? Wot does he weigh? Bring 'im down here and I'll lick him!"

The Greatest Show

ARCHIE BELL, of Cleveland, went South one time as a guest of one of the advance men of the Ringling Circus. The advance car spent two weeks in Alabama, where the Robinson Brothers Circus, which is a Southern institution, is a great favorite.

The car was covered with pictures and the negroes came down in droves to gape at them. There was a flagstaff on top of the car and on it was a pennant which bore the words: The Greatest Show on Earth—Sept. 1.

"Mammy, w'at dat sign mean?" asked one of a bevy of children a negro woman had with her.

The woman studied it for a time.

"It mean," she answered, "dat dis yere is de greatest show on earth 'cept one—Mistah Robinson's!"

A Sad Prospect

ONE of the St. Paul hotels has a porter who likes to use big words. Not long ago two guests were discussing a St. Paul restaurant that has an uptown place and a downtown place.

"I saw an obituary notice on the downtown place today," said one man, "but I didn't see any on the uptown place."

Not long after, Herb Meyer came along and asked the porter which of the restaurants was the better.

"Well, Mr. Meyer," said the porter, "the uptown place is good; but I understand that lately the eating at the downtown place has got to be very obituary!"

American Patriotism and Europe

By HUGO MÜNSTERBERG

DECORATIONS BY M. L. BLUMENTHAL

I HAVE just come back from a splendid year abroad. I was sent out by my university as exchange professor to lecture on psychology and philosophy; but I always felt that I should not be living up to the real meaning of my mission if I did not do my best to spread on the European continent reasonable ideas about true Americanism, as plenty of absurd ideas prevail there. Whenever associations or universities invited me to give general addresses I laid my psychology and philosophy aside and preached America. I tried to overcome prejudices and to foster healthy sympathy. Hence I spoke of American progress and achievements, of American art and literature, of American education and scholarship, as well as of my favorite topic, the American woman; and whenever a trump was needed I became enthusiastic over American patriotism.

I believe sincerely that no European country knows a patriotism of such fervor and explosiveness. The foreigner who approaches the land gets a foretaste on shipboard. He may have heard the Marseillaise, or God Save the King, or *Deutschland, Deutschland über Alles*, or the Russian Hymn, sung by deeply devoted masses; but when at the captain's dinner on the steamer the band plays Dixie, a frenzy breaks into the feast such as he has never seen in the Old World. There is something jubilant and something final in American patriotism, and every outsider must feel what a tremendous power for the good of the country is generated by such triumphant confidence.

Foreign News in American Papers

TO BE sure, probably no other country has so much needed such highstrung patriotic emotion for the fulfillment of its mission. None has combined on its soil such a number of different races and naturally divergent elements. Only a passionate patriotism could hold them together to secure a unity of convictions and actions. None has had to work out its destiny on such a gigantic area, with such intense contrasts of local conditions, of economic demands and of cultural level. Only an unquestioning patriotism could make the millions forget their provincialisms and wield them into a world power; but, whatever the social necessities for this national over-emotion may have been, it stands out as an inspiring symptom of American idealism. A people that loves its country with such exuberance must have a heart and a mind open to anything for which enthusiasm may be worth while.

When I spoke in Europe this was the whole of my story. I did not care to add there that a disproportionate part of this fine patriotism draws its strength from a glaring ignorance of the rest of the world. This instinctive feeling has never impressed itself so strongly upon me as since my return. The typical American does not know and does not care to know Europe, with the exception of England, the mother country. To be sure, it may be granted that a highstrung patriotism in days of conflicts and excitement demands a certain unfair prejudice against all other lands. "My country, right or wrong!" ought to remain superior to all others; but happily there is no struggle and no excitement, and the quiet days rather invite fairness and expansive interest.

There was, also, once a time when the Americans naturally took an unfriendly attitude toward the older nations as a kind of defense against their ill-tempered haughtiness. But that belongs to a distant past—for a long while the great nations have welcomed the United States as an equal and have held open to her a place in the front rank. The American ignorance as to Europe which prevails today is simply carelessness and a poor habit, like bad spelling or shiftless arithmetic. For most Americans, the ignorant indifference as to Europe no longer grows from their prejudices; the prejudices grow from their indifference. They do not take any trouble to inform themselves. If they know their own country and reserve for England a certain respectful interest they feel that everything is all right. Too few begin to feel that such a platform of the modern Know-Nothing party is, after all, impossible at a time when the United States has become a world power, the serious needs of which demand most subtle adjustment to the events of the globe.

The whole misery of the situation discloses itself in the kind of news which the American papers print about the European continent. There is no lack of material, and the sensation of the day is cabled with such an abundance of detail that, at least, the reader of the large and leading papers has a general feeling that he is getting plenty of information from Rome and Constantinople, from Paris and St. Petersburg. It is only necessary, however, to sift all this news for some months, as a scholarly historian would sift his material, and the vague admiration for the cable expenses of the newspapers soon turns into a sincere pity for the misinformed reader.

I took considerable pains during the last year to study day by day the international news on both sides of the ocean. For instance, I examined carefully the number of lines devoted to American news in certain important European papers and to continental European news in leading American papers. From the mere counting of the quantities I went on to a detailed analysis, comparing so far as possible the so-called facts, which the American correspondents in Europe confided to the wires, with the actual events as they were known on those same dates to the careful peruser of European journals—and vice versa. There was no reason to be proud of the achievements of the European papers. Their so-called information too often emphasized the sensational. Yet their work appeared almost like a thorough study compared with the looseness and carelessness with which European news is gathered for the customers on Broadway. The most trivial incidents are picked up and magnified into important events, and happenings of momentous consequence are ignored; the facts themselves are distorted because essential features are carelessly omitted and their connections are presented with the irresponsibility of gossip. Of course the American reader is beyond the stage in which everything printed is taken as true, but whatever is cabled still comes to him with a certain right to be believed. After those months of serious inquiry, I am sure the pictures the American reader accepts as exact photographic reproductions are, on the whole, hasty sketches by careless and often unskillful draftsmen, poorly suited to the American of today.

The newspapers are, after all, only one element in the relations between civilized nations. We are so proud of the international character of our art and science, and all the cultural and social endeavors of mankind, we are too little aware that this internationalism can easily lead to chaos if it is not planfully directed and supervised. We no longer travel in mail-coaches and sailing-boats from land to land, and yet we too easily forget that the intellectual intercourse of the nations also demands ever new modernizations. If left to the casual and haphazard influences of mere commercial interests, even those cultural values may be of little avail for making the nations of the earth really acquainted with one another.

I have tried systematically to study the selection of European books that have appeared in translation on the American market. The result gave me a pitiful showing, as much by the glaring omissions in the list as by the preposterous inclusions. This seems to be true of the literature of all countries so far as I was able to discover. Often a book finally lands in America when it has become entirely antiquated at home and has lost all significance for the country in which it originated. The German book which stirred some leading critics most deeply this year, and was accepted as the last symptom of German movements, produced the same heat of emotion a decade ago in the Fatherland and there has long been covered with dust. It is well known that the persistent efforts of a few great art dealers have created in the American market a monopoly for French paintings through artificially awaking a taste, then a fashion and finally a craving for an art which originally did not lie at all in the line of American instincts. In a similar way accidental factors have determined the most recent prevalence of Italian opera in the operatic life of the nation. It is to a high degree just as accidental that in the field of scholarship Germany for a long while was the only place of pilgrimage for American students, though no American ever sees a painting of Böcklin or hears an opera of Mozart or Beethoven. At the same time America herself does not make any effort to bring to the other nations her own spiritual products. From Paris to Moscow, the bookstores have almost given up the effort to import American books when their customers order them. They feel utterly helpless; they do not know how to reach the American publishers, who do not take the slightest trouble to accommodate themselves to European needs.

All these questions of arbitrariness and prejudices in the cultural field are so earnestly before my mind because I spent my last year in the organization of a new institute in Berlin which was crystallized about such interests. The American public still knows so little about this new Amerika-Institut that it is indeed worth while to point out its significance. Its program is to further and to expand the cultural relations between the United States and Germany. This sounds almost trivial, and it appears as if just this labor were being performed in many places; but in the whole history of civilization probably no such enterprise has ever been recorded, and what it aims at may truly be the model for future developments. Here we have, at last, that desirable modernization of international intercourse—a kind of efficiency management in the world of ideals. The relations of civilized countries have always been carefully organized in political, legal and economic affairs; but in the fields of education and scholarship, of art and literature, of moral and social purposes, the international exchange is nothing but disorder. Energies are wasted, efforts are scattered, the cheapest elements often rush into the foreground, the best impulses remain inhibited—in short, disorganization prevails. Though the national work might become a stimulation and an inspiration to the neighbors, it too often becomes a source of irritation and contempt.

Hands Across the Sea

THE purpose of this new German institute is to improve the situation so far as Germany and America are concerned. A scholar, for instance, who desires connections with universities or libraries, museums or archives, laboratories or industrial establishments, municipal or political offices, finds the doors opened through the agency of the Institut. Care is taken that the best and most characteristic works be translated; that the art of one land be made known to the other; that teachers and students be helped; that congresses and exhibitions be supported, and that truth about the foreign land be disseminated. Statistics are gathered, investigations are carried on, and every day brings new and important tasks to the Institut, which occupies seven rooms in the magnificent structure of the new Royal Library, in Berlin. No rivalry is possible between this new Amerika-Institut and any society or establishment that works toward the mutual understanding of the two nations. Such rivalry can no more exist there than between a chamber of commerce and any business undertaking. The chamber of commerce is not doing business, but it organizes and regulates and helps business all round. The Amerika-Institut, too, sees its aim in helping and

Digitized by Google

adjusting and harmonizing the scattered efforts which have arisen and may arise on both sides of the ocean.

Our modern civilization demands such systematic help in the field of unpolitical and uncommercial endeavors, but this effort of Germany must be only the beginning. If the principle is once recognized in its value, it must lead farther. On the one side, Germany must develop similar institutes for the relations to all the other civilized nations; on the other side, all the great countries must create such institutes of cultural organization for their own exchange with the important peoples of the globe. All the nations will then become interrelated in their cultural work as they are related politically by the diplomatic agencies; but none would gain more through such national establishments of the government than the United States, in which, as I have insisted, the cultural relations to the leading fellow countries are more accidental and disorganized than any great European country would tolerate. I do not say this as the result of a vague impression, but as the outcome of a full year of directorship of the Amerika-Institut, in Berlin, which has its sources of information all over Europe. True patriotism cannot possibly demand that the nation care for nothing from foreign countries except what comes floating on the waves of chance.

It appears strange that there is no more intimate acquaintance when we consider how many thousands of American tourists land every summer in Cherbourg and Rotterdam, in Hamburg and Bremen, in Naples and Genoa. Yet is their method, and still more their attitude, in traveling really adapted to ideal purposes? To be sure, most of them look on it as a gaudy vacation. They have an "awfully good time" or they are terribly bored; but in any case they do not feel obliged to make deep researches and sociological investigations or to work hard as unofficial delegates of their country for the cultivation of international friendship. Of course no one demands that from them. And yet every one who travels is practically a kind of unofficial delegate of his nation and has a certain influence on the general relations of the peoples. Moreover, though he may be out only for irresponsible fun the traveler gathers information after all and picks up impressions; and they help to shape the views of his fellow countrymen. Everything that he might gain and achieve is spoiled from the start if he comes with the wrong attitude.

An Open Purse But a Closed Mind

THERE are plenty of exceptions, but the great mass of American travelers nowadays go through Europe with a social haughtiness and with an air of superiority which practically preclude a sympathetic understanding of the national life about them. No doubt they like quite well the quaint old towns and the medieval architecture, but the people who live there are considered more or less as stage supernumeraries whom the countries must keep in order that visitors may get a romantic impression. The mountains in Switzerland are delightful, too, and the inhabitants serve well as waiters and curiosity dealers. Every one enjoys the picture galleries of Italy, but the Italians are just good enough to kneel picturesquely in their old churches.

More than four decades have passed since Lowell wrote, not without resentment, his famous essay On a Certain Condescension in Foreigners. The tables have been entirely turned. The most touchy American may be satisfied with the admiration that Europe has for the strong side of this great republic and with the unspoken flattery which it offers by its overzealous imitation. Those many thousands of American tourists who flit through the older lands in their automobiles find nothing but deference among the foreigners with whom they come in contact. It is the average European who today gets the taste of a certain condescension in foreigners who hang small silk flags, with the Stars and Stripes, out of their hotel windows. They come with their minds made up that Italians do not know how to cook and that their railways are intolerable for a decent American; that the French are perverse in their morality and that they never take a bath; and that the Germans have no other thoughts than lager beer and the policeman—in short, they look on continental Europeans with about that wisdom with which the man on Broadway sometimes speaks of Bostonians when he grins and simply says: "Baked beans!"

Whatever improvements are made in those obsolete countries seem to them to have been arranged not by general progress but from the natural desire to satisfy the well-tipping tourist. They have no idea in what a wonderful rhythm of internal development the leading countries of the European continent move on the common road of social ideals. They do not see how much in the labor movement, how much in the struggles for women and children, how much in the educational world, how much in the civil service and in a thousand other fields, would be suggestive and helpful—yes, truly inspiring—to the American who would come not to look down but to take part in a sympathetic mood. It is simply depressing to find out on the returning steamer what third-class opinions these first-class passengers have really brought home. True patriotism cannot possibly demand that the American visit foreign lands with his purse open, but with his eyes shut!

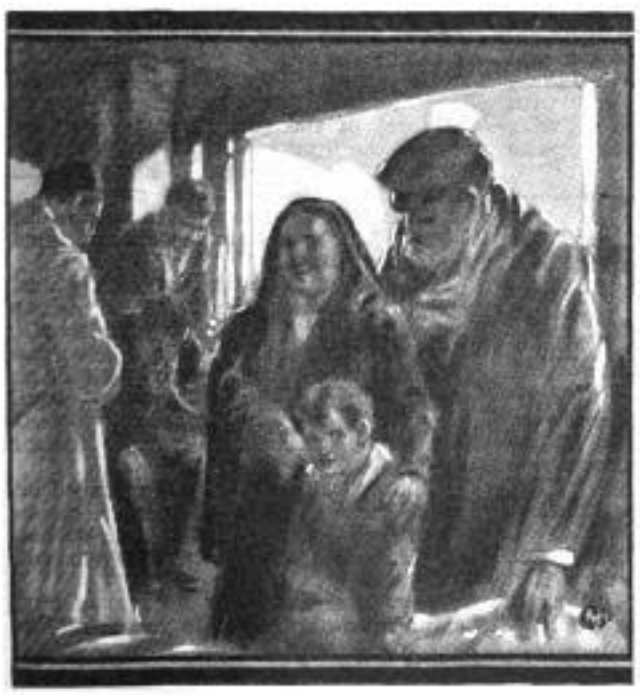
Is not this condescension to foreigners even a part of the political creed for the American on the street? The old stump-speaking on the rotten monarchies of Europe has probably died out; but when the average politician scrambles for some reasons why the Monroe Doctrine ought to be upheld he will not forget the moral argument that the governmental system of the republics stands on a level much higher than that of those monarchies which are seeking a foothold in South America. Fortunately there is at present no state in Europe which has the remotest idea of violating the traditional Monroe Doctrine; but comparison of the sham principles of some of those operetta republics with the ethical values of the historic monarchies is worse than bad politics—it is bad education.

Can it be denied that even all the modern discussions on peace and disarmament, on arbitration treaties and the causes of righteous wars, get a good deal of their steam from the confident belief that it is the duty and mission of America to be the preceptor of Europe in the department of higher morality? Arbitration treaties seem welcome to the whole nation, and certainly a number of the friends of peace believe in them without restriction; but so much has surely been shown by the discussion—the crowd considers them welcome only up to the point where, according to their feeling, fighting is necessary after all. Hardly any American doubts that no written arbitration treaty would hinder the American nation from fighting against any European country if it believed that its just interests were at stake.

In other words, the Americans take it for granted that, whatever agreements may be made, American public opinion must remain the supreme judge of the world's affairs. For this reason, in fact, not a few attack such treaties as necessarily insincere and proclaim that just wars ought not be suppressed, and that a righteous war in a good cause may be better than a peaceful endurance of injustice; but is there not lurking behind this argument, too, the feeling of national superiority? In modern times the dire burden of war does not fall upon nations because there is justice on the one side and injustice on the other. The ultimate pretext for the war may be some quarrel which might be looked on as if right must be with the one party and wrong with the other party; but what boots the pretext? The powder barrel that explodes is war, and not the match that sets it off.

War finds its natural condition when the wholesome growth of two rivals has reached a point at which there is no longer any room left for the expansion of both. If two men love the same girl there is no chance for a compromise and for arbitration, nor is there justice with the one and injustice with the other. Japan was in the right and Russia was in the right too—or rather the question of right and wrong was not involved when the two giants were wrestling for supremacy in the East. A true respect for the historic energies by which the destiny of the nations becomes fulfilled demands that the spectators value the noble ambitions on both sides instead of posing as judges who decree that one side is just and the other unjust; but throughout the public discussion the American tone is that some one is surely in the wrong and that America will discover the culprit.

True patriotism cannot demand from Americans that they flourish the big stick across the Atlantic!



Is not this careless, haughty, condescending, unfair behavior toward the European nations ultimately the residue of a patriotic view that really already belongs to the past? While all this unfriendliness survives, can it be overlooked that recent times have slowly changed American ideas as to their own national life? The American nation has grown up with the idea that it is an English nation and that, just as its language is English, its life character and its heart's blood are Anglo-Saxon too. The Anglo-Saxon is the true American, England is the country of kinship; the immigrants who come from other countries are useful fellow workers and desirable guests, but they remain guests and the countries from which they are derived remain foreign countries. They may be the home countries of the guests, but no ties of kinship connect the countries with the American nation. Has the American nation, however, really any need for persistently ignoring the fact that this whole theory is an artificial construction based on an untenable illusion?

Malicious critics of Europe like to present the national life over there as if all were held together by willful theories of the aristocratic classes forced on the suggestible masses and finally accepted by them with enthusiastic ignorance; but what must be said, then, of the dogma preached by an aristocratic minority of the country here, through which the non-Anglo-Saxon majority is delegated to the position of guests and hyphenated citizens? The Irish and the Scotch, the Germans and the Dutch, the Danish and the Swedish, the Austrians and the Italians, the French and the Russians, have heard the story believingly for a long while; but finally their patience has come to an end and their non-English consciousness has awakened. They have studied the history of their ancestors in this country and have become proud of their contributions to the development of this great nation. They have discovered how the traditions of the schoolbooks and the teachings of public opinion unfairly and grotesquely ignore that wonderful coöperation, and they suddenly feel like children who discover that the story of the stork will not do, after all.

The Melting Pot

THOSE seventeen million German-Americans know that the blood of their ancestors was offered for the unity of this nation; that the brawn and the brain of their fathers helped to build its prosperity; that their education and their character have given tremendous momentum to the glorious work of the nation, and that they themselves are just as good American citizens as the Anglo-Americans. Those Germans who sought their homes in Pennsylvania in the seventeenth century are to the millions of modern German-Americans what the Pilgrim Fathers are to those descended from English stock. The time has passed when the children felt ashamed that their parents were not of English but of Teuton origin. Exactly the same change has come to all the other peoples. The one man who is the idol of the nation has never lost a chance to tell how Dutch and Scotch and Irish and French bloods are mixed in his veins.

This new feeling and attitude of the majority necessarily demand a fundamental revision of the antiquated national theory. The American people are not an English people, nor a Dutch, nor a French, nor a German, nor an Irish. The American nation is an entirely new people which, like all the other great nations of the world, has arisen from a mixture of races and from a blending of nationalities. The ties of kinship do not connect it with England more than with Ireland or Holland or Germany or Sweden. All these races are united and assimilated here—not by a common racial origin, but by a common national task.

"No wonder at my daring speed;
This name will keep me in the lead!"

They must work out in unity the destiny of a nation to which all the leading countries of Europe have contributed their most enterprising elements as bearers of their particular traits and ideals. A new patriotism has sprung up that does not aim toward the conservation of an English people, but hopes for the highest development of a unique nation in which the finest qualities of all Europe will be blended.

This new patriotism alone can be a true stimulus for all the healthy elements in this great country. The old kind of patriotism has been really holding back the non-English elements, as it forced on them the artificial task of imitating something which was not in harmony with their inmost nature. The new patriotism inspires every one to his duty of contributing the very best of the ideals of his home country to the happiness of the whole. The new patriotism of tomorrow will not know hosts or guests among the citizens of this country. The nation is one solid whole; and whatever European country has contributed to its inheritance must have its share in the gratitude of every inhabitant.

The Irish or Dutch or Swedish or German or French-American would indeed be utterly ungrateful if he were to forget how endlessly much England has given to this nation which is now his own. And the Anglo-American would be no less ungrateful if he were to forget what the European continent has poured out for the strength and the beauty and the blessing of his beloved land. Since the people with all the manifoldness of elements feel themselves one, the nation cannot have a diversity of ancestors—all Europe is the mother country. To see this mother country's achievements will be every American's pride, to visit its soil will be his inspiration—the intercourse will never be without respect and even the rivalry never without sympathy. The Anglo-American resentment of yesterday and the condescension of today toward continental Europe will yield to friendship. True patriotism cannot demand that the American people crumble and fall asunder when they begin to think lovingly of their ancestral homes! There ought not to be civil war on the battlefields of European memories.

HIGHGRADE LINES

(Continued from Page 13)

"You've chosen a fine program to introduce your friend to good music with," he said; and therewith began a lively conversation that lasted until a round of applause signalized the appearance of the conductor. The next moment he raised his baton and the celli began to sigh the mournful phrase which ushers in the symphony. Milton leaned back luxuriously as the woodwind commenced the next phrase; and then, while the introduction ended with a sweeping crescendo and the tempo suddenly increased, Elkan sat up and his eyes became fixed on the trombone and trumpet players.

He maintained this attitude throughout the entire first movement, and it was not until the conductor's arm fell motionless at his side that he settled back in his seat.

"Well," Milton asked, "what do you think of it?"

"A-Number-One!" Elkan answered hoarsely. "It would suit me just so well if it would last the whole evening and we wouldn't have no singing and dancing at all."

"What, no singing and dancing!" Milton exclaimed.

"Sure!" Elkan continued. "I wish them fellers would play the whole evening."

The conductor tapped his desk with his baton.

"Don't worry," Milton commented as he settled himself for the next movement. "You'll get your wish all right."

Elkan looked inquiringly at his mentor, but Milton only placed his forefinger to his lips; and thereafter, until the conclusion of the symphony, the pauses between the movements of the symphony were so brief that Elkan had no opportunity to make further inquiries.

"Well, neighbor," asked the gentleman on his right, as the musicians filed off the stage for the ten-minutes intermission, "what do you think of your first symphony?"

Elkan smiled and concealed his shyness by clearing his throat.

"The symphony is all right," he said; "but, with all them operators there, what is the use they are trying to save money hiring only one foreman?"

"One foreman?" his neighbor cried.

"Sure—the feller with the stick," Elkan went on blandly. "Naturally he couldn't keep his eye on all them people at once—ain't it? I am watching them fellers, which they are working them big brass machines, for the last half hour, and except for five or ten minutes they sit there doing absolutely nothing—just fooling away time."

"Them fellers ain't fooling away their time," Milton said gravely. "They ain't got nothing to do only at intervals."

"Then I guess they must pay 'em by piecework—ain't it?" Elkan asked.

"They pay 'em so much a night," Milton explained.

"Well, in that case, Mr. Jassy," Elkan continued, "all I could say is if I would got working in my place half a dozen fellers which I am paying by the day, understand me, and the foreman couldn't keep 'em busy only half the time, *verstehst du*, he would quick look for another job."

Elkan's neighbor on the right had been growing steadily more crimson, and at last he hurriedly seized his hat and passed out into the aisle.

"That's a pretty friendly feller," Elkan said as he gazed after him. "Do you happen to know his name?"

"I ain't never heard his name," Milton replied; "but he is seemingly crazy about music. I seen him here every time I come."

"Well, I don't blame him none," Elkan commented; "because you take the Harlem Winter Garden, for instance, and though the music is rotten, understand me, they got the nerve to charge you yet for a lot of food which half the time you don't want at all; whereas here they didn't even ask us we should buy so much as a glass beer."

At this juncture the short, stout person returned and proceeded to entertain Elkan and Yetta by pointing out among the audience the figures of local and international millionaires.

"And all them fellers is crazy about music too?" Elkan asked.

"So crazy," his neighbor said, "that the little man over there, with the white beard, spends almost twenty thousand a year on it!"

"And yet," Milton said bitterly, "there's plenty fellers in the city which year in and year out composes chamber music and symphonic music which they couldn't themselves make ten dollars a week; and, when it comes right down to it, none of them millionaires would loosen up to such new beginners for even five hundred dollars to help them get a hearing."

The short person received Milton's outburst with a faint smile.

"I've heard that before," he commented, "but I never had the pleasure of meeting any of those great unknown composers."

"That's because most of 'em is so bashful they ain't got sense enough to push themselves forward," Milton replied; "*aber* if you really want to meet one I could take you tonight yet to a café on Delancey Street where there is playing a trio which the pianist is something you could really call a genius."

"You don't tell me!" Elkan's neighbor cried. "Why, I should be delighted to go with you."

"How about it, Mr. Lubliner?" Milton asked. "Are you and Mrs. Lubliner agreeable to go downtown after the show to the café on Delancey Street? It's a pretty poor neighborhood already."

Yetta smiled.

"Sure, I know," she said; "but it wouldn't be the first time me and Elkan was in Delancey Street."

"Then it's agreed that we're all going to hear the genius," Elkan's neighbor added. "I heard you call one another Jassy and Lubliner—it's hardly fair you shouldn't know my name too."

He felt in his waistcoat pocket and finally handed a visiting card to Elkan, who glanced at it hurriedly and with trembling fingers passed it on to his wife, for it was inscribed in old English type as follows:

Mr. Joseph Rammerman
Festoria Hotel
New York

VI

"ONCE and for all, I am telling you, Volkovisk, either you would got to play music here or quit!" Marculescu cried at eleven o'clock that evening. "The customers is all the time kicking at the stuff you give us."

"What d'ye mean, stuff?" Max Merech protested. "That was no stuff, Mr. Marculescu. That was from Brahms a trio, and it suits me down to the ground."

"Suits you!" Marculescu exclaimed. "Who in blazes are you?"

"I am *auch* a customer, Mr. Marculescu," Max replied with dignity.

"*Yow*, a customer!" Marculescu jeered. "You sit here all night on one cup coffee. A customer, *sagt er!* A loafer—that's what you are! It ain't you I am making my money from, Merech—it's from them *Takeefim** uptown; and they want to hear music, not Brahms. So you hear what I am telling you, Volkovisk! You should play something good—like Wildcat Rag."

"Wait a minute, Mr. Marculescu," Max interrupted. "Do you mean to told me them lowlife bums in front there, which makes all that *Geschrei* over Dixerlie and such like *Narrischkeit*, is *Takeefim* yet?"

"I don't want to listen to you at all, Merech!" Marculescu shouted.

"I don't care if you want to listen to me *oder* not," Merech said. "I was a customer here when you got one little store *mit* two waiters; and it was me and all the other fellers you are calling loafers now what give you, with our few pennies, your first start. Now you are too good for us with your uptown *Takeefim*. Why, them same *Takeefim* only comes here, in the first place, because they want to see what it looks like in one of the East Side cafés, where they got such good music and such interesting characters, which sits and drinks coffee and plays chess *und Tarrok*."

He glared at the enraged Marculescu and waved his hands excitedly.

"What you call loafers they call interesting characters, Mr. Marculescu," he continued, "and what you call stuff they call good music—and that's the way it goes, Mr. Marculescu. You are a goose which is killing its own golden eggs!"

"So!" Marculescu roared. "I am a goose, am I? You loafer, you! Out of here before I kick you out!"

"You wouldn't kick nothing," Max rejoined, "because I am happy to go out from here! Where all the time is being played such *Machshoves* like Wildcat Rag, I don't want to stay at all."

He rose from his chair and flung ten cents on to the table.

"And furthermore," he cried by way of peroration, "people don't got to come five miles down to Delancey Street to hear Wildcat Rag, Mr. Marculescu; so, if you keep on playing it, Mr. Marculescu, you will quick find that it's an elegant tune to bust up to—and that's all I got to say!"

As he walked away, Marculescu made a sign to his pianist.

"Go ahead, Volkovisk—play Wildcat Rag!" he said. Then he followed Max to the front of the café; and before they reached the front tables, at which sat the slummers from uptown, Volkovisk began to pound out the hackneyed melody.

"That's what I think of your arguments, Merech!" Marculescu said, walking behind the cashier's desk.

Max paused to crush him with a final retort; but even as he began to deliver it his tongue clove to the roof of his mouth, for at that instant the door opened and there entered a party of four, with Elkan Lubliner in the van. A moment later, however, Milton Jassy pushed his guests to one side and strode angrily toward Marculescu.

"*Koosh!*" he bellowed and stamped his foot on the floor, whereat the music ceased and even the uptown revelers were startled into silence. Only Marculescu remained unabashed.

"Say," he shouted as he rushed from behind his desk, "what do you think this joint is?—a joint!"

**Takeefim*—Aristocracy.

Digitized by Google

"I think what I please, Marculescu," Milton said, "and you should tell Volkovisk to play something decent. Also you *should* bring us two quarts from the best Tchampanyer wine—from French wine Tchampanyer, not *Amerikanischer*."

He waved his hand impatiently and three waiters—half of Marculescu's entire staff—came on the jump; so that, a moment later, Jassy and his guests were divested of their wraps and seated at one of the largest tables facing the piano. It was not until then that Milton descried Max Merech hovering round the door.

"Merech!" he called. "*Kommen sie 'r uber!*"

Max shook his head shyly and half-opened the door; but Elkan forestalled him. He fairly bounded from the table and caught his assistant cutter by the arm just as he was disappearing on to the sidewalk.

"Max," he said, "what's the matter with you? Ain't you coming in to meet my wife?"

Max shrugged in embarrassment.

"You don't want me to butt into your party, Mr. Lubliner!" he said.

"Listen, Max," Elkan almost pleaded; "not only do I want you to but you would be doing me a big favor if you would come in and join us. Also, Max, I am going to introduce you as our designer. You ain't got no objections?"

"Not at all," Max replied, and he followed his employer into the café.

"Yetta," Elkan began, "I think you seen Mr. Merech before—ain't it?"

Mrs. Lubliner smiled and extended her hand.

"How do you do, Mr. Merech?" she said; and Max bowed awkwardly.

"Mr. Kammerman," Elkan continued, "this is our designer, Max Merech; and I could assure you, Mr. Kammerman, a very good one too. He's got a great eye for color."

"And a good ear for music," Milton added as Kammerman shook the blushing dilettante by the hand.

"In fact, Mr. Kammerman, if he has got such taste in designing as he is showing in music," Milton went on, "he must be a wonder! Nothing suits him but the best. And now, if you will excuse me, I'll get Volkovisk he should play you his sonata."

He left the table, with his leather portfolio under his arm, and for more than five minutes he held an earnest consultation with Volkovisk and the cellist, after which he returned smiling to his seat.

"First Volkovisk plays his sonata, Opus 30," he explained, "and then he would do a little thing of my own."

He nodded briskly to Volkovisk and Kammerman settled himself resignedly to a hearing of what he anticipated would be a commonplace piece of music. After the first six measures, however, he sat up straight in his chair and his face took on an expression of wonder and delight. Then, resting his elbow on the table, he nursed his cheek throughout the first movement in a posture of earnest attention.

"Why," he cried as the musician paused, "this man is a genius!"

Max Merech nodded. His face was flushed and his eyes were filled with tears.

"What did I told you, Mr. Lubliner?" he said; and Jassy raised his hand for silence while Volkovisk began the second movement. This and the succeeding movements fully sustained the promise of the earlier portions of the composition; and when at length Volkovisk rose from the piano stool and approached the table Kammerman jumped from his chair and wrung the composer's hand.

"Sit in my chair," he insisted, and snapped his fingers at Marculescu, who fumed impotently behind the cashier's desk.

"Here," he called; "more wine—and look sharp about it!"

Marculescu obeyed sulkily and again the glasses were filled.

"Gentlemen," Kammerman said, "and Mrs. Lubliner, I ask you to drink to a great career just beginning."

"Lots of people said that before," Max murmured after he had emptied his glass.

"They said it," Kammerman replied, "but I pledge it. You shall play no more in this place, Volkovisk—and here is my hand on it."

Max Merech beamed across the table at his employer.

"Well, Mr. Lubliner," he said, "you lost your chance."

Elkan shrugged and smiled.

"Might you could find another of them genius fellers for me maybe, Max?" he said.

And therewith Kammerman slapped Milton Jassy on the back.

"By Jove! We forgot your trio," he said. "Play it, Volkovisk, as your valedictory here."

Again Volkovisk sought the piano, and after whispered instructions to his assistants he began a rendition of Jassy's Opus 47, from the manuscript Milton had brought with him; but, allowing for the faulty technic of the cellist and the uncertainty that attends the first reading from manuscript of any composition, there was little to recommend Jassy's work.

"Very creditable!" Kammerman said at the end of the movement. "Perhaps we might hear the rest."

Max kept his eyes fixed on the table to avoid looking at Jassy, and even Volkovisk seemed embarrassed as he swung round on the piano stool.

"Well?" he said inquiringly.

Jassy emitted a bitter laugh.

"That'll do, Volkovisk," he replied hoarsely. "I guess it needs rehearsing."

At this point Max attempted to create a diversion.

"Look at that lady sitting there!" he said. "She puts on a yellow hat to an old-gold dress. She's committing murder and she don't know it!"

Kammerman seized on the incident as a way of escape from criticising Jassy's trio.

"That reminds me, Lubliner," he said. "Give me your business card if you have one with you. I must tell Mr. Dalzell, my cloak buyer, to look over your line. I'm sure, with a designer of Mr. Merech's artistic instincts working for you, you will be making up just the highgrade line of goods we need."

VII

ONE year later, the usual crowd of first-nighters lounged in the lobby of the Siddons Theater during the intermission between the second and third acts of M. Sidney Benson's newest musical comedy, Marjory from Marguery's, and commented with enthusiasm on the song hit of the show—My Blériot Maid. A number of the more gifted even whistled the melody, skipping the hard part and proceeding by impromptu and conventional modulation to the refrain, which had been expressly designed by its composer, Milton Jassy, so as to present no technical difficulties to the most modest whistler.

Through this begemmed and piping throng, Kammerman and Volkovisk elbowed their way to the street for a breath of fresh air; and as they reached the sidewalk Kammerman heaved a sigh of relief.

"What a terrible melody!" he ejaculated.

"But the plot ain't bad," Volkovisk suggested, and Kammerman grinned involuntarily.

"To be exact, the two plots aren't bad," he said. "It's made up of two old farces. One of them is Embrassons nous, Duval, and the other Un Garçon de chez Gaillard."

"But the costumes are really something which you could call beautiful!" Volkovisk declared.

"Merech approved the costumes too," Kammerman agreed with a laugh. "He left after the first act; and he said that if you endured it to the end you were to be sure to tell Jassy the colorings were splendid!" He lit a cigarette reflectively. "That man is a regular shark for coloring!" he said. "It seems that when I first met him that night he was only an assistant cutter; but Elkan Lubliner made him designer very shortly afterward—and it has proved a fine thing for both of them. I understand we bought fifteen thousand dollars' worth of goods from them during the past year!"

"He deserved all the good luck that came to him," Volkovisk cried; and Kammerman placed his hand affectionately on his protégé's shoulder.

"There's a special Providence that looks after artists," he said as they reëntered the theater, "whether they paint, write, compose, or design garments."

YOUNG MEN WHO RISE

THE question of self improvement is the serious concern of many business men. The following incidents illustrate how two different firms secured satisfactory results from their employees.

One of the very greatest of our corporations, whose capital runs into hundreds of millions, recently planned improvements which, its engineers estimated, would cost something like two million dollars. To the man in special charge of the work, however, there came the thought that much might profitably be learned from Germany. He had gathered what ideas he could as to which country could aid him; and, though he knew that, on the whole, Germany was behind the United States in regard to it, he at the same time believed that there was much of value to learn over there.

So he selected two men—chose them heedfully, with a distinct eye to the qualifications for the investigative task in hand; and, sending for them, he first explained just what they were to do.

"You are to go together to Germany, get into the mills over there and learn all you can that may be of help to us in the big improvements we are planning to carry out, and which both of you know about."

Then he told them why it was that he had selected them for the trip of discovery.

"You are both," he said, "experts in the technical details of our work—if you weren't you wouldn't be earning your big salaries; but I am going to speak very frankly to you, for I have picked you out for a very important service.

"You, X, are a good mixer. You meet people well and always make a good impression. You make friends. Now I want you to use this good quality to special advantage. Always you will keep your eyes and ears open for suggestions, and help your side partner—just as he, though I will give him a special province, always must be ready in turn to help you.

"And for your part, Z," he said, turning to the other man, "I expect that you, too, will help in making friends and use tact and discretion, and knock off as much as you can of the stiffness and aloofness that you've been allowing to grow on you. Now don't get offended; this is just business—and very important business."

The two men sailed for Europe and were away six months, during which time they piled up a tremendous bill for expenses; but the total was neither criticised nor questioned, for they got the goods! They went to various cities, got into the biggest mills in just the right way and saw everything that was to be seen—the two making an admirable team, playing into each other's hands just as their superior had expected them to do. Their report was so admirable, and they had used eyes and judgment to such good advantage, that the corporation saved fully a quarter of a million dollars by carrying out the suggestions that came from their seeing what was worth while in the German methods.

"I try to look at my own establishment in the same spirit with which I look at that of a rival," said a rising Chicago man. "I walk through my own place, judging, estimating, silently praising or criticising, as nearly as I can, in the same spirit as if it were not my own. I know I can't give myself quite the same viewpoint toward my own place of business any more than a man can look at his own personal character precisely as he does at the personal character of a neighbor. The idea of it first came to me some years ago when I was in a similar establishment down in New York, and suddenly found myself looking very disparagingly at the way goods were displayed in one of the important departments, and thinking very disparagingly of all the clerks—for there was a certain air of looseness, of slackness, of ineffective arrangement and of general lack of snap. And I thought: 'How does it happen that the proprietor doesn't see all this just as I do?' And instinctively the answer came that it must be precisely because he was the proprietor! That set me thinking, and I began to realize just how easily a man may miss seeing things that are right in front of him. Now I know that pretty nearly every man watches his own establishment closely—of course that's true in the case of any successful man; but there isn't any man, no matter how wise or successful, who can watch to the very best advantage until he has got into the way of looking at his own establishment just as if he were looking at another."

"Invaluable, Sir"

FOR many reasons; first of all, because Hansen's Gloves are made of real horsehide, tanned by a special process and *guaranteed* not to shrink or shrivel, harden, crack or peel.

Consider what that means: A glove that water won't faze; that can be thrown down soaking and picked up soft; a glove that's proof against frost, heat and steam, that costs no more, and yet outwears the ordinary kind.

HANSEN'S GLOVES

"Built Like a Hand"

Invaluable, too, because though *ready-made*, they are "made-to-order"—not only to fit your hands, but to fit whatever work or play those hands have to do. The sports—motoring, hunting; the professions, the trades—any and all find in Hansen's Gloves the maximum service with *flexibility* and comfort.

Railroading in all its branches is especially provided for in Hansen's "Peccary," of Mexican pigskin, strong but soft; in the "Protector Gauntlet" and the "Glad Hand."

From the lineman and ironworker to the men down in the mines and woods; sportsmen, farmers, doctors, all agree that Hansen's Gloves are "invaluable" for fit and comfort; for long life and ease in service. Washing in gasoline leaves them soft and pliant as new.

Two Charming Models
New York's Most Popular Designs

SIZES. Bust measure, 32 to 44 inches, skirt lengths 40 inches, finished with an extra deep basted hem; also in proportion to fit **misses** and **small women**, sizes 32 to 38 bust measure, skirt lengths 38 inches, finished with a deep basted hem so that the length may be adjusted by the customer if it is found necessary to do so.

Satin Foulard Dress
New York's Latest Model **$10.98**

35076. **A Stunning Fiche Style Dress** of fine bordered satin Foulard, lustrous summer weight silk material, will be one of the most fashionable fabrics this season. The waist made in Fiche style, body of waist of plain foulard and the Fiche effect of the bordered material, gracefully draped over the shoulders and extending to the waistline both front and back. A chic little rosette of plain foulard trims front. The waist is collarless. The chemisette is trimmed with self-covered buttons. The short sleeves trimmed with cuffs at the border. The feature of the dress is the bias tunic which slopes from the left side ending in a point at right side. The bordered material has been used effectively at bottom of tunic; underskirt effect is of plain foulard. On each side of skirt extending down to bottom is a deep tuck. Waist and skirt are joined by pointed girdle. Waist hooks invisibly in the back, while the skirt closing is on the left side. Comes in Copenhagen blue, navy blue, a becoming shade of brown or in black. In each case the border is of self color and white. **Our special price, mail or express charges paid by us, $10.98.**

Working to Save Wood Waste

By FORREST CRISSEY

AN IMPORTANT investigation concerning supply and demand was instigated, not long ago, by the wood-pulp manufacturers of Wisconsin, who began to wonder how long their supply of spruce would hold out and what they would do about it when it began to shrink. Their appeal was promptly acted upon by the Office of Wood Utilization and a thorough investigation made, with results that astonished all concerned. It revealed the fact that just as much wood is wasted in Wisconsin as there is material cut. In other words, more than a billion feet of lumber was cut in Wisconsin in the year covered by the investigation and more than a billion feet of lumber went into waste. Now a series of experiments are being carried forward to demonstrate what soft woods from this waste are capable of being converted into acceptable pulp and at what cost. Already the investigation has told the pulpmakers the amount of standing pulp timber now in the state, the size of the possible supply from all kinds of waste at mills, the varieties comprised in this supply and the relative proportion of each variety—what proportion of the supply is in slabs; what in edgings and in other forms—and how much it would cost to sort the different species and forms of the waste. On the completion of the experiments that are being carried out coöperatively, the pulpmakers of Wisconsin will have a fairly comprehensive bird's-eye view of the present and immediate future of their industry.

The Oaks From Little Acorns

It is altogether possible, if not entirely likely, that the result will be the utilization of millions of feet of waste stuff that now goes into the burners at the mills. The demand for cheap paper of the pulp type is tremendously on the increase; and if any considerable part of the immense waste now going on at the lumber mills can be turned into pulp the result will be hailed as little short of a national benefaction.

Not long ago a lumberman from the Pacific Coast came into the Office of Wood Utilization and asked:

"How long after Douglas fir has been fire-killed is it good to log and manufacture? How long will Western red cedar, Western spruce, and woods of that character, remain good for lumbering and manufacture after the forest has been swept by a disastrous fire? And will the standing or the fallen timber in such a forest be found in the better condition?"

The men who were sent to the Pacific Slope to answer this question located a five-year burn, a ten-year burn and a seventeen-year burn, and began to work out the comparative problem in a definite, scientific and businesslike way. They met with many surprises in their results which can hardly fail to make their investigations almost invaluable. For one thing, they established the fact that fallen or "down" cedar is more durable than standing cedar, especially when located in a moist and cool situation. Also the fact was established that insect attacks on fire-killed Western cedar are remarkably few and generally confined to the workings of the smaller bark weevils. Not only did the investigation answer the questions asked by the West Coast lumberman, but it established facts worth thousands of dollars annually to the lumbering interests of the West.

Incidentally this work in the great redwood forests brought the investigators face to face with an aggravated form of waste. They found that thousands of tanbark oaks, from which the bark had been previously peeled, were being burned in the process of lumbering the great redwoods. The tanbark oak grows among the redwoods and the lumbering practice has been for the owners of redwood tracts to sell—for a small sum—the tanbark privilege of a tract about two years in advance of removing the redwood. The amount of money received by the owners of these forests for the tanbark privilege is nominal and trifling; in fact, the giant redwoods so completely fill the eye of the lumberman that he looks over the tops of the smaller tanbark oaks and comes to consider them as mere cumberers of the ground. If these oaks stood in a forest by themselves, where they were not overshadowed by the gigantic redwoods, they would appear to be magnificent trees, many of them showing clean boles of from sixty to eighty feet to the lowest limbs.

After these splendid trees are felled and stripped of their bark, they are left as useless. By the time the redwood cutters are on the ground these oak trees are generally well seasoned. Then some of them are used for pillows with which to break the fall of the redwoods. The green trunk of a redwood from which the bark has been removed will not burn, even in the fiercest forest fire. Therefore, after the redwoods have been felled and peeled, circles of forest fires are set to clear the woods of all undergrowth and thus leave a clean floor for the logging operations. In these clearing fires thousands of tanbark oaks are reduced to ashes.

The investigators from the Office of Wood Utilization no sooner saw this appalling waste than they tackled the problem of preventing it. The lumbermen merely said that if the timber of the tanbark oak was good for anything they would like to be told to what use it could be put. Shipments of these oaks were sent to the timber-testing station at Berkeley, California. From there convenient quantities of the lumber were sent to wagon factories, cooperage concerns and furniture manufacturers in San Francisco. Practically all of these manufacturers reported that this timber was well suited to their purposes and they could use it to advantage.

This investigation and its experiments have demonstrated to the timber-owners that the tanbark oaks in their redwood forests are worth more for timber than for tanbark. The oaks can serve both of these uses, but only at the expenditure of considerable effort; for unfortunately the bark, if used for tanning, must be peeled in the spring, which is the most difficult of all periods of the year for lumbering operations. If the tree is allowed to lie where it falls, and be exposed to the soaking rains and the hot sun, it is spoiled for timber use. However, by hauling the trees into piles, this deterioration is largely overcome.

Timely Destruction of Tradition

Hard wood of any kind is extremely scarce on the West Coast and most of the finishing woods are brought from the East, from the Philippines, Mexico or Japan. As a consequence, through this investigation, the "snap" of the tanbark contractor has been destroyed; the timber-owners are themselves taking the tanbark and afterward cutting the tanbark oaks up into lumber for wagon-rims, furniture, cooperage materials and other uses. The utilization of one-half of the annual waste of tanbark oak timber under the old methods will amount to hundreds of thousands of dollars. And as the public learns better to appreciate the value of this wood it is bound to command an increasingly higher price. The real achievement in this matter, however, as seen by the eyes of the Office of Wood Utilization, is the fact that millions of feet of hard-wood lumber have been rescued from the bonfire and given to a locality that is so destitute of hard woods that it is obliged to import practically all of its supply.

Perhaps no waste-saving enterprise ever undertaken by the Office of Wood Utilization is more important than the campaign against the sawmill tradition that all lumber must be cut into lengths of an even number of feet. The first question which the office undertook to answer was this: How much lumber does this tradition, that flooring, ceiling, siding and finished lumber must be cut into an even number of feet, waste at the mill? A very complete investigation of this kind of waste at the mills in the Southern states demonstrated that more than thirty million feet, or approximately six hundred thousand dollars' worth of material, was being annually wasted simply because contractors and carpenters figured in even lengths and did not consider an odd length as a possibility. For example, it was found that when a sixteen-foot board came up to the trimming saw at the mill, and there was a small knot near the sixteen-foot mark, the board was cut to a length of fourteen feet—and a foot and a half of clear lumber thrown into the waste.

Meantime another force of investigators was busy taking the frame house of the ordinary type apart to see what "made it go." Many of these houses in various parts of the country were examined and measurements taken of the boards and timbers entering into their construction. Then an average was struck—and it was found that more than forty per cent of the boards entering into the construction of the ordinary frame dwelling house were of odd lengths or were nearer the odd foot than the even. These findings were so conclusive that the Forest Service urged the Southern mills to stop this waste and, whenever possible, to produce materials in odd lengths. Today both the Southern and Western mills are turning out large quantities of odd lengths and are having no difficulty whatever in marketing them. Wideawake contractors and carpenters are found to be entirely willing to save money at the sacrifice of the old and almost sacred tradition that boards are born in lengths of an even number of feet.

Doing Business With Uncle Sam

Uncle Sam is in the lumbering business himself in a big way. He has one hundred and ninety-three million acres under the supervision of the Forest Service. Of this total, one hundred and sixty-six million acres are in the United States and the remainder in Alaska and Porto Rico. In the United States there are one hundred and sixty-five national forests, which give to each supervisor and his eight or ten assistants the care of about a million acres. This keeps them fairly busy looking after the upkeep of the property without giving any thought to the matter of selling stumpage. The total stand of timber on the national forests, exclusive of Alaska, is approximately five hundred and thirty billion feet. In the fiscal year of 1910 there was sold from the national forests five hundred and seventy-five million feet of timber at a valuation of one million four hundred thousand dollars—an average stumpage price of two dollars and forty-four cents a thousand feet.

There has been a general impression among lumbermen that it isn't worth while to attempt to do timber business with Uncle Sam. They have held stoutly to the notion that he is all tied up with red tape, and that many practically impossible conditions are imposed upon the buyer.

Now it occurred to the national forester and his assistants in Washington that the Office of Wood Utilization was distinctly a business office that kept in close touch with the lumbering trade. So Mr. Sackett, the head of the office, was given an additional job. He was assigned the work of furnishing detailed information to inquirers concerning the stumpage which the Government has for sale on the national forests. Incidentally he interpreted this assignment to mean that it was up to him to remove from the minds of lumbermen the tradition that it is hard to do business with Uncle Sam. Today any lumberman who walks into the Office of Wood Utilization can get, straight off the bat, all the detailed information concerning a Government timber tract that the biggest timber-owner could furnish regarding any of his holdings. Any lumberman can get complete data on definite sale areas—embodying location, estimate by species, markets, estimated logging cost, millsites, and every essential detail that the prospective buyer demands before making a personal investigation of a timber proposition. This information can be supplemented in many cases by accurate maps, photographs, personal reports and other means calculated materially to assist in forming an intelligent decision.

Altogether, the Office of Wood Utilization is a busy place. As a specialist in the disorders of the wood trade, Uncle Sam keeps a crowded consultation room and is making a growing reputation with his patients. It is, perhaps, not too much to say he has not another office that is of greater practical service to his people than this.

Editor's Note—This is the second of two articles by Mr. Crissey on the subject of wood waste.

How's Business and Why

HALF the battle consists in getting used to things; and it would seem as if the *business* men of this country might by this time have become accustomed to the pace they have been for some time following and *be able* to adhere to it for a while longer without uttering loud complaints. True, the pace has been irksome to a degree; and *if it proceeds* from an avoidable handicap, which some of them probably think it does, the irksomeness is the more accentuated. *Whether* the handicap is avoidable, however, is debatable. That which the individual can control is about the only thing that is avoidable to him; and in this instance it is uncertain how far the individual business man or business men collectively can now or could have originally controlled the conditions comprising the handicap. What those conditions are or were are points on which men might not agree. This much may be asserted—that the avoidable conditions are those for which men themselves were to blame if blame attached anywhere. And as regards those conditions it is for business men to correct them so far as it is in their power to do so.

These remarks are general, but they have an object—to wit, to encourage men to accept the existing situation and make the best of it; and it is probably not nearly so bad as it might be, and it will surely be better by-and-by. One cannot look at the statistical information regarding general business affairs in the United States at the turn of the year without being impressed with the magnitude of the undertakings and achievements of the people of the country, even in an unsatisfactory year.

Bank Clearings Analyzed

Volumes would be required to give far less than the whole of this information, and but little of it can be reproduced here. Conspicuous among the more important items is that of bank clearings. Bradstreet's gives the clearings of all the leading cities of the country for 1911 as $157,769,230,440, compared with $162,027,883,852 for 1910, showing a decrease of three per cent from 1910, and 4.6 per cent from 1909, when payments made were of record proportions. Compared with 1908 there is an increase of nineteen per cent, and an increase of nine per cent over 1907. When contrasted with that other active year, 1906, the decrease for 1911 was but one per cent. The contribution of the city of New York to the decrease in 1911, compared with 1910, was the determining factor; for clearings outside the metropolis for the twelve months were greater than in the previous year by $643,000,000—the exact returns being $65,396,417,705 in 1911 and $64,753,383,760 in 1910. New York clearings for the year were $92,372,812,735, a decrease of five per cent from 1910, 10.8 per cent from 1909, eleven per cent from 1906 and one per cent from 1905; while, compared with 1908, there was a gain of over thirteen per cent, and of 5.7 per cent compared with 1907. Outside of New York in 1911 there was an increase of one per cent over 1910 and three per cent over 1909. New York's share in the total clearings of 1911—60.5 per cent—was the least since 1897, and should be attributed to the decline in stock speculation, share transactions amounting to 22.8 per cent less than in 1910.

Perhaps the story of clearings in different sections of the country for the last months of the year is as interesting as any chapter. It includes the period from September 1 to December 31 and comparison is with the corresponding months of 1910. The facts can best be told in tabular form:

Localities	Percentage of Increase September	Percentage of Increase October	Percentage of Increase November	Percentage of Increase December	Percentage of Increase 12 months
New England	4.4	*2.2	3.4	2.3	.4
Middle	13.5	*4.7	2.9	1.3	*6.5
Western	3.5	3.2	*.2	2.2	1.8
Northwestern	2.9	1.7	1.9	2.3	*1.1
Southwestern	2.5	1.4	*.1	*.8	.8
Southern	16.6	7.3	6.1	1.9	8.7
Far-Western	5.1	5.8	11.6	5.7	2.6
Total United States	10.3	*2.3	3.0	1.8	*3.2
New York City	15.2	*4.9	3.1	1.0	*5.0
Outside New York	4.2	1.5	2.7	2.4	1.0
Canadian	9.0	19.4	24.7	21.6	17.8

*Decrease.

It will be noticed that there was an increase in every section of the country during September, the city of New York being rated as a section—also in Canada; that there was an increase in five of eight sections during October, an increase in six during November, and in seven sections during December. The declines in October were in New England, the Middle states and the city of New York.

In November they were in Western and Southwestern states, while in December they were in Southwestern states only; and the declines were less than one per cent in the two sections last named during November and December. For the year as a whole, a decrease in clearings was shown in the Middle and Northwestern states, in the city of New York and the United States, though not in the United States outside the city of New York. In New England, for the long period, there was an improvement in clearings of four-tenths of one per cent; in the Western States of 1.8 per cent; in the Southwestern states of eight-tenths of one per cent; in the Southern states of 8.7 per cent; in the Far-Western states of 2.6 per cent, and in the country outside of the city of New York of one per cent. The best ratio of gain was in the South, where the cotton crop the previous year—two years, in fact—was favored by its high price.

Looking across the Canadian line, the story is far better than for the United States. Bank clearings there were not less than nine per cent in excess of the previous year in any month—as much as 24.7 per cent in November and 17.8 per cent for the year 1911 considered as a unit. The reason for this is in plain view. Canada was favored by a remarkable real-estate and railroad development, immigrants from the United States and other countries arriving by hundreds of thousands, occupying and developing farms and swelling the products of the country, while the railroads were being extended without interruption. The crops there were likewise in excess of those of the previous year, while in parts of the United States there was a deficiency of crops.

Cotton Crop Figures

Reference must be made to the dimensions of the 1911 cotton crop, which confound all early estimates whether they portrayed honest convictions or the wish of men who naturally wanted a yield that would sustain the high prices that accompanied the small crops of the two previous years. It will be recalled that, when the new season was young, estimates ran about twelve million to thirteen million bales, and it was solemnly resolved that cotton should sell at fourteen cents a pound, and then at fifteen, which it never did thereafter and probably will not again until crop shortage shall once more furnish the occasion. On the contrary, cotton fell to less than nine cents a pound for future delivery and to a small fraction over that for immediate delivery; and the reasons for this decline were manifest all the autumn as statistics of ginning came to public notice and the Government estimates of yield were made known. Ginning statistics by the Census Bureau, as of January 1, 1912, showed 14,332,756 bales already ginned against 11,084,515 bales on the same date in 1911 and 9,647,327 bales on January 1, 1910. In each of the eight ginning periods, beginning with September first and ending with the first day of this year, there was reported a larger amount ginned than on the corresponding date of the two previous years.

It is confidently declared that the Government's last estimate of the cotton crop of 1911—to wit, 14,885,000 bales of five hundred pounds each—will be shown to fall three hundred thousand to five hundred thousand bales short of the final yield. It is calculated that less than two-thirds of the crop had gone to market in early January, and that 5,500,000 bales of spinnable cotton remained on Southern plantations yet to be marketed. The South no doubt keenly felt the fall in the price of cotton as evidenced in other ways and in the declining percentage of increase in bank clearings as the year 1911 drew to a close. Those increases were 16.6 per cent in September compared with the previous year, 7.3 per cent in October, 6.1 per cent in November and 1.9 per cent in December; while for twelve months there was an increase of 8.7 per cent, as quoted above. It is quite possible that clearings have been somewhat

FLOOR—S-W Floor-lac light oak

There is a complete plan for decorating every room in your house, shown in actual colors and worked out in every detail, in our free "Style Portfolio of Home Decoration" (both exterior and interior).

SEND FOR THIS PORTFOLIO. Look over the color plates, select the one you like best for the room you have in mind, turn it over to your own painter, and he can give you just the results shown by following the specifications. These decorative plans are practical—any good painter can carry them out. This portfolio will acquaint you with the modern method of interior decoration—a method that is at once artistic, durable and sanitary. This portfolio is sent free of charge.

IF, AFTER RECEIVING THE PORTFOLIO, you do not find anything exactly adapted to your needs, send us a description of the room, or rooms, you wish to decorate, and our decorative department will work out some suggestions for your individual use. The illustrations shown here in miniature are two of the twenty color plates included in the portfolio. Send for it today.

If You Want to Beat the Crowd

you must save yourself from unnecessary shock.

Your nerves and your muscles, your brain and your whole physical being are kept from wasteful jolts and jars when you wear

O'Sullivan's HEELS OF New Live Rubber.

They are worn by hustlers everywhere, because a hustler must save his strength for the big job—not waste it pounding hard heels on hard pavements.

Say "O'Sullivan's" to your shoemaker—then get out and walk on New Live Rubber. The ease and pleasure of your progress will delight you. You will be able to do twice as much work, with less effort.

At your shoemaker's 50c attached

unfavorably affected in the South by the holding back from market of a large amount of cotton; for it is obviously essential that a proportionate part of a large crop shall be sold at a reduced price to equal the gross receipts of a smaller crop sold at a high price.

However, there is compensation in the abundance and cheapness of cotton, since it has stimulated the cotton manufacturing industry North and South and in foreign countries deriving their raw material in part from this country. The coarse cotton industry of the South and the fine manufactures of New England received a decided impetus from the opportunity to obtain raw cotton at a relatively low price. There is chance still for large improvement in the mill-sections of the United States, a chance to which the labor troubles in the large manufacturing centers of Great Britain may add. Offsetting this factor is the practical closing of China by internal revolution to the cotton trade of the world. Still, the fact of cheap cotton will remain as a foundation for activity in the textile industry at least until another cotton crop shall become operative as a price factor.

The Iron and Steel Trade

The status of the iron and steel industry continues encouraging, and the greatest of the manufacturing concerns in that line of business can show the longest list of unfilled tonnage upon its books that has been there since the end of March, 1910, when the orders were 5,402,514 tons, compared with 5,084,761 tons on the thirty-first of December, 1911. There was an increase of 942,000 tons in December and of 1,473,000 tons since the close of September. The increase in twelve months is about two million four hundred thousand tons—averaged, say, at the rate of about two hundred thousand tons a month. It chanced that the least tonnage on the books was at the close of 1910—2,674,757 tons. The contrast between the growth of unfilled tonnage from an average of two hundred thousand tons monthly for the year to 942,000 tons in December is indeed encouraging. The increase has been fairly steady, with slight lapses in April, May, June, September and October. Two factors appear to have accentuated the favorable trend in orders—a somewhat radical cut in prices of products and the exhaustion of supplies of rails and equipment; and perhaps there should be added an amount of building activity at Chicago, on the Pacific Coast and at some other points. The new orders received suggest that the plant of the greatest of the steel corporations could be kept busy at something like full capacity for a brief time, and at, say, eighty-five per cent of capacity for several months.

Whether the railroads will enter upon a period of active construction is not known absolutely; but, judging from remarks of prominent men in the management of the properties, there is no present intention of pursuing that policy. Reason enough for this is seen in the indisposition to borrow largely for construction or other purposes at the commencement of the new year. There was plenty of borrowing by railroad and industrial and public-utility corporations in the year lately passed. An estimate puts the total at almost two billion dollars—to be more exact, $1,946,028,450 compared with $1,195,000,000 the previous year. Of the total for 1911, railroads stand charged with $479,350,000 in bonds and $255,699,000 in general and equipment notes compared with $399,112,000 in bonds and $179,201,000 in notes for 1910. The amount classed as industrial bonds was $200,333,000 bonds compared with $129,858,000; and there were $268,903,000 called public-utility bonds against $176,844,000 in 1910. And, again, there was $123,960,000 put down as industrial and public-utility notes compared with $75,150,000; and lastly there was $556,374,850 under the title of industrial and public-utility stock against $143,377,000 during 1910.

The exceptional increase was in industrial and public-utility corporation borrowing. The railroads did their heaviest borrowing in the earlier months of 1911, while the corporations classed as industrial and public-service were borrowing about equally the season through. Toward the end of the year the latter corporations showed a trend toward bonds instead of stock in their financing. The corporations engaged in industry appear to have had quite as prosperous a year in 1911 as did the railroads. To what extent the securities issued in 1911 have found lodgment with investors it is impossible to state; but the impression is that they have been largely placed and that there was a far better demand for investments last year than was thought to exist at the time.

Another industry in which improvement was shown is the copper industry, though it cannot be said absolutely that the improvement is in the statistical position of the metal. The stock of metal on hand in America at the beginning of 1912 was the least since the American Copper Producers' Association began issuing monthly reports—to wit, 89,454,695 pounds; showing a decrease of 22,330,695 pounds in a month, and some nine million pounds below the previous low point of 98,463,339 pounds, on February 1, 1910. The decrease in stock for the year 1911 was 32,575,500 pounds, or considerably less than the decrease from the maximum stock of the year—165,995,932 pounds on the first day of June. World stocks of copper have decreased quite as fast as domestic stocks. The copper industry abroad has, in truth, improved faster than in this country.

The uncertain element in the case of copper statistics is the credit that ought to be given to speculation. There is no doubt that speculators stimulated the buying sentiment if they did not actually inaugurate it, the purpose being to secure a profit on the advance, to stir consumers and to start a movement in the copper-mining share market. Whatever the cause or the motive, the result was pronounced in these several directions. December exports of copper were the largest for a month during the year, amounting to 79,238,716 pounds. In December, 1910, however, they were materially larger, or 88,104,075 pounds. Domestic deliveries were not the largest for twelve months in December, though total deliveries, including exports—145,227,190 pounds—were the record for the year. Production for the year, including imports, was 1,431,938,338 pounds, while deliveries were 1,464,513,838 pounds. On commercial and speculative demand, copper advanced all of two and one-half cents a pound in the last weeks of the year.

A Look Into the Future

Business at large in the country is not at its best by considerable, though still tremendous in volume because the wants of consumers at home and abroad are so enormous. Exports are very large; credits are considerable and are earning good interest according to reports regarding the rates German borrowers have been willing to pay of late. It is again to be said that the chief complaint regarding business relates to profits. These are very irregular. Here and there a concern amounting to a practical monopoly, like Standard Oil, American Tobacco or the American Telephone Company, seems to be prospering about as usual; and the concerns exceptionally situated, like the Delaware, Lackawanna & Western Railroad, seem to have no trouble in earning prodigious amounts—forty per cent, more or less, on the capital stock. On the other hand, concerns that have been overweighted by capitalization and bad management in the past, and have continued to carry that legacy, have found it difficult to keep out of the hands of receivers. These need not be named in order to be identified. Thus is the situation checkered. There is satisfaction here and discontent there—and a general complaint of politics.

Money need merely be referred to. If it were in very large request it would either be scarce or a good many loans would be disturbed in trying to meet the demand. Since it is not in very large request, and since debtors are not pressed, and since no one seems to look for marked business revival and mercantile demand until politics and legislation are made clearer, nobody appears to think that money will give any bother to deserving borrowers. Loan rates are comparatively easy the country through. Collections are spotted—and so are business conditions, for that matter. The uneven crops gave rise to uneven general conditions as to locality, and the developments of another crop year are awaited with concern. Given good crops in 1912, given a satisfactory banking and currency law, and given a satisfactory outcome of the presidential election next autumn, there will be hope—though not positive assurance—of more active and more satisfactory trade conditions.

Crisco makes pastry more digestible

THE vegetable ingredients of which Crisco is made are assimilated more readily than are animal fats. These vegetable fats have actual nutritive value.

Women who have thought that their pastry could not be improved have used Crisco and found that they can make tenderer crust and with a uniformity impossible with lard or lard and butter.

Crisco pastry has a *flavor* as delicate as that given by butter.

Crisco has none of the disagreeable features so characteristic of compounds or mixtures of oils and fats. Crisco pastries have not the slightest suggestion of the offensive odor or flavor which accompanies the use of cottonseed oil or lard compounds.

Purchase a package of Crisco today. Use it for pies, for desserts, for hot biscuits and see how wholesome, delicate and dainty it makes your foods.

Packages 25c, 50c, and $1.00 except in the Far West.

On request, we shall mail a fully illustrated booklet, giving many other advantages of Crisco.
The Procter & Gamble Co., Dept. K, Cincinnati, O.

The Senator's Secretary

IS THERE any Democrat in the audience who has not had a boom for president started for him? If so let him step forward and call his name and we'll see to it at once!

The dearly beloved Democrats certainly have the bug! They think it is all over but the vote-counting; and every man who has had his name in the paper other than as a party to a foreclosure suit, who is more than thirty-five years old, and of good, merchantable character, has aspired, is aspiring or is getting ready to aspire. Booms are growing everywhere. There will be ten hundred and seventy-two delegates, or thereabout, in the Democratic National Convention, and from the looks of it at this writing there will be about ten hundred candidates. So, if it could be arranged that the odd seventy-two delegates might present their own claims for the office, and make it a candidate for each delegate, there would be a situation in Baltimore that would be about as logical as the present one.

The Democrats sniff the battle from afar, sniff the victory and, what is more sustaining, sniff the jobs from which they have been debarred since 1897. And with every sniff a new candidate develops. As it stands now, it will take about a week in Baltimore to present the names of all the candidates at present in the field, for there must be a speech for each candidate and a second, and no convention-rules committee ever was hard-hearted enough to put a time limit on nominating orators. That was well enough emphasized at Denver four years ago where, though it was a certainty that Mr. Bryan would be nominated as soon as the ballot was taken, the convention sat from eight o'clock in the evening until daybreak and heard the orators orotundly place him in nomination. If it hadn't been that Jim Faulkner and Eddie Riggs found a Swiss-cheese place near by a large number of rising young journalists would have died of exhaustion, notwithstanding the fact that, at 3:27 A. M., Ollie James had King Edward taking off his jeweled diadem and casting it at the peerless feet of the peerless leader, and at 4:19 Gus Thomas could see the dawn breaking for the Democracy—which was no joeh, as it was breaking at exactly that moment, and a fine view of it was had from the Swiss-cheese place.

On the Democratic Altar

Which remarks are presented here because of several things—one being a news paragraph that the leading Democrats of Wilmington, Delaware, held a meeting the other day and took steps—"took steps"—a delightfully indefinite manner of procedure—to secure the nomination of that noble countenance, Alton B. Parker. Mr. Parker, it will be remembered by some, was the gentleman who was defeated unanimously in 1904, and who, since that time, has delivered many masterly after-dinner addresses on The Duty of the Democracy in the Present Crisis. It may be that Mr. Parker knows what the duty of the Democracy is at present, but it is a sure thing the Democracy neither knew nor did its duty on the sad occasion when Mr. Parker himself took a few steps toward the White House—but only a few!

Also, we learn that Senator John W. Kern is being urged for the place. The Senator is coy and does not say his boomers nay; but he should beware. After a lifetime of trying to get on an official payroll he is now reposing in the Senate. Divorced from that, even for the glittering prize of a nomination for the presidency, he might never get back again. Another is Mayor William J. Gaynor, of New York; and still another is Senator O'Gorman, of New York. And they are coming in from all parts of the United States. Their name is legion—as we were taught to say in our youth. Any Democrat who is not mentioned for the presidency may well doubt his Democracy.

Still, there comes an occasional one who astonishes the country by withdrawing. Take the case of Senator Newlands, of Nevada, who issued a letter a time ago, in which he took himself out of the contest. To be sure, there were not many persons who knew the Senator was far enough in the contest to withdraw; but it seems he thought he was and he pulled out—at a considerable sacrifice too; for it was stated he had the promise of the delegates from Nevada, amounting to six votes and quite a start toward two-thirds of ten hundred and seventy-two. However, the Senator refused to let his name be considered further. He sacrificed himself on the altar of Democracy. He gave back to those six Nevada delegates their promise of support and told them to go whither they might. As for the Senator, he declared for Wilson. And there is this to be said: If the Senator really had those six votes he had six more than a good many men who are getting their names into the papers as possible candidates will have at the showdown.

Many Are Called

It is the simplest thing to start a boom for yourself or for a friend. All that is necessary is to hive half a dozen men in a room for a few minutes and then hand the reporters a political statement beginning like this: "At a meeting of prominent Democrats of this city, held last night, it was decided to take steps to promote the candidacy of William Q. Magoosh for president. Mr. Magoosh is the well-known ——" That is positively all that is needed. It is cheap, and if necessary can be kept up for several days by the simple expedient of hiring a few typewriters and writing letters to all parts of the country, soliciting support. Of course no support will be forthcoming, but the game can be carried on so long as the two-cent stamps hold out, and it is certain the papers will carry a paragraph now and then if the letters and the press flimsy are assiduously distributed.

The presidential situation on each side is getting into the opera-bouffe stage. Heaven only knows what will be the result on the people if the symptoms now apparent develop into the hysteria that, by all the rules, should be the outcome. We'll all be stark, staring mad by November. Nor is all the comedy on the Democratic side—not all. Take, for example, the case of Carroll Smalley Page, United States Senator from Vermont. This Senator is a Republican. It is his firm opinion that the only logical solution of the present difficulties of the Republican party is the selection of a good, conservative Eastern man who would be a rallying point round whom all factions can gather, and who would unite a disunited party and lead the forces of Republicanism on to a glorious victory. Pressed to name this man, Senator Page modestly but firmly mentions the name of Carroll Smalley Page. As the Senator sees it, there is nothing to it. He is the Moses to lead the perturbed Republicans out of the wilderness. He is the man to whom all can turn. Thus far he has the support of one United States senator—Carroll Smalley Page.

It would be ungenerous to leave Vermont in the lopsided condition of having a Republican candidate for president, and it must be said for John Barrett, chief of the Pan-American Union, that he is not an ungenerous man. Nobody can claim that about John. Hence, if the situation shall rise whereby Carroll Smalley Page shall be named by the Republicans, John is willing to march to the front for the Democracy and give them the equal advantage of a candidate from Vermont by taking the Democratic nomination. It cannot be claimed he is in any sense an active candidate, but he is as receptive as the Grand Cañon. John, you know, came from Vermont and Oregon—thus uniting the Orient and the Occident; and he is thoroughly bipartisan, having held office under both Republican and Democratic Administrations. At heart, though, John is Democratic—at heart and in view of the fact that there are fair prospects for Democratic success next fall. The real solution, I should say, would be for both parties to unite and name Page and Barrett for a joint ticket. It has a winning sound.

As foretold, the minute the Democratic leaders discovered their presidential situation had evolved into Woodrow Wilson against a large and variegated field, Wilson became the mark for the sharpshooters on all sides. There was a great howdy-do over the story that Wilson refused to let Colonel George Brinton McClellan Harvey support him any longer, and Marse Henry Watterson shed many bitter tears over it. So also did the old-line Democratic leaders, all of whom are supporting Harmon. This was held up to be a frightful case of ingratitude; and the spectacle of Jim Dahlman, Tom Taggart and a lot of other case-hardened politicians deploring ingratitude as the basest of political crimes was very affecting. A large number of bankers and trust magnates and other captains of finance were deeply touched also—melted to tears. Everybody cried!—that is, everybody who is against Wilson.

Meantime there are other rods in pickle for that eminent political schoolmaster. Though it is true that the Democrat who beats him will be the nominee of the Democracy for president next June, it is also true that the professor will have sore spots on him from head to heels before he gets through. They are after him with every known political weapon, and they will keep lambasting him up to the last moment. They may get him too. Whether they do or not, the scholarly governor of New Jersey will have many an unpleasant quarter of ar. hour before the bands begin on the unending rendition of Maryland, My Maryland, at Baltimore next June.

So far, oddly enough, nobody has proposed that sterling statesman, Senator Weldon Brinton Heyburn, of Idaho, for the Republican nomination. This is odd, for the Senator qualifies almost every day. He should be named and should run on this platform: The war is not over. Recently the Senator has deemed it necessary to break into the proceedings of the Senate each day as soon as the chaplain has concluded his prayer.

Behind Closed Doors

One day not long ago he was in particularly fine form. There had been a discussion in the Senate on the previous day concerning the debate of the arbitration treaties in open session. The rule has been to debate treaties in executive session, with closed doors and cleared galleries. The question of how these treaties should be debated was finally decided in favor of open debate, but the decision was arrived at in a discussion of the question with the doors closed.

On the following morning Senator Heyburn bobbed up with a copy of the Congressional Record in his hand. The Senator is a large and ponderous man, and speaks in a large and ponderous manner. He said:

"I find on page 1006 the heading, Session With Closed Doors; and then follow the proceedings in session with closed doors. I did not understand those proceedings were authorized to be published as a part of the Record."

"What is spread on the record?" asked Senator Lodge.

"The proceedings and discussions seem to be in the record. If they are to remain in the record there should be some authority for it, because there is no authority for it under any rule of the Senate."

Senator Heyburn is very strong on the rules of the Senate, and he spoke in a tone of evident reproof to Mr. Lodge.

"Where is it?" asked Mr. Lodge in a puzzled manner; and Heyburn read.

Whereupon Mr. Lodge showed Senator Heyburn that the only reference to the discussion with closed doors was the line, "The doors were thereupon closed and at the expiration of one hour and five minutes they were reopened"; and that not a word of the discussion behind closed doors was printed.

Then, with great dignity, Senator Heyburn said:

"My attention being called to it, I now understand it."

Can you beat that? I ask you: Can you beat it? Rising to berate the Senate for allowing the proceedings behind closed doors to be spread on the record, and prepared to deliver a most instructive admonition to the Senate as to how its affairs should be conducted, he found he didn't know what he was talking about, hadn't read the paragraphs he claimed offended, and was totally at sea. Thereupon he said: "My attention being called to it." His attention having been called to it!—but not until he had called the attention of others to himself! And some still claim the Senate is as powerful as it used to be!

"My, but these Beans are Good!"

Hungry boys and girls are always glad to have

SNIDER

PROCESS

PORK & BEANS

Right eating is of *first* importance in the making of intelligent, fully developed boys and girls—keen of mind, strong of body.

Judged by the chemical analysis alone, we should give beans the very highest place among foods. Beans, remember, are 84% nutriment. They contain protein, the strength-making food element that builds bone and muscle, in greater quantity than the best cuts of meat, also a large percentage of fat, besides a considerable amount of starch.

"Pound for pound, they would thus be more valuable than meat or our best cereals." Thus states "Uncle Sam," of beans, in one of his special bulletins on "The Nutritive Value of Foods."

Growing children should eat Snider's—the *right* kind of Pork & Beans—at least two or three times a week. They may even take the place of meat, at dinner, and they are the universal favorite for the after-school luncheon.

Snider's Tomato Catsup whets the appetite and aids digestion. Use it upon meats, hot or cold, on fish, oysters, and in gravies.

Snider's Chili Sauce is delicious on all meats and fish.

Ask your Grocer to send Snider's —the kind of superior quality.

"It's the Process"

Own a Town!

You Can Control the Typewriter Business of Your Own Town

New Local Agencies for The Oliver Typewriter in unoccupied territory are now ready for assignment.

Hundreds of men now have the opportunity of their lives—the chance to *own a town*.

The lure of the overcrowded cities has blinded thousands of young men to the greater opportunities that exist in small towns and villages.

The Oliver Typewriter Company has inaugurated a nation-wide Local Agency System which makes these *towns* loom large on the Opportunity Map.

The company will soon open up a *larger* number of *smaller* towns to Resident Agents, who will have Exclusive Control of all sales of new Oliver Typewriters in their respective territories.

This important move has been under consideration for months. The success of the 15,000 Local Agencies already established has conclusively proved the wonderful possibilities of the small town, as well as the large town and village field, as a market for Oliver Typewriters.

We have carefully tabulated the results shown by every Local Agency.

These sales sheets show to a *penny* the net profits of each Local Agent.

The sales possibilities of all communities, from cities down to villages, have thus been accurately figured out.

We find that even the *smallest town* is a very profitable field for a wide-awake Local Agent.

Hundreds of Local Agents in such towns make very handsome incomes.

"Every Typewriter in Town an OLIVER!"

At a surprisingly large number of points *every typewriter in the town is an Oliver.*

So far as the sale of typewriters is concerned the Oliver Local Agent OWNS THE TOWN.

Printype OLIVER Typewriter

The Standard Visible Writer

Think what it means to *control the sale* of a great business necessity like The Oliver Typewriter in a certain, definite territory.

The man who holds the Local Agency has *a business of his own*, which pays in direct proportion to the time and effort expended.

Spare Time or Full Time

We do not require Local Agents to give their exclusive services.

Many Oliver Local Agents who took up the work in connection with other business have more than *doubled their earning power.*

Some have disposed of other business interests so as to give all their time to the agency.

If you secure a Local Agency for The Oliver Typewriter, the company will give you every possible assistance.

We train you in actual *Salesmanship.* Where necessary, we even help you *close sales.* You get the *full profit* on every sale in your territory during the lifetime of your agency.

Exceptional ability wins promotion to more important positions.

Our "OPPORTUNITY BOOK" Free to Applicants

This book explains our Agency System and gives you a "bird's-eye view" of the remarkable field for energetic, ambitious men in towns and villages. Whether you are "footloose" or permanently engaged in business or professional work, it will be worth your while to investigate our Local Agency proposition. Applicants are requested to state their qualifications and present employment.

Selling experience is not so important as the ability and determination to *succeed.*

BELOWSTAIRS IN A HOTEL

(Continued from Page 11)

retain so that the chief's ideas shall pervade kitchen, pantries and dining room. The heads must somehow be sure of a permanent corps, and constantly their nerves are strained to the breaking point by the natural tendencies of those under them. It is not strange that a man with the gift of managing other men can always sell it to advantage.

It is an unwritten law that these chiefs in a hotel must never let any difficulty come to the notice of the guests, whether it be a death or a battle royal over a plate of salad. They must make their men pull together; they must be braced for the constant, sometimes unconscious, trial of strength between them and their subordinates; they must know their own work thoroughly and the work of their men. Human issues are always rising up for them, complicated by race problems. They must deal out justice, arbitrate when it is safe, be diplomatic if there is time and secure smoothness at any cost. The general manager and the maitre d'hôtel deserve the name of statesmen. Never would these smiling persons admit that friction could occur in a hotel. Whether they have charge in "back" or in "front"—as the two divisions of a hotel are technically called—these masters of men conceal from the outsider their processes.

Perhaps the two people who come most closely in touch with the human element belowstairs are the steward and the housekeeper. A typical steward is a man of wide experience in dealing with facts, circumstances and people. His eye is usually compelling, his mind is swift and sure, and his patience as ample as his salary, which sometimes reaches ten thousand dollars

Economy Their Watchword

"The first thing a man must have to hold down a job like this," said a big steward whose hard work had not reduced his bulk, "is vitality without limit. There are days when I work twenty-two hours out of the twenty-four. Last week I was four days without seeing my family. I got home after they were all in bed and left in the morning before they were up. There isn't a head of any department in a hotel that doesn't expect to work overtime. If they don't the hotel doesn't last, and neither do they. If you aren't on your job and something goes wrong, the general manager will ask why you weren't on the floor at the time.

"I guess the world thinks of a hotel steward as they do of the white-coated persons you see on shipboard. Why, the only difference between an average big business man and us is that we have ten details to look after to his one. The only difference between myself and a great continental buyer is that he knows his hats or model gowns, while I have to know all my staples and human nature besides. I'd get on pretty well if it weren't for the human nature.

"The great problem in my work and in the work of all of us is to please the patrons. That isn't because we are charging them a great deal—we don't, considering what we give them. There is about a servant and a half to every roomer in a big hotel. Did you ever stop to figure on the intricate machinery you set going when you order even such a simple thing as toast and coffee? You have twenty people working for you before you are through. You pay more than your toast and coffee cost, but you don't begin to pay for what the service costs. However, we have to please you and the five thousand other 'yous' who eat here in a day, because if we don't succeed we soon go to the wall in this day of competition.

"Every observant visitor in our kitchens wants to know why we throw away all that is left on the guests' plates—why we don't give it to the poor. Well, I've often wished the poor could have it—there ought to be something for them out of all the waste; but from our point of view it is cheaper to throw it away than to take the time of men to sort it over, to say nothing of the space they would occupy on the floor. Not that we throw everything away; anything that is left on the serving plates is passed on to the servants' dining room. Besides that we sell this refuse to a firm for two or three thousand dollars a year—and don't ask me what they do with it! One thing I know—they pick a lot of oyster forks and other small silver out of it, for the dish scraper cannot always be careful when the dish cleaner is yelling for plates. It's not all loss to us; and, indeed, it's cheaper, as I said, than time.

"Economy is the watchword; that's the main problem next to pleasing the guests—and, I tell you, we look after it! The little bits of potatoes left over from crimping and cutting fancy shapes for the patrons are used in the servants' hall. The minute the seasons begin to change and the business to lessen we cut off our men. Those we keep never have an idle minute. Our two shifts are arranged so that every man is busy every minute, even when it isn't what is technically called a rush hour. When the cooks are not busy at the ranges they are polishing their pots and pans.

"We have to guard against leakage too. We'd like to think every one is honest, but we can't. We have to have timekeepers or watchmen on the lookout to see that no one goes away with bulky pockets. Every department keeps its eyes open. Why, a certain big New York hotel lost ninety thousand dollars in one year because the waiters and checkers got together and beat the auditing department. We know what goes on in the other hotels, for when we fellows at the top have a minute of time we study them to see what we can learn. Every big hotel imitates the others in some respects. One hotel may have a house superintendent to look after the bellboys and the male help in front, though another may dispense with him. The shape of our white caps may be different, but our general policy is the same.

"Most outsiders think there must be a good deal of waste in the ordering, but there isn't. Of course with all the coming and going there must be a lot of chance and a lot of guessing; but the successful steward guesses right. I know pretty well how the seasons run and I am in conference with the chef every day, and he tells me just how much he has used the week or the day before. In this business the chef and the steward have to be as close as brothers, or closer; if they can't work together one of them has to resign, or else the hotel had better go out of business. And a chef has to be manager, cook, artist and business man in these days. Our man can tell to the fraction of a second how long it takes to cook anything, and how long it takes to eat it too. He can turn from giving a lesson in cooking to taking account of his stock; from that to jacking up an assistant with a swelled head; and from that to making out a bill-of-fare that is a triumph of combination and taste. At that he is not better than several others in this country who are worth the eight or ten thousand dollars they receive. Together he and I see to it that we are never overstocked and never run out of perishable goods—to say nothing of staples and dishes. He makes his report to me in the morning; by noon I have my lists made out and next morning everything is ready for work."

How Guests are Pampered

"Another of my problems is to get the best of everything. We stewards study the home market and go after the best as we see it. I have a place in Pennsylvania where I get my head lettuce; another place on the Eastern Shore of Maryland where a man puts in his time growing tomatoes for me. A woman in South Carolina sends me sugar-cured hams—the real thing. Even my apples I get from a special orchard. Now and then there comes a year when I go abroad to get some special French wine and to keep an eye on what is going on in the French hotels. Patrons may not send out a song of praise when things are right; but if they are judges their palates are pleased, and that helps the custom of the place. We are always on the alert to find out what a guest wants, and if it isn't on the map we put it on the map. Every hotel is like that, whether it serves *à la Française, à la Russe* or *à l'Américaine.* We make a heroic effort to minister to comfort and luxury and we are always bucking against some obstacle. It may be a hue and cry against size and gorgeousness and superfluous servants—just as if we'd spend a superfluous cent if our custom didn't demand it! Anyhow, it's dollars to dimes that something is always coming up to keep us on the jump. You guests are the spoiled darlings of a wonderful organization and you take it as a

God-given right. I'd rather be a steward than anything else; but I think I'll make a farmer of my son."

A large part of the success of the "front" of the hotel depends on the housekeeper.

"I began the way I suppose most girls do," said an expert housekeeper, a woman of gentle voice and mild eyes with a glint of fire in their depths. "I got tired of helping mother with the housework. When I was at school I took all she did for me for granted; but when I left school and began to slave for my little brothers and sisters I didn't like them to take all I did for granted. I felt abused, so I got a job in a factory. I was only sixteen, but in a week the boss had made me forewoman. I guess he noticed the other girls used to stop and listen when I spoke. I don't know why, for I never yelled the way some do. Well, then the man I was engaged to and I broke off and I didn't want to stay in the town, so I went to visit a friend in Fall River, whose aunt was housekeeper in a small hotel. That got me interested and I took a job as chambermaid under her to learn all she knew. Then I heard of a job in New York in one of the uptown hotels and I went there; but I got tired of the guests changing all the time, and there wasn't so much money in it as you'd think. This was a hotel where women came chiefly; and, you take my word for it, the first person on whom a woman begins to save her tips is the chambermaid. I got the experience and I went West and was housekeeper in a little hotel where I really learned my business."

A Housekeeper That Knew How

"You see you've got to have experience; you've got to have what the managers call a method. One break in it and you're lost. If when one of my maids goes to the laundry for clean towels she didn't turn over a corresponding number of soiled ones the whole system would get out of gear. I went from hotel to hotel, learning something in each place and being able to bluff the proprietor or manager better every time and make him think he had the best housekeeper in the country.

"You have to adapt yourself constantly to new conditions; you have to steer constantly between saving the girls under you and getting enough work out of them to suit the management. Some small hotels won't let the girls use the elevators; they have to climb five or six or seven stairways maybe four or five times a day. I never could see that it would injure a guest to ride in an elevator with a nice, clean girl. I'd rather ride with the girls than with some of the guests I've seen! Some of the hotels want a girl to take care of twenty-eight rooms where twenty-five are more than enough. Of course the bigger the hotel the less you can save the girls. Why, sometimes I've come home from supper after the theater and stepped past my scrubwomen with no more feeling than I have for the sewing machines in the linen room. They were all machines and I simply took a look to see that they were getting their floors perfectly clean and wondered if I hadn't better see about a new supply of scrubbing cloths. It's natural; the bigger an institution gets the less human are the relations between the man at the top and the men at the bottom. In a family hotel you have time to be good to your help and the guests both; in a big place you can think only of the guests. And we do think of them in every way—little subtle ways that take a lot of them in and that all of them have to pay for. Some of the best hotels, for example, make a practice of having the servants learn a guest's name. A chambermaid or a floor-waiter will not say 'Madam,' but 'Mrs. Brown.' It is the same with the waiter and omnibus driver and captain and head waiter. It makes the unsophisticated feel as if the whole hotel had been waiting for them to come; and even the guests who know it's only a part of the game like it and are even flattered by it; but after you've helped run a hotel for a while you don't wonder at anything in human nature."

The real marvel is that a few masters of men can impose control on hundreds of untutored or stupid or restless or undisciplined human beings; that they can teach deftness and mechanical skill, order and self-control under highly abnormal conditions. There is something fine about belowstairs—generals and soldiers both; if there were not, pampered abovestairs might be led to reflect on the nature of its rights and privileges.

Madam, will you try a package of Heinz Preserves at our risk?

WE KNOW our Fruit Preserves equal the finest product of the home kitchen—and we are willing to prove it to you at our risk.

All we ask you to do is to get a package of Heinz Preserves, Fruit Butters or Jellies from your grocer. And if you think you have ever eaten better preserves, return them to the grocer and he will refund your money.

We can make such a guarantee because Heinz Preserves are actually made the home way. We use a pound of sugar to a pound of fruit. We use as great care as the most exacting housewife; every berry is hand picked and thoroughly washed. Our kitchens are models of cleanliness—as any one of our 40,000 annual visitors will tell you—and our cooks are experts, with years of experience. And last, but not least, we have unequalled facilities for obtaining the best fruits—selected, fresh and luscious.

These are the reasons why Heinz Preserves, Fruit Butters and Jellies are unequalled in flavor, goodness and quality.

Heinz Preserves

Cherry, Damson Plum, Red Raspberry, Peach, Strawberry, Black Raspberry, Pineapple, Blackberry

Heinz Fruit Butters

MULLINS STEEL BOATS CAN'T SINK

Because they are built like Government Torpedo Boats, of tough, puncture-proof steel plates, pressed to rigid form and so securely joined together that a leak is impossible. The Mullins Steel Boats are guaranteed against puncture — leaking — waterlogging — warping — drying out — opening seams — and NEVER REQUIRE CALKING.

MOTORS: The Lozier-Victor 4-Cycle and Ferro 2-Cycle. Light — powerful — simple — can be operated by the beginner — start like automobile motors — one man control — never stall at any speed — exhaust silently under water.

We also manufacture a complete line of steel hunting and fishing boats — row boats — cedar canvas-covered canoes.

Our beautiful book, illustrated in colors, is free.

THE W. H. MULLINS CO., World's Largest Boat Builders, 120 Franklin St., Salem, Ohio

THE CALF-PATH

(Continued from Page 19)

the hitherto impassive face of the listener relaxed more and more, until a well-defined grin extended across its broad expanse and the plaited-leather watchguard became agitated by the mirthful heaving of the vest below.

"You leave my part of it to me and tend to your own part yourself, and I guess there won't be any slip-up to it," said Lucas joyfully when Rickey had finished. "Just between you and me, Rickey, there's some of my wife's relations that I like a whole lot better than I do this man Cruser; but he certainly ought to have that road after all the trouble and expense he's been put to to build it. What's right s right!"

"Them's my sentiments too," declared Rickey. "At the same time, you can expect to see me put up an interesting fight. We can't lay down and let folks walk all over us!"

"Sure not," agreed Lucas with an appreciative chuckle. "Do your darndest; but if you're that ugly and sot you and me ain't going to be on speaking terms!" And so they parted.

. . . . . .

The following morning Mr. VanOpdom, the mining engineer employed by the Top-Notch Company, reported to his chief at the breakfast table.

"Things aren't going along quite so well, I'm afraid," he said. "Curran is down here with Raymond and they've been hustling to some purpose already."

"I could have told you that," snapped Mr. Paul Jarley Cruser. "I saw that rascally grafter, Lucas, last night and he gave me the pleasing intelligence. When you've quite finished your breakfast I want you to get out and hustle to some purpose. It's a good thing to do if you only knew it."

VanOpdom stiffened. "If you are dissatisfied with me ——" he began.

"I am!" said Cruser, turning on him the full glare of his tortoise-shell-rimmed, gold-bridged eyeglasses. "I'm dissatisfied and disgusted with the whole infernal business. I don't say you're particularly to blame—if that's what you want; but I don't see what you've accomplished. On Monday I could have closed up the whole deal—dammit!—if I'd been willing to stand for plain highway robbery. Now I expect I'll have to. One thing"—Mr. Cruser removed his glasses and shook them at his lieutenant with a threatening roll of his head—"One thing, I'm going to have that charter!"

"I suppose you'll get it, then," remarked VanOpdom, sipping his coffee. "What does Lucas say?"

"Says he's willing to do the best he can for me on the terms he mentioned, but I can expect there will be more expense attached to it before it goes through. That depends on how active Raymond and Curran are. The ——" Mr. Cruser attached a number of lurid adjectives and nouns to the article and pushed his plate away.

VanOpdom looked a little disgusted and Mr. Cruser, perceiving this, shook his glasses at him again.

"I want you to keep track of these fellows," he observed. "If they talk to anybody find out who it is and what they talk about. Take this list; and if it's any of those men send me word—and keep your eyes and ears open. Mix in! Get busy!"

VanOpdom beckoned to a waiter. "Take my breakfast over there," he requested. Then to Cruser: "What you want is a combination of errand boy and private detective," he said. "I'm neither; and you have my resignation as engineer right now—to take effect at once. I've been contracting stomach trouble ever since you struck the Basin and I'm through. I guess I've told the committee all there is necessary to tell about the road. Good-day."

Without waiting for any reply Mr. VanOpdom rose and, carrying his napkin with him, walked over to the table he had indicated and proceeded to eat a hearty breakfast.

Mr. Cruser did not linger over his own meal. He was too near choking with anger and righteous resentment to take any chances with food. Here was a serpent that he had nourished in his bosom to the tune of two hundred and fifty a month—and it had turned and stung him! And for absolutely no reason! All he, Cruser, had asked for had been loyalty—an interest in furthering his interests—the service he had a right to count on—and he had received wanton insult and desertion! He left the dining room with all the dignity of his bulk and presence—and almost collided with his old guide, Rickey Raymond, in earnest conversation with one Juan Trujillo, member from Taos. Rickey smiled and nodded in an absent-minded way; and then, taking Trujillo by the arm, he led him a little apart.

Mr. Cruser made his way to the cigar stand and, after a contemptuous appraisement of the stock, selected a panatela, lit it, strolled to the door and looked gloomily out. The line of chairs on the unevenly flagged pavement was nearly all occupied; so Mr. Cruser continued to block the doorway. Presently he heard from the chair on his right:

"It was thisaway, Bob; I was in Juarez at the time and you can't tell me no different. His name was Bolton and he wasn't no friend of Ben's at all. He got into a difficulty with this yere Cavitt and he killed him; but Cavitt had drawed his gun, mine you. That didn't cut no grass. They took and threw him into jail and kep' him there—just calculated to keep him until he'd spent all his money and then take him out and shoot him. Well, Ben allowed he'd get him out; so he goes over to Fort Bliss and gets four or five of the musicians and a spare uniform ——"

"I reckon maybe that was the way of it," interrupted a deep and gentle voice. "But this White Crow Pass road incorporation bill, Al. What are you going to do about it?"

"Do?" said the historian. "I'll vote against it if you say so. Well, sir, Ben gets a *secretario* to forge an order ——"

Mr. Cruser craned his neck as well as he could, for it was not a neck formed for craning, and saw that the chair on the right was filled by another legislator and that his companion was Curran of the Lady Lou mine; whereupon he jammed his hat well down upon his forehead and fared forth in search of Pappy Lucas.

Mr. Lucas was not encouraging. He had just heard of the defection of Fernando Barca, of Rio Arriba County, upon whom he had counted; and he shook his massive head gravely when informed of the late occurrences at the hotel.

"It's the way I told you, Colonel," he said. "It's a-going to cost you money."

"How much?" asked Cruser.

Lucas told him and he hesitated a few moments.

"I'll pay it, by thunder!" he said. "You get the bill passed and I'll pay it."

"You've got the order wrong, Colonel," suggested the Power. "You pay it and I'll get the bill passed. There might be a little tagged on at that; but, if you want, any further sum I'll make conditional on the bill going through. How much it will be depends on how close we're run in the next two days. There's the Agua Dulce water matter and the Socorro county-seat grab to take time, and there's a fight on a land-grant confirmation before we get to you; but I'll try to get things shoved along lively. And if I succeed it won't cost you much extra—maybe nothing."

"I put myself confidently and unreservedly in your hands," said Cruser. "I trust to you entirely."

Nevertheless, Mr. Cruser thought it advisable to be, as far as possible, on the safe side; and, to this end, after certain preliminaries upon which Lucas insisted, he engaged the services of an acute and pleasant-mannered young clerk of the House to keep tab on Pappy Lucas and things in general. He also established confidential relations with the genial and general Arch Beach, a judge of probate and an avowed enemy to the Lucas methods. These gentlemen furnished the capitalist with much information that might have been valuable if its source and wellspring had not been the Machiavellian Pappy himself.

However, it quieted Mr. Cruser's mind and inspired him with such confidence that encountering Rickey the following afternoon, he returned that gentleman's greeting in grim fashion.

"I suppose you think that you are making Cain with me, Mr. Raymond," he said, "but let me tell you, we're going to have our road in spite of you."

"Is that so?" queried Rickey. "And what are we going to do with our road when we get it, P. J.?"

Digitized by Google

We'll sew you up in a sack so tight you 't make a wiggle," Cruser replied, red- ing at the other's air of amused con- pt. "You'll see what we'll do with bless you!"

Put that finger down!" commanded key sharply; and as Mr. Cruser obeyed h precipitation the young man laughed. you only had as much sand as you've bad temper you'd be a holy terror, P. he said, and turned and limped away, ring the Top-Notch magnate dazed.

nother day passed and the Agua Dulce er matter and the Socorro county-seat iness were disposed of. There remained y the land-grant tangle to be straightened , and meantime the act to incorporate mpany for the construction of a wagon- d from White Crow Pass to Garnet in had passed all the preliminary gradа- s, for all the strenuous efforts in oppo- on by Messrs. Raymond and Curran, ntly, imperceptibly and irresistibly it l moved along, brushing aside all obsta- s—a very glacier of an act—until nothing s before it but the vote of the House lf. Curran had appeared before the nmittee, urging limitations of the com- y's power to close any part of the road repairs and a stipulation of its immediate ning to public use; but even these con- sions were denied and the company was owed the space of twelve months to com- te what was already completed. A sorry took for the Lady Lou!

There was a partial gathering of the Lady u forces in Rickey Raymond's bedroom the night preceding the vote. Robert Curran occupied the solitary chair, ckey was stretched on the bed and half dozen other gentlemen were perched on rious articles of furniture or squatted out the room, which was hazy with to- cco smoke. The general sense of the meet- t was that the fight was lost.

"It won't be anything like a close vote," ujillo said. "It will be unanimous, with couple of dozen exceptions or so. Let's ake it unanimous, friends."

"I'm going to catch the early morning in to Lamy," Curran announced de- tedly. "I'm not going to attend my m funeral when I don't have to! You'd tter pack your grip, Rickey."

"I'm going to stay till the last dog's ng," replied Rickey. "I've got a hunch. d I'm surprised at any gentleman who s down his hand at this stage of the me." Here he winked at Trujillo, and rran looked up in time to catch him— d upon this the meeting adjourned.

Curran went to his room pulling both ds of his drooping mustache with one nd, as was his wont when especially oughtful; but he had decided to post- one his departure. At seven o'clock he s awakened by a lively tattoo performed the panels of his chamber door with a out walking stick and Rickey's voice in itation of a bugle reveille:

I can't get 'em up!—I can't get 'em up!—
I can't get 'em up in the mawnin'!"

"If you're round here when I do get up u'll be right sorry!" growled Curran, owling at the door. Nevertheless he se and, after a hurried toilet, joined his iend, whose gayety in the face of defeat ruck him as ill-timed and in strangely d taste. He was still brooding on this ought, unresponsive to Rickey's flow of eerful conversation, when they seated emselves in the crowded gallery of the ouse and the Speaker's gavel struck its teful blows.

"Cheer up!" whispered Rickey, encour- gingly; "the worst is yet to come!—and may be a long time a-coming."

"I wish I could look as happy as you do bout it," Curran muttered savagely; "but reckon this means more to me than it es to you."

Rickey took the reproach meekly.

"Try to look happy, anyway," he turned. "See who's watching you!"

It was Mr. Paul Jarley Cruser, immacu- te in a faultlessly tailored gray suit, ashing with diamonds and flushed with sured success—grinning with malice like ginger-muzzled demon as he turned his yeglasses on his defeated adversaries.

Rickey winked at him and Curran forced a really creditable smile, though the clerk was beginning to read the act which gave Top-Notch a monopoly of the White Crow Pass road.

A moment's pause and the interpreter rendered the Spanish version; that con- cluded, the sallow gentleman from Rio Arriba moved the passage of the act. A shifty-eyed gentleman from Bernalillo was a prompt second and there were no re- marks—only a shout or two of "Question!"

"Those in favor of the passage of the act will signify the same by saying Aye."

A roar of assent.

"Contrary, No."

A scattering fire of dissent, and the ayes had it and it was so enacted. Trujillo arose to demand a rollcall, but thought better of it and sat down. Cruser violated the proprieties by a short laugh that echoed through the chamber and then got up and began to make his way to the exit. Passing within a few feet of Curran and Raymond, he grinned again and permitted himself an undignified and derisive gesture. Curran started up; but Rickey's grip was on his arm—and it was a remarkably strong grip for a convalescent.

"Sit down, you long-legged border ruffian!" commanded the young man. "There's something a right smart better than homicide on tap." He nodded to Pap Lucas, who saluted gravely in return. The clerk was unfolding another document.

"Be it enacted by the Legislative As- sembly of the Territory of New Mexico: Section One—That Robert V. Curran, James Marshall Orr, Ricardo Raymond, and all other persons who are now or may hereafter be associated with them and their successors and assigns, are hereby constituted into a corporation ——"

"What does this mean?" gasped Curran.

"Hush, Bob!" said Rickey. "We're getting a little old toll road of our own!"

. . . . . .

It was an explanation that took Rickey some time.

"You leave the old packtrail where it takes the jog south at the broken ground east of Snag Tooth and follow straight on, tracking a wandering wall-eyed buckskin mare, same as I did about five years ago—and what do you suppose you'll come to? Three guesses. If you guess a thirty-foot straight up-and-down drop into a gully twenty foot across you won't be more than five foot out. Well, when you come to that you naturally turn back, unless you're an extra good jumper; but if you are some on the jump, and you land the most of your heft on the other side of the gulch and keep agoing, you'll hit a narrow draw that winds into the range so you can't see it till you ride up to it. That draw takes a straight shoot to the back of Joe Harper's claim on the ledge running into the Caneguilla; and from there it's a rough half mile to Garnet Basin. A hundred dollars' worth of lumber for a wagon bridge, gentlemen, and a week's pick- and-shovel work for four or five men, and we've got a road that's five miles long to the eight that it takes to corkscrew through White Crow Pass—and all level as the top of a billiard table. I found that out by starting from both ends. Most folks haven't lost no wall-eyed buckskin mares and most folks would sooner follow along a broke trail, no matter how crooked it is. They're like the crowd that done tagged along after a calf in some poetry I was reading the other day. First come a dog and then a buck sheep, with the flock after him; and finally everybody was awobbling after that doggone calf a hundred years after he had been shipped for beef."

Curran gulped.

"Rickey," he said, "I've got to say that I've had doubts about you the last day or two—you seemed so plumb indifferent. But why didn't you tell me, son?"

"I was afraid you'd get plumb indifferent too," explained Rickey. "Well, we've got our road and P. J. Cruser's got his. That's what I call a fair deal—only I know P. J. won't be satisfied when he hears about it! And now, gentlemen, I'll trouble you to clear out and let me pack my collar and tooth- brush; for I don't mind owning I'm getting anxious to see Mrs. Raymond once more."

That Flavor

In Quaker Oats is given by Nature to just the choicest grains.

You don't find it in common oatmeal.

We get it by picking the rich, plump grains—just the finely-flavored oats.

We get it by 62 siftings. There are only 10 pounds of Quaker Oats in a bushel.

Then our process retains the flavor.

That is the reason why Quaker Oats stands unique among oatmeals.

This Morning

Millions of people, half the world over, enjoyed this delicious oatmeal.

It was served on more tables than all other brands together.

So it is every morning.

Just because mothers believe it worth while to make oatmeal delightful.

And because they know, after years of comparison, that children like Quaker Oats best.

Quaker Oats

Is the utmost in oatmeal.

It is the cream of the oats, prepared in the ideal way.

Yet, despite the selection, the cost is only one-half cent per dish.

Do you ever, in your home, serve a lesser oatmeal?

Regular size package, 10c

Family size package, for smaller cities and country trade, 25c.

The prices noted do not apply in the extreme West or South.

The Wonder of The Pianola Piano

Written for *THE AEOLIAN COMPANY* by E. S. Moffat

WHAT MODERN invention that you enjoy compares with the Pianola Piano for sheer wonder? Today, we will say, you have neither piano—music, nor ability to play. Save for a natural appreciation of music, you are, musically, no different from the cave dweller of ten thousand years ago. Yet, tonight! After the day's work! You—who could not even hum a tune—can sit down at a Pianola Piano in the same house that yesterday was silent—and play anything you want to play! Frankly, every other consideration aside, doesn't this strike you as a perfectly wonderful thing?

THE WONDER OF YOUR REPERTOIRE

WHAT shall you play first? Airs from the musical comedy, first sung only last night? You can have them—or those of foreign successes, not yet heard in this country.

What next? The old airs you've known since childhood? You can play them, every one—from Silver Threads to Sweet Evalina and The Mocking Bird.

Then what? A venturesome excursion into wonderful Concert melodies, whose haunting fragments tantalize your ear? Right here, the Pianola Piano begins to lead you into Music's Wonderland.

Not one, but hundreds of exquisite conceptions ring out from under your hands—crisp, brilliant, rich with the precious surcharge of human feeling. Before you are half aware, you are enjoying your own masterly renditions of splendid creations that you once thought far beyond your reach.

Play them all. Play 'Faust' and 'Carmen' and 'William Tell.' Play 'The Moonlight Sonata'—the 'Ballade in A'—the 'Melodie in F.' Play Grieg and Moszkowski. Play Liszt. Play Chopin and Mendelssohn—Mozart and Beethoven. Play them boldly and strongly—exaltedly—for their divine harmonies will sweep you up from earthly things and bear you into Music's Secret Garden, with the first glimpse of its boundless reaches breaking on your sight.

And how you have changed! For the same timid step that took you beyond the Gates also swept aside the veil. You grow with your new power, and exult! You hear at last—and understand! You have been released from deafness. You have won a new language over night. You have added a cubit to your stature with your purse.

How wide is this thing—'Music'—that you have won? For you have won it, not in part, but in entirety. Wider than you can see. Deeper than you can feel. Farther stretching than your years will span.

For, look you! By this one admirable step you have gained a greater ability than the most prolific Composer known to Music or the greatest Interpreter ever born to translate it.

You have obtained absolute command over the archives of music.

There is nothing that you cannot play—no piece too intricate—no fingering too difficult.

Not ten pieces—and not a hundred. Not hundreds—but thousands. Not ten thousand—but nearly twice ten thousand. The music of two centuries!

You—the non-musician—have been enabled, by the Pianola Piano, to play all the good music ever written.

THE WONDER OF YOUR SKILL

THINK again of your untrained fingers. Is it possible that your unknowing touch can make notes to ripple like running water? Can those unskilled hands be thistle down? Can they be steel?

Feel the soft push of the air against the keys as you pedal gently—already you sense its flexibility. Pedal faster—a loud note is coming—strike it hard. Build up a crescendo—louder—and louder—and louder! Strike a crashing chord!

And—while its splendid echoes ring—ease hand and pedal, till the next note falls as softly as a breath.

The Melody is next. It ought to sing—to soar above the accompaniment like the meadow lark safe above the storm. Here the Themodist chooses the theme notes for you, out of bass or treble, and gives them the delicate emphasis of the human touch. Here, too, the Graduated Accompaniment saves your playing from monotony—and the Sustaining Pedal Device makes the wonderful vibrations hang in air.

How many wonders so far? Four—and all of them your own accomplishment. For entirely by yourself you have struck the right note—sustained it with the pedal—raised it above the accompaniment—and subdued the chords around it. Unskilled you may have been, but no one can say it now for you have suddenly gained the touch of a Master Pianist—sensitive, delicate and unerring.

And his mind—what of that? Can you have his knowledge of expression—his keen intel gence—his welling sympathy?

Waving from side to side on the Music roll the Pianola Piano is a line—the marvelo Metrostyle line-of-interpretation—the supren wonder of music. Follow it with your temp pointer and you will accomplish Music's olde impossibility—the transference of another knowledge into your own mind. For, while th Works of a Composer live after him, the expre sion with which he played them passes awa forever with the man.

This expression you will reproduce! Correctl delicately. No nuance too faint, no change tempo too swift, no enchanting "swing" to elusive. You will know how long to hold yo notes, how fast to make your runs, how slowl to approach a rest. And you will have the grea est minds in the world of music to teach yo What else remains?

With this supreme acquisition, you who wer until today unskilled as well as unlearned wi have all that music can give you—all give through the Pianola Piano—knowledge—repe toire and skill.

IMPORTANT TO THE MUSIC LOVER

IT is to the public's advantage to know that th genuine Pianola Piano is made only by th Aeolian Company. In buying any of the othe instruments which the Pianola Piano's succes has brought upon the market, the purchas foregoes important advantages like the Metr style, Themodist, Graduated Accompanimen Sustaining Pedal Device, etc., which are esse tial to an artistic performance and contribut vitally to the pleasure of playing the Pianol Piano. The preference of the musical world, the educational world and of the great majorit of the music-loving public has given to th Pianola Piano a standing not shared even in slig degree by any other Player-piano whatsoever.

There are but five Pianola Pianos, namely the Steinway, Weber, Steck, Wheelock an Stuyvesant Pianola Pianos. Their prices rang from $550 for the Stuyvesan Upright Pianola Piano, up t $2000 for the superb Steinwa Grand Pianola Piano.

These instruments are pur chasable on very low monthl payments when desired, an liberal allowance is made o instruments taken in exchang

The Aeolian Company ar the largest manufacturers o musical instruments in th World. They have agencie in all principal cities an maintain their own Branche in Chicago, St. Louis, Cin cinnati, Indianapolis, Dayto Fort Wayne in this country Also the Aeolian Compan maintains direct foreig Branches in the cities o London, Paris, Berlin, Madri and in Sydney, Melbourn and Adelaide, Australia.

Full information is con tained in Catalog A, whic is obtainable on request fro The Aeolian Co., 362 Fif Avenue, New York.

out the showgirls for their big Some of them are pretty certain inners—new faces are popular w York audience that is used to and there is always a market for press agent will later proudly dainty society recruits to lyric drama. These beginners are either overly anxious or else they are awkward and self-conscious beyond words, and at the call of the stage manager they come a-running, falling over themselves and each other; and on their faces are expressions of desperate earnestness, they being greatly bewildered by the conditions with which their veteran sister showgirls are familiar.

"Smile!" yells the stage manager at them. "Don't forget the old property smile! Smile like you would if you were seeing me hung. The audience is paying good money to see you smile. Smile if it kills you!"

They look toward him, stretching their dismayed faces into the affected simper which, pointed up and edged with grease paint, will look from the front almost like a real smile. Viewed close up it is a ghastly imitation, but it seems to satisfy him. He turns and signals to an accompanist, who can play any air on the piano, roll and smoke cigarettes, eat a sandwich, trim his fingernails and carry on a conversation with a friend—all at the same time.

"Hey, Vince; give me that entrance number once more. Come down stage, ladies."

They come halfway down and pause hesitatingly.

"Not way up there," he entreats them. "Don't stay up yonder in Sullivan County all winter. The old folks at home are expecting you. Come on down inside the city limits."

Thus encouraged, they come with a rush which almost carries the stage manager backward over the footlights.

"That'll do! That'll do!" he orders. "Stay inside the orchestra seats if you can. Don't go clear out on the sidewalk—you might be mistaken for ticket speculators. Now go back and try that again."

Patience Incarnate

Then he comes over and leans wearily against a wall. "They call them society girls!" he states in a bitter whisper. "What society? Whose society? Give me little Rachel Goldstein, from Second Avenue, or Maggie McCarthy, from Number Steen Hundred and Steen Dumpty-Dump Street, rear flat, two flights up, ring Finnegan's bell, and in three weeks I'll have her sweeping across the stage so you'd think she had been raised a pet by one of the first families. But these society dames!—gosh! They can't even keep out of the way of their own feet." I am able to quote him literally, so to speak, because these remarks were made in my hearing at a rehearsal recently. The stage manager, however, didn't let the young women hear his vain laments. He merely turned round and started in all over again, drilling them until they had the right thing—and then, if I remember correctly, he decided at the last moment he didn't like the idea anyhow, and killed the whole number and thought up a brand-new one on the spot. All along, though, he kept his temper and used decent language. The old style of stage manager, who cursed everybody in sight, has gone out of fashion here of late; and this man belonged to a newer, decenter school. And as for patience!—Well, when it came to being Patience on a Monument, he had the original holder of the title pushed off her pedestal and backed clear out of the cemetery.

Presently a demand rose for a few new lines. A scene which had been laboriously learned during long weeks was cut out and there was need of some connecting dialogue to link the remaining fragments together. The stage manager beckoned to the nearest author.

"Hey, Louie," he yelled; "write me about six or eight lines, will you, to make this thing hang together?"

Right there an amateur musical comedy librettist would have gone soaring; but Louie was an old bird. He yanked a block of paper out of one pocket, a pencil out of another and made a writing desk out of his right knee. In two minutes the job was done—and the dreadful night's work went on. It probably wasn't literature, but it surely was art!

One time I sat through part of the dress rehearsal of a big, pretentious musical show. It was four o'clock in the morning then, and the company had been rehearsing since noon the day before and would keep right on rehearsing until broad daylight.

The Abbott-Detroit Fore-Door Limousine

A Veritable Drawing Room on Wheels

EXCLUSIVE—roomy—warm, sheltered from the wind and weather, the Abbott-Detroit Fore-Door Limousine is as snug and comfortable as your living room at home. It is a place where you can enjoy yourself, entertain your friends, discuss social or business topics with the utmost privacy.

It enables you to save time, protects your health and that of your family; in fact it has now become a social necessity in every private establishment.

Unlike many limousines, the Abbott-Detroit possesses a luxuriousness and roominess which is a surprise to everyone who enters its interior.

The body is very well made and exceptionally well finished.

It has plenty of head room, deep, yielding upholstery, and it does not rumble like many limousines which are improperly designed and fitted.

The best imported broadcloth, hand buffed leather, laces and curtains are used, and choice may be had from a generous selection of colors and furnishings.

The equipment includes 2 electric headlights, 2 pillar lamps, a tail lamp, 3 dome lights for interior, Auristophone, Toilet set, flower vase, spare storage battery, 36" x 4" tires on front, 37" x 4½" rear, nickel plated trimmings, horn, full set of tools.

CALIFORNIA HOMES

Leads the World in Building

This bungalow of 7 rooms cost but $2700 to build.

Why build on the old fashioned cigar box plan when for the same money you can build a house that has style and comfort and is suited to any climate?

50c BIG SPECIAL OFFER

100 Pages. 220 Illustrations.

Our new 1912 improved book—"**Practical Bungalows**" now ready for delivery. Shows 75 attractive homes, exterior and interior views. Valuable hints on home building. Elevations and floor plans, costs, descriptions, etc. Beautiful 6-colored cover. We have built over 2000 homes. We can help you solve that building problem—get our ideas. Complete architect's blue print plans for $5.00. Send 50c., coin or stamps, for this big book postpaid TODAY.

Los Angeles Investment Company

Largest Cooperative Building Company in the World

333 A So. Hill St. Los Angeles, California

The owner of the show—one of the biggest men in the business—sat in a front seat of the orchestra, with his secretary alongside him taking notes. Within the next few hours—for the opening performance was scheduled for that coming evening—he stood to make or lose heavily on an investment of perhaps forty thousand dollars. Disasters, big and little, had been piling up round him in mountains. By rights his hair should have turned snow-white in a single night, but he seemed quite calm and collected. Behind him stretched the empty, echoing, half-lit cavern of a theater. All the seats were covered over with white cloths, so that from the stage the chair-backs suggested rows of graves in a soldiers' cemetery after a snowstorm. 'Twas, indeed, a cheerful sight! In one of the boxes six little dancing girls were sound asleep. Their costumes were duplicates—on a smaller scale—of the Weary Willie outfit of the principal comedian, with tomato-can hats and all that; they were made up to look as much as possible like small editions of him. They were huddled together like tired kittens in a basket. The light from the wings shone down full upon their small, wearied faces, which were painted grotesquely with wide, exaggerated mouths and red noses.

A group of larger girls, dressed in green velvet gowns, came on for a dance. For the first time, then, the owner realized that these gowns jarred with the stage setting to an absolutely painful degree. He roused himself and called for the costume designer, who in this instance chanced to be a man-member of his staff.

"Billy," he said, "what possessed you to think out a color scheme like that? These gowns look absolutely poisonous against that background."

The designer, worn to a frazzle like everybody else, only waggled his aching head hopelessly.

"All right," said the owner; "cut the number out—this show is going to be about nine hours too long as it is."

"What'll I do with the costumes?" queried the designer plaintively.

"What do I care?" answered back the harassed owner. "Wear 'em yourself! Give 'em to the poor! But chuck the whole number out—it's no good anyhow."

And chuck it out they did, then and there, and bridged over the gap in some makeshift fashion and went ahead—incidentally chucking out an outlay of perhaps a thousand dollars for gowns and properties; but nobody batted an eyelash. In musical comedy productions things seem to be built up laboriously, an inch at a time, in order to be torn down in a minute. The writer heard of a case lately where, almost at the last minute, several hundred dollars' worth of specially made high russet leather boots for the choristers were thrown away without ever having been worn, and new ones were ordered to take their place—the wardrobe mistress having suddenly remembered that they were laced boots, whereas the fashionable feminine boot of the moment was a button boot; and she knew that every woman in the audience would take note of this crime against fashion and probably dislike the piece on that account. In the mounting of every big show there are about half a million of such details to be remembered—and somebody has to remember them.

Hoodooed by Success

This particular four A. M. rehearsal went on and on, while milk wagons clattered through the empty streets outside and dawn began to redden the sky over the East River gastanks. The prima donna came forth to sing her big solo. Above her and behind her a gang of carpenters and riggers were working like mad, putting the last touches upon a set of scenery that had come from the scene-painter's lofts only the afternoon before and which was still sticky with fresh paint. Certainly it was not done by intent, but every time she opened her mouth to reach for her best chest note one of the workmen would let something fall or turn something over. She tried three times to get under way. The third time a sleepy rigger dropped a heavy hammer and, in trying to catch it, fell off a ladder and lit on a pile of tin breastplates and helmets with a crash that sounded like a switch-engine hitting a junk wagon and knocking it through the front window of a dairy lunch.

The prima donna's nerves snapped and she burst into loud lamentations; but even in this extremity she didn't forget [illegible] obligations to her profession—she [illegible] over as she cried, so that her tears, [illegible] ing downward through her [illegible] wouldn't stain the front of her white [illegible] frock. And thus she stood and sobb[illegible] from the very bottom of her anguish[illegible] heart, which was a good distance to [illegible] from, seeing she was a quite large prima donna, even as prima donnas run, and [illegible] as to weight.

The little broilers, however, with [illegible] Happy Hooligan faces, slept right [illegible] through it all—slept through that explo[illegible] and half a dozen other violent erupti[illegible] which followed it. Everything appeare[illegible] was going to eternal smash, and yet [illegible] night, at eight-fifteen, when the curt[illegible] went up on a gorgeous first act, fifty [illegible] ingly fresh and confident faces [illegible] across the footlights at the audience; [illegible] next day the critics all agreed that it w[illegible] smooth and entirely finished performa[illegible] All of which goes to show that, a[illegible] matter of theatrical propositions, you [illegible] can tell.

Along Broadway they tell of one [illegible] ducer who, like most men of his trade [illegible] acutely superstitious. He was putting [illegible] a musical show and for the first time [illegible] his experience the rehearsals ran al[illegible] smoothly from the very beginning. [illegible] stead of being cheered by this, the [illegible] ducer got so low in his mind that [illegible] friends and associates began referring [illegible] him behind his back, of course, as [illegible] human Dismal Swamp.

However, at the last rehearsal the w[illegible] thing blew up. Principals forgot [illegible] lines and mixed their cues. Chorus [illegible] were guilty of frightful stupidities, [illegible] piling on top of the other. Costumes [illegible] fit and couldn't be made to fit; steps [illegible] didn't match and wigs wouldn't go [illegible] else wouldn't stay on. A courier ran [illegible] the owner with these and other distress[illegible] tidings.

"The ingénue has quit again; [illegible] orchestra has gone on a strike because [illegible] there's a scab playing the slide trom[illegible] without a union card; the comedian [illegible] downstairs getting soused to the [illegible] the chorus is fainting away in relays; [illegible] scenery won't work; the properties [illegible] wrong, and the prima donna is up [illegible] dressing room, going out of one of [illegible] hysterics into another."

Little Helen's Great Pie Jose

"Fine and dandy!" said the [illegible] "You go back and tell the soubrette [illegible] quit resigning or I'll accept her resigna[illegible] and break her young heart. Let [illegible] orchestra go—all this show needs is a [illegible] ist and a trap drummer, and I can play [illegible] drum myself! Throw water on the [illegible] donna; and if there's no water handy [illegible] scenery on her—or vitriol. And [illegible] worry about the comedian—I'll go [illegible] and let him buy me a few drinks, and [illegible] stop rather than spend any money on [illegible] body else. I was afraid for a while [illegible] this show was a bloomer, but now I [illegible] I've got a hit."

And, as it turned out, he was right [illegible] seems to take this eleventh-hour trying [illegible] properly launch a show down the [illegible] There has been an unusually large [illegible] musical shows turned out in New York [illegible] season; and nearly all of them, it [illegible] predict, passed at least once through [illegible] eleventh-hour period. There are [illegible] points of resemblance about them. [illegible] of them as do not depend upon a [illegible] tune running through the piece have [illegible] back upon the turkey trot or the [illegible] gallop or the rabbit hop or the bunny [illegible] or some one or other of those dancing [illegible] chorean fantasies that have been given, [illegible] perhaps unjustly, to San Francisco's [illegible] bary Coast dance-halls. And the [illegible] of acting in any one of them has been [illegible] by a child actress named Helen [illegible] playing in Lew Fields' show, The [illegible] Homes. She is not the wizened, [illegible] prematurely wrinkled little old woman [illegible] nearly every child actress is. She's [illegible] round-eyed, round-faced, round-[illegible] round-tummied kiddie, who is [illegible] years old going on seven; and she [illegible] much to do except in one scene, [illegible] successfully wheedles a pie away [illegible] boy and eats it.

The way little Helen Hayes eats [illegible] pie is worth the price of admission [illegible] the one best thing musical [illegible] produced this winter. Sarah Bernhardt [illegible] couldn't stand up before an audience [illegible] eat a pie any better than that!

LUCKY STRIKE
TOBACCO

Makes The Pipe Smoker Welcome

THE fragrant, cheery *quality*-aroma of Lucky Strike Tobacco is a friendly introduction for the pipe-user to *any* company of smokers.

And Lucky Strike is as *good* as it *smells*. Mild, pure, cold, biteless—*satisfying*.

Whenever You See a Pipe You'll Think of LUCKY STRIKE

Lucky Strike Roll Cut, though only a short time on the market, promises to rival in sale the *enormously* popular Lucky Strike Sliced Plug—its *twin* in quality and flavor.

Lucky Strike Roll Cut is *all ready for your pipe*—that is the only difference.

Lucky Strike Tobacco retains its aroma in any climate burns slowly—holds fire without clogging your pipe.

Made of only selected Burley—matured for years—its flavor developed by the famous Patterson Process—a secret with this company—discovered over half a century ago by Dr. R. A. Patterson, the founder of this business.

That is why there is a difference—a special satisfaction—an indescribable smoking quality in Patterson tobaccos you will not find in any other.

Lucky Strike in convenient pocketboxes—at all dealers.

The Tobacco Trade

In making every endeavor to fill all orders, but the great growth of Tuxedo (the granulated Burley) is taxing our Tuxedo plants to the utmost. We have never durst like Tuxedo, because its sales have grown only on sheer merit that we have always had in meeting the demand. So much of it is sold that we must have orders in advance.

Can't Slip From Shoulders

THE RECORDING ANGEL

(Continued from Page 5)

path his feet trod. He was in love and knew it. It is a sensation that a man recognizes and admits, and that a woman fears and denies. He was murmuring "damns" and other profane terms softly to himself, as a monk recites his prayers. He knew that a disaster had overtaken him, that from this moment his life, his aims in it, would be controlled, not by his will but by his passion.

It is the same predicament that a wolf experiences when, while loafing carelessly near a sheepfold, he suddenly feels his hind-leg snatched in a trap. If he is wary, however, he keeps silent. He does not howl till the owner of the sheep comes and kills him. This was why the man whispered his "damns." He still hoped to escape, as every man does when he first falls in love.

Night had fallen when he again entered the square and made his way to Bilfire's saloon, leaned across the bar and held up three fingers to a white-aproned, poppy-faced youth behind it. The dog was anxious to introduce him to the four other men present, all friends of the hound; and he intimated the fact with his friendly tail, as he wagged himself from one to the other in the hound's deprecating fashion. But the stranger refused to know that any one else was present. He drank in a sort of thundering silence. He set down the glass with a scowl, obviously designed to be his comment upon Ruckersville liquor. As a matter of fact, it was very good; but he was in pain, the peculiar pain of knowing the nature of love and yet of having fallen into it. Involuntarily love phrases belonging to innocency and youth leaped up in his memory, like maidens long imprisoned— suddenly escaping with candles in their hands—running about in his inner darkness.

He had loved so often he was tired of loving. Now here it was again, the old unrest. Therefore he was furious, and not being of a nature to kick the adoring dog he scowled at the whisky and turned his very impressive back upon young Colonel Fanning-Rucker, the rising attorney of Ruckersville, who stood listlessly near scanning the Ruckersville Star, and upon old Mr. Clark Story—the Storys had the misfortune of not being even distantly related to the Ruckers—who, being very poor, had the miraculous gift of being able to figure out upon his cuff how he could and might become immensely rich at any time, if cobalt or copper or, to be more hopeful, gold should be discovered on his plantation. This lay in red undulating hills upon the edge of the town. He always carried a pocketful of lying, ill-digested stones whose ugly surfaces hinted of sparkling interiors.

If Mr. Story had had only one drink he was willing to calculate his fortune tediously upon the copper basis, but if he had had as many as three he would be content with nothing less than a two-foot vein of pure gold, which he believed lay halfway down his innocent old well-shaft. But, as I have written, this was June, his cotton was ankle deep in grass and his corn needed rain. He was discussing the future humbly upon the cobalt expectation in his cow pasture with Mr. Elbert White and Captain Alexander Rucker-Martin. The three were seated at a deal table in a retired corner of the saloon, with all of Mr. Story's specimens spread out before them, when the stranger, who is threatening to become the hero of this tale, entered and cast the gloom of his love affairs over the situation, although the victims, of course, did not know the nature or cause of this gloom. They took it as a personal affront—the outer darkness of an impudent stranger who had no right to cast them into it.

Mr. Story paused in his calculations, lifted his childish, rheumy blue eyes at the interruption, which was psychic rather than real, and began to comb his straggling gray beard with his fingers. He was offended. The broad negative back of the man at the bar seemed to deny every hope he had in the world. It was the back of reality turned upon the sweet old-whiskered face of romanticism. Colonel Fanning-Rucker lowered his newspaper so that he also contemplated the same offensive back.

After explaining to every one in the room that he had chosen a new master, the dog

"Now, will I make them as beautiful as they are practical," said O. H. L. Wernicke—the father of Sectional Bookcases—when he became president of The Macey Co.

Macey Book Cabinets

at down on one hip, braced himself with his orelegs, poked out his other hindleg, turned his body sideways and began to sniffle diligently in search of a flea. Not a word was spoken until the stranger straddled out.

"Who is he?" quavered old Mr. Story, indignantly gathering up his specimens and dropping them into the sagging pockets of his alpaca coat.

"Stchranger within our gates, Stchory, thast who he is," hiccoughed Elbert White in that mewing voice peculiar to inebriation.

"Looks like the cross between Satan and a Shanghai rooster to me," laughed Colonel Fanning-Rucker.

All this time Captain Rucker-Martin had been sitting braced against the wall with a drawn-dagger expression upon his little gray shell of a face, his eyes spitting fire as he batted the lids rapidly.

"He—he is an insult!" he exclaimed now in great excitement.

The captain had a fine treble voice and talked through his nose, but he was known to be a brave man in spite of it. This was all that could be said of him. He belonged to that great class of Southern men who were made and tempered too quickly in the red furnace of war, and finished up only for battle-line purposes. He had retired from business without entering it, owing to a gunshot wound received in the back, from which he suffered tortures. He was very sensitive, as was everybody else in Ruckersville, for that matter. But the difference was that the captain had once knocked a man down for saying in his presence that Robert Toombs was "no gentleman." This happened long ago, but upon the reputation accruing to him from the incident he had walked the streets of Ruckersville for nearly forty years, dragging first one wing and then the other, so to speak, and thrashing his gamecock spurs in them. He was so emaciated from his sufferings that his mustache and goatee seemed to bristle from his skeleton. And he would have died happy fighting any day. He had an amiable thirst for blood glory. This fate being denied him he refused to give up his ghost peacefully in bed, as the doctor predicted whenever he came down again with the old wound. What time he was not seeking a "difficulty" he spent in Bilfire's saloon, explaining how he came to be shot in the back instead of in front, where every gentleman is entitled to receive his bullets.

"I tell you, sirs, it was damnable! It was contrary to all the ethics of proper warfare! While we were taking the enemies' breastworks one of their blackguard regiments charged us from the rear, and I was shot down from behind."

At this point in the narrative he invariably appealed to Elbert White.

"You were there, White. You know how I came to have this wound, where no gentleman ought to be insulted with a wound."

"I wash, Captain! I wash right there," White would sob. "Wherever the red rim of battle blazed there you might have scheen Corporal White leadin' the Confederate Army. I lost four of m' legs at Gettysburg and all m' arms at Appomattox."

As a matter of fact he had never been wounded, but when he was drinking it was his hallucination that he was a centipede and his occupation to lament the different members he had lost in battle.

Colonel Rucker folded his paper, arose from his chair and sauntered out. He remembered that he had an engagement to call on Sylvia Story that evening and that he had no time to lose. The Storys lived on the old Tinny Bone place, beyond the town. He recalled with some irritation that he must pass through the pasture where the bull was kept. This always made him nervous—not that the animal had ever noticed him. Still, he wished that shiftless old scamp, Clark Story, would at least make a front gate to his place and save visitors the inconvenience of being possibly gored to death when they came in the back way.

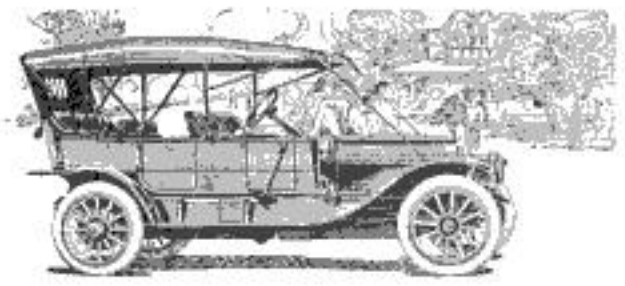
But the three old Gracchi determined to follow the stranger and discover who he was and what business brought him. They had been messmates in the army of Virginia, and messmates ever since in Bilfire's saloon. They had no affairs of their own, so they took a vital interest in those of other people. They borrowed animation and returned it in gossip.

III

THEY entered the wide doorway of Daddisman's Hotel half an hour after the stranger had disappeared through it—three abreast, Elbert White being in the middle owing to the fact that he did not carry his liquor well. It opened immediately into what was called the office. This was a large square room of one color all over. The walls were gray, but decorated with flaming lady's-legs calendars. The ceiling was gray and the floor was covered with an ashy, wornout oilcloth. The stove had not been cleaned since the winter fires died down in it. But this was a convenience. It served as a spittoon. The ashes were long since packed down with tobacco juice. The pipe made an ugly elbow halfway up to the ceiling and, as high as the tallest drummer could reach, was plastered with advertisements setting forth the merits of everything from chewing gum to breakfast cereals and corsets. A corner of the room was boxed off for the innkeeper's desk and for a counter, upon which rested a glass showcase and the register for the names of guests. Under the glass were exposed several boxes of cigars, little square nickel bags of smoking tobacco, a glass jar of pink and lavender-colored "breath pills," another of striped sticks of clove and peppermint candy. That which corresponded to the "breath pills" above was concealed in pleasant, gleaming, golden bright rows below the counter. Altogether it was one of the most alluring spots in the town, because it so completely, and at the same time so discreetly, filled the natural cravings of its male citizens. On the opposite side of the room stood a wide table, long enough to reach past both front windows. The chairs in the room appeared to be humbly related to it. They were always in the position of having been dragged up to it, or dragged away from it, or of having been kicked under it, owing entirely to the time of day when you observed them. This table had another distinction. Twenty years ago a duel was fought on top of it—an impromptu duel without seconds. It was fought to a finish over a game of cards, with pocket knives, by Tony Adams and Jim Bone. They were both drunk at the time. And Tony had remained drunk ever since. But young Bone, believing that he had killed his friend, disappeared that same night and had never been heard from—a good riddance, everybody said.

"He was born with an open knife between his teeth, same as you say somebody was born with a gold spoon in his mouth," commented old man Adams, who would have been glad if his own son had been able to follow Bone's example in evacuating Ruckersville for the far unknown country of lean prodigals.

Tony was the only person who had ever grieved for his friend. He was like an overgrown, fair-haired child that time has jerked off the wagon and left sitting tearfully in the sand. He recovered from his wounds, consisting of various slashes across the arms and breast, but he refused to survive the departure of his friend.



"He might have known I'd have forgiven him. 'Twa'n't his fault, nohow. There were five queens in that deck of kyards, and nary one of us knowed it till it was too late to keep him from fightin' me for drappin' her on him in the wrong place."

When Captain Martin and his two companions entered the hotel they saw Billy Daddisman, the keeper, standing behind the counter, staring at the open page of the register with horror and amazement clearly depicted in every line of his white, pop-eyed face. The three gentlemen from Bilfire's immediately braced themselves with their stomachs against the other edge of the counter, hurriedly took out their respective spectacle cases, adjusted their glasses upon their noses and peered at the same page. But here an unexpected circumstance delayed them. It seemed that after they had examined Mr. Story's new specimens at the saloon Captain Martin had accidentally placed Elbert White's glasses in his case, and White, who was near-sighted, had got the captain's, who was slightly cross-eyed in his left eye. The two old roosters cocked their heads in vain this way and that at a name written in flaming headline chirography entirely across the page. They could make nothing of it. And Story was scuffling with equal futility for even a chance to see what they were looking at. He was very small and timid and always came last, never saw anything first, and lacked the Zaccheus energy of most small men. Martin and White each lifted their eyes to the other, but even then White had to turn his face sideways

(Continued on Page 48)

YOU automobile buyers are in two classes: the ones who own cars and have reached their desire for certain things through experience, and the ones who are buying a car for the first time and must depend to a large extent on what others tell them.

An advertisement can't very well appeal to both of these classes, and the fact that so many experienced

drivers are buying Mitchell cars shows that the car itself is the best reason they can have for making this selection.

To the inexperienced man we will say—In a Mitchell car you get simplicity with power—easy to understand; you get speed with perfect safety; you get low cost of operation and long life for the car; you get a handsome appearance and luxurious ease in riding; and most important just now to you—you get careful attention and explanation of everything you don't understand about automobiles both before you buy and afterwards. The Mitchell service is a great help to the beginners.

The new Five Passenger Mitchell-Six is pretty apt to be exactly what you want—the experienced drivers are enthusiastic over this new car . . . . Price $1750

are ready to deliver this new Grafonola with 12 double-disc records (24 selections) subject to three days' free trial, for $59 cash—or for the same price at $7 down and $5 a month; no interest, no extras.

Registered U. S. Patent Office

THE Columbia Grafonola "Favorite" is a notable combination of high quality and low price. The mechanism is fully cabineted, the reproducer operating beneath the lid, and the sound waves being led through the tone-arm to the tone-chamber where they are greatly amplified and then thrown out through the opening, subject to reduction at your will by the partial or complete closing of the small doors. The cabinet work is of the highest possible craftsmanship, the wood used being either selected grain quarter-sawn oak, or strongly marked genuine mahogany, hand polished. No finer finish is applied to a thousand dollar piano. The turntable is revolved by a powerful triple spring motor, which plays three records at one winding and may be rewound while running. The operation of the motor is absolutely silent, and its speed is regulated on a graduated dial.

If the nearest dealer happens not to be able to supply you, write to us here. If you don't know where to reach a Columbia dealer nearby, write us and we will send you his name and address. There are over 7,000 of them in the United States and about 250 new ones are being added every month.

"Hearing is believing"—and trying is proving. Don't let this day get by before you take action. This is the objective point we have been working toward for four years—and the only mistake you can make is the missing of it! Don't miss it—seize it!

If you have been waiting till the perfected "talking machine" arrived, don't wait any longer: it's here.

If you have not been ready to purchase till the enclosed type of instrument could be sold for less than $200, here is the perfect instrument at a *quarter* of the price. If you haven't yet realized the quality of the music that the modern Grafonola is capable of, remember that the same was until very recently true of many of the greatest artists in the world who are now under exclusive contract with the Columbia—Mary Garden, Lillian Nordica, Olive Fremstad, Alice Nielsen, David Bispham, Josef Hofmann, Zenatello, and a long list of others.

If you own a talking machine of the enclosed type—whatever make—it's full time you knew the Columbia Double-Disc Record guarantee: "We guarantee to every purchaser of Columbia Double-Disc Records that the material used in their composition is of better quality, finer surface and more durable texture than that entering into the manufacture of disc records of any other make, regardless of their cost. We further guarantee that their reproducing qualities are superior to those of any other disc records on the market and that their life is longer than that of any other disc record under any name or any price."

COLUMBIA PHONOGRAPH COMPANY, Gen'l, Box 219, Tribune Bldg., New York

Digitized by Google

This is the Columbia Grafonola "Favorite,"

the first Grafonola ever offered at its price or anywhere near it. We believe it is the best that can be constructed and sold at its price, or near it—the first instrument of the enclosed type offered at anything like its price, capable of all the tonal quality of the $200 instruments.

The 24 selections on the 12 double-disc records include the famous "Rigoletto" Quartette and also the splendid "Lucia" Sextette, for which two selections alone many talking machine owners have had to pay $13. Or your own selection of records will be supplied. (Record album extra, 10-inch, $1.50, 12-inch, $1.75.)

Headquarters for Canada, McKinnon Building, Toronto. Prices in Canada plus duty.

ERS WANTED—We intend to contract with over 1000 new dealers within two weeks. Columbia Distributers in every large city. Write to us for offer to dealers. ***Exclusive selling rights granted where we are not actively represented.***

The Howard Watch

The Telephone Operators in New York City handle 180,000 calls every rush hour. They will connect you with any one of 500,000 subscribers in half a minute.

Ask the Exchange Manager how he can handle all these calls, and he will tell you tersely, "By saving the seconds."

"Schedule time" is the keynote of American industry. That means *HOWARD time.* There's always somebody higher up holding a HOWARD Watch on the job — demanding the HOWARD type of accuracy and punctuality.

The HOWARD is the one watch in the world wholly adapted to modern progress. It has the precise construction and the scientific adjustment.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is *fixed* at the factory and a printed ticket attached — from the 17-jewel (*double roller*) in a Crescent *Extra* or Jas. Boss *Extra* gold-filled case at $40, to the 23-jewel at $150 — and the EDWARD HOWARD model at $350.

Find the HOWARD jeweler in your town and talk to him. Not every jeweler can sell you a HOWARD. The jeweler who can is a good man to know.

Admiral Sigsbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U. S. Navy. You'll enjoy it. Drop us a post-card, Dept. N, and we'll send you a copy.

E. HOWARD WATCH WORKS, Boston, Mass.

and high quality is guaranteed. Sold by dealers or direct. Address Dept. M.

GUNN FURNITURE COMPANY, 3 Victoria St., Grand Rapids, Mich.

(Continued from Page 45)

and cross his left eye before he could make out the features of his friend:

"Damme, sir, you have appropriated my glasses!" exclaimed the captain, snatching at the little steel-rimmed spectacles he saw on the other man's nose, which were entirely too small for his large eyes. At the same moment White snatched his own twin moons from the captain's nose. They were both furiously red—two very old cocks, facing each other with their heads drawn and their neck feathers bristling.

"Hist!" whispered Daddisman, putting out his hands and gently parting them as he would have parted two children. "Don't fight, for God's sake! I've got the devil in this house and am likely enough to have disturbance without your breaking loose!"

Mr. Story had taken advantage of the confusion to duck under the arms of his companions and to get at the register.

"Jim Bone, New Mexico," he read in his high, piping voice.

"Hist!" warned Daddisman; "he's just three doors down the hall. He might hear you!"

"Well, 'tain't cussin', jest to call his name, is it?" demanded Story, aggrieved.

"I don't know, but I'll take no chances on it. I've never forgot the night he carved Tony Adams like a raw turkey up there on that table, twenty years ago. And he wa'n't more'n sixteen then. If he's kept on the way he started he won't take nothin' offen nobody by this time. I reckon, too, he'll light on you first, Story. You got his pa's place and you've never paid for it."

This was horrible. Story faded gently into the outer darkness and was seen no more that evening.

"Did he have anything to say?" demanded the captain.

"The queerest thing he could have said," replied Daddisman. "He asked me where was Tony Adams.

"'In there,' I says, pointing to the trunk room where 'Tony always lays when he's sleepin' off his drunk.

"He went in. Then I got uneasy, not knowin' but what that old queen of hearts was still ranklin' in him and that he might be carvin' Tony again. So I stepped to the do' to see what was goin' on."

"Well?" demanded the captain, as Daddisman paused.

"Well, sir, Tony was layin' on the flo' as comfortable as a pig, dead asleep with his head throwed back and his mouth open, and Jim was squattin' down starin' at him as if he was lookin' at a man that had changed to a maggot since he seen him last. There wa'n't no danger in his expression, so I tipped back. Presently he came out and give orders for Tony to be put in the bridal chamber till he was sober, and for me to charge it to him. Cost him somethin', too."

Suddenly there was the sound of a heavy body striking the floor above and a yell that pierced the evening air like a distracted calliope.

The three men stiffened with horror as a crash of glass followed and the yells increased. Daddisman ran out into the street, looked up at the window, dashed back into the house and up the stairs.

"It's Tony tryin' to fall out of the winder in his shirt tail," he exclaimed to Elbert and the captain, who followed him up the steps.

The door of the bridal chamber had been locked, to insure the invalid's remaining where he was put till he could make a creditable appearance. Daddisman fumbled desperately with the key in the lock, while the screams of the prisoner became more and more distressing. A crowd was gathering outside. Every one in Ruckersville knew which was the bridal chamber in the hotel, and it was the last place from which such sounds of distress could be expected. At last the door yielded and the three rescuers entered.

They beheld a scene of the wildest confusion. The brilliant covers of the bridal bed lay upon the floor. Ornaments designed to appeal to the happy, romantic illusions of the newly married were scattered and shattered. And in the midst of all stood the erstwhile maggot in merely an abbreviated shirt. His thin, blond hair was erect with horror, his face pallid, his blood-shot eyes distended, and he was perfectly sober.

"What is the matter?" demanded the hotelkeeper.

"Oh, Daddisman! I always knew I'd do it some day when I was drunk! But which one did I take?"

A Step in the Right Direction

Out of the land of hurly-burly babel *into* the garden of sunshine and blossoms and real living where winter is only a name.

Get the Spirit

of the *real* West—this land of blooms and gladness and promise; know its wonders, its achievements—the joyous future it offers you or any man or woman. It is naturally your land of hope, of health. Right here you [illegible] over again.

tyleplus

He bent forward, resting one hand upon each naked knee, wagged his head from side to side and wept uncontrollably.

"What are you talkin' about?"

"Don't tell me it was Leonora! And if it's Mary Yancey I'll kill myself. I never could live with a woman as thin as that!" he moaned.

"Look ahere, Tony, are you seein' snakes?" said Daddisman, advancing and laying a gentle hand upon him.

"I wish I was. I'd prefer 'em. But where is she?"

"Where is who?"

"The bride!"

He straightened himself with an effort and gazed fearfully about the room.

"You ain't married. Git back in bed, you durn fool!"

Tony permitted himself to be shoved down upon the mattress and covered with the flowered spread. He pulled it up to his chin, looked confidentially from one of his attendants to another, and explained:

"I've been always afraid I'd yield to matrimony when I didn't know what I was doin'. And when I woke up in this here bridal chamber I was plumb distracted."

"You shet up!" said Daddisman in deep disgust.

"Oh, don't leave me, gentlemen," cried Tony as the three men withdrew and the door closed.

Daddisman opened it, thrust his head in and said:

"You been put in here to git sober. You ain't married. Shet up!"

"But this ain't no place for that. Lemme go!"

The sound of his voice died away as Daddisman, Elbert and the captain tramped downstairs, utterly serious.

An hour later, when all was quiet, the two old men still sat in the office discussing the arrival of Jim Bone. It appeared, by his air of duello dignity, that the captain had something on his mind. They went over to the table and examined the ancient blood stains in it. Next they stood at the door that entered the hall, hesitating.

"You go," said White. "I'm afraid I might sthumble and dishturb him. I ain't stheady on my pegs tonight."

The captain straightened up, threw his shoulders back, smoothed his outer front with his two thin hands, assumed his bugle charge expression and stepped briskly but noiselessly down the dimly lighted hall to where a hound lay curled before the third bedroom door. The dog walled his eyes up at him, worked his ears in a complimentary manner, and patted his tail softly upon the floor. The only other sound was that of smothered thunder, which issued from the door and filled the hall like rude, somnambulent music. The captain paused just long enough to realize the nature of this rhythmic noise. Then he returned to the office with an air of privacy and intimacy about him.

"He sleeps, he snores like a gentleman. I will not disturb him. Doubtless he will explain in the morning."

"Explain what?" demanded Daddisman, who had been making entries in a book and whose attention had at last been attracted.

"Your guest insulted three gentlemen in Bilfire's saloon this evening," answered the captain.

"He did? Well, you wait till he goes over there before you ask him to explain. I don't want a man like that to explain nothin' in this house," exclaimed Daddisman.

. . . . . .

On this same night Miss Mildred Percey could not sleep. She was not nervous, she was just tender-minded. She could not decide whether to write a sonnet or to choose a design by which to make her new summer silk. The inspiration was the same. A woman's gown is always the poetical expression of her feelings, hopes and desires. If it is becoming it rhymes with her; if it does not become her the meter is wrong—a hexameter lady wearing a pentameter muslin. At last Miss Mildred put out her light, leaned her face against the window casement, and sighed. The starlight glistened upon the broad leaves of the magnolia tree outside; the air was perfumed with a thousand blossoms. Her eyes filled with tears and she began to whisper softly, as if she were afraid the angels would hear her:

"Oh, God! Oh, God!"

You would have thought that she was dying, at least that she was in mortal agony or that she had a deep secret grief. As a matter of fact she was only giving vent to

The 1912 Thomas "Six-Forty"

TOURING CAR, 7 PASSENGERS — PHAETON, 5 PASSENGERS
SURREY, 4 PASSENGERS — RUNABOUT 2 PASSENGERS
EACH, $4,000

THOMAS DECLARATIONS NO. 5

We assert that the carburetion and ignition of the Thomas Six-Forty is unexcelled in motor car construction. With seven passengers aboard it will throttle down on high gear to the remarkably slow speed of *three miles per hour*. This is on magneto operation and without slipping the clutch. One single mis-fire of a cylinder would stall the motor. Five miles per hour on battery is supposed to be the minimum for cars of the same weight, power and class.

Our Catalog—"The Story of the Thomas" awaits your request.

E[illegible]MAS MOTOR CAR COMPANY, DEPT. J . BUFFALO

the same feelings that make other animals cry or sing. The difference is that other animals are naïvely, innocently open about expressing themselves, but a gentle, virtuous maiden of thirty-five has no more liberty in such matters than a mummy. This was why Mildred called secretly and timidly upon her Maker. He was probably the only One in the universe who thoroughly understood the situation, whether He meant to do anything about it or not. She saw clearly before her three things as she went on weeping. The first was the awful-looking stranger she met that day, the second was the first line of her sonnet, the third was her muslin, fashioned into a ravishingly pretty frock. Her literary ambitions lay in the background. Still she thought drearily, as she rose, wiped her eyes and crept between the sheets of her snowy bed, that what she desired above everything in the world was to become an author—one of those brilliant men and women who come trailing their amazing clouds of glory into fiction every year, tarry just long enough to "make a name," and then disappear.

It was also on this same night—or, rather, about two o'clock in the morning—that Miss Mary Yancey sat up in bed and listened. Miss Agnes Yancey also sat up in her bed in the next room and listened.

"Sister Mary," she called softly, "did you hear that?"

"Yes; what was it?"

"Sounded like a man creeping upstairs!" moaned Agnes.

"I knew it would happen," quavered Mary, "when I saw that awful creature leaning over the gate this afternoon. We must get up and see what it is."

She leaped from the bed and struck a match and lighted the candle upon the dresser.

"But if it is a man why should we get up and go to meet him?" chattered Agnes, who was getting the chill of terror.

The next moment, however, they appeared in the hall and passed solemnly in review before the portraits of their ancestors, which hung upon either side. Both were ghostly pale and wore absurdly ruffled gowns. Their hair was rolled upon hairpins, the points of which stuck out, and their bare feet looked funny and old as if they had ceased to arch themselves. Miss Mary advanced, carrying the candle in one hand and the garden shears in the other. Agnes clung to her, peering into every corner and closet, behind every door, under every bed. Suddenly they heard it again, the stealthy movements of something living which seemed to be approaching them from the kitchen stairs.

"Oh, my hair!" gasped Agnes, throwing up her hands to cover her head as she sank down upon the landing.

The next moment a large gray cat padded up the remaining steps, tail erect, purring, and prepared to rub himself against anybody's legs that were available.

"Scat!" screamed Miss Mary before she thought. The candle went bumping down the stairs. She had never spoken harshly to Thomas a Kempis before in his life. She snatched him from the floor before he could recover from his astonishment, ran to the back door, unlocked it, dropped him outside in the soft summer rain, slammed the door, then slowly climbed the stairs to her room. She could hear Agnes' staccato sobs. Both sisters were disappointed, although they were far from suspecting such a thing. Nothing is more ludicrous, if you want to look at it that way, than the longing of maidens for lovers, which changes later to an old maid's fear of a man hidden in the house. Really it is pathetic. And men should be prosecuted to the full extent of the law for allowing any good woman to remain unwed till this romantic neurasthenia develops.

Far out beyond the town a mocking bird was singing in his sleep, high up in an old elm tree before an ancient house; and inside a woman slept with the windows open wide, secure, locked within that serene assurance of her own beauty and power. Beautiful women never are afraid of men, never look for robbers under their beds.

(TO BE CONTINUED)

A Work Bench for Brain-Men

"The Desk With Brains" is built to your order from sections your dealer has in stock. Drawers, compartments and filing spaces may be put together in exact accordance with *your needs*—to exactly suit your brain requirements.

We can send you a chart showing different combinations. You can order the one you want. Then—the papers you need to refer to oftenest will be *always in easy reach*. The tools you need for brain work will be *always at hand*.

The Desk with Brains

can be made up in 8,000 different combinations. The sections are interchangeable fractional sections—B-M Quality "Cabinettes." They may be changed to fit new *needs* as they arise.

"The Desk With Brains" can be made up to suit perfectly the requirements of any and *every* man who uses a desk—Sales Manager—Advertising Manager—Purchasing Agent—Mechanical Engineer—Factory Superintendent—Author—Accountant—or any other expert.

Write for our descriptive and illustrated list. We send it *free and post paid* to any brain-worker.

Gives Your Home A Cheerful Atmosphere

With the great variety of patterns and colors found in "CREX" rugs and carpets, any effect desired, to harmonize with furnishings, may be obtained.

There are "CREX" coverings suitable for every floor. They are used in some of the most beautifully furnished homes. On almost every well appointed living porch you will find a "CREX" covering. Rain and snow will not injure. They lie flat—never curl.

For brightness, durability and sheer cleanliness, there is no covering, of moderate cost, that will compare.

The fibre being impenetrable, the dust falls through. Merely shake rug or carpet and brush off with a damp broom. The largest carpet can be thoroughly cleaned in ten minutes.

Prices are so reasonable, they will astonish you.

Let us mail you a copy of the story of "Crex" and catalogue giving dimensions and showing in actual colors the many charming patterns. *Remember, all grass coverings are not "CREX." If you want the original and genuine, look for trade mark.*

Digitized by Google

For the gears I use the most perfect alloy ever worked out for this purpose.

To test these gears, which others test with a hammer, I have built a crushing machine of 50 tons' capacity. There I submit the gears to a crushing test, to measure exactly what each gear will stand.

The Nickel Steel axles are much larger than necessary. Every year I have built them stronger. Now my margin of safety in this vital part is considered extreme by most makers.

For the bearings on axles and on the transmission I use Timken Roller and Hyatt High Duty. Lesser bearings have led to trouble.

I have found that magnetos differ immensely. So I devised a test where, for ten hours a day, the magneto must act under tremendous compression. I have found only two makes which stand it.

Half the troubles with cars are due to a carburetor incapable of dealing with low-grade gasoline. So I adapted a carburetor to the commonest grades. And I doubly heat it—with hot air and hot water—to facilitate evaporation.

I add about one-fifth to the power of my engine by putting intake valves on top.

The long-stroke motor, the cylinders in pairs, the dust-proof transmission, the system of oiling, all simply accord with the best modern practice.

I carry inspection to the farthest extremes. Every part is inspected—every vital part tested. That is essential. Without it, flaws will creep in which only use can discover.

Good Measure

Another thing I have learned is that buyers enjoy good measure.

My wheel base is long, my wheels extra large, my tonneau is roomy. The car is over-tired. The springs are much stronger than necessary.

The design of the car, as each can see for himself, has the last touch of up-to-dateness.

The upholstering is deep, the filling is hair, the covering is genuine leather. I avoid all the petty economies.

The body finish consists of 17 coats. The lamps are enameled, as per the latest vogue. Even the engine is nickel trimmed.

The most perfect car will fail to satisfy buyers unless its appearance is perfect.

Exclusive Features

In addition to all this, Reo the Fifth has two or three features found in no other car.

One is the center cane-handle control. See the picture. All the gear shifting is done by moving this handle not more than three inches. It moves in four directions—for low speed, intermediate, high speed and reverse.

Another unique feature is the absence of brake levers. Both of the brakes operate by foot pedals. One of the pedals operates the clutch and the service brake as well.

So the front of the car is clear. The driver dismounts on either side as easily as you dismount from the tonneau.

This arrangement permits of the left side drive. The driver sits, as he should sit, close to the cars which he passes. He sits where he can look back in making a turn. He is on the up side of the road. This has only been possible heretofore in electrics.

These are features to which other cars must come. But you find them today only in Reo the Fifth.

Price—the Only Sensation

The only sensation in this Reo the Fifth is the price at which we shall sell it.

All the rest results from an earnest desire, in this my final achievement, to give the best that a car can give.

If I have done that—and I believe that I have—the price of $1,055 is both unique and sensational.

Most other features are found in some other cars, but the amazing fact is the price of this car in which you find the best of everything combined.

Now I wish to explain the reason.

Paring Down Cost

For the past several years, my chief effort has been to cut down the cost of my cars.

I have felt that my place in the future depended as much on paring of cost as on skill in designing.

I have been helped in this by an enormous demand for my cars. Our multiplied output has cut overhead cost.

I have also been helped by the good-will these cars created. Each has helped to sell others. So selling cost is a fraction of what it was.

I have helped myself by inventing special machinery. The parts are now made by automatic machines, invented and built in our shops. Labor cost, on some parts, has been divided by fifty. And we get the utter exactness which hand work never gave.

Fixed Month by Month

We now make in this whole shop only one style of chássis. That saves in itself nearly $200 per car.

We have standardized the car, so that changes aren't necessary. Our tools and machinery last until we wear them out.

The whole car is now built in this one model factory, so we pay no profits to parts makers.

This year, in addition, we have cut a big slice from our profits. This new car, we figure, will more than double our output. And our profit hereafter will be a trifle per car.

Price Not Fixed

We have also adopted a changeable price. The price of today is based on today's price for materials—the lowest they have been in years. But our contracts with dealers provide for instant advance.

The price of $1,055 is the minimum. It can certainly never go lower. But, if cost advances, the price must be advanced. Price cannot be fixed for six months in advance without leaving big margin, and we haven't done that.

This initial price is the minimum. It is the lowest price, in my estimation, which an equal car ever will cost. But that is today's price only. I very much doubt if Reo the Fifth can long be sold that low.

My Supreme Effort

A hundred makers will argue that their higher-priced cars offer more than does Reo the Fifth.

I don't wish to dispute them. Judge that for yourself. It isn't hard to make actual comparisons.

Whatever the verdict, I can only say that this car marks my limit. I would not know where to add a single iota if paid a doubled price.

Better materials I know are impossible. Better workmanship is out of the question. Better features and devices, if they exist, are still unknown to me.

More power is possible, but not economical. More size, room and weight can be had, of course, if one thinks them worth the price. But more of care or skill or quality is totally out of the question.

This Farewell Car is my finest creation. If others do better, they are better men than I.

Ask for Catalog

This car with roadster body sells for $1,000. With close-coupled body or touring car body the price now is $1,055. Our catalog shows the various body designs.

It also gives complete specifications. It enables comparisons, part by part, with any other car.

The book is ready for mailing. Ask for it now, as this car at least is worth investigation. When we send the book we'll tell you where to see the car. Address

(Concluded from Page 17)

of interstate commerce, with added sanction to enforce that law. He suggested that Congress say: "By restraint of trade we mean every obstruction of trade, including limitations upon the liberty of individuals who engage in trade as defined"; and then write into the statute the following definition from Baron Parke's decision in the case of Mallan versus May:

"The rule . . . is, that total restraints of trade . . . are absolutely bad, and that all restraints, though only partial, if nothing more appear, are presumed to be bad. . . . Contracts in restraint of trade are in themselves, if nothing show them to be reasonable, bad in the eye of the law. . . . But if there are circumstances recited in the instrument . . . it is for the court to determine whether the contract be a fair and reasonable one or not, and the test appears to be whether it be prejudicial or not to the public interest."

There could be no reasonable objection to the first proposal made by Senator Cummins. Such definition as he proposes would constitute a glossary of terms of the Sherman Law; and it is the legislative practice in England—and one that is growing all over the world—to add to public acts such a glossary. This clarifies the legislation and, in addition, reduces the burden imposed on the judiciary. Senator Cummins also recommends: That Congress describe certain combinations that are already in existence and that are likely to be organized in future, and then declare them to be a type of reasonable or unreasonable restraints of trade.

We should then be able to speak by the statute-book of good combinations and bad combinations, and be reasonably certain of congressional approval for our opinions. In times past the expressions "good trusts" and "bad trusts" have found their way into the public utterances of statesmen and near-statesmen. But analysis has usually disclosed the fact that the speaker's party friends were prominent in the "good trusts," whereas the "bad trusts" were officered with "enemies of the republic."

Senator Cummins further recommends the organization of an industrial commission composed of men of the highest fitness. This commission would have authority to pass upon a proposed combination of existing independent concerns, and to determine whether or not such a combination was in itself objectionable under the law. If, in the judgment of the commission, a monopoly was threatened, then the combination could by process of the courts be arrested. If, on the other hand, the commission should satisfy itself that no restraint of trade or monopoly would result, then—in the opinion of Senator Cummins—this preliminary determination ought, without doubt, to preclude any future inquiry into the questions of restraint of trade and monopolization.

It is not the senator's idea, however, by this process to preclude a prosecution for violation of the law if the combination pursue dishonest or oppressive trade methods. If this liability to prosecution could be carefully guarded in a statute the objections of many to a trade commission would be met.

The spectacle of trust promoters like Gary and Perkins rushing to the Capitol and advocating an industrial commission is unsettling to the nerves of the radical member of Congress.

"What those fellows are after is an immunity bath!" exclaims the congressman with the black soft hat. "There will be no trade commission if I have anything to do with it."

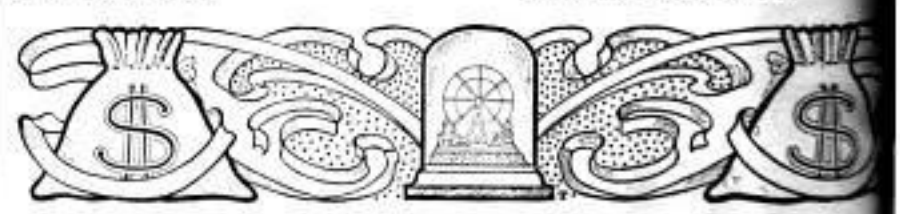
Senator Cummins would be the last to favor a trade commission whose "certificates of character" to combinations would result in immunity from prosecution for unlawful acts in restraint of trade. But the senator would meet business men halfway. He would take Mr. Gary at his word when he said:

"No decent man is desirous of violat the laws of the country or of doing thing which is inimical to the public ests. . . . Give us a commission which we may go and say: 'Here are the facts; here is what we would like to here are the results—the probable we do not want to antagonize the la do not want to do anything that we not to do. We want your advice.'"

And the senator from Iowa would vide a bureau to which business men go in the spirit proposed by Mr. Gary from it obtain the advice needed. Gary has made his proposal with a reservation he will get a legislative brick, provided Senator Cummins way about it.

Commissions are necessarily of growth. Congress delegates its grudgingly, and any commission must its worth before it is given added For an illustration one may turn to Interstate Commerce Commission. It far back in 1888 that this commission created. Relief from the oppressions of railroads was the guiding motive, posedly, in its creation by Congress. the legislative job was badly done, decisions of the courts finally divested commission of what authority it was possess, until it became nothing but a crying in the wilderness. But if it could nothing else this impotent commission tainly emitted loud and long cries. Interstate Commerce commissioners regarded in Congress as a joke and treated with scant respect these guardians of the shippers' rights were tinually demanding more authority—more power. If Congress was deaf to their the country heard, and so in 1906, public opinion led by President Roosevelt the Interstate Commerce Commission recreated and given the club it needed—the authority to fix rates. By the tion of 1910 this authority was and today we have a regulation of charges and service by commission protects the rights of the shippers—and public—and is just to the railroads. the people were eighteen to twenty getting it!

Query: If Congress created an commission in 1912 should we have istrative control of trusts before 1912?



That would depend very largely personnel of the commission. It say that the commission's powers have to be pried loose from the tional prerogatives of Congress by force of public opinion.

Congress could well look to Cummins for leadership in the tion. But Congress won't. Of we may be reasonably certain specific proposal to amend the law there will be 90 objections Senate—one Colorado vacancy—objections in the House—one vacancy—with one member pro "open mind"—Victor Berger, the And if by any odd chance a bill both houses, then it must meet Objector. He would probably sisting that Congress wait for of an "expert board" of politi mists—or conconists—drafted cloistered halls of learning. In and after a generous expenditure money, a commission of this book-learning would very possibly as follows:

"In view of the vast extent of the trial system of this country and the nitude of the financial interests both on the part of the trusts and who pay the freight, your commission lieves that the possible consequences a system of regulation are too warrant its adoption at the present

Notwithstanding this bleak Senator Cummins will urge legislation in this spirit: "I would far rather issue settled right than settled my way is wrong."

That's the A. B. C. of it.

THE SHIP'S JESTER

(Continued from Page 8)

The skipper came running up on the bridge and the crew saw him take the stairs three at a time.

"No fire drill this time," bawled Mr. Nye—"it's the real thing!" The grim smile was gone from his mouth, his glittering eyes snapped savagely as he raced aft and, under the skipper's directions, opened the main hatch. A blast of flame and smoke belched out and drove him back half fainting, while the men, without awaiting orders, quickly battened down the hatch.

"I'm afraid it's all off, Tom," said the skipper quietly. "She's an old whaleship and her bones are oil-soaked. She'll burn like a stack of hay—and God knows how long she's been smoldering belowdecks! Nothing to it but to keep the hatches on and starve the fire for lack of oxygen. If we run for it she may last until we get to Skagway."

Mr. Nye nodded.

"If we can beach her on the flat off the mouth of the river we might save her," he suggested. "There's a nineteen-foot tide there; and if we drive her hard aground at low water she'll be awash at the flood, and—we might save the engines."

"I believe you're right," the skipper replied. "When a whaleship catches fire at sea she's gone! We'll run for it. Meantime take as many men as you can use and cut through the bulkhead between the engine room and the after hold. We've got to get a stream into that hold without letting a blast of fresh air in too."

A minute later the engines of the Shandon Belle were running wide open and the column of black smoke belching from her funnel gave ample evidence that the stokers were not sparing the coal. The ship gathered headway at once; and within an hour after the discovery of the fire Tip McCune, walking aft to read the log, noticed that the ship was doing better than thirteen knots.

It was a silent, desperate battle that Tom Nye fought with the flames belowdeck. With his crew he succeeded in cutting through the bulkhead—but a rush of noxious gases drove them back; and in order to save the engine-room crew the opening was quickly boarded up and the attack on the flames abandoned in that direction. On through Chilkoot Inlet and into Taiya Inlet swept the doomed Shandon Belle.

"Ten miles from Skagway," panted Mr. Nye to Tip McCune as they came on deck together and the mate noted a familiar patch of coastline. "Ten miles more—and the bloody deck so hot it's burnin' my feet! I doubt if we'll make it."

As if in answer to his prophecy a muffled report, as of an explosion, came from below. The Shandon Belle trembled violently and the covering of the main hatch burst upward.

"Can of powder somewhere in that blasted cheap little jag of freight!" snarled Mr. Nye. "Turn the stream into the hold!" he shrieked to a little knot of seamen standing by with a hose and raced below to give the word to the engineer to start the pumps. When he came on deck a few minutes later he found the hose ripped and split in a dozen places, and a feeble stream playing into the smoking hold. The hose, old and rotten, had not been equal to the pressure of water from the steam pumps—and the last hope of the Shandon Belle was gone!

From that moment it became a race with the flames to beach the ship and try, if possible, to save the engines. Up through the inlet they raced, with the smoke and flames bursting through the splintered hatch and the molten pitch in the deck-seams tugging at the feet of the crew as they shrank back from the fearful heat. A mile and a half to starboard the town of Skagway loomed in the light of the late afternoon; but the flames were spreading rapidly and the skipper knew that it was useless to keep his engineers below any longer. He rang for full speed astern; and as the Shandon Belle pulled up in her stride the engines were stopped. Three minutes later two boats, filled with men, dropped from her blistered sides and shoved off. A third boat trailed astern, her long painter fast to the stern railing of the ship.

"Lash the wheel, Mr. Nye," commanded the skipper when he found himself, the chief mate and the chief engineer the last men

Everywhere we go the lesson of good teeth is told

What more common than our admiration of a pretty face turned to disappointment when that face smiles!

True, the clever woman whose teeth are not attractive, when she must smile, never lets us see.

But how delightful when the open smile, in features beautiful or plain, suddenly dazzles us with the glory of perfect teeth.

You who have fine teeth, whether through good fortune or through wise care, or through the dentist's skill, *safeguard* them by daily *night* and *morning* use of

Dr. Lyon's PERFECT Tooth Powder

Prepared for almost half a century by a doctor of dental surgery

What Dr. Lyon's does not do should be entrusted only to your dentist to do.

Sold Everywhere

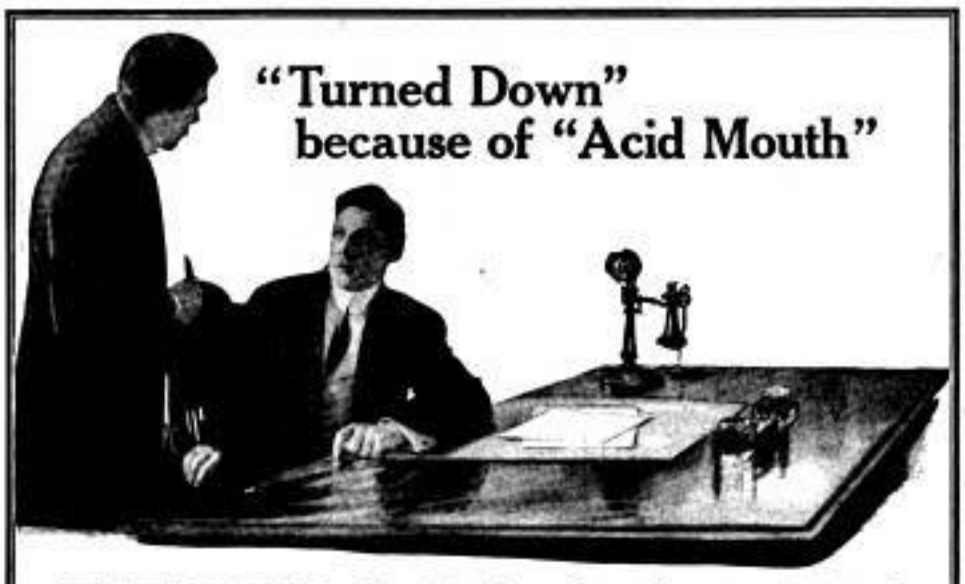
Begin early to make the use of Dr. Lyon's Tooth Powder a life habit with your children, and thus insure them perfect teeth and consequent fine appearance and health.

The great virtue of Dr. Lyon's is that it provides a perfect dentifrice *in powder form*, having no gelatine, glucose or honey to leave sticky masses between the teeth to encourage decay. It polishes, thoroughly cleanses the teeth, removes discoloration and tartar and imparts a natural fragrance to the breath.

Ford

THERE are several mighty practical reasons why every *fifth* motor car in use in these United States is a FORD and why every *third* motor car built and sold this year in this country will be a FORD.

If you contemplate the purchase of a motor car, does not self interest advise you to investigate why FORD Model T cars are in such tremendous demand? Immediate delivery.



Ford Model T Touring Car, 4 cylinders, 5 passengers, fully equipped, f. o. b. Detroit	$690
Ford Model T Torpedo, 4 cylinders, 2 passengers, fully equipped, f. o. b. Detroit	$590
Ford Model T Commercial Roadster, 4 cylinders, 3 passengers, removable rumble seat, fully equipped, f. o. b. Detroit	$590
Ford Model T Town Car (Landaulet), 4 cylinders, 6 passengers, fully equipped, f. o. b. Detroit	$900
Ford Model T Delivery Car, capacity 750 pounds merchandise, fully equipped, f. o. b. Detroit	$700

Complete equipment includes Top, Automatic Brass Windshield, Speedometer, Ford Magneto built into the motor, Two 6-inch Gas Lamps, Generator, Three Oil Lamps, Horn and Tools. No Ford cars sold unequipped.

Send for Booklet, "The A B C of Ford Exclusive Features," and read it before you buy any motor car. Address Department P.

"Turned Down" because of "Acid Mouth"

UNSOUND, discolored teeth and a tainted breath are even more indicative of digestion and physical condition too weak for the struggles of business, than they are of careless personal habits, for—

Even careful brushing does not insure your teeth against decay if your dentifrice is not efficient.

PEBECO TOOTH PASTE

Pebeco is the one dentifrice that preserves as well as cleanses, for it counteracts the great cause of decay and discoloration—"Acid Mouth."

Experience the feeling of freshness that follows its use. Watch the stubborn spots of discoloration fade and disappear. If you smoke, Pebeco will clear away the odor of tobacco from your breath.

Send for a 10-Day Trial Tube and Acid Test Papers

and learn the true power and value of Pebeco

Pebeco Tooth Paste is a scientific product of the laboratories of P. Beiersdorf & Co., Hamburg, Germany. It is to preserve and cleanse the teeth, not merely to wash them and to taste pleasant.

Its effectiveness and the extra large size of the regular tubes make Pebeco the most economical dentifrice you can buy. These big tubes are 50 cents. Ask your druggist, but send today for Trial Tube and Test Papers.

COOPER, WELLS & CO., 212 Vine St., St. Joseph, Mich.

remaining on the burning ship. "I'll head her for the flats, kick her wide open and let her go to glory!"

For answer Mr. Nye damned the Shandon Belle from keelson to truck—for he loved her. The skipper rang for full speed ahead and pointed her nose for the beach. Mr. Nye was lashing her helm when the skipper and the chief engineer hailed him from the bridge.

"We'll jump for it!" they called. "The trailing boat will pick us up."

Mr. Nye stepped out of the pilot house and joined them on the bridge.

"This is what comes o' stealing that boy Tip McCune," he said bitterly. "There ain't no luck in shanghaing—and I always said so."

With this parting shot Mr. Nye dove off the speeding vessel. The skipper and the chief hit the water beside him a second later, and the Shandon Belle, blazing and abandoned, continued at full speed for the beach. Her steam was pretty well exhausted before she struck the first time. Tip McCune, seated beside Mr. Nye in the boat, saw her hesitate as if fearful of going to destruction; but the demon in her vitals spurred her on. She lifted to a long roller, shook her forefoot free of the sand and swept grandly up on the beach. She rounded up, bows on, and lay over on her port side, while the waves broke over her. A vast cloud of steam supplanted the smoke as the flames died within her; and at the sight the skipper gulped and two big tears started across his cheeks.

Mr. Nye, observing these mute evidences of sorrow, leaned over the thwart and nudged the ship's jester in the short ribs.

"The Old Man's all broke up," he whispered hoarsely, albeit sympathetically. "Raise a bit of a chanty, Tip, and make the skipper laugh."

"I—I can't," replied Tip McCune—"I left my best pair of silk tights behind me."

"You must," reiterated Mr. Nye. "I can hit you if you don't make the skipper laugh. He never needed you before, Tip; but he does now."

In the face of such earnest pleading from the honest Nye, Tip McCune could not refuse. So he cleared his throat and in his nasal falsetto he sang:

"Strike up the band! Here comes a sailor,
Cash in his hand, fresh off a whaler.
Stand in a row,
Don't let him go;
Jack's a cinch, but every inch a sailor!"

When a skipper has just been relieved of his command by the blind force of circumstances, and his ship lies a smoldering hulk on a lee shore, sympathy is very sweet indeed. There was a subtle compliment in Tip McCune's choice of the ditty—"Jack's a cinch, but every inch a sailor!"—and the skipper was quick to perceive it. Moreover, they were, one and all, exceedingly "fresh off a whaler," and, despite his tears, the skipper had to laugh.

"Well, Tip, my lad," he said kindly, "we're all out of a job now; so suppose you let bygones be bygones. You ain't nursin' any grudge, are you, Tip?"

"Gwan, Tip; let sleepin' dogs lie," said Mr. Nye; so Tip McCune lied and said he'd had a bully good time, and that he desired to be friends with everybody—whereat the crew cheered and Mr. McCune abdicated forever his office of ship's jester.

It was late in the afternoon when they landed at Moore's Wharf. Mr. Nye, Tip McCune and the skipper ate supper together, and the two mariners accompanied Tip on a round of the combination gambling houses, saloons and variety theaters so prevalent in Skagway in those days. Before they retired in one of the alleged hotels that night Tip McCune had a job in the Northern at five hundred dollars a week—and blessed the day he was shanghaied.

Early the following morning the crew of the Shandon Belle were aboard the charred hulk. It appeared that the vessel had been beached at high tide, and with the coming of low tide she lay high and dry. Under her port quarter and just above the Plimsoll mark a great hole—nearly six feet in diameter—had been burned. She was completely gutted, a few charred uprights showing where her house had stood before the flood tide had washed most of the wreckage away. Save for the hole burned in her quarter, however, the shell of the vessel was still staunch and tight; and, beyond the damage which was bound to occur by reason of their contact with the salt water, the engines were not injured.

REIDER'S FINE POULTRY

ook and calendar for 1912 contains 200 pages, varieties pure bred, 42 colored plates. Many her illustrations, descriptions, Incubators and rooders. Low prices on all stock eggs. How raise and make hens lay. Get my plans. They say it's great—this book—only 15 cents.

B. H. GREIDER, Box 33, Rheems, Pa.

"We'll get the old girl off and have her rebuilt," exulted the skipper after a brief examination.

"But she's full of water," protested Mr. Nye. "The sea comes in through that big hole in her quarter when the tide rises, and when the tide is out the water stays in the vessel."

"Well, what's to prevent our pumping her out?" snapped the skipper. "Then we'll patch that hole, have her hauled off at high water and towed down to Seattle."

The sagacious Nye shook his head.

"Easy enough if there are any pumps available in Skagway," he said; "but I don't figger there are. It's goin' to take some pumpin' to lift ten thousand gallons of water out of this hulk and patch the hole between tides. And she must be pumped out and patched before she'll float. At high water she'll be submerged."

Mr. Nye's point appeared to be well taken, as the skipper discovered an hour later. Moreover, the weather was threatening, and to await the arrival of pumps from Seattle was out of the question. The Shandon Belle could not stand many days of battering by that nineteen-foot tide, and the skipper knew it.

"Total loss," he said sorrowfully, addressing himself to Mr. Nye and Tip McCune. "I'm going to wire the owners and tell them the exact conditions."

He did. Next day he received a reply from the owners stating that the Shandon Belle had been abandoned to the underwriters, who would sell the wreck at public auction on the floor of the Merchants' Exchange at noon the following day.

"What do you suppose the wreck will bring?" Tip McCune inquired of Mr. Nye, who called to see him that night in his dressing room at the Northern.

"Fifty or a hundred dollars," replied Mr. Nye. "Nobody will make an offer for a wreck in Alaskan waters."

"Suppose one should buy that wreck, float it and haul it off the beach into deep water, what would it be worth?" inquired Tip.

"Easy twenty thousand dollars," said Mr. Nye. "The engines alone are worth that."

"Very well, then," replied Tip McCune. "I've been working here three days at five hundred a week, and I guess it's up to me to hit the boss for a couple of hundred and buy the wreck of the Shandon Belle."

"What will you do with it when you get it," demanded Mr. Nye indulgently—"use it for a watch-charm?"

"No," said Tip McCune dreamily; "I'll sell it and buy an interest in Sholto's Circus. The Old Man's awfully hard up and I could get in on the ground floor cheap."

Mr. Nye grinned and turned the conversation into other channels.

The following day Tip McCune drew two hundred dollars on account of his week's salary, wired one hundred and fifty of it to a San Francisco attorney recommended to him by the cashier of the bank, and instructed him to bid in the wreck of the Shandon Belle at the lowest possible figure. The following morning he received a wire stating that the Shandon Belle was his property at a net cost of one hundred and twenty-five dollars; so he strolled down to the beach to look at his property. It was flood tide when he arrived and the masts and top of the smokestack of the Shandon Belle were all that showed above the water; so Mr. McCune went back to town to await the ebb tide. During the interim he rounded up three carpenters and purchased a quantity of lumber sufficient to patch the hole in the wreck temporarily; after which he called on the owner of a powerful little steam tug and arranged to have the tug on hand at high water to haul off the Shandon Belle when she floated.

The moment the tide had receded sufficiently to permit of Tip McCune and his men walking out to the Shandon Belle, the work of salving her commenced. During the afternoon they labored at the wreck until the returning tide drove them shoreward.

That night Tip McCune met the skipper and Mr. Nye at the hotel.

"Come down to the beach at high tide tomorrow," he said, "and watch me float the Shandon Belle."

"Hark to the ship's jester!" said Mr. Nye compassionately.

"She'll float at four o'clock," said Tip McCune. "Be on hand."

Having nothing else to do, they were both on hand. And when the tide finally came thundering in across the flats and

Bring Out the Beauty of Your Floors

IT'S THERE. Just needs the right finish—such as only Old English Floor Wax can give—to impart the richness and lustre that made "Old English" finish famous.

It's the large proportion of hard, imported wax in Old English that does it. It also makes a pound of

Old English Floor Wax

go farther than a pound of ordinary wax and renders the finish exceptionally durable. When it *does* show wear, you need not "do over" the whole floor. Just rub a little wax on the worn spots. Old English Floor Wax gives a finish to floors, furniture and woodwork which will not scratch nor hold dust. Makes housework a lot easier. It's not expensive, either—a 50 cent can will do the floor of a large room. Why don't you try Old English on *your* floors?

Send for Free Sample and Our Book

"Beautiful Floors—Their Finish and Care"

You'll find lots in it to make housework easier. It tells about

Finishing New Floors	Cleaning and Polishing	Finishing Furniture
Finishing Old Floors	Care of Waxed Floors	Interior Woodwork
Hardwood Floors	Finishing Dance Floors	Stopping Cracks
Pine Floors	Kitchen, Pantry and Bathroom Floors	Removing Varnish, etc.

FRANKLIN AUTOMOBILE COMPANY
Syracuse N Y

swept up round the wreck the Shandon Belle floated!

A steam tug got a line aboard her and took her in tow before she could be driven farther up the beach; and within an hour the wreck of the Shandon Belle was moored hard and fast to the wharf!

"This is the first time on record," said Tip McCune as he joined the skipper and Mr. Nye, "that a ship's jester has ended up by owning the ship. What do you think of my vessel?"

Both mariners stared at him, fascinated and amazed.

"Rot me and grind my bones!" murmured the skipper.

"Shoot me for a junk-thief!" said Mr. Nye. "How in blazes did you do it?"

"It's very simple," replied Tip McCune modestly. "Up at the Northern the other night I got the idea from rubbering at a seltzer bottle. You know, if you've ever been in vaudeville or traveled with a circus, you will learn a whole lot of things they don't teach you in school. For instance, you learn to take a chance—and if you're broke it doesn't worry you. If you can't find a cleaner and presser to put a crease in your Sunday pants you fold them and slip them under the mattress and sleep on them. People say, 'Beware of substitutes'; but I tell you if it wasn't for substitutes we couldn't get along. Consequently, when we found there were no pumps in Skagway I looked round for a substitute—and discovered it in a seltzer bottle."

"You're a liar by the clock!" said the skipper.

"Shut up and listen!" roared Mr. Nye rudely. "Go on, Tip. What did you do next?"

"Well, you remember there was some of that up-freight piled on deck. Part of it consisted of forty-four fifty-foot lengths of three-inch iron waterpipe. The deck burned away under this pipe and the fire was so hot that it heated the pipe; and when the burning deck gave way one end of those pipes fell into the blazing hold and the other end leaned against a part of the deck that was badly burned, but did not fall through. Result: The iron piping became heated and bent in the middle at almost right angles without affecting the carrying capacity of the pipes where they were bent.

"I took these forty-four pieces of pipe and ran them out through that burned hole in the hull. One end projected into the water-filled ship and the other end projected out on to the beach. Then the tide came in and submerged the whole business—but the tide went out again, and as the tide receded the water in the Shandon Belle was siphoned out until the hold was practically free of water. Then I had the pipes withdrawn; the hole was patched and when the tide came in again the Shandon Belle floated. There was a steamship man in Skagway who said he'd give twenty-five thousand dollars for the wreck, delivered alongside the wharf—and I've just come from closing with him.

"I don't think I'll ever go to sea again," continued Tip McCune plaintively. "It's a hard life! I'll clean up here tomorrow and buy me a first-class passage back to San Francisco Saturday, on the City of Pueblo. I wired Sholto—he's the fellow that owns the circus that went broke, and he says the show is going under the hammer in two weeks if he can't make good. I'll get back just in time to bid it in for myself. You know, there's good money even in a one-ringed, one-elephant circus if you play the pumpkin circuits. It's death to go into the big cities with a show like that; and the Old Man ought to have known ——"

"Oh, say, Nye!" gasped the skipper. "And I thought all along he was just a plain damned fool!"

"Tip," said Mr. Nye humbly, "you're a smart man; and me and the skipper we ——"

He broke off suddenly ashamed—and Tip McCune held out a hand to each.

"Thank you for shanghaing me," he said, and laughed. "And, remember, if you ever happen round where my circus is making a stand I'll shill you through and give you a ride on the elephant!"

WIN or LOSE?

This Shot Decides

Often, at the most critical point of the game, an awkward situation can be solved only by the utmost delicacy of touch, accuracy of hand and eye and steadiness of nerve.

BURROWES

Billiard and Pool Table

THE LIGHTED WAY

(Continued from Page 33)

She shrugged her shoulders. "You are lways so gloomy, my young friend," she aid. "We will have luncheon together, ou and I, and I will try to teach you how o be gay. Tell me, then," she went on, s they reached the landing and she waited r Arnold to open the door leading into ie private room, "how is the little invalid rl this morning."

"The little invalid girl is well," Arnold plied.

"She was not too tired yesterday, I ope?" Fenella asked.

"Not in the least," Arnold assured her. We both of us felt that we did not thank ou half enough for our wonderful day."

"Oh, *là, là!*" Fenella exclaimed. "It as a whim of mine, that is all. I liked aving you both there. Some day you ust come again, and if you are very good may let you bring the young lady, though 'm not so sure of that. Do you know that ıy brother was asking me questions about er last night until I thought my head vould swim?" she continued curiously.

"Count Sabatini was very kind to her," Arnold remarked. "Poor little girl, I am afraid she is going to have rather a rough ime. She had quite an alarming experience last night after our return."

"You must tell me all about it presently," Fenella declared. "Shall we take this little round table near the window? It will be delightful, that, for when we are tired with one another we can watch the people in the street. Have you ever sat and watched the people in the street, Arnold?"

"Not often," he answered, giving his hat to a waiter and following her across the little room. "You see there are not many people to watch from the windows where I live, but there is always the river."

"A terribly dreary place," Fenella declared.

Arnold shook his head.

"Don't believe it," he replied. "Only a short time ago the days were very dark indeed. Ruth and I together did little else except watch the barges come up, and the slowly moving vessels, and the lights, and the swarms of people on Blackfriars Bridge. Life was all watching then."

"One would weary soon," she murmured, "of being a spectator. You are scarcely that now."

"There has been a great change," he answered simply. "In those days I was very near starvation. I had no idea how I was going to find work. Yet even then I found myself longing for adventures of any sort—anything to quicken the blood, to feel the earth swell beneath my feet."

She was watching him with that curious look in her eyes that he never wholly understood—half mocking, half tender.

"And, after all," she murmured, "you found your way to Tooley Street and the office of Mr. Samuel Weatherley."

She threw herself back in her chair and laughed so irresistibly that Arnold in a moment or two found himself laughing too.

"It is all very well," he said, "but I am not at all sure that adventures do not sometimes come even to Tooley Street."

She shook her head.

"I shall never believe it. Tell me now about Mr. Weatherley. Was he very sorry when he arrived for having caused you so much anxiety?"

"I have not yet seen Mr. Weatherley," Arnold replied. "Up until the time when I left the office he had not arrived."

She set down the glass she had been in the act of raising. For the first time she seemed to take this matter seriously.

"What time was that?" she asked.

"Ten minutes past twelve."

She frowned.

"It certainly does begin to look a little queer," she admitted. "Do you think that he has met with an accident?"

"We have already tried the hospitals and the police station," he told her.

She looked at him steadfastly.

"You have an idea—you have some idea of what has happened," she said.

"Nothing very definite," Arnold replied gravely. "I cannot imagine what it all means, but I believe that Mr. Weatherley has disappeared."

XXVI

FOR several moments Fenella sat quite still. She was suddenly an altered woman. All the natural gayety and vivacity seemed to have faded from her features. There were suggestions of another self zealously kept concealed. It was a curious revelation. Even her tone, when she spoke, was altered. The words seemed to be dragged from her lips.

"You have some reason for saying this," she murmured.

"I have," Arnold admitted.

Just then the waiter entered the room, bringing in a portion of the lunch they had ordered. Fenella rose and walked to a mirror at the other end of the apartment. She stood there powdering her cheeks for a moment, with her back turned to Arnold. When the waiter had gone she returned, humming a tune. Her effort at self-rehabilitation was obvious.

"You gave me a shock, my friend," she declared, sitting down. "Please do not do it again. I am not accustomed to having things put to me quite so plainly."

"I am sorry," Arnold said. "It was hideously clumsy of me."

"It is of no consequence now," she continued. "Please give me some of that red wine and go on with your story. Tell me exactly what you mean."

"It is simply this," Arnold explained. "A few days ago I noticed that Mr. Weatherley was busy writing for several hours. It was evidently some private matter and nothing whatever to do with the business. When he had finished he put some documents into a small safe, locked them up and, to my surprise, gave me the key."

"This was long ago?"

"It was almost immediately after Mr. Rosario's murder," he replied. "When he gave me the key he told me that if anything unexpected should happen to him I was to open the safe and inspect the documents. He particularly used the words: 'If anything unexpected should happen to me or if I should disappear.'"

"You really believe, then," she asked, "that he had some idea in his mind that something was likely to happen to him, or that he intended to disappear?"

"His action proves it," Arnold reminded her. "So far as we know there is no earthly reason for his not having turned up at the office this morning. This afternoon I shall open the safe."

"You mean that you will open it if you do not find him in the office when you return?"

"He will not be there," Arnold said decidedly.

Fenella's eyes were filled with fear. Arnold went on hastily:

"Perhaps I ought not to say that. I have nothing in the world to go on. It is only just an idea of mine. It isn't that I am afraid anything has happened to him, but I feel convinced somehow that we shall not hear anything more of Mr. Weatherley for some time."

"You will open the safe, then, this afternoon?"

"I must," Arnold replied.

For several minutes neither of them spoke a word. Fenella made a pretense at eating her luncheon. Arnold ate mechanically, his thoughts striving in vain to focus themselves upon the immediate question. It was she who ended the silence.

"What do you think you will find in those documents?"

"I have no idea," Arnold answered. "To tell you the truth," he went on earnestly, "I was going to ask you whether you knew of anything in his life or affairs that could explain this?"

"I am not sure that I understand you," she said.

"It seems a strange question," Arnold continued, "and yet it presents itself. I was going to ask you whether you knew of any reason whatsoever why Mr. Weatherley should voluntarily choose to go into hiding?"

"You have something in your mind when you ask me a question like this. What should I know about it at all? What makes you ask me?"

Then Arnold took courage. Her eyes seemed to be compelling him.

"What I am going to say," he began, "may sound very foolish to you. I cannot help it. I only hope that you will not be angry with me."

Her eyes met his steadily.

"No," she murmured, "I will not be angry—I promise you that. It is better that I should know exactly what is in your mind. At present I do not understand."

"I have been carrying a Hamilton for the past eight years,

and in twenty years I have found no watch that gives the satisfaction that the Hamilton Watch does."—*Conductor C. Smith, Chicago & Alton R. R.*

The Hamilton Watch

The Railroad Timekeeper of America

Conductor C. Smith of the Chicago & Alton train, "The Red Hummer."

Over one-half (about 56%) of the Engineers, Firemen, Conductors and Trainmen on American railroads where official time inspection is maintained carry Hamilton Watches.

About four years ago the Hamilton 12-size Watch was introduced. This watch is equal in accuracy and reliability to the larger railroad sizes in spite of the fact that it is the thinnest 12-size 19 or 23 jewel watch made in America.

Hamiltons are made in all standard sizes. Prices of watches vary according to movement and case from $38.50 to $125.00.

Your jeweler can supply a Hamilton movement to fit your present watch case if you desire. Ask him what he knows about the Hamilton Watch.

Write for "The Timekeeper"

This book is well worth having and saving against the day when you will want to buy a watch. We gladly send it to any one interested in the purchase of a watch.

Do You Buy Farm Products at Wholesale?

Do you buy the staple vegetables in small lots of retailers, paying a heavy middleman's tax, or do you buy direct from the producer in large lots and get better quality at lower price? Articles giving the experience in buying such staples as potatoes and other vegetables, apples and other fruits, direct from the grower are desired and will be paid for at current rates by the Editors of

The Country Gentleman

The Curtis Publishing Company, Philadelphia, Pa.

His manner acquired a new earnestness. He forgot his luncheon and leaned across the table toward her.

"Fenella," he said, "try to consider how these things of which I am going to speak must have presented themselves to me. Try, if you can, to put yourself in my position for a few minutes. Before that evening on which Mr. Weatherley asked me to come to your house nothing in the shape of an adventure had ever happened to me. I had had my troubles, but they were ordinary ones such as the whole world knows of. From the time when I went to school to the time when I had to leave college hurriedly, lost my father and came up to London a pauper, life with me was entirely an obvious affair. From the night I crossed the threshold of your house things were different."

There was a cloud upon her face. She began to drum with her slim forefingers upon the tablecloth.

"I think that I would rather you did not go on," she said.

"I must," he declared fervently. "These things have been in my mind too long. It is not well for our friendship that I should have such thoughts and leave them unuttered. On that very first evening—the first time I ever saw you—you behaved, in a way, strangely. You took me into your little sitting room and I could see that you were in trouble. Something was happening, or you were afraid that it was going to happen. You sent me to the window to look out and see if any one was watching the house. You remember all that?"

"Yes," she murmured, "I remember."

"There was some one watching it," Arnold went on. "I told you—I saw your lips quiver with fear. Then your husband came in and took you away. You left me there in the room alone. I was to wait for you. While I was there one of the men who had been watching stole up through your garden to the very window. I saw his face. I saw his hand upon the window-sill with that strange ring upon his finger. You have not forgotten?"

"Forgotten!" she repeated. "As though that were possible!"

"Very well," Arnold continued. "Now let me ask you to remember another evening only last week—the night I dined with your brother. I brought you home from the music hall and we found that your sitting room had been entered from that same window. The door was locked and we all thought that burglars must be there. I climbed in at the window from the garden. You know what I found."

All the time she seemed to have been making an effort at listening to him unconcernedly. At this point, however, she broke down. She abandoned her attempt at continuing her luncheon. She looked up at him and she was trembling.

"Don't go on!" she begged—"please don't!"

"I must," he insisted. "These things have taken possession of me. I cannot sleep or rest for thinking of them."

"For my sake," she implored, "try to forget!"

He shook his head.

"It isn't possible," he said simply. "I am not made like that. Even if you hate me for it I must go on. You know what I found in your sitting room that night."

"But this is cruel!" she murmured.

"I found a dead man—a man who to all appearance had been murdered there. Not only that, but there must have been people close at hand who were connected with him in some way or who were responsible for the crime. We left the room for five minutes and when we came back he had disappeared. All that we can judge as to what became of him is that this same night a dead man was left in a taxicab not far away by an unknown man whom as yet the police have failed to find."

"But this is all too horrible!" she murmured. "Why do you remind me of it?"

"Because I must," he went on. "Listen. There are other things. This man Starling, for instance, whom I met at your house and who is suspected of the murder of Rosario—both your brother and you seem to be trying to shield him. I don't understand it. I can't understand it. Your brother talked to me strangely the night I dined with him, but half the time I felt that he was not serious. I do not for a moment believe that he would stoop to any undignified or criminal action. I believe in him as I do in you. Yet if Starling is guilty why do you both protect him?"

"Is there anything else?" she faltered.

"There is the final thing," he reminded her, "the reason why I have mentioned these matters to you at all—I mean the disappearance of Mr. Weatherley. Supposing he does not come back, how am I to keep silent, knowing all that I know—knowing that he was living in a house surrounded by mysteries? I hate my suspicions. They are like ugly shadows that follow me about. I like and admire your brother, and you—you know ——"

He could not finish his sentence. She raised her eyes and he saw that they were full of tears.

"Help me," he begged. "You can if you will. Give me your confidence and I will tell you something that I think even you do not know."

"Something concerned with these happenings?"

"Something concerned with them," he assented. "I will tell you when and by whom the body of that man was removed from your sitting room."

She sat looking at him like a woman turned to stone. There was incredulity in her eyes, incredulity and horror.

"You cannot know that!" she faltered.

"I do know it," he asserted.

"Why have you kept this a secret from me?" she asked.

"I do not know," he answered. "Somehow or other, when I have been with you, I have felt more anxious to talk of other things. Then there was another reason that made me anxious to forget the whole affair if I could. I had some knowledge of one of the men who were concerned in taking the victim away."

"Listen," Fenella replied. "I do not ask you to tell me anything more about that night—I do not wish to hear anything. Tell me instead exactly what it is that you want from me."

"I want nothing more nor less," he answered gently, "than permission to be your friend and to possess a little more of your confidence. I want you to end this mystery that surrounds the things of which I have spoken."

"And supposing," she said thoughtfully, "supposing I find that my obligations to other people forbid me to discuss these matters any more with you?"

"I can only hope," he answered, "that you will not feel like that. Remember that these things must have some bearing upon the disappearance of Mr. Weatherley."

She rose to her feet with a little shrug of the shoulders and walked up and down the room for several moments, humming a light tune to herself. Arnold watched her, struggling all the time against the reluctant admiration with which she always inspired him.

"And it was for a luncheon such as this," she protested, "that I wore my new Paris gown and came all the way from the country. I expected compliments at least. Perhaps I even hoped," she whispered, leaning a little toward him, with a smile upon her lips that was half mirthful, half provocative, "that I might have turned for a moment that wonderfully hard head of yours."

Arnold rose abruptly to his feet.

"You treat men as though they were puppets," he muttered.

"And you speak of puppets," she murmured, "as though theirs was a most undesirable existence. Have you never tried to be a puppet, Arnold?"

He stepped a little farther back still and gripped the back of the chair, but she kept close to him.

"I am to have no other answer from you, then, but this foolery?" he demanded roughly.

"Why, yes!" she replied graciously. "I have an answer ready for you. You are so abrupt. Listen to what I propose. We will go together to your office and see whether it is true that Mr. Weatherley has not returned. If he has really disappeared and I think that anything that I can tell you will help, perhaps then I will do as you ask. It depends a great deal upon what you find in those papers. Shall we go now or would you like to stay here a little longer?"

"We will go at once," he said firmly.

She sighed and passed out of the door.

"It is I who am a heroine," she declared. "I am coming down to Tooley Street with you. I am coming to brave the smells and the fog and the heat."

He handed her into the car. He had sufficiently recovered his self-control to smile. "In other words," he said, "you mean to be there when I open the safe!"

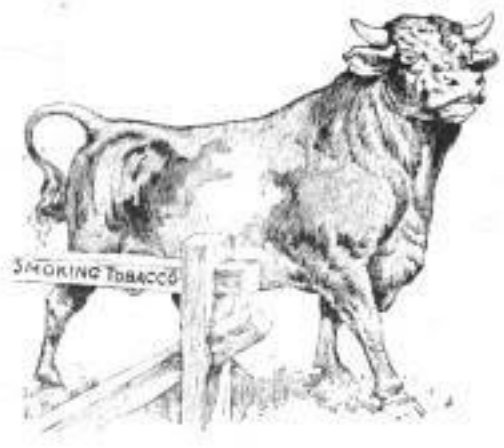
If a pipe could talk

—it might say something like this:

"Seems to me that tobacco's about the cheapest pleasure you buy. High cost of living?—think of all the happy moments you have with me and that muslin sack of "Bull" Durham *for five cents!* Where on earth are you going to get so much pleasure for so little money?



"And if you want to know, I like this good old "Bull" Durham best of all—it *agrees* with me. This is *tobacco*, this is. Of course you could pay more if you wanted the frills. Don't ask me to stand for the frills. *I* don't get the package. It's the *tobacco* that counts with me.

GENUINE

"BULL" DURHAM

SMOKING TOBACCO

"I guess you could pay a little less, too. But don't you think you'd be mighty foolish to lose the pleasure you are getting now to save a cent or so?—for something *that isn't "Bull" Durham?*

"I met some old pipes the other day who told me they smoked it fifty years ago. I don't wonder they were enthusiastic if "Bull" Durham was as good then as it is now.

"More? Yes—thank you! That *does* taste good!"

Smoked by more millions of men than all other high-grade tobaccos combined.

Blackwell's Durham Tobacco Co

THE PANAMA PLUM TREE

(Continued from Page 9)

When the Pacific-Hawaii freighters began to run as clippers round the Horn, a few years ago, they handled less than twenty-*five thousand* tons a year. Last year they handled seven hundred and fifty thousand tons; and by the time Panama opens they expect to be handling a million and a half tons a year. The fleet has grown to more than twenty steamers, and they are building five more for Panama traffic. At present they use the Tehuantepec route.

Over seventy million dollars' worth of American traffic passed over the Tehuantepec route in 1911. This will all come by Panama when the canal opens.

"Then the fact that Tehuantepec is one thousand miles nearer than Panama—or four days nearer New York than Panama—will not affect the canal?" I asked President Dearborn, of the Pacific-Hawaii. Certain engineers have declared that the Panama route can never overcome the natural advantage of nearness which Tehuantepec possesses.

"Never!" he answered without a moment's hesitation. "We use the Tehuantepec route now; but, as soon as Panama opens, we shall use the canal—and Tehuantepec can never compete with Panama. The transfer of freight across the railroad at Tehuantepec requires from eight to ten days. Ships will pass through the Panama Canal without breaking bulk—that will more than make up the longer time at sea."

The Board of Trade and Transportation of New York has put itself on record out and out in favor of free tolls for American ships.

The Hansa Line, of Bremen—the third largest German steamship company—with a fleet of more than sixty steamers, is now putting on Panama ships.

It looks as if the East were alive to Panama's possibilities, all right—doesn't it?—and unanimous at least on the fact that there is a prize worth trying for? Curiously enough—but it is not surprising—though the American shippers, the American transportation men, talk freely of Panama, the foreign steamship men are as mum as oysters! I had a curious experience of this in a European line of big freighters. A friend, who is one of the leading agents, had happened to tell me of the two big freighters they were having constructed in anticipation of the Panama trade.

"Freighters for Panama traffic!" exclaimed their general manager, not knowing I had already seen photographs of the architect's prints. "Not a ton! We have no plans whatever as to Panama." Yet this line already has an agent on the field in every city on the Pacific Coast. The reason for this reticence is too plain for comment. Leave affairs exactly as they are, let American navigation laws stand just as they exist, and, tolls or no tolls at Panama, the foreign carriers will continue to handle ninety-one per cent of American commerce.

A Treaty That Ties Our Hands

When you have said that the shippers of the Eastern American seaports are unanimous on the fact that Panama presages one of the biggest trade revivals America has ever known—you are at the absolute limit of their agreement. On the subject of navigation laws, tolls or no tolls, ship subsidy and the Hay-Pauncefote treaty, there is the same conflicting, contradictory opinion as on the Pacific Coast. In proportion to his breadth of view, a man usually recognizes the reason for the violently contradictory views; and, in proportion to the microscopic animalculæ of his gray matter, he considers the other fellow "a liar" and "a fool." There doesn't seem to be anything halfway in views on Panama. It was the same when Spain set out for treasure on the high seas four centuries ago. They fell to breaking heads at once. That is the case with Panama today.

"No tolls—no tolls at all; free tolls to the whole world. Such a policy will inaugurate the greatest activity in preparations for the canal that the world has ever known in the history of shipping and commerce!" declares John Barrett, director-general of the Pan-American Union.

"I don't know what Hay was thinking of in that Pauncefote treaty, to put us at a disadvantage with nations that already have an advantage over us in building and operating cheaper than we can!" declared the editor who was close to Theodore Roosevelt's confidence during the negotiations; "but I do know that, Hay-Pauncefote treaty or no Hay-Pauncefote treaty, having spent four hundred million dollars on the canal I don't believe in making a present of it to the steamship companies of the world! Let them pay tolls for what they get; and if that throws our world traffic into the hands of foreign carriers let the foreigners act as carriers. These draycarts in the street act as carriers for us; and it doesn't impoverish us to let them do the carrying——"

"But wait!" says Lewis Nixon, who has had much experience in American shipping. "But wait! That freighting of foreign vessels and the use of foreign capital, insurance, brokerage and other charges has drained us in thirty years of six billion dollars in gold—two hundred millions a year it has cost. So long as a foreign octopus has a tentacle fastened to every one of our seaports, sucking our financial lifeblood, so long will legislation be futile to build up the system of a patient bleeding to death. The one thing our foreign rivals fear is a preference for our own ships in tonnage taxes. The regulation this way is constitutional—subsidies are not!"

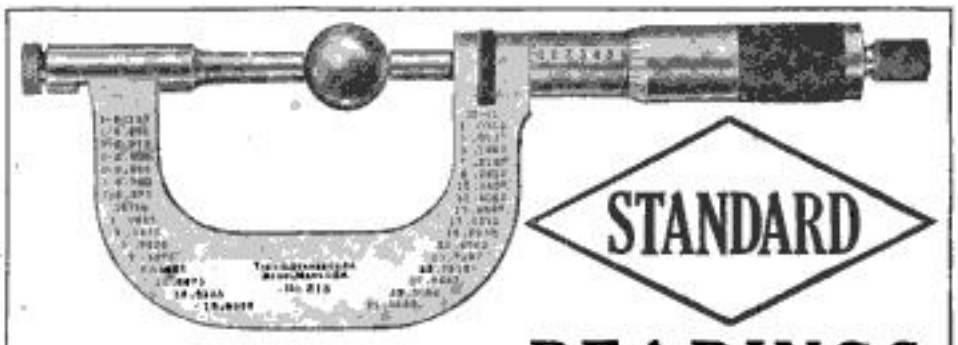
"Yes; the navigation laws are utterly obsolete and unworkable! They date back to 1789 and 1812 and 1840. They must be abolished!" declared a Maritime Exchange man.

"But if you abolish the laws, and let Americans build and buy and equip abroad, won't the abolition of those laws let foreign ships in on your coast-to-coast trade? And, because they can operate cheaper, won't that swamp the American completely?"

Free Toll and Free Trade

"Of course it would. It would put us Americans all out of business as long as protection keeps the price of material so high; but, when you abolish the old laws, pass new ones! What American shipping needs is a free toll for coast-to-coast trade—not free tolls for international trade. Then pass a law closing our port-to-port traffic to foreigners—and our merchant marine will take care of itself, without any subsidies."

"As a steamship man, of course I want free tolls," declared the president of one of the big companies; "but as a member of Congress I don't know whether I think I should support that. Traffic could stand a toll lower than Suez, which began at two dollars and is now under one dollar and thirty cents, without any detriment."



Right against that advocacy of the Suez policy stands the resolution of the Suez directors themselves, when they made their last reduction to six francs plus: "Each alleviation of the burden borne by the shipping trade constitutes a stimulus for the activity of maritime commerce. The reduction from the higher to the lower tariff has been compensated by the increased tonnage."

"What would be the effect of Senator Bristow's bill for the operation of a Government steamship line through Panama?" I asked President Dearborn, of the Pacific-Hawaii, which cannot be accused of being "a little brother" to any railroad system or having any affiliation outside its own directorate.

"What would be the effect of a Government-operated line?" he repeated. "The Government's Panama Line is being run at a loss now. Put the American merchant marine, with its high cost of building and high cost of operating, in competition with a Government line run at a loss—why, such a project would put us all out of business—that is all! It may be good politics, but it would simply kill what there is of our American merchant marine. We have built up, without subsidy, fear or favor, our present fleet of more than twenty ships. Why put us out of business?"

"So long as the law which denies American listed companies the right to go abroad for their boats remains in effect, any scheme for a merchant marine must fail to command the necessary capital," said President Hepburn, of the Chase National Bank.

"There is little inducement for the investment of capital in steamships under our present navigation laws," declare Nelson Cook & Company, of Baltimore. "Under the laws, a citizen of the United

STANDARD

BEARINGS

Are Measured to the Standard of *One ten-thousandth* of an inch

The engineering accuracy of Standard Bearings meets and defeats the finest foreign bearings on their own ground.

It argues a final achievement in American bearing practice.

The American motor car manufacturer, who has perfected his product to a point that precludes foreign competition, must now take full cognizance of Standard Bearings.

An accuracy of one ten-thousandth of an inch means to the motor car buyer safety, service, ease of riding and freedom from repairs.

Superiority in engine, transmission and axle construction constitute a superior car *only* when linked into a frictionless unit by perfect bearings.

Any bearing less accurately constructed than the Standard cannot possibly be capable of an equal efficiency.

Ask of your dealer, "Is this car equipped with Standard Bearings?"

1581 Myrtle Avenue Brooklyn, N. Y.

TREES - Low Prices - Freight PAID

FREE BOOK SAVES MONEY

Write NOW for our wonderful catalogue of money-saving offers on fine quality trees, shrubs and plants. Freight PAID! All orders guaranteed. Don't buy till you've read this big list of nursery bargains. Send for it TODAY! Address

Rich Land Nurseries, Box 107, Rochester, N. Y.
Rochester is the tree center of the world.

WRITE to-day for Star Catalog of GUARANTEED ROSES Sent Free!

Leading roses shown in *natural colors*. Catalog is up to date—offers the cream of the world's roses—also **new free delivery offer.** Also contains "How to Grow Roses," "Rose Lover's Calendar" and list of best roses for your climate.

The Conard & Jones Co., Box 90, West Grove, Pa.
Rose Specialists—30 years' experience

SEND ME 10 CENTS

If you will send me the addresses of two of your flower-loving friends, I will send you my bargain collection of *Spencer Sweet Pea, Giant Orchids, flowering type, Nasturtiums, dwarf chameleon, mixed, Royal Show Pansies, Asters, tuft mixed;* also 30 seeds of the

GIANT MARGUERITE CARNATION

which blooms in 4 months from sowing; also **Free,** "Flower Culture" and my descriptive 1912 catalog containing 48 pages. Write today, enclosing 10 cents. **MISS C. H. LIPPINCOTT,** *Pioneer Seedswoman.* Dept. 56, HUDSON, WIS. (1 hour's ride from Minneapolis)

What Sprayer?

Use the sprayer that does the most work most thoroughly at the lowest cost.

Brown's Auto Spray

No. 1 fitted with Auto Pop Nozzle—most powerful and efficient hand outfit. Capacity 4 gallons. For large sprayers—Brown's Non-clog Atomic Spray. Write for low prices and *Free Spraying Guide.*

The E. C. Brown Co., 22 Jay St., Rochester, N. Y.

Burpee's Seeds are supplied every year direct to more American planters than are the seeds of any other growers. Do your seeds come direct from Philadelphia? If not, we would like to make your acquaintance. Simply send us your address (a postal card will do) and you will receive BURPEE'S ANNUAL FOR 1912,—a bright book of 178 pages, which has long been recognized as "The Leading American Seed Catalog." Kindly **write to-day!** Address

W. ATLEE BURPEE & CO., Burpee Buildings, Philadelphia

States is positively forbidden to purchase a ship built in a foreign port. Furthermore, he is so restricted by the laws governing maintenance and operation as to be unable to compete with foreign-owned vessels. Ships can be built in foreign countries at about forty per cent below the cost here. It costs twice as much to run a steamship in this country as it does the foreign owner. Foreign ships are prohibited from trading in our intercoastal trade. There seem to be only two sides to this question—either our navigation laws must be changed so an American citizen can buy his ships in the lowest market; or the Government should protect the American owner by a subsidy. What we should prefer is that the navigation laws be repealed."

"Panama will cause a great revival of the merchant marine because the time is ripe for it," said President Dearborn, of the Pacific-Hawaii. "Free tolls are the best kind of subsidy—free tolls for the intercoastal traffic, and a toll beneath that of Suez for international traffic, either American or foreign. This will not violate the Hay-Pauncefote treaty. A great change is impending in transportation on this continent, and I do not think the railroads will oppose it. What they lose in continental traffic they will make up many times in local freight. We want free tolls for intercoastal trade if we can get them; but if you abolish all the navigation laws and let foreigners engage in our intercoastal trade, that will put the American marine out of business; for foreigners can build at half we can and operate cheaper; and they are satisfied with two or three per cent on capital where American capital will not venture unless sure of more. Without the coastwise laws we should be helpless in competition; and it is very doubtful, indeed, if a subsidy is legal under our laws. Reserve to us the coastal traffic and give our coastal ships free toll—and our merchant marine will prosper when Panama opens."

Eastern and Western Views

And now, comparing views regarding Panama on the Atlantic and Pacific, how do they stand?

Both demand the repeal of the old navigation laws; but the East says, "not all" the navigation laws. Reserve to the American marine the coast-to-coast trade.

Both declare that free tolls are all the merchant marine needs for prosperity; but again the East says, "free tolls, but not for all"; free tolls only for intercoastal trade—and tolls on international traffic, whether in American or foreign bottoms. This, certain authority contends, would violate the Hay-Pauncefote treaty. The exact words of the section of the treaty in question are:

ARTICLE III. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules in terms of entire equality, so that there shall be no discrimination against any such nation, nor its citizens or subjects, in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

Both East and West alike seem lukewarm or indecisive on the subject of a subsidy. It will be noticed that both Mr. Dearborn and Mr. Nixon, authorities on shipping, contend that a subsidy might be held to be illegal or unconstitutional. It will be remembered, when tenders were opened for the Panama postal subsidy, there was only one offer—that of the Pacific-Hawaii; and the Pacific-Hawaii found itself utterly unable to conform to the terms of the post-office requirements. This was not because the bankers and railroads conspired to crush a subsidized Panama line, but simply because the speed demanded for untried waters and the small amount of mail available to earn the subsidy rendered the scheme, as outlined by the Post-Office Department, financially impossible. Panama, in these days of express fliers and aviators, will never be a great mail route but a great freight route. The two types of ships are different—one for speed, one for space; and the amount of mail available does not justify the outlay of capital needed for the speedy ship.

In Your Garden

the initial cost of the seeds is the smallest part of the expense and yet it is really the most important item. In buying Henderson's seeds you know you are starting right. If your garden is not a success, you can eliminate at least one of the possible reasons. Sixty-four years of successful seed growing, testing and selling has given us an experience that should and does make Henderson's seeds the best that it is possible to buy. Henderson's Tried Tested Seeds.

SPECIAL OFFER

Our 1912 catalogue, Everything for the Garden, a book of 204 pages, over 500 illustrations, color plates, etc., will be mailed on receipt of 10 cents. In addition we will send our Garden Guide and Record and our collection of Henderson's Specialties, this coupon envelope will be accepted as 25 cents in any order of one dollar or over.

Sooner or later you will smoke a pipe

Sure you will. Some day you'll pack a load of Prince Albert in your jimmy and find out what real pipe-smoke is. And the sooner you do it the more fun you'll have.

That's how P. A. has started millions of men to smoking a pipe steady. In two years it has doubled the number of pipe smokers, made the pipe twice as popular. No tobacco could do that unless it had the goods.

PRINCE ALBERT

the national joy smoke

has everything—that is, everything but the old sting and rankness. ***P. A. can't bite your tongue.*** No matter how long or how hard you go to it. The biter simply isn't there. But the mellowness and rich tobacco fragrance and cool sweetness—say, you just naturally want to keep on smoking one pipe-load after another.

P. A. is made by a patented, exclusive process that takes out the bite and rankness—no other can be like it.

Sold by all live dealers in 10c tins, 5c bags wrapped in weather-proof paper, half-pound and pound humidors.

Irene Franklin sings "I've got the mumps" for the Edison

The mumps are "catching," but not so catching as this song, not so catching as Irene Franklin nor so contagious as the pleasure which she brings to your home on the

EDISON PHONOGRAPH

Irene Frank[illegible]ewest and brightest headliner on the vau[illegible]le circuit, joins the great army of stars alread[illegible] making records for the Edison—Lauder, Stella Mayhew, Marie Dressler, Marshall P. Wilder, Digby Bell, Sophie Tucker, Anna Chandler, Billy Murray and Ada Jones, of vaudeville fame; Slezak, Carmen Melis, Constantino, Martin, Marguerita Sylva, Carl Jorn and Marie Delna, of the Grand Opera stage; Victor Herbert's Orchestra, Sousa's Band and innumerable others almost equally famous.

Irene Franklin and all these other great stars are at your command *whenever you want them* when you own an Edison Phonograph.

Hear the new Irene Franklin Records at your Edison dealer's today:

"I've got the mumps," "The talkative waitress," and "I want to be a janitor's child." These are Amberol Records—which mean *all* the verses of each song, no cutting, no hurrying.

Any Edison dealer will give you a free concert. There is a genuine Edison at a price to suit everybody's means, from $15.00 to $200.00; sold at the same prices everywhere in the United States. Edison Standard Records 35c; Edison Amberol Records (play twice as long) 50c; Edison Grand Opera Records 75c to $2.00.

Thomas A Edison Inc.
11 Lakeside Avenue Orange, N. J.

The Edison Business Phonograph will cut the cost of your correspondence from eight cents a letter to at least four cents. In some cases it has reduced this cost to as low as two-and-one-half cents.

THREE YEARS OF PROGRESS

The Ground Covered During Three Years of Political Skirmishing

By William Allen White

DECORATIONS BY HERMANN C. WALL

THEY were sitting in the dining room of a club in Chicago three years ago, the night after the nomination of William H. Taft for president. One man was from California, one from Michigan, one from New Jersey—all devoted followers of the Rough Rider. They didn't like the way things were going. They regarded the platform adopted by the convention as a straddle; they saw Sherman, a reactionary, looming up for the vice-presidency, and they were sickened by the stink of money that was permeating the proceedings. The California man was inclined to think that perhaps Roosevelt's friends had made a mistake in permitting him to keep out of the race. The New Jersey man believed that things were headed wrong and was willing to make any sacrifice of Roosevelt's name and fame in history to turn the tide of reaction that seemed to be flowing in. When up spake the Michigan man.

"No," quoth he, "not on your life! If the people of this country can't buck this thing themselves, if they can't run this country as they would like it run, they will deserve all the misgovernment they get rubbed into them. It's merely a question of who is boss here—whether property is going to own the people or the people are going to own property. I'm for the Rough Rider bigger'n a wolf, but the time has come when we have got to do business without him. We must hustle for ourselves. Four years more of spoon-fed reform will ruin us. If the people desire to progress—and they do or I'm all wrong—they must get out and fight for it; stand on their two legs and go after it tooth and nail. I'm glad to see Theodore Roosevelt go—we've got to fight it out in this country ourselves sooner or later without him, and the sooner the quicker."

What it Means to Get a Finger in the Pie of Politics

AND so Theodore the First, sometimes called the Brash, "sailed away for a year and a day to the land where the palmtree grows," along with other tropical flora; and the spoon-fed people stood up on their legs and began that contest which Mr. Paul D. Cravath, certainly a qualified witness, has seen fit to call "the contest between the people, through their Government, and organized wealth, through the corporations." For three years the contest has been waged with some asperity. In every city, in every state and in the Federal Government, some form of that struggle has been manifest. In caucuses; in primaries; in conventions; at the elections; in legislatures; in Congress; in the White House; in the minor courts, state and Federal; and in the Supreme Court itself, the political contest for the ownership of the United States has been raging. The battle has not been drawn; the "people, through their Government," have won—not finally, of course; but they have made substantial gains.

It is doubtful if any other three peaceful years in American history have seen more substantial changes in the attitude of the people toward things fundamental than the past three years have shown. These changes have appeared in the state governments of some of the commonwealths of New England and in the Pacific Coast region, in the rich sagebrush principalities of the Rockies and in the industrial and agricultural states of the Mississippi Valley. Whatever is moving the people is, of course, but a continuation of the impulse that carried them so far during the first years of the century; and naturally during the past three years they have used the experience that the earlier years of the contest under President Roosevelt gave them—and they have had the accumulated momentum of those years. The important thing, however, is that there has been no let-up in the struggle begun ten years ago. The wave of reform has not ebbed.

Moreover, the political purpose remains stronger than the economic motive. The movement is institutional at base. It began with the primary, which was designed to break the alliance between business and politics; and, now that the primary is operating in three-fourths of the states, it is used as a lever for giving the individual more direct control of the other institutions of government.

To this end the people are creating new institutions—nothing but a rebuff from the United States Supreme Court can stop the spread of that institution called the initiative and referendum. It is now in force in two hundred and nine cities in twenty-five states and is a part of the fundamental law for state purposes in eleven commonwealths. These eleven are Maine, Missouri, South Dakota, Arkansas, Oklahoma, California, Colorado, Arizona, Montana, Nevada and Oregon. The legislatures that adjourned this spring submitted it to the people of eight other states—Washington, Idaho, Wyoming, North Dakota, Nebraska, Florida, Wisconsin and Indiana—where it is incorporated in the new constitutions. In Ohio it was granted to all cities. The urban population forms a major part of the people of that state; and, moreover, a working majority of the delegates to the constitutional convention are pledged publicly in writing to put the initiative and referendum in the new Ohio constitution. In three other states the initiative and referendum passed both houses of the legislature—Kansas, Massachusetts and Illinois—but lacked a constitutional majority in one house. In Minnesota and Michigan it passed one house of the legislature by the required majority and lacked but a few votes in the other house.

New Political Ideas and Forms of Government

HERE are, all told, twenty-five American states where the fundamental relation of the people to the state government is being changed. If, during the next decade, direct legislation gains as rapidly as it has gained since 1908, three-fourths of the American states will be made over. The initiative and referendum today are exactly where the primary was in 1906. The recall has been adopted by the people of Oregon, California and Arizona; it has been submitted to the people for a vote in 1912 as a constitutional amendment in Nebraska, Wisconsin, Indiana, North Dakota and Washington, and by initiation it will go before the people of Colorado. It is a live political issue, for in the cities also it is spreading. It will be found in about one-third of the cities that have adopted the initiative and referendum as parts of their charters.

Digitized by Google

The legislatures of the states were busy last winter with municipal grants of these weapons of fundamental democracy. We find the right to adopt the recall was granted to cities in Idaho, Montana, North and South Dakota, Washington, Wisconsin, Wyoming and California; and the right to adopt the initiative and referendum was granted to cities adopting the commission form of government in Illinois, Louisiana, Virginia and Michigan.

Coincident with the feeling that the powers of government should be extended to the individual voters, there seems to be a well-defined tendency toward widening the suffrage. Four states last year submitted the question of equal suffrage for women to the voters as constitutional amendments—California, Kansas, Oregon and Wisconsin. California adopted the amendment. This is the largest number of states that ever had this proposition before the people in any one year. Heretofore the suffrage movement has been successful only in the Far West, where men exceeded the women in numbers. The states having woman suffrage are Washington, Idaho, Wyoming, Colorado, California and Utah. If the people of Wisconsin, for instance, should adopt woman suffrage in the election of 1912, the question would cease to be sectional and become part of the national democratic movement; for Iowa, Michigan and Massachusetts are regarded as good fighting ground.

Another evidence of the closer relation growing up between the people and their servants is the growth of what is known as the Oregon plan for the election of United States senators. It is the direct development of the primary. After the party candidates for United States senators are nominated at the primary in the summer, the names of the successful candidates of all the parties are put upon the ballot at the general election in November for an advisory vote. To make that advisory vote binding, every legislative candidate is given an opportunity to sign at option one of two statements: First, that he will vote for the United States senator designated by the advisory vote of the people of his state; second, that he will not vote for the candidate chosen by the people. Naturally most of the legislative candidates agree in writing to obey the people, and the advisory vote becomes binding. Thus, in 1909 the Republican legislature in Oregon elected a Democrat, and in 1911 a Democratic legislature in Nevada elected a Republican, and a Democratic legislature in Nebraska elected a Democrat—all because the people so voted in an advisory vote. In 1911 three United States senators were so elected. In 1913, as the result of the work of the legislatures of 1911, a dozen senators will be elected by the Oregon plan of a direct advisory vote.

The Latest Creation in Democracy

IN ADDITION to the three states named above, Idaho, California, Colorado, Arizona, Kansas, Minnesota, Ohio, Montana and New Jersey will elect senators by a direct advisory vote that will be all but mandatory. The Iowa legislature indorsed this plan; but a reactionary governor thought Iowa people were not so capable of choosing senators by a direct vote as the people of Kansas, Nebraska and Minnesota—and he vetoed the bill. However, with twelve states electing senators by a practically direct vote and with the fourteen states of the South, wherein there is but one party, electing United States senators at the primary, it is easy to see that if the constitutional amendment to the Federal Constitution legalizing a common custom should happen to lag it will make little difference.

In a few years more, if the tendency is not checked, most of the states will have the direct vote for senators under the Oregon plan, and those that do not have it will probably be of a type whose electorate is so sluggish that it will make little difference how they choose their senatorial representatives. The people of a state deserve about what they get in the way of representation. If they are not willing to sacrifice their time and their money for the common good they will get the type of senator that represents a selfish, sordid people.

The amendment, by avoidance, of the Federal Constitution in the election of United States senators by a direct vote is not the limit of the cheerful audacity of these reformers. The Constitution provides that the president and vice-president shall be chosen by the electoral college. It has suited the purposes of politicians in practically all of the American states to ignore this constitutional provision by placing the names of the president and vice-president on the ballots at the general elections; and now the reformers are going one step farther and are seeking to place the candidates for party nomination for president and vice-president upon the primary ballot. This permits the Republicans to choose at the primary in their states between Mr. Taft and Mr. La Follette, and the Democrats to express their choice by direct primary vote as between Mr. Woodrow Wilson, Mr. Harmon, Mr. Folk and Mr. Clark. In six states this idea has been legalized: in Oregon—where the people initiated the law—California, Nebraska, Wisconsin, North Dakota and New Jersey. In a number of other states—notably Kansas, Ohio and Michigan—the idea will be adopted probably without warrant of law.

The presidential primary may be called the very latest creation in fundamental democracy. It is as untried as the primary was ten years ago and stands about where the initiative and referendum stood five years ago. It is only about two laps behind the recall; but the idea appeals to the common-sense of the people, for the reason that if they are wise enough to vote for president they are wise enough to choose presidential candidates. And it is likely the conventions which nominate presidential candidates in 1920 will be composed of spectacled, high-browed gentlemen of sedentary temperament, who will register the choice of the people on an adding machine while the delegates devote themselves to the nice points of verbiage in the platform. By that time, perhaps even the platform planks will be submitted to the people by a primary initiative system such as Texas now has, in which case the national political conventions may be run by correspondence or by long-distance telephone.

What a crowd of candidates for post-offices, and for United States district marshals and attorneys and revenue collectors, will be put out of commission by the change! The conventions will not be so dramatic as they are now, but they will be representative—which, after all, is a more or less important point. Prophecies are dangerous, but analogies are harmless. And we may look back a little over a century and surmise how Alexander Hamilton and the dear old Fathers would have smiled superciliously if they had been told that their well-laid plans to put the choosing of a president in a few hands would be laid low by a party system which gave every voter in all the land a direct vote in the election of a president! The electoral college, however, went into atrophy before the demands of the people for a closer grip upon national affairs, and the national party convention may follow the electoral college into disuse during the present decade—for all over the country the convention system is passing. It is passing because the people have found that the system offers to a few men great power to work their selfish ends in national politics. In working those ends these few men open a clear way for the forces amenable only to property to enter American politics and corrupt it.

It is against the perversion of American politics to selfish ends that the whole strength of the so-called Progressive or reform movement is directed. No one cares for the primary because it is the primary; or the initiative and referendum because of the name, or the Oregon plan for electing senators because it belittles the legislature; or the presidential nomination law because it would destroy the national convention's prestige. It is because money gets into conventions and legislatures and turns the will of the people into a byword that these institutional changes in our form of government have risen during the past ten years. All that the people demand is self-government. And it is interesting to note that, coincident with the growth of the primary system and its logical development in fundamental democracy, in nearly every state of the North and West a corrupt-practices law has been passed.

The Ten Backward States

THREE years ago more than half the states north of the Ohio River and west of the Alleghanies had laws requiring publicity of campaign expenses after the election. These laws in general have been amended or replaced by other laws going a step farther. It is now generally provided that there shall be publicity of campaign expenses before the primary or before the election, or both; so that the voters may know how much money a party committee or a candidate is spending, where it comes from and where it is going. In several states, notably Oregon and Wisconsin, the amount of money that may be spent by a candidate is limited. The legislatures of 1910-11 in the various states overhauled their corrupt-practices acts and amended them to provide for publicity of campaign expenses, both as to source and disbursement, before the election. This was done in Idaho, Indiana, Maryland, New Hampshire, Ohio, South Dakota, Wisconsin, New Jersey, Wyoming and California. Colorado is to vote in November upon a corrupt-practices law initiated by the people. In New York, North Dakota and Maine stringent acts or amendments have been added to the present law.

Democracy is almost cynically frank; it acknowledges that without rigid restrictions it will be as easy to beat the game of self-government through fundamental democracy as it was to beat self-government through representatives. Three years ago a state's rank in the Progressive column might have been estimated by the breadth of its primary law and the rigor of its anti-pass law; today these laws are nearly universal, and a state's stand is best measured by the kind of a corrupt-practices law it enjoys. Before leaving the political activities of the forward movement in the country it may be worth while to set down the states that do not have the primary law, in some of its forms, covering practically all important offices and generally providing for the nomination of United States senators. These backward states are Connecticut, Vermont, Rhode Island, Pennsylvania, Indiana, Delaware, North Carolina, West Virginia, Utah and Montana—hardly a respectable minority; and even Montana provides that the party convention nominees for United States

Digitized by Google

senators shall be put on the ballot in November for a direct advisory vote, which the legislature, in advance of its election, pledges itself to follow. In some cases, as in Oregon, South Dakota, Maine and Colorado, the primary came after the initiative and referendum; but generally direct legislation and the recall follow the primary as a natural development of a self-governing people.

Democracy seems to feel a need to mend economic conditions; for, all over the country, in all the courts, in Congress and in the White House, we are tinkering away at this job—cheerfully withal, even though we know what a task it is. Speaking broadly and ignoring a wide neutral zone, in the state legislatures the economic activities of those states in the forward movement are divided into efforts of two kinds—to curb the encroachment of those who have and to ameliorate the conditions of those who have not. Perhaps this is robbing Peter to pay Paul; but there is a feeling among the people that certain artificial conditions that make some men rich and keep others poor must be changed, and that by taking away special privileges in one direction we may establish justice in another; that in some way unearned increment shall be distributed in wages.

So, all over the nation, and particularly in that group of states which have adopted the primary and its accessories, we find the legislatures devoting themselves to the two branches of the problem as they are revealed—first, in the control and regulation of public utilities, and second, in securing for labor compensation for trade accidents. The endeavor is definitely to take from capital employed in the manufacture and sale of public utilities—transportation, water, light, fuel, power and communication—everything but a decent rate of interest, with reasonable managerial salaries, and to make capital bear the sickness and accident expenses due to any trade as a charge against the trade—to be passed on to the consumer of the manufactured article if it seems necessary, but to be taken off the back of labor in any event.

During the past three years a sort of tacit agreement seems to have been reached between the people and the railroads that much of the regulation of railroads, as to rates at least, may be safely left to the Interstate Commerce Commission and to the railroad commissions of the states appealing to that central body for aid. The legislation of 1910-11 has shown a distinct tendency away from state regulation of railroads and toward the centralization of regulation in the Interstate Commerce Commission. In the place of stringent state railroad legislation, about which there is some dispute, we find the state legislatures in the more intelligent and progressive of the states devoting themselves to local utilities—to the electric company, the interurban railroad, the gas company, the telephone company, the waterworks and the town street cars—touching the larger transportation problem only in dealing with express companies, whose business is more or less local, and with telegraph companies in connection with their local rates and service and taxes.

The public-utility commission is the old railroad commission enlarged. This public-utility commission, with powers over practically all public utilities as above designated, is found now in Kansas, Maryland, Connecticut, Michigan, Ohio, New Jersey, California, Washington, New York, Wisconsin, Massachusetts, South Dakota, Oregon and Nebraska; and North Dakota has given cities the right of initial action in fixing rates and securing service from local utilities. The control of the issue of stocks and bonds—to prevent overcapitalization—is given to public-utilities commissions in Kansas, Maryland, Michigan, Nebraska, Ohio, New Jersey, California, Wisconsin and Massachusetts; and, as a corollary of the right to control the issue of stocks and bonds, the commissions are empowered to make physical valuations of the properties of public utilities in Kansas, Maryland, Nebraska, Michigan, Ohio, Oregon, South Dakota, Washington, Wisconsin, California and New Jersey. Except in New York, Wisconsin, Massachusetts and Nebraska, these powers over local public utilities have been given to the commissions by the state during the past three years; and even in the states just named, within the year the powers of the commissions have been extended either by judicial confirmation or legislative action. *(Continued on Page 38)*

THE GRIP OF THE LAW

By Richard Washburn Child

ILLUSTRATED BY W. B. KING

"Great Scott! Say, I'm Sorry! Let Me Help You Pick 'Em Up"

THE Great January Sale was on at the mammoth People's Store of Shodiwell, Tultrate & Markum. Paymaster, who in his profession of versatile adventurer with other people's money had suffered the boredom of a month's inactivity, leaned over the cut-price fiction counter, where literature, dressed in the clothing of a brazen flirt, appealed to the market, hysterically beseeching readers, readers, readers!

Suddenly a hand, small and white, delicately shaded with the pink of life, coming within the rascal's vacant stare, picked up a detective story, the cloth cover of which was besmirched with huge imitation thumbprints. On one finger of the lady's hand which held the book was a diamond that seemed at first glance to be of the size of a cut-glass stopper from a decanter.

The gleam of the stone may have hurt Paymaster's eyes, but an unprejudiced observer who noted Paymaster's lids narrowing down into two slits as he lifted his gaze to the woman's face would have said, had they known him, that the wily Paymaster scented game.

No observer, however, would have been so unfair as to say that the woman was not pretty. To be sure, she was attired in black from head to foot; yet the mourning she wore was of that doubtful character which enhances rather than detracts from the mischievous charms of a diminutive but active body, a well-poised head of fluffy golden hair and a chin so rounded that maturity, almost due in the record of time, seemed postponed indefinitely.

It might well have been expected that the combined charms of the vivacious little woman and the scintillating diamond would have led Paymaster to plan a pursuit of her, either to satisfy his vanity or his leaning for illegal acquisition. She might not have seen him at all and he might have followed her through the crowds unseen, following her golden trail—or, when that had faded from sight for a moment, then the strong wisps of violet perfume which she left on her way. Had this, however, been the sequence of the scene at the book counter, the chronicle here set forth would never have been written. What happened, in fact, was much more surprising.

The girl raised her eyes, looked into Paymaster's face; then, stifling a gasp, beckoned toward the store entrance with a subtle little jerk of her head and a lowering of one delicate eyelid. The lady had introduced herself as one who, however lacking in refinement, was in no wise delinquent as to observation, self-control or power of expression. Her one movement had spoken the equal of a paragraph of words. She had said: "Heavens! It's you—Paymaster—come out of the past! On the level, I'm not sorry to meet you. See this black dress? My husband died several months ago. Do you remember when I was bookkeeper for the Coöperative Dividend Syndicate, Limited, on Nassau Street? I haven't seen you since the postal inspectors got us; and Jim Tholpin married me because I wouldn't testify against him at the trial. Meet you outside. I want to tell you something."

Paymaster, always gallant, strolled toward the entrance, complimenting by little glances of surprise which apparently recognized each time the charm—whether she had it or not—of any salesgirl who chanced to be idle. He had enjoyed, in his thirty odd years of life, lingering for five minutes in the memory of many thousands of frivolous feminine minds. The compelling carefree air was his; he wore it as he met Mrs. James Tholpin—*née* Natalie Murphy—where the swinging doors, like mills, took in their grain on one side and discharged their chaff into the roar of the street on the other.

"So you've kept out of jail!" whispered Natalie.

"My dear girl," Paymaster answered carelessly, "my work is too various. It's scattered in too many cities. I keep changing my game. A month ago I took a round of the drug stores in Boston, Philadelphia, Wilmington, Baltimore and Washington. I'd go in and suggest that the soda clerk had short-changed me a dollar the day before. They'd look up their cash. You know about four out of five days they run over two or three dollars. No reason why they should have it any more'n me—is there? Thirty stores a day—thirty or forty dollars. Works best when you take a taxicab. Nice little trip."

Mrs. Tholpin's dangerous violet eyes danced with naughty delight.

"Say, you're just the same as ever!" she exclaimed with a shiver of enjoyment.

"I made love to you once," Paymaster replied, producing a sheepish grin to order. "You didn't like me then."

"Yes, I did. It was platonic."

"You can't prove it by me," the rascal answered. "Words like that would have given you a convulsion in the old days when you used to order fried eggs and batter cakes at Hormel's Lunch."

Natalie sniffed.

"He made me do a lot of reading," she asserted. "Things have changed. There's an Englishman at my boarding house now who's as refined as you ever saw. And he doesn't notice nothing wrong with my education. That's what I wanted to talk with you about—I don't mean education—it's love."

Paymaster sprang into a defensive attitude and then extended his fingers, palm downward, in one of the impressive oratorical gestures of the streets.

"Nix on love, my proud beauty!" said he, smiling. "It's too late. You're a good girl all right, and all that, and your being a widow don't figure with me; but—nix on love!"

"Oh, I ain't talking of you and I ain't in love with anybody, you boob!" said Natalie blithely, adjusting her large hat with the aid of her own reflection in the store window.

"It's the Englishman. He's in love with me, or so close to it that it hurts him. He's got money already and more coming to him too. He's in this country to collect it. Only what a poor fool! You never seen such a sheep. He's got to be sheared, Paymaster. He's a fruit, and such a chance! It's a shame not to pick him. 'Aw, reelly,' he says, 'Mrs. Tholpin, you are very chawming—oh, truly!—this mawning, I assuah you.'"

She turned up her little nose a trifle farther than Nature intended the normal uplift and allowed her arms to fall helplessly to her side to display utter weariness.

"It should be killed—quick," she added. "It oughter be put out of its own cute little misery. I don't want it bothering me."

"I don't quite see where I fit!" Paymaster yawned as his eyes took a quick tour of inspection over the neat little personage with the long eyelashes. "Can't you complain to the police?"

The girl bit her pink under lip.

"It's queer business for an honest, respectable girl like me," she said. "Only I thought of it the minute I seen you. You're the one to do it. It's a shame for somebody not to get it."

"Get what?"

"The fifty-eight thousand."

Paymaster's smile disappeared as if it had fallen into the brown snow-slush under his feet.

"What's the answer?"

"It's name is Rutherford Abbott-Ewan," she explained. "It's about our own age and wears clothing that looks like

Digitized by Google

burlap and costs money. It has a package of letters of introduction and it has a pigskin leather case for everything it owns, from cigar cutter and fountain pen up to shoes and umbrellas. It stares at me when I talk to it as if it was going to fold up with love and wither away."

"Write that in your diary," urged Paymaster impatiently. "It's great. But what's the business end of this anyhow?"

"Well, there was an old brother he hadn't seen for eighteen years. He died two years ago in Whiffletree Forks, Minnesota, and left some sort of a will, and so on—and they've just settled things; so Ruthy has the only claim, and he's here waiting for his—what do you call 'em?"

"Credentials?"

"Yes, dear; that's the word. And he's ready to go any day—as soon as they come. Only you look a good deal like him. That's what put it into my head the second I saw you. And if you had the papers ——"

"And got there first ——"

"And I kept him here by wearing my lavender gown and smiling at him at breakfast—the kind of smile I can throw when I want to ——"

"Then ——"

Paymaster looked at Natalie—a little doubtful possibly, but grinning at the prospect of the sport; Natalie looked at Paymaster—a little frightened perhaps, but thrilled with the mere wickedness of the conspiracy. Both laughed aloud.

"But now suppose I went out there with a checked suit, and all that," suggested Paymaster; "and then while I was in town he wrote a letter to the people out there—the lawyer—whoever has been looking after the business for him. Well?"

"Nothing to it," Mrs. Tholpin replied with her sweetest tone, glancing down at her diamond. "Mr. Rutherford Abbott-Ewan left the name of the lawyer in England, and—will you believe this?—until his papers come he can't remember it. It hurts its little head to think. It expects its papers at general delivery this afternoon. Do you see the bright light? The only thing that gets me is how I'm going to dodge going to church with it while you're gone; if my friends see me with it they'll think I'm payin' an election bet."

Paymaster strolled out toward the street-crossing with her as she walked; the unlighted cigarette in his mouth bobbed about merrily with the shrewd expressions that played round his thin lips.

"Are you going to get the papers for me?" he asked.

Natalie was much insulted. Her little figure bristled.

"What's the matter with your getting 'em?" she exclaimed angrily. "I'm only giving you a tip. I'm not a thief—and don't you forget it! All you've got to do is to go to the window before he gets there and ask for 'em. The steamship gets in at noon—at high tide."

He smiled again. His sense of humor was not dull or his feelings sensitive.

"Why don't you say something?" she asked. "What are you thinking about?"

"Just thinking," said he, "that your bally-bally friend had been to the general delivery window enough for the clerk to call the inspector's desk the minute I began to play the title part in this Abbott-Ewan production. But the matter is simple after all."

"How?"

Paymaster placed his two hands on his forehead, palms outward, fingertips meeting, in the manner of a Hindu mystic. Without a word he walked over to a newspaper stand on wheels, where were displayed daily journals from thirty big cities widely scattered over the country.

"Hany Hinglish papers?" Paymaster demanded.

The brisk newsboy whisked out an assortment.

"How much for the armful, separately wrapped?"

"Two dollars."

"Wrap 'em up!" said Paymaster grandly. "As a friend of mine named Blowther would wheeze: 'Let's do things in a real big, broad-gauged way.'"

"How much are the souvenir postcards?" he asked, stepping into the entrance of a vacant dilapidated store.

"Two for five on those."

"What'll you take for fifty all stamped?"

"Dollar-sixty."

"Start the factory. We'll come back for the papers and the cards. I want some stamps. Come on, Natalie."

"The money's gone to your head," cried the girl, clutching his arm, but confident that, after all, Paymaster would reveal at the next moment one of his characteristic strokes of genius.

"Just for that I won't tell you what I am going to do," he answered.

"You're addressin' 'em all to Ruthy!" she cried, looking over his shoulder as he began to write.

"Why not?" asked he, looking up at her when his work was finished and he had deposited his huge consignment to the mailboxes.

Her curiosity showed in a pout which had appeared on her pink lips, but Paymaster gave her no time to speak.

"I start for Whiffletree tonight," he said gleefully, "with muh passports and a new suit of clothes made out of a steamer rug. Do you get me? And you stick to the Englishman. Let's see the smile again. That's good. I'd fall for that myself. You're prettier than ever and I'm just as square as I ever was. It's a sure go we divide on this or my name isn't R. Abbott-Ewan. This is my rush season. We're turning applications away. Time is money. Goodby."

Natalie watched him as his lean, agile body, lithe as a cat's, squirmed away through the crowd; then she stamped her well-clad little foot with the vexation of a woman who has not been told.

"English newspapers and postcards," she repeated. "Ain't he a regular cut-up!"

So far as Paymaster regarded a clever idea with more intimate, personal, fatherly affection than one that was merely profitable, the widow of the deceased James Tholpin, promoter of the Coöperative Dividend Company and the Electric Nitrogen Corporation, was right. If, however, she had been at the post-office at four that afternoon she would have seen a diverting little drama which to her eyes would have had a significance not apparent on the surface.

For at the hour when winter dusk begins to fill the corridor in front of the incoming division of the post-office, where the bust of Alexander Hamilton glances down superciliously on the common run, a strange-looking individual walked up and down the tiled floor, kicking scraps of paper, cigarette ends and hairpins with the deliberate, preoccupied manner of a great philosopher. This man wore a long overcoat the color of a lioness, which would have done justice to a character part of an English tourist in a musical comedy. Subsequent happenings indicated strongly its fitness as a costume for a comedy not musical. Now and then the head of the coat's wearer rose from the spacious collar, like the head of a ferret from a rathole, turned in a rapid survey of the individuals passing and then fell back under its broad-brimmed hat into the obscurity of the garment.

At five minutes after four, when the bust of Alexander Hamilton had sneered visibly at modern life for the seventh time, the figure in the coat suddenly seemed to become more active, and from the sharp and hawklike nose which protruded above the upturned lapels came a little explosion of satisfaction. The corridor being almost deserted, the emotions of the wearer might well have been attributed to a single newcomer who was approaching the middle section of the division.

This stranger walked with a military step which was in keeping with the accuracy of his dress. His hat was adjusted without a tilt to right or left that could be measured by a micrometer; his nose was in the exact center of his ruddy, rather expressionless face; his tie, in which a pin was fixed halfway between the right and left edges, dropped into a precisely buttoned, green-knitted waistcoat, as if the point had been predetermined by the use of dividers. Accuracy stood out in his gloves, in the set of the spats on his right foot and on his left. He strode over the tiles up to the delivery window with clicks of his soles beautifully measured with the intermittent clacks of his yellow Malacca cane. He drew out a linen handkerchief with a blue-checked border.

"Why Didn't I Study Law? That's What Gets My Goat!"

"Rutherford Abbott-Ewan. Many thanks," he said into the A to M general delivery window; "and, by-the-by, I'm rawther in a 'urry—if you don't mind."

At these words the head of the bystander came out of the big coat again long enough to say half aloud: "Natalie was right—now that food and clothes are so high it ought not to live any longer."

Almost immediately the clerk within thrust forward a bundle of mail matter that would have staggered the post-office collector for an antifat-medicine house.

"My word!" exclaimed Ewan. "Postcards and letters all together! And papers! I wonder what 'as 'appened at 'ome. My word!"

He gathered the confusing mass into his arms and attempted to carry them to the wall desk, where he might separate them. When halfway across the corridor, however, the waiting stranger, having cast a furtive glance all about, threw himself viciously against the Englishman's back, causing the latter to sprawl forward on the tiles with a great clatter of the Malacca cane and derby hat, and a wide scattering of the papers.

"Great Scott!" cried the rascal in the ulster. "Say, I'm sorry! You didn't hurt yourself? I never saw you. It was just bump and over you went! Let me help you pick 'em up."

He had already undertaken this unselfish task, gathering newspapers, postcards and letters with swift, deft motions of his hands.

"There you are," he said at last, interrupting the brushing the furious Englishman was giving himself. "Now you're all right. I'm sorry."

Yet, for the sake of truth, it must be denied that Paymaster, as he hurried out into the crowd, was sorry. For in the pocket of the ample coat which would have infolded him twice and which he had bought for the express purpose of causing a sensation in Whiffletree, Minnesota, was the envelope containing the identification and legal documents for which Mr. Rutherford Abbott-Ewan had waited so long.

. . . . . .

Those who have never passed a day in Whiffletree do not know the sadness which settles upon that distributing center for the mining and timber country as a winter night begins to creep through Main Street, and the last rays of sunset linger, perhaps with reluctance, on the tower of the Opera House and Home County Bank, photographs of which building may be obtained by those whose architectural tastes permit, at "Joe Ford's, the Foto Man," two doors below the Grand Hotel and this side of Commercial Block. The wind wails through the ten motheaten pines which were spared by the lumberjack's ax to make Smith's Park in the center of the town, and dim lights begin to burn in the palatial and gloomy brick and pillared residence of Amos Wearing Joy, whose huge plate-glass windows overlook the expanse of buildings which degenerate into wooden shacks, as the land drops off to the eastward, and end abruptly in the smelter which discharges noxious hisses and gases, like a peevish reptile chained to a dumpheap.

Paymaster, with his English coat and English bag and English spats and English cigarettes, from which he had torn the United States customs stamps, having walked up half a block from the railroad yard, caught some of this atmosphere of depression.

"Look here!" he said to the last solemn-looking individual whom he met on the corner of Main Street, "what does a man do here evenings? Is there a moving-picture show?"

"No," said the man suspiciously. "Are you going to start one?"

"Maybe," Paymaster replied craftily. "Who are the lawyers here?"

"Nix on Love, My Proud Beauty! It's Too Late"

Digitized by Google

"Lawyers!" the man whimpered. "Lawyers! There aren't lawyers. One's too many, I say, and I ought to know. There's only one and that's Lawyer Joy—Amos Wearing Joy—with offices in the Ore and Lumber Building across the way."

"Thanks," said Paymaster. "I'll take a chance."

He left the native shaking his head sadly, as if to say, "There goes another!" and, still carrying his bag, climbed the creaking wooden stairway of the brick block; observing the dirty hallways, he rejoiced that there were none of the marble corridors and mahogany anterooms with which he had believed he might be awed into nervousness and perhaps some calamitous slip from his presence of mind. He knocked on the ground-glass pane at the end of the passage.

"Come in!" whispered a timid voice and Paymaster opened the door.

The man within was six feet two and smelled of bay rum, but his size and aroma were the only positive qualities which seemed to remain in him. When he spoke, his voice was timid and halting; he cast his dull eyes to the floor and extended a hand which felt like the under side of a slice of cold blueberry pie.

"Mr. Joy?" began Paymaster.

The huge Insignificance giggled with silly pleasure and made other noises in his throat which sounded like air in a steam radiator.

"I'm not Mr. Joy. He's terribly busy in the inner office. I'm his secretary—for eighteen years. Sit down and wait."

Five minutes passed, during which the clock that advertised an insurance company ticked so mournfully that Paymaster concluded that ill luck was in store for him. Suddenly the door flew open, slammed against a case half occupied by law books and filled with agricultural reports, and a shockingly powerful voice roared: "Timmy, who's next? Tell the others to wait."

"Go in," whispered the vast Creature of Humiliation in an awed tone. "That's Mr. Joy. He's all through his last conference."

Paymaster had seen no one go out or any other clients waiting. He stepped into the room.

A little man, who could not have stood shoulder-high to Napoleon Bonaparte, was seated behind a flat-topped desk. Though he must have been in middle age, his hair was black as crows' feathers and as disordered as that of a Western senator who has been thinking. He had two little, tight and not over-clean fists, one of which he was using to dash off words on a block of paper and the other to make inexpressive thrusts toward Paymaster. His face, like his hands, looked undersized and cramped.

"Well!" he roared like a bull. "What now? What now?"

"You're the lawyer that has my property," said Paymaster.

"Haven't got it! Haven't got it!" bellowed the other. "Who are you? Who are you?"

"Rutherford Abbott-Ewan," said Paymaster.

The little man dropped his papers, pulled out the ends of his four-in-hand tie, flapped them up and down on his fingers, and, adjusting a formidable pair of eyeglasses, with black, hard rubber rims, stared at Paymaster.

"So you're the brother of poor George Abbott?" he shouted. "Sad death! Sad death! Nearly broke my heart. Write your name here. Timmy, get out the Abbott probate files."

Paymaster shuddered, but wrote a signature. He felt certain that he had met real trouble at the outset of his infamous undertaking, and he was tempted to fly through the door and down the narrow stairs when he saw the massive Inconsequence bringing in a pile of folders, maps, letter files and drawers of card catalogues.

The attorney looked at Paymaster's writing. The attorney scowled a terrible scowl. He shook the paper. He leveled his crooked little forefinger at the man before him.

"That your hand?" he roared. "Eh? Eh?"

The rascal nodded.

"Then who signed these letters?" Joy screamed, dancing about in a paroxysm of cross-examination.

Paymaster, at bay, invariably does at least one thing—he lights a cigarette. This he succeeded in performing with leisurely grace. Then he looked up.

"My secretary," he replied coolly.

Joy seemed to collapse. He fell back into his chair, wiped his forehead and seemed utterly exhausted.

"I have my papers with me," said Paymaster. "Yes. Letter of introduction—letters from you, written when you took up the case at my barrister's request—letters from my brother George. Here they are. And let me offer you an English cigarette."

"More like it! More like it!" muttered the lawyer, having read the exhibit. "Why, Mr. Abbott-Ewan, what else would you have me do than be suspicious? Would you have me fail to conserve—conserve!—preserve!!—preservate!!!—my client's interests? The responsibility—the gravity, sir, of my position is tremendous, especially in a case when the beneficiary of my labors is at Wellmouthstoke-on-Battersall, ten thousand miles away! No, Mr. Abbott-Ewan, the ethics of the law are rigid. It was necessary for me to identify you before paying you a penny."

"The money——" the adventurer began, with an eager smile.

Mr. Joy clapped his little paws together for an interruption and then rubbed his sandpaper palms in noisy satisfaction.

"We will come to the adjustment of the final rights in the case as soon as the proper procedure permits. Let me do my full duty as attorney. Let me acquaint you with the steps I have taken. Timmy, hand me those papers in file one."

"I'm not a lawyer myself," Paymaster ventured.

"What Did the Lawsuit Cost—Us?"

Joy nodded sympathetically as if to say that he was sorry, but on a pinch could forgive his client the delinquency.

"Now these are the papers in Nordquist *vs.* Abbott's Executor *et al.*," began the attorney.

"I thought George died without owing a cent."

The lawyer smiled.

"This was a case of a Norwegian farmer for damages and personal injuries, owing to your brother's automobile frightening a horse the plaintiff was leading. It was brought into this office after your brother's death, but before you engaged me to act. Of course professional honor forbade me to act on both sides. Therefore I turned the matter over to Jenkins Plumtaster, who used to be my partner. Here is the complaint. Let's see—'Said plaintiff was thereby rendered, made and created sick, sore, lame, wounded and injured, and subject to great mental agony.' And let's see—'Said automobile aforementioned, calculated, purposed and designed to terrify, terrorize and otherwise frighten animals of the nature, kind and species of the horse.' There it is. Read it over! At the risk of being considered conceited, I say that my defense of that case was most ingenious. I never believe in a compromise when there is a good chance in a fight."

"Ha!" exclaimed the impostor. "You won!"

"Won!" roared the little man. "Certainly not. We lost. It was too bad. Here is the decision and copy of executed judgment and satisfaction—three hundred dollars."

"That isn't much in an estate of fifty-eight thousand," Paymaster exclaimed cheerfully.

"Legal expenses and costs, of course," said Joy. "Typewritten evidence, service of detective, Doctor Marrow, expert testimony—seventy-eight hundred dollars. Appeal on agreement to pay all counsel fees, court work, Jenkins A. Plumtaster, four days—four hundred dollars. Appeal referred to referee on facts and law, transcription of record, counsel fees—total, four thousand two hundred and seventy-eight dollars and—and—what's that figure?—and thirty-five cents!"

"What did the man sue for?"

"Eight hundred dollars, if my memory serves me," said Joy. "Now, Timmy, let's have those papers in the prayer in equity for partition of the joint ownership in the Abbott-Blackall timber piece. Blackall, Mr. Ewan, did not want to sell; but your representatives indicated you wanted quick assets to close the estate. Blackall's a client of mine and asked my advice. I told him, of course, not to sell unless forced to do so. What other course could I take?"

"I can't see," muttered Paymaster.

"Certainly not!" said Joy, dumping a load of documents on the desk in front of the adventurer. "That meant showing our teeth. I say it meant showing our teeth! I'm a fighter in such cases—the servant of my client. Of course a prayer to compel a sale is tedious. We need the best of men to confirm titles. He ran into a snag. He was up in Harlan County twelve days—sixty-five dollars. Just look over these items. We pressed the matter over a period of eighteen months. Timmy, is the total right?"

"Sixteen thousand three hundred and forty-two dollars?" sang the secretary. "Yes, that's correct."

"How about the hundred dollars we paid the timber surveyor?"

"I forgot that."

"Add it in when you revise this record. We want it accurate," commanded the lawyer, savagely biting the end off his cigar. "Now give me file three."

Timmy trembled.

"File three is still with the clerk of probate."

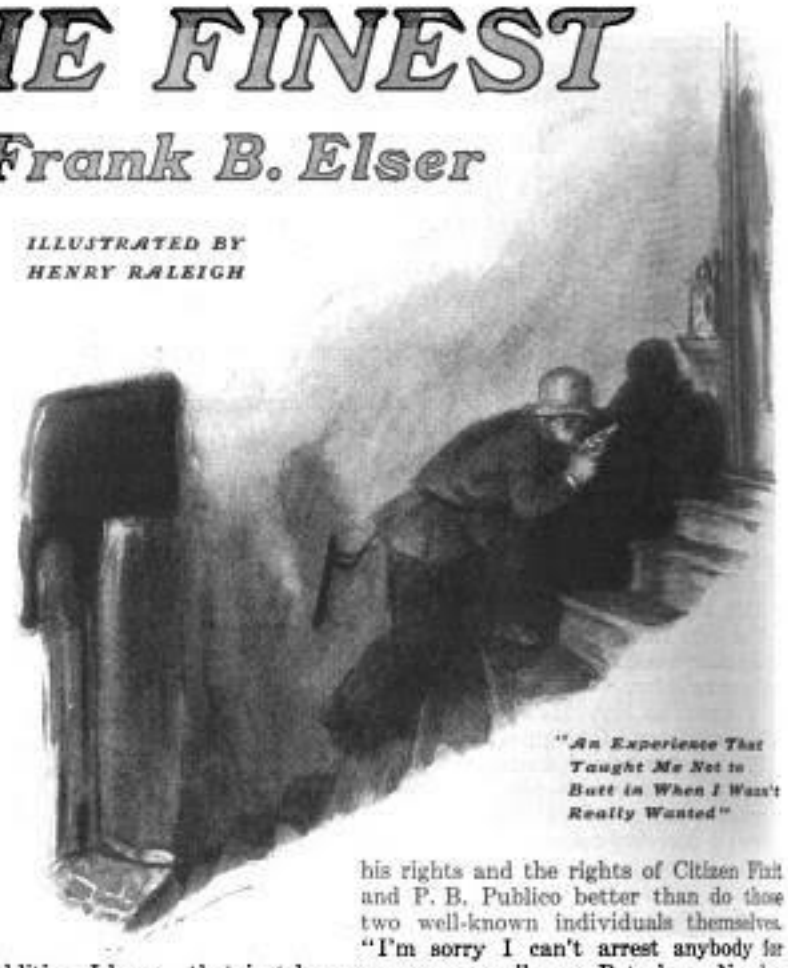
"Pah! Where are the papers in that breach-of-promise claim we settled?"

"They're here."

"Who brought the breach-of-promise?" asked Paymaster timidly.

"Timmy's daughter," snapped Joy. "I certainly was sorry for that girl."

"But how can a breach-of-promise be held up against a dead man?"



"The breach was a refusal to marry long before death. Friends of your brother say he never saw the girl except at the Knights' Annual Ball; but then—what could I do? I wrote you. You said to use discretion. A dead man's memory, you know. And, besides it looked as if we would have to take it 'way up to the Supreme Court on a fine point of law. Personally I'm a compromiser. Furthermore, it was just at the time that Slattery, a minor, twelve years old, to whom your brother had left five thousand dollars under his first will because he was fond of the child, brought suit through his guardian to contest the validity of the second will. I wrote you about it. I drew that second will myself—drew it myself! I knew that old man Slattery was wrong. I could have told him so and made him mad as apoplexy. I couldn't do that! You know how that is? Slattery has been a good client of mine. Why, he wanted me to fight the case for him! But I said, 'No; I owe my efforts to Mr. Abbott-Ewan. I'll call up

GAYNORIZING THE FINEST

A Policeman's Story Told to Frank B. Elser

ILLUSTRATED BY HENRY RALEIGH

"An Experience That Taught Me Not to Butt in When I Wasn't Really Wanted"

PROBABLY you are an average American citizen—or, if not, an average citizen of the city of New York. Whichever you are, if you have ideas about the Black Hand, about Tong wars in Chinatown, about gang fights, and about other things for which New York is famous and infamous, I will lay you ten to one that, on snap judgment, you will say that being a policeman on the metropolitan force is a pretty dangerous occupation.

In this you are more or less wrong. I am one of over ten thousand policemen in New York, and I am putting it straight when I say that the risk of injury or death isn't one, two, three with the real problems of the game. By the real problems I mean the little things under the helmet and behind the brass buttons, about which the public, in New York or elsewhere, seldom reads or hears—the little things and William J. Gaynor. Being a policeman is, of course, more of a hazard than, say, superintending a misses' school on Riverside Drive or doing night-watchman duty at a home for the aged; but it can't compare as a taker of life and limb with structural steelwork, tunnel-boring and many other occupations less picturesque. Alongside of such work, twirling a club with the "Finest"—otherwise the second largest police force in the world, in the second city in the world—is as safe as tatting.

As I write this, the year 1911 has just closed—and only four men out of 10,200 odd in the department have died during this twelvemonth. Of these four, only one—Patrolman Michael Lynch, who was shot by a negro—met a violent death in the performance of duty. Of the other three, two died of commonplace heart trouble and one was struck by a trolley car.

Show this record to your family if they object to your becoming a policeman because of imagined dangers, and I think they will change their notion.

Brains Mightier Than Clubs

IT IS true that willingness to meet death or have a leg twisted in a mix-up with a runaway is requisite to a successful cop's make-up; but this isn't what worries him. Rather, the policeman's troubles in New York today are the things not on the schedule, to meet which he has got to think. The day of the husky piece of beef, surrounded by a blue uniform and topped off with a helmet, is past. Brains have come to be mightier than the club. The men who are getting the promotions are the thinkers, not the bruisers and the grafters.

The Irish still predominate, but they no longer have a strangle-hold on the force. There have been German-Americans and Italians among us for a decade or more, and now Jews are turning out onto the sidewalk in greater numbers every year. The Jewish patrolman or detective is so common today that he attracts no attention—there are Jewish lieutenants galore; and over in Brooklyn you will find Henry Cohen—whose name is not Irish—an inspector. Only the other day, to meet changing conditions, they added a Jewish chaplain to the department. When I first came on the force a Jewish cop was a curiosity. I am an Irishman, forty-one years old, and I have been a policeman for seventeen years. My first year's salary was eight hundred dollars; and, assuming for the sake of convenience that I am still a patrolman, it is now fourteen hundred dollars. Out of my first year's pay I bought my own uniforms, my clubs, my revolver—a matter of about two hundred and twenty-five dollars; in fact I bought—and have bought—everything in the way of equipment except my shield. The city furnishes that absolutely free. I lend carfare out of my own pocket to stranded old ladies who have lost the handkerchief with the dime knotted in it; I tote sticky foundlings to Bellevue; I lead to the station house for examination stray dogs suspected of rabies; I settle family quarrels rather than hale man and wife to the Domestic Relations Court; I try to be polite to unreasonable and overzealous members of the S. P. C. A. who unjustly accuse a driver of cruelty to his horse and insist upon his arrest—and sometimes I pursue and shoot a mad cat in the tenement quarter, or pick up, in true country pound-master style, a small red pig wandering in the theater district.

These are some of the little things. In addition, I have a few routine duties as prescribed by the regulations. Referring you to these, you will note that, among other things, I am empowered and expected at all hours of the day and night to prevent crime; detect and arrest offenders; preserve the public peace; suppress mobs, riots and insurrections; direct traffic; arrest all street beggars; provide police attendance at fires; assist, advise and protect immigrants and travelers; and carefully observe and inspect all places of public amusement, down to and including cock-pits and ratpits.

Personally I have never observed or inspected a ratpit, but I have been asked by a little girl where she could bury a pet white rat. What's more, I told her. This all may sound like a joke; but, take it from me, the business of being a cop is some job—if I do say it myself.

Conditions in the city are becoming more complex every day and the policeman with all muscle and no brains no longer fits in the scheme. Gray matter under the helmet is what is wanted. A patrolman recently won a difficult booklovers' contest conducted by a newspaper; and though Commissioner Waldo is not looking for bookworms as a general thing, he is emphasizing that—to succeed—a cop must study. And as a student the cop is making good. The "Finest" are getting wise.

Today the policeman who is on to his job knows the penal code and the corporation ordinances better than the taxpayer who accosts him; he can put it all over your so-called man-about-town when it comes to street-corner diplomacy; and in a pinch the chances are that he knows his rights and the rights of Citizen Fiat and P. B. Publico better than do those two well-known individuals themselves.

"I'm sorry I can't arrest anybody for that just because you say so," says Patrolman Number 753 to the indignant citizen who complains that hoodlums are snowballing pedestrians at a nearby corner. "I'll stroll over that way and try to catch 'em at it; but I'll be thrown out of court if I arrest anybody for a misdemeanor on hearsay."

"But I saw them throwing," insists the citizen.

"Were you hit?" asks Number 753. "And will you appear as complainant?"

Seeing Things at Night

THE citizen shakes his head. He wants the boys arrested, but he doesn't want to be bothered with court procedure.

"I saw them; that's enough," he argues.

"Sorry, sir; but nothing doing," says the policeman. Then to clinch the matter he pulls forth his green rulebook and reads something like this:

You are authorized to make arrests—

1. On a warrant;
2. When you have seen an offense committed;
3. When a felony has, in fact, been committed and you have reasonable cause to believe that the person to be arrested committed it;
4. In the nighttime, when you have reasonable cause to believe that the person to be arrested committed a felony, though it afterward appears that a felony has been committed but that the person arrested did not commit it.

Having recited this as if he knew it, Number 753 walks toward the corner and the indignant citizen mutters something about a "smart cop," with nasty emphasis on "smart."

Naturally the policeman hates to go into court with a case he can't support, to be made a monkey of by a keen magistrate with a sense of humor. So, next time one appears a bit diffident in taking action in a petty case, pause a minute before calling him a boob and get his view. Court is the bane of the cop's existence anyway. How eager would you be to make an arrest for a trifling offense fifteen minutes before it was time to go off duty in the evening? If you look the other way it means go home to the wife and supper on time; make an arrest and it's wait in night court until perhaps two o'clock in the morning—then be on the job early the next day.

Some policemen strike it unlucky this way and have an epidemic of little arrests extending over a period of a week or more. They may live in Flatbush or Staten Island; but it's up to them to hang round the courts until their cases are disposed of. Moreover, it is convictions and not arrests that count on your record. Under these circumstances wouldn't you look the other way now and then, and let a couple of street fighters separate before you arrived on the scene? I think you would.

"When I was new in the game," a veteran of the force was saying not long ago, "I used to think that every arrest I made was a step nearer promotion. I'm not so energetic now. I try to be there with both feet when anything big is doing;

Moral: Be a Wise Cop, Know the Law, Wink and Gaynorize

Digitized by Google

Asked for a Loan—Not of a Dime or a Quarter—But of Five Dollars

but if I see a crowd cheering on a pair of fighting bootblacks I usually slow up a bit until some one has time to holler, 'Cheese it!—the cop!' If I were to run in everybody who broke a law I wouldn't eat a meal at home three times a month.

"I'll never forget an experience I had about ten years ago," he continued; "an experience that taught me not to butt in when I wasn't really wanted. I was as green as grass and was walking along, just looking for trouble, on a beat on the lower West Side. Scraps were frequent in the district; and as I approached a place known as the Corned-Beef Flats I heard a noise upstairs that scared me—even though a cop. There was a terrific crash of crockery and furniture and a series of wild yells, suggesting riot and murder.

"Pistol in hand, I went up the steps three at a time and broke in the first door I came to. As I did so, some one who was apparently waiting pasted me square in the eye with a beer bottle. I rolled down the stairs, picked myself up on the landing in a daze and, with blood streaming down my face, blew my whistle for assistance.

"In a minute an old warhorse of the precinct came loping up; but, instead of dashing up the stairs as I had done, he just stood and looked at me.

"'What's the matter?' says he at last.

"'A terrible fight in the flats,' says I.

"'Did you start it?' says he.

"'Of course not,' says I, wiping the blood off my face.

"'Then come along,' says he, 'and don't be interrupting a family celebration. It's dangerous!'"

A Dramatic Dismissal

NO ONE except a panicky youngster ever whistles or raps for assistance unless the situation demands it. For this reason the response from fellow officers is instantaneous. The signal is never ignored. The shrill of a whistle or the tattoo of a night stick on the sidewalk has an ominous and sinister sound, and every man who hears it is on his toes at once. Only three times in more than thirty years have there been cases of dismissals from the force for cowardice. These cases made profound impressions.

The last occurred in August, 1907. A patrolman, whose name it would be cruelty to mention, faltered and showed a yellow streak when a murderer he was pursuing darted up a stairway. The man had a gun and he threatened to use it, and the cop simply didn't have the nerve to go and get him.

Like the hanging of Danny Deever, this poor fellow's dismissal from the force in disgrace has the young recruits "a-shakin'" to this day. And it was terrible! Bingham, then Commissioner, stood him up before the crowd at headquarters and delivered a denunciation that made even the veterans shiver.

"My God, men," said the Commissioner, "don't ever let this thing occur again while you and I are together! A man is not a man who is not physically brave. That poor devil is not a man; he is a poor, weak thing! It is thirty years, they tell me, since there has been such a charge; and in thirty years only one man out of about nine thousand is a mighty small percentage. It won't dilute the water much. Take his shield and his buttons—and let him go!"

While the man to whom this was addressed stood trembling and ashen-faced, they unclasped his shield from his breast and began to take his buttons; but the buttons were bradded on and there was no getting them off without a pair of pliers. After a moment of fumbling, agonizing to all who witnessed it, he was allowed to go; and he staggered from the room with his buttons still on. The two other cases of cowardice on record occurred in 1877. The men dismissed flinched from an armed maniac.

Failure to make petty arrests may sound like neglect of duty, but it's seldom that a policeman gets in trouble for it. On the other hand, it is the wise cop who knows that this policy will not only lessen the arduous duties of sidewalk-pounding, but that it is in harmony with the pronounced ideas of William J. Gaynor, Mayor of New York, and the most eccentric and original commander-in-chief—that is the title—the department has ever had. You may remember that Gaynor, as a Supreme Court Justice, had decided opinions on how the city should be policed, and he and General Bingham had a set-to about the case of a boy in Brooklyn who, Gaynor said, was the object of police persecution. The police arrested the boy with remarkable perseverance notwithstanding Justice Gaynor's protest; and also, notwithstanding his protest, the boy was mugged for the Rogues' Gallery, though he had never been convicted of anything.

When Gaynor took office his mind was all made up about what a policeman should and should not do, and he set about putting these ideas into effect at once. Ask any man on the force and he will tell you that Gaynor has alternately heckled, puzzled, discouraged and encouraged the police of New York more than any influence in their history. Rhinelander Waldo, whose name correctly suggests Knickerbocker aristocracy and whom the mayor has described as "a catch—for he's rich," is the latest commissioner and an able one; but the mayor, with power to remove a commissioner over night—or over minute, for that matter—is the Big Boss, and the force doesn't know just what to think of him yet. However, he knows what he thinks of the force.

The mayor has always held that there are too many arrests; and, more than any one else, he has made it clear that a cop must know when to wink and pass on. A few weeks ago His Honor said, in addressing a gathering at a banquet on the East Side, that he was proud to announce that there were fifty thousand fewer arrests in the city during the first year of his administration than there were in the year preceding.

"Your chairman has alluded to the fact," said the mayor, "that since I took office I have relieved you from undue interference from the police. I have tried to do this. I had a hard time doing it. Some people think that the nicest thing in the world is to let the police knock every one on the head. No policeman has a right to put even so much as his little finger on you except by law.

"In the first year of my administration the number of arrests without warrants was fifty thousand less than the year before. The public cried that there was a 'crime wave'—that these fifty thousand fewer people arrested were burglars and thieves; but I took the figures myself and analyzed them, and I showed that the falling-off in arrests was in petty things. We don't need police in this free country. The police now understand that it is their business to deal with criminals and not with decent people."

Moral: Be a wise cop, know the law, wink and Gaynorize.

Carrying out these ideas about non-interference with decent people, it was the mayor who caused to be put into effect the summons system, under which, instead of haling Bill Jones to court instanter for a trifling misdemeanor, the cop says: "Tag! You're it! Come to court in the morning!"—or words to that effect. Likewise it was the mayor who insisted that growing children must have a place to exercise their bodies—in the streets if necessary. He made this plain in one of his characteristic letters. Answering a communication from a little girl who complained that she couldn't roller-skate on the sidewalks, he suggested that she try again, for he was sure that every policeman would "wink very hard" when she clattered by on her skates.

Thus, the New York cop must know when to wink and when not to wink—but it's not so easy as it sounds. Make a silly arrest and he will be criticised as a bonehead or worse; neglect to make one and P. B. Publico, heretofore mentioned, will go all the way to headquarters with a complaint. To meet these complications, knowledge of the city ordinances and the penal code is a lifesaver; and you would be surprised to know how glib some of the police are in the technicalities of the law.

Almost to the point of shouting, the mayor has demanded that the East Side shall live as the East Side wants to; and to avoid trouble the policemen on duty there must use the most delicate judgment. Strictly speaking, it is against the law for Jewish merchants on the East Side to keep open their stores on Sunday. Go down there next Sunday and see how the law is not obeyed. Everything is wide open; Sunday is the big shopping day. The cop who would try to enforce the law would be nothing short of a lunatic. Many persons harbor an idea that these Jews do business on Sunday by legislation authorizing those who worship on Saturday to keep open their places of business on the Christian Sabbath. Such a law was passed, but it was knocked out as discriminatory by the State Court of Appeals. Hence, the Jew on Hester Street has no more legal right to sell you a pair of trousers on Sunday afternoon than has the big merchant in the uptown shopping district; but, under a policy that it is inexpedient to enforce any law with which the majority of the citizens of a district are not in sympathy, he does it just the same. By this system the shrewd and unorthodox merchant of the Ghetto may peddle his wares on both Saturday and Sunday with little fear of molestation.

The Complexities of Pushcart Law

THE lower East Side lies in the First Inspection District, as that geographical division of the city is called for police purposes; and in this district there are approximately forty-five thousand pushcart pedlers. As the typical resident of the East Side feeds and clothes himself and family largely from the pushcart—both as merchant and purchaser—you can see that the industry has complexities worthy of consideration by an Interstreet Commerce Commission.

To regulate these pushcarts and their pushers, the city of New York has adopted a set of ordinances almost as minute in their provisions as the Constitution of Oklahoma. If the poor pedler were held amenable to one-fifteenth of these regulations he would spend about an hour a week on the street and the rest of his time in court or jail. Gaynorization saves the day.

If Aaron, with the fruit cart, violently assaults Nathan, who peddles suspenders, of course an arrest is made; but if he fails prominently to display his license; fails to have a number painted plainly on both sides of his cart; fails to stand ten feet from his nearest brother in trade—in short, if he breaks any such petty rules the policeman is more than likely to pass on. He may speak to the pedler who hasn't shown any license and perhaps arrest him if he is without one; but making an arrest for other infractions, too numerous to mention, is decidedly out of the question.

Enforcing the ten-feet-apart rule is physically impossible. The city fathers who passed the ordinance might

GOVERNMENT AND BUSINESS

A Very Clear-Cut Exemplification of the Club Theory

By WILL PAYNE

ILLUSTRATED BY JOHN R. NEILL

A BUREAU in the Government of the United States is charged with the promotion of domestic and foreign commerce. This bureau employs a force not so large as that employed for the same purpose in a single state of the Union by one foreign Government. I am indebted for that item to a speech made in Kansas City not long ago by Secretary Nagel, of the Department of Commerce and Labor. It furnishes a convenient illustration of the fact that when Governments in the United States deal with business at all they pretty generally use a club.

There are people still living in this country who admire Andrew Jackson for smashing the Bank of the United States—a very clear-cut exemplification of the club theory. Few episodes in American history have been more thoroughly raked over by competent scholars. Every circumstance has been brought to light.

We know, then, that the bank under Biddle's management was really conducted ably and honestly; that it brought about resumption of specie payments, which had been suspended during the War of 1812; that it furnished the country a sound, uniform currency, of which there was great need; that it performed very valuable services for the Treasury; that it assisted materially in the development of the South and West—in short, that it was a highly useful institution. We know also that the charges brought against it were either trivial or poppycock. Two committees of Congress, after Jackson began his attack, investigated the bank and reported favorably upon it. The bank was not a political machine, though most of its directors were personally opposed to President Jackson. Professor R. C. H. Catterall, who had access to Biddle's private letters and papers, in addition to many other sources of information, found no evidence whatever that the bank ever spent a dollar corruptly.

The political atmosphere, however, was filled with vague, unprovable charges, mostly that the bank was a "monster"—"octopus" apparently not having been invented at that time; that, in some mysterious manner, it "made the rich richer and the poor poorer"; that it was "the scourge of the common people"—in short, it was what we now call Big Business and Wall Street.

Laws That Hinder But do Not Help

PRESIDENT JACKSON succeeded handily enough in smashing the bank, thereby precipitating a brisk little panic and opening wide the door for that flood of depreciated or worthless "wildcat" state-bank currency which plagued the country for years and involved it in immense losses.

This episode is still admired by people who imagine President Jackson as another St. George slaying the dragon; but what he did actually slay was the family cow! In spite of protests to the contrary, there is still rather too much disposition to stick a knife into any large horned beast that comes within reach—without adequate inquiry as to how harmful or useful the animal really is, or how far any objectionable characteristics may be removed.

As an illustration: We lead the world in banking power, and our foreign trade, running neck and neck with Germany, is decidedly exceeded only by England; but our banking system is so circumscribed by law that American banks cannot finance American foreign trade. Our great rivals, England and Germany, have branch banks where they have important trade. Besides directly facilitating business, these banks are constant and persuasive advertisements of their respective countries. Some years ago a group of financiers proposed to establish an American bank for the special purpose of dealing with foreign trade, with branches in the East and elsewhere. The best they could do under our banking laws was to incorporate by a special charter in Connecticut; but a Connecticut bank cannot do business at first hand in New York. So this concern was obliged to do its business in our financial capital and chief port in a left-handed way, through an agent.

Again, our national banks are forbidden by law to employ the credit instrument by which a great part of all international trade is moved—namely, the accepted bill of exchange. The result is that American importers in many lines are obliged to go to England for the credit instrument with which they do business. When Uncle Sam buys coffee, for example, he must get his credit in London and go to the foreigner with an English O. K.—which scarcely tends to increase the foreigner's respect for him.

We buy nearly seventy million dollars' worth of coffee in South America. The Brazilian exporter doesn't wish to sell us coffee and wait for his money until the cargo reaches New York and is sold. The American importer doesn't wish to pay for the coffee in Brazil and have his money tied up until the cargo gets to New York and is sold. To avoid this long tying-up of either party's capital, the importer gets his bank in New York to arrange with a London bank so that bank will accept ninety-day drafts drawn by the Brazilian exporter against actual shipments of coffee, bills-of-lading showing that the coffee has been shipped to accompany the draft.

The Brazilian exporter then puts his coffee on shipboard and gets bills-of-lading for it. He takes the bills-of-lading to his own bank in Brazil and attaches them to a ninety-day draft for the price of the coffee. The Brazilian bank will at once discount that draft at a low rate of interest because the London bank has agreed to accept it—that is, to guarantee payment at maturity. The Brazilian bank can immediately rediscount the draft by cable in London, and practically not lie out of its money a single day. At this writing the London discount rate for these "to-arrive" bank-accepted drafts is three and a half per cent. By the time the ninety-day draft falls due, the coffee has reached New York, been disposed of, and money to meet the draft has been remitted to London.

Now there is scarcely any chance of a loss in this transaction. The actual coffee has been shipped, as the bills-of-lading show. It is, of course, insured against loss at sea. The responsibility of the American importer is guaranteed to the London bank by a bank in New York; but if the exporter drew directly upon the importer and then sought to discount the draft he would find only a limited market for it and have to pay a correspondingly high interest rate. Any bank that discounted it would want to know the reputation of the exporter and of the importer, and something about the coffee trade; but when the London bank steps in and stamps its acceptance upon the draft, then any bank will discount it without further inquiry, relying simply upon the sufficient name of the London bank. Thus there is a very wide market for the draft. Year in and year out, in fact, these bank-accepted drafts, by which a large part of all international trade is moved, can be discounted in London and Paris at the rate of three to three and a half per cent, or even less, always commanding the lowest rate.

Our national banks, however, cannot accept time drafts. Nobody seems to know just why that restriction was put in the bank act, nor does anybody know a sufficient reason for keeping it there. We say to a national bank in New York: "You may extend credit freely to a coffee importer; but you must not extend it in the form in which he can directly use it. You may virtually stand responsible to a London bank that accepts his drafts; but you must not accept them yourself." Which illustrates the point that it is easier with us to get laws that restrict business than to get laws that promote business.

One result is that our foreign trade has to get an English or a French O. K. and pay well for the privilege. Another result is that the banking reserve of this country continually feeds stock-exchange speculation.

Foreign banks keep a cash reserve against deposits, and a secondary reserve, consisting of paper upon which they can realize at any moment. This secondary reserve is largely in the form of bank-accepted drafts drawn against actual commercial transactions. Consequently, in Europe commerce gets the lowest-going interest rate and the secondary bank reserve is employed largely in legitimate commercial transactions.

Having no bank-accepted drafts, and no discount market for them, that resource for employing secondary reserve is denied our banks. Our big city banks, however—especially those in New York and Chicago—need a secondary reserve quite as much as European banks do, because lesser banks all over the country deposit reserves with them; and if a pinch occurs the whole country is drawing upon them at once.

Feeding Speculation and Starving Trade

TO BE safe, these banks must always have, in addition to their reserve of actual cash, a secondary reserve, consisting of loans that they can realize upon at any moment. The only available loans of that character in this country are call loans on collateral—that is, loans payable upon demand and secured by pledge of stocks and bonds; in short, loans to stock-exchange brokers and operators.

Because they are quickly convertible and the banks must have them for secondary reserve, these stock-exchange loans almost always get the benefit of the lowest going interest rate—commonly two or three per cent, or about half what the merchant and manufacturer are paying. Thus speculation and not legitimate trade gets the benefit of the lowest interest rate; thus, also, our bank reserves are constantly feeding the stock exchange instead of feeding commerce.

There is no reason to doubt that the European system, with its benefits to legitimate trade and independence of stock-exchange speculation, would have developed here if our bank legislation in the last two generations had been shaped with a view to the needs of business.

Probably, in the United States, a dozen laws to restrict business are passed or proposed for every law to promote business that is passed or proposed. It seems time to redress the balance a bit.

True, our foreign trade flourishes, for which thanks are due first to Nature and next to the very trusts we are trying to disorganize. Forty per cent of our exports are raw material, far and away the biggest item being cotton, which the world buys of us because soil and climate have given us almost a monopoly of growing it. Fifteen per cent

Inside Ball in the Church League

By GEORGE FITCH

ILLUSTRATED BY JOHN T. McCUTCHEON

REGULARLY about the middle of October, when the championship baseball games are over, I begin to worry about the destruction of our birch forests. To cut up a nice, innocent birch tree and leave a whole lot of little birch trees fatherless in order to make print-paper, and then to plaster that paper over with golf scores and horse gossip, and the kind of stuff the college correspondents send out to keep football alive between Saturdays, looks almost like a crime to me. For weeks after the baseball scores disappear I just take a hasty look at the piazza of a morning newspaper to see whether any one has stolen the Capitol at Washington or whether any aviator has gone up so high that he has lost the way down; and if there isn't any type bigger than an ink bottle in the headlines I let it go. I know the nation's safe, and I'm afraid if I read on I'd turn over to the hay they call the sporting section in the winter and get homesick for spring.

There are two kinds of fans—bleacher fans and newspaper fans; and I've been a newspaper fan ever since the year after Cap Anson won his last pennant. I learned to read in the newspapers that fall, and the next spring I began to steal the sporting page away from my father while he was reading the heavy artillery on the editorial page. All that summer I read about Anson and his champions with as much pride as if he were an uncle of mine. I remember how shocked and paralyzed I was that fall when Anson's team blew up in the stretch and lost the pennant. In my childish way I supposed that Chicago always would win—that it was so provided in the Constitution—and I didn't see how the country was going to adjust itself to the new state of affairs.

I've followed the Chicago team by the morning mail ever since. Anson, Burns, Pfeffer, Williamson and Hutchinson were all early heroes of mine, though I never saw them play; and many a morning, at a critical point in the race, I've gotten up early and helped the Homeburg newsdealer chase the Chicago paper sack as it rolled down the platform after being dumped from the fast mail, which merely slowed down to about fifty miles an hour through our town. It took twenty years of devoted reading on my part to land a pennant for the team, but I never faltered. I never yelled "Rotten!" or "Take him out!" or "Give us a beam, bartender!" It wouldn't have done me any good, anyway, at that distance. I just read pluckily on until Captain Chance finally turned the trick; and I'll bet I was as proud of the team as if I had had baseball for a supper appetizer instead of for breakfast all those years.

You'd be surprised to know how many newspaper fans there are anyway. Take our own town of Homeburg, for instance. Probably not ten men in a year see the Cubs play; but most of us are red-hot fans just the same—mail-order fans, so to speak. There's a little informal gathering every morning in front of the State Bank, where we Cub fans talk the whole thing over acrimoniously with the White Sox supporters after we have read the papers, and discuss the previous day's doings of the Homeburg boys in the big leagues.

There are two of them now—Adams in the National and Dewey in the Three-Eye; and, though we might take our eyes off the President for a whole week and never once hunt up his doings on the first or fifth or ninth page, you can bet we don't neglect Adams and Dewey. We look their record over every morning; and when Adams cops a Bleriot out in right, or Dewey doubles and drives in the winning run, we're suffocated with pride.

Seems to me, take it all in all, baseball's a lot more fun in a small town anyway. It isn't so formal. There's not such a financial atmosphere about it. We just go out and play ball. We make more errors and we do more mahogany-headed work on the bases than they do in the big leagues, but we get just as much fun out of it; and as for excitement—well, I'll venture to say there never was so much interest a head over baseball during a world's series as there was in our church league which we pulled off three years ago. That's one of the things that makes me content to stay at home and read about the big-league games. I've seen the church league finish. I've played on the Congregational team, which won the pennant by one game and one run and one cussword—and there really isn't anything more thrilling in baseball for me to look forward to on this sphere.

Our church league was the achievement of Sanford Carroll. Carroll is a young college graduate who came to Homeburg one summer to run our weekly paper while the editor was on a trip. He was an all-round man and a great addition to our little city. He made the band, on the first practice night, with his trombone; and a little later he organized an orchestra and got appointed choirmaster of the Congregational church. They'd had one basso and about half a tenor in the choir for some time, but inside of two weeks they had no less than ten men toiling away on the anthems; and as for girls—well, Carroll was a handsome chap and the trustees were really embarrassed. There wasn't room for everybody in the choir loft. That's what hustle and personality will do anywhere—in Homeburg same as in New York.

All this time, however, baseball was Carroll's first love. He was an eleven-thousand revolution fan—newspaper, bleacher and padded-glove sorts combined; and it was his ambition to organize a league between the various churches. I think he thought of it first because the Congregational church had a crackerjack pitcher, and a catcher who was pretty fair—but that is neither here nor there. He talked to a lot of the Methodist boys; and, as they had a shortstop with some talent, they fell in with the idea at once. There were two Swedish churches in Homeburg and they volunteered to organize one team from both churches. That left only the Baptists on the fence. The Baptists are not very strong numerically, though they have a church so big that you are always afraid it will cloud up and rain inside it when you are there, and their baseball material was—to put it mildly—phenomenally punk; but by a good deal of persuasion we prevailed on them to come in.

The ministers were pretty skittish at first, and we had to talk a good deal about exercise and the value of pure air and pure sport before they would warm up to the proposition. Even when they did consent, they unanimously insisted on a cast-iron rule expelling from the game and from the park any player using a word which assayed even the slightest trace of sulphur. Rule One was a no-swearing rule, and the Baptist minister nearly kicked over the whole league at the last minute by insisting on another rule, prohibiting the stealing of bases. We argued and argued, but he was firm. We had to promise to score them as "appropriated" bases before he would relent.

It was evident, however, that the league was going to be a howling success from the start. The way the various teams jumped into the game was beautiful, but I don't think any one was so eager as we Congregationalists. It was our big chance to get the jump on the Methodists; and if you don't know it I'll just tell you there had been a genteel but decided rivalry for twenty years between the Methodists and the Congos—that's what we call the Congregationalists in Homeburg, life being short. The Congos had begun strong. They had built a big church; and, just about the time the Methodists had put up a nice brick church about half its size, we had put in a pipe organ and taken the wind entirely out of their sails—but there was no drowning those Methodists. They stuck at it and revived and revived—I mean had revival after revival—and grew and got almost sacrilegiously enterprising.

Our Christmas celebrations in the church were admired by every one for their beauty and splendor; but the Methodists hired the opera hall and had two Christmas trees every year—one on each side of the stage, with a fireplace between, out of which Santa Claus came sometimes and other times had to wait until the fireplace could be taken off of him, things not always working smoothly. We used to have annual steamboat excursions on the Mississippi River—grand affairs too; but the Methodists chartered a bigger steamboat and sold four freezers of ice cream to our one. Little by little they pulled away from us, and finally they enlarged the church and fitted it with new oak pews in the up-to-date arena style. After that they put in a better pipe organ than ours, which was pretty old and inclined to be rheumatic by that time, and hired our organist, who had played free for us for fifteen years. Then we gave up and settled down to take their dust on the long, weary journey through this vale of sorrow.

However, the baseball league seemed to be our chance to get even for a lot of the past. There was no use denying it—our team looked mighty good. We had a pitcher with curves and a catcher who really knew how to catch, and I was some considerable little shortstop in a modest way, while Carroll was one of the best fly exterminators I ever saw outside of the profession; so it was with feelings of sublime confidence that we faced the Methodists on the first day of the season before a crowd of a thousand eager citizens, half of whom were embroidery and mission-circle experts who had never seen a baseball game before.

It was a glorious day. It made up for years of grief. As a church, the Methodists were early risers and hard workers, but when it came to baseball they were agnostic to excess. Randolph Blinn was on the first base for them. He was a mighty fine fellow, who led the choir and was superintendent of the Sunday-school, and he enjoyed the game immensely—but he wasn't much comfort to the team. When Alf Saunders, who shortstopped clear from right field to the home plate, dug up a grounder and hurled the ball at him, Blinn would watch it in the most eager and friendly manner; and as soon as it had zinged past him he would turn and chase it as industriously as if he were getting a dollar a step. Roy Collins, on second, was nearly as bad, while A. W. Bunscomb, who had caught a game back in the early neolithic age, wouldn't stand up behind the bat after the first inning, but took balls on the bounce. We almost ran ourselves to death, for the bases were only flag stations and the basemen conversed pleasantly with us as we tore by. "Let the fielders do the work!" was their motto. A grounder is lots easier to handle after it has plowed out through the grass to a fielder anyway. There isn't so much chance of getting it on the end of the thumb with a cruel concussion.

Twenty-six to one was the score and life was perfectly rosy! What did we care for the Methodist pipe organ or their two-ring Christmas tree, or their brand-new parsonage and their paid choir? We walked round the streets all the next week and hunted up Methodists to talk to. We'd talk about the weather or the crops, or the nerve of the Q. Railroad in taking off the four-twenty-three train; but eventually the conversation would sneak round to the subject of baseball, and shortly after that the Methodist would get up and go home, no matter where he was. Then we would saunter out after another Methodist and begin another conversation. Life was just one gloat after another!

The Baptist and Swedish churches went at each other the next Wednesday; and, as champions to date, we sat by and watched them with a bored air. It wasn't so much of a game as it was a dodging-match. Both teams kept their eyes on the ball very carefully and did not allow it to get near enough to bite them. The Swedes finally won, 31 to 19 or thereabout; but they weren't proud about it, because they had averaged five errors apiece.

He Was Superintendent of the Sunday-School, but He Wasn't Much Comfort to the Team

Digitized by Google

The Deacon Stood Watching it With Fascinated Awe

As for the Baptists, they were real martyrs to the game. In spite of their utmost efforts, they couldn't dodge the ball all the time, and the number of contused palms, telescoped fingers and dented features they accumulated was appalling! Deacon Hexton's case was particularly pathetic. He was a partly petrified old chap, with a forty-year stand of whiskers and the spirit of a boy; and he tried to play shortstop because no one else dared to do it. He stopped almost a dozen balls that afternoon and only used his hands twice. After that he kept them behind him out of harm's way. He was knocked down by baserunners; he had a finger cracked; he was hit in the ribs with a pitched ball—and, worse than all, he made a home run.

It was his crowning misfortune. He didn't mean to do it in the first place. He had struck out four times and had gotten so he sort of liked the wild swing of the bat, when he hit the ball accidentally just on the belt. It soared over Lars Sjodeen's head and the deacon stood watching it with fascinated awe.

"Run! Run!" a thousand voices yelled. The captain of the team pushed the deacon off and he trotted to first where he stopped, it looked safe there and he had no wind left anyway; but Sjodeen couldn't find the ball in the thick weeds in right field and a committee of Baptists ran down and pried the deacon off first. He sprinted to second and after great persuasion was encouraged to start for third. He was making good time when Ellery Cain, the town nuisance, yelled "Slide!" from the bleachers. With one despairing look, Deacon Hexton slid. He landed twenty feet from the bag and, clawing desperately for it with hands and feet, finally crawled to it amid cheers that rocked the solar system. The ball was still lost—they never did find it; and after the deacon had been brushed off and pinned up, and his glasses had been found, he walked home like a Roman conqueror—though, as a rule, Roman conquerors didn't rub their faces in the dirt before parading. He struck out more carefully than ever after that and walked with a cane for days afterward.

It looked like the Congo first and the rest were nowhere after that game, and we filled our coats more tightly than ever that week. We took the Swedes on the following Wednesday, and to our grief and amazement went up against Andy Lung, a heady little pitcher who had worked some with the town team. His regular catcher, Bengt Bengston, was there too. We had never held a very high regard for the piety of these two young men and were surprised to meet them in such select company; but it seems that they were Lutherans technically—they had been confirmed about fifteen years before—and we were compelled to associate with Lung's curves for nine innings.

It would have been a sad day for us if it had not been for the young Swedish Methodist pastor, the Reverend Leander Ringborg, who played shortstop and threw industriously at eagles and sundogs all the afternoon. I never saw a man throw at a first baseman and miss him in so many directions. Twice he overshot him by a good forty feet and once he hit the official scorer, while the other seven times, having failed to calm down the ball until the runner was well on his way to second, he threw it toward first base, anyway, and got it entirely out of circulation, thereby allowing us to score profusely. He enjoyed the game immensely and worked with all his might, but he was not what you would call a cool-headed player by several thousand degrees Fahrenheit. However, he was the pastor, and his team never thought of asking him to retire to the field, where he would have been more useful. That is the disadvantage of standing too much in awe of your pastor.

As a result, we beat the Swedes, but hardly enough to notice it—twelve to eleven was the score—and we didn't feel so chesty by a good deal. Our team work didn't loom up so brilliantly this time. We had two or three awful holes. Duffield had four flies in right and didn't get near enough to any one of them to wish it good afternoon; while Lord, on second, achieved five errors on five chances, and might as well have been made of mud when the catcher pegged a ball down his way. We saw plainly that we should have to plug up those cavities; and that, I suppose, is what started all the trouble.

I blame ourselves for the whole business, though we didn't mean it—honestly. There was Lord, on second base, as useful as a mountain of mud; and there was Archie Holbrook, a perfectly good second baseman of civilized habits, going to waste on the sidelines because he had never investigated a church from the inside. We liked Archie and we loved those broad adhesive hands of his. The more we thought of them the more we thought of Archie's welfare. It was distressing to see him growing up far, far from the best influences. We yearned to give him a lift and set him on the right path. I can't see anything wrong in it even now. One should always help a brother; and it was with feelings of the purest philanthropy that we went to Archie and suggested that he enroll himself at once in the Congo Sunday-school and join the choir.

Archie had been watching those church games until his arms had almost twitched themselves off. It had also been terrible for him to see a nice second-base job going to waste while he was lingering idly by. So he accepted with great speed, though nervously; and after he had gotten seated in the choir the next Sunday and had sort of warmed up to the occasion, you'd have been surprised to hear how his voice came out above the rest. Archie had a good voice, but it didn't have any particular throttles or mufflers or check valves on it, and some of the people in the congregation looked sort of wild during the anthem. However, as I said, it was the very best second-bass voice in the city—and, anyway, the anthem wasn't very long.

We spread the news of Archie's reform as vigorously as we could during the next few days, and he played with us against the Baptists a week from the following Wednesday—played one of the finest little second-base games I ever saw. The Baptists had strengthened up a little by not letting their second baseman play at all—but, of course, they had no chance. They played in a sort of foreordained and indignant manner, and it was plain to be seen the game was a bore to them. We were as easy on them as we could be—only made about sixteen runs in five innings—and we gave them a couple of runs, too, by bringing Duffield in and letting him play short for an inning; but that didn't ease matters much, and after the game it almost seemed as if they considered Holbrook had done the whole thing—though goodness knows we could have beaten them without any one at second. We were just perfecting our teamplay and laying for the Swedes. That was all—absolutely all.

The slight hard feeling among the Baptists wasn't a marker, however, to what the Methodists were saying. They had been sailing right along and had beaten the Swedes themselves the week before—Lung and Bengston having been called out of town on parochial work at a baseball tournament in the next county; and from the way they commented on our second baseman you would think they regarded evangelistic work as nothing less than a crime. They fairly boiled with indignation—and we weren't surprised at all, when we met them two weeks afterward, to find the crack Homeburg juniors, Kelley and McGuire, on the team. They had seen the error of their ways, the Methodist captain sarcastically told us, and had decided to attend the Methodist church.

We were pretty indignant, but we didn't say anything, there not being anything particularly pat to say. It was as pretty a game as you would care to see. We could only hit the red streaks Kelley's shoots left behind them and no one on the Methodist team could bat except McGuire, who tried for a home run every time and got as far as third twice, only to die a lingering death while his awestricken teammates pecked timidly at James' sizzers. It might have gone on forever if I hadn't caught a good one accidentally and lifted it for two bases in the twelfth. I took a long lead and McGuire thoughtlessly threw to the Methodist second baseman to catch me. The look of disgust on his face when the second baseman hastily drew himself out of range would have withered a bronze statue! I ambled in while the Methodist centerfielder was carrying the ball in to where he thought he could throw it to the second baseman; and McGuire threw his glove about two hundred yards as he took off his harness—but he didn't swear. I listened with all my might. He swelled visibly—but he didn't swear! It was a wonderful feat of self-control.

After that it was perfectly plain to every one that the baseball season would be fought out strictly on its baseball merits; and that, if any one had any kind word to speak in connection with any one else, it would be done outside of business hours, so to speak. The Methodists and Baptists went after each other the next week and the revivalists just toyed with the high divers, Kelley striking out twenty-two men. On the following Wednesday we tackled the Swedes; and Lung and Bengston, having finished their missionary tour, were right in the middle of the game. Moreover, Albert Alberson and Swan Hedine had discovered their confirmation papers after a long search, and they worked at short and on third. The game was settled in advance. We were a nice little team and played a good parlor game; but did you ever try to reason with the projectiles that four or five husky young Scandinavian coal-miners were batting? I played short and considered myself lucky to get out alive. We couldn't touch Lung—and the score was seven to nothing—a real ball game! The next day little groups of Methodists came round to the various places where we were trying to make our living and leaned over the desks and counters, and talked baseball—baseball—baseball! It was enough to drive you mad, they were so sneery about it. By that night there wasn't enough good feeling in Homeburg to hold a love feast round a pinocle table.

In other ways, though, the season was certainly a success. The whole town turned out to the games, and the noise was so thick and continuous that a cannon hardly would have found a chance to edge in and make its remarks heard. It was mighty hard on the regular county league team, which was playing fourth out of a possible fifth that season. We played Wednesdays to an overflowing field. They played Thursdays to the score boy and the umpire; and along in August they disbanded, after putting a pathetic little piece in the paper telling how hard they had fought for the honor of Homeburg, with no support at all!

By that time we were going down the toboggan at a horrifying rate. The Swedes had cleaned us again; and after a terrific Homeric struggle, in which I might say we represented the dying Trojans, the Methodists got our goat about the last of August, with the aid of three college team visitors who had attended an ice-cream social given by the church and were therefore held to be eligible, and the same old demons, Kelley and McGuire, who were now going to church with such careless grace and precision that you might almost have supposed they had been born that way. We had decided to stand or fall with our one recruit, Archie Holbrook; and this time we fell with a series of heart-wrenching bumps. We perspired and we wrangled. We cut off two base hits and ran bases as if catamounts were behind us—but it was no use! The sun was dying in a bloody sky when our last man was run down between third and home, with the score eight to five against us;

Archie Had a Good Voice, But Some of the People Looked Sort of Wild During the Anthem

Digitized by Google

and the next day I wished heartily that baseball had never been invented. I never heard so much baseball talk in my life, and absolutely there wasn't a thing to talk about either!

Our only comfort in that hot, tragic month was the *Baptists*. They had plodded sulkily along with their regular team, and when we met them, just after the fatal Methodist day, we fell on them with long-bottled fury. We three-baggered and home-runned until the concussions sounded like a bombardment; and we taunted and guyed them as we fanned them out, threw them out, worked the hidden-ball trick on them and put them into the joke class generally. The sewing-circle demons was what we called them. It wasn't a happy afternoon, but it was some relief anyway. We shut them out thirty-seven to nothing, and tauntingly declared that old Deacon Hexton was their only real player, he having stopped a batted ball by accident—though he lost it in his clothes and Holbrook got a home run off of it. Poor Deacon Hexton had suffered heavily all through the season. It was such a temptation to make him dodge at the plate that every pitcher in the league had winged him at least once; and, what with colliding with liners and baserunners, he was getting into such a dismantled condition that it looked as if he would have to finish the season in a wheeled chair. Why, he even lost a handful of whiskers in this particular game when he fell down on second while trying to stop a throw and James, our pitcher, slid in and spiked the deacon's chin shrubbery; but what there was left of the deacon was certainly game. He didn't assay an ounce of quit to the ton; and he made the last out that day by running wildly up to an infield ball, clapping his big straw hat down on it as if it had been a butterfly and then fishing it out and tossing it to first.

The final series began the next week amid a tension that practically paralyzed business in Homeburg. Every one had a fighting chance but the Baptists; and when their game with the Swedes came, on Wednesday, and the latter trotted out their hereditary and hypothetical church-workers, along with two new home-run specialists who, it seems, had been baptized while they were too young to object, we began to make bets on whether or not the score would reach three figures. When the Baptist team came out we suspended all occupations, including that of breathing, and stared, bug-eyed, at the aggregation!

It was the Homeburg regulars—the whole team from Franklin, the star pitcher, down to Petie Berg, a five-foot whirlwind, with the home-run record of the league! At their head was Deacon Hexton, with a quiet but perfectly noticeable smile extending from horizon to horizon on his face; and in his hand he held a sworn statement that the Homeburg baseball team, having met on the church steps the night before and having contributed a nickel apiece to the foreign-mission fund, were entirely eligible and were considered to be Baptists of whom the church was particularly proud—not one of them having broken any laws or backslidden in any way durjng his entire church connection. Having read this to the multitude, Deacon Hexton withdrew to a comfortable seat in his old surrey and the doings began.

It was a game to be embalmed in ball history! Those Swedes didn't care for Franklin or Berg, or the whole Homeburg regulars, with a few big-leaguers thrown in; and they tore off two runs in the very first inning with a batting streak that sent the entire light-haired section of the bleachers into hysterics, and made old man Hexton get out and walk nine times round his surrey, chewing a stalk of timothy as he did so. No wonder he was agitated! It had cost him one hundred cool dollars, we learned afterward, to convert the Homeburg regulars to the Baptist faith on Wednesdays—one hundred dollars a game, win or lose! And the deacon was the kind of man that wanted to see good fruit brought forth from the seed he had sown.

"He Said You Were a Superimposed Parallelepiped!"

He needn't have worried, though. Franklin was about to break into league baseball, anyhow, and after the first inning you would have thought the Swedes were batting at X-rays. Meantime, Berg was concussing and detonating, and the rest of the team were straightening out Mr. Lung's inshoots with businesslike regularity. The score that day was eleven to two in favor of the Baptists. A week later they took on the Methodists, and they never have computed the score with any degree of exactness. The Methodists had hard luck owing to the violent backsliding of Kelley and McGuire, who tried to introduce cigarettes into a lawn social and got on their dignity when it was mentioned by some hundred and nineteen people. They quit the team cold; and, it being only the day before the game, no other battery could be located and herded into the fold. It wasn't a game. It was a Marathon on the bases. The Baptists pounded in about forty runs, and after each one Deacon Hexton would rise and wave a big white handkerchief and shout: "Hooray, boys! Hit it again!"

That night the town was one hornets' nest. The Methodists were furious; the Swedes were sulky—as for ourselves, we were desperate. Our turn was coming on the following Wednesday. On that date we would march out on the diamond and provide a summer day's amusement for the Baptists of Homeburg and surrounding towns.

That wasn't what was bothering us the worst however. The Methodists and ourselves were tied for first place. The Wednesday game was the last one; and if we were defeated that darned old church, which already had the biggest membership and the biggest Christmas celebrations, and a church with an auditorium and a three-manual pipe organ, would take the pennant and hang it from the steeple—after which the members would come round and lean on our counters and desks and talk baseball until murder was committed or the Angel Gabriel called time with his big horn!

Wasn't that a pretty prospect? It just ruined our health to think of it. I had never hated anything so badly in my life as the job of going out there and getting batted off the planet—and all on account of a fool idea we'd started ourselves. Every man on our team would have stood up and taken a good beating with a club to get out of it—but there didn't seem to be any hope. I went to Deacon Hexton, accompanied by Ambrose West, the banker, who is a member of our church, and pleaded with him to play the regular church team, promising to leave out all of our good players if he did, and even to play the solo alto of our choir in right field—but he just chortled at us.

"What, let those bright young fellers backslide after me spending so much money bringing 'em into the church!" he said indignantly. "What do you think I am? Here I see a chance to bring light into nine young souls. It's costing me a lot of money, but I don't begrudge that. You ought to see them boys at service! They listen to the minister just as careful as if he was talking baseball; and now you want me to boot them out of the church because you're afraid they'll beat you next Wednesday! Dear, dear!—but this is a wicked world!"

He talked on that way as long as we would stand it—wouldn't listen to reason or anything else; so we went home and began taking quinine in preparation for the sad event, in the midst of which disagreeable process Sim Bone and Pang Byers came to us and asked permission to play. They are beloved members of our church, but what they know about baseball you could print in scarehead type on a postal card; but they argued that we were going to be annihilated, anyway, and they had contributed to the expenses of the team and wanted some of the fun—and besides, they said, they had a scheme. So we let them play; but it almost caused a row, because every member of the regular team wanted to have one of the recruits take his place. You could judge from this that we weren't approaching the festivities with anything like joy.

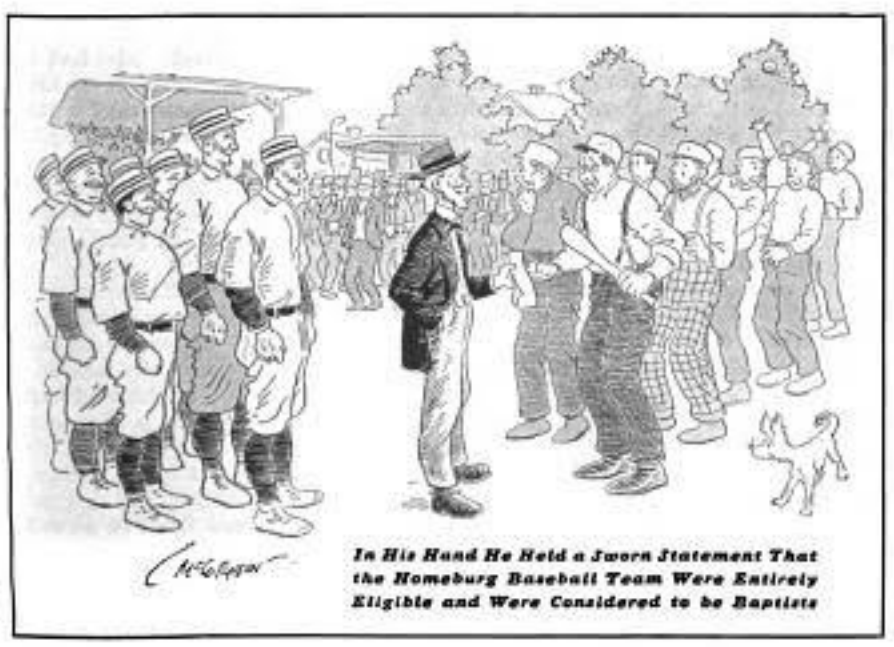
I have never seen so many people in one place in Homeburg as there were on the baseball field that Wednesday—and the Baptists had a big majority. Every Baptist within forty miles was present, and most of the Methodists, too, they having figured out that the pennant was going to be batted into their clutches that afternoon. The pseudo, hypothetical and temporary Baptists got a reeking cheer when they burst out on the field, and a little knot of Congregationalists chirped loyally at us as we went gloomily out on the diamond.

Sim Bone played first at his request. Sim is the best catch-as-catch-can talker in our town. He is as sarcastic as tabasco sauce, and witty, too, and he had the emergency Baptists on the team mad before the game began. Carroll played second and I stuck to short, while on third base we had Pang Byers. Pang is about forty, and whenever he goes into the gas office to complain about his bill they ask him how much he wants off before he starts. He is the most destructive conversationalist I know of. He is a regular verbal griddle. They still tell in Homeburg how a smart traveling man began to josh Pang in the restaurant one night about his straw hat, it being later in the year than the traveling man allowed the world to wear straw hats. Pang let him talk a minute—and then started in with a few general allusions to the wonderful advance in microscopy and the science of detecting the infinitesimal. From there he wandered on, speculating on how long it would be before science would be able to discover a traveling man's brain. Then he began discussing a traveling man's neck; then his mouth, and then his ears; but he didn't finish, because the traveling man went away. And, Pang following him, the traveling man didn't wait for the train, but walked out of town and over to the junction, where he sat four hours all alone and glad of it.

We went on to the field, and Andrews, the temporary Baptist third baseman, hit the first ball so hard that both the pitcher and I had to jump for our lives to get away from it. Andrews stopped at first, being kind of weak from not having had a chew of tobacco for over an hour, and Sim Bone turned on him with a glare.

"What do you mean, you unfumigated, unmitigated quintessence of undesirability, by trying to kill our pitcher?" he hissed. "Why, you scarified protoplasm, if you do that again we'll transmogrify you!"

Andrews roared like a bull. Sim had been talking to him that way before the game too.



"Say, do you want your damhead knocked off?" he shouted. "I'll ——"

"Excuse me," said Corwin Jones, who was umpiring for us, "but you're out of the game and off of the field for swearing!"

The row that followed made big-league baseball sound milksoppy. The whole super-Baptist team crowded round Jones, and before they got through talking he managed to get two more—the third baseman and the right fielder. They threatened, roared and threw their gloves round for ten minutes. It was blissfully tumultuous. Deacon Hexton came down and said he really didn't think the boys meant to swear; but we were firm. Besides, we were inexpressibly shocked at the deacon. Maybe they didn't mind little things like profanity in his church, but we certainly could not permit it. That fixed the deacon and evened up for a previous evening he had given us.

Presently the three debaptized players shouldered their bats and went out of the park, while the grandstand seethed and growled and bubbled and muttered like a retreating thunderstorm. They saw the whole wicked plot and besought the rest of the regulars to stand firm. They called on them, with tears in their eyes, to be calm and patient; and the three miserable weaklings who went out to plug up the holes came up to us and asked us if we couldn't kindly play the game out without sarcasm!

In His Hand He Held a Sworn Statement That the Homeburg Baseball Team Were Entirely Eligible and Were Considered to be Baptists

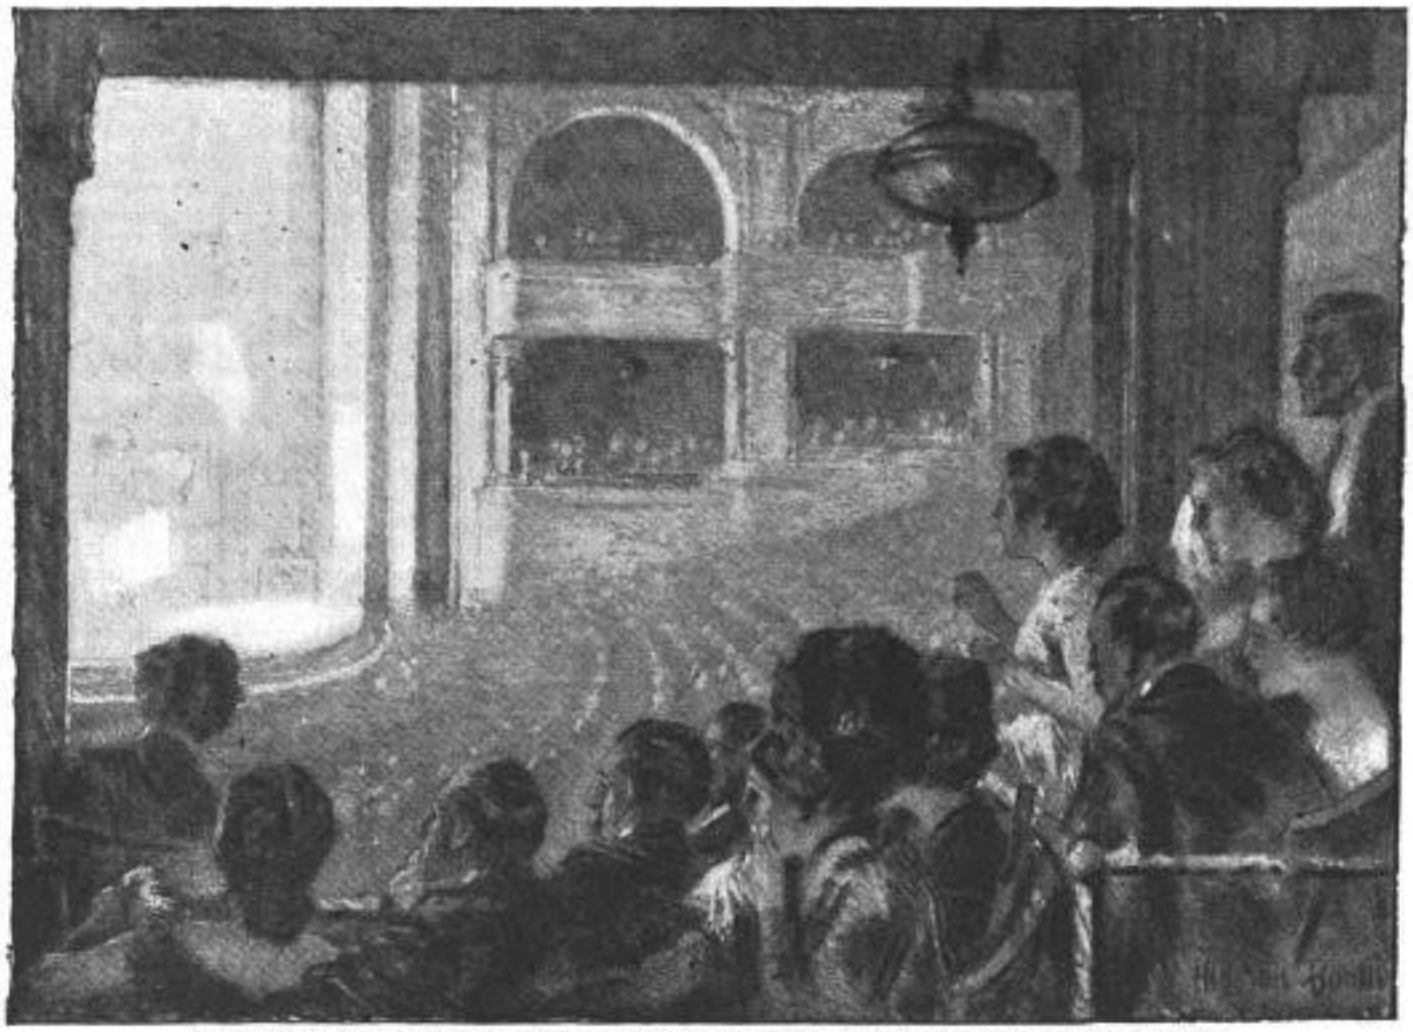
The Box-Office Value of Tears

By MARY SHAW

ILLUSTRATED BY HANSON BOOTH



TEARS—idle tears!" sang the poet.

"It does no good to cry, darling," we teach the children. All the maxims and platitudes preach the uselessness of tears; but ask a manager of a theater about the actual value of tears and, undoubtedly, he will show you that millions of dollars have been made by this amiable and general human weakness.

It is not so easy to make persons in an audience weep as it is to make them laugh. The general impression that the emotional actor has a finer kind of talent than the comedian is borne out by experience. Playwrights who understand the nature of things strive to get telling situations—that is, to bring tears to an audience in the makeup of the play itself. There are fundamental things in human nature which, properly placed in the drama, will bring tears from the audience. They are very few in number, but they can always be relied on for this effect. The surest one is the relation of the mother and the child in unhappy situations. A large proportion of women and an average number of men are very quickly touched by any trouble in the relations of these two.

It does not matter how indifferently such scenes are played; the audience can always be relied on to bridge over any gaps in the performance.

In these days, when there seems to be a kind of dread of plays that touch upon the tearful emotions, superficial reasoning would indicate that the temperament and nature of the public at large are different from what they were in former days. In America the desire to be amused, which shows so great a change from fifteen to twenty years ago, when audiences equally enjoyed being moved to tears, might lead us astray if we did not remember that there is a fashion in tastes in the theater just as much as there is in clothes and in sports.

This Otherwise Impossible Play Was Swept Into Stupendous Financial Success on a Flood of Tears

Thirty years ago in this country such plays as Camille and East Lynne, which depended for their vogue almost wholly upon tears, were the greatest money-makers that the American stage had ever known. And in their wake came a series of plays such as Froufrou and Led Astray, modified somewhat in character, but still dependent largely on the same element that won the entire approbation of the theater-goers.

Careful observation of the successful plays on our stage during a long period shows this constant changing from one type to another. There was a period in which melodrama was in the ascendent, another of emotional drama, another of comedy, and still another of burlesque. So there is no need to grow tragic over the present liking for something rather light and ephemeral in dramatic fare.

George Eliot, a great student of human nature, has written that people grow to wear grief like a hat, cocked to one side, with a feather stuck in it. This is true of an audience. The susceptible women and girls who throng the matinées, and use up three or four handkerchiefs at Zaza and such plays, are not suffering in any real sense. If persons in an audience actually entered into the catastrophe presented on the stage as they would enter into one in real life, then all the current thought of the disagreeableness of emotional plays would have some real meaning. A long experience in presenting rôles of this kind, however, has taught me that there is quite as pleasurable an effect on certain persons in having the tenderer side of their nature gently touched as there is in having their sense of humor tickled.

It is when people begin to give reasons for avoiding sad plays that one sees how little we really know of ourselves and our natures. Nearly every one of the objectors will tell you that he or she is particularly sensitive to suffering of any kind. They will not stand for being "harrowed up," they say. If they were really harrowed, in the true sense of the word, by the weepy drama, then, indeed, it would be something seriously to eliminate; but, as a matter of fact, it is not at all easy to harrow persons with an imaginative recital like a play. The instant proof is that we are surrounded every moment of the day by deep suffering; yet we are in no sense harrowed by the actuality.

The sad plight of a child will touch persons in the theater more deeply than any other one thing. Yet, curiously, the same persons who weep copiously over a little chap, cold and neglected and deserted, in a play, will be quite indifferent in real life to the same sort of boy when they pass him on the street or when they hear a touching story told of one. It gives an audience a pleasurable sensation to see the misery of the child in a play relieved, because it costs them nothing but a little sympathy and everything is so beautifully fixed up "for keeps"—while the actual boy on the street is a distressing problem with a haunting face, from which you get no pleasure. So how can you be harrowed by a thing in a theater which you are able to endure philosophically outside?

The truth is that persons who make such objections to the emotional drama are simply those to whom the emotional drama does not appeal. If they were really "harrowed up"; if their hearts throbbed and their imaginations were made captive; if they lost for a time all sense of the reality about them and were projected into a dream world of which they were a vital part—they would enjoy the drama. And that is the whole meaning of stage representation—to make the audience a component part of the personality of the characters on the stage and the life they are living.

No one disputes the right of an individual to select the kind of play he prefers or the mood he would be in for the few hours in the theater; but to explain his preference by misstatement is an injustice to himself and an injustice to the theater. The American, for the most part, is a nervous rather than an emotional being. He takes everything—business and amusement—as he takes his quick lunch—on the run. Comedy effects can be quickly developed and disposed of. Emotional effects require a longer time in preparation, a subtler attention and more abandonment of the individual. Therefore they have to be particularly powerful and universal in appeal to hold his attention. It is not his sensibility that makes him dread them, but something quite different—his unbalanced nerves.

The value of the weepy drama at the present moment is certainly not so great as it has been at other times in our stage history. The reason is that just now it does not chance to be the prevailing tone and fashion; but, even so, it can hold its own, provided it is skillfully sandwiched with lighter material. And, at any stage of the game, the appearance of a man or woman with unusual power to draw tears from an audience will restore to favor this class of play which was so popular a decade or two ago.

One can easily see that if a woman of the talent and personality of Clara Morris were to rise and demonstrate in some play the power to send women into what is called hysterics, and have them led out weeping from the theater—to shake strong men by her portrayals—we should at once be flooded with a lot of drama written for her and her imitators; in fact, it is only a short time since Miss Morris made her phenomenal success in plays of an essentially weepy character, and people have not changed much in so short a time—only fashion in plays changes. It sounds almost like a fairy tale, the description of how, when as Miss Multon she pleaded so eloquently to see her child, women and men rose up in the audience and screamed: "Let her see her child!"

How odd it reads, in this day and order of things, that Miss Morris was able to keep the curtain down thirty or forty minutes between two scenes of Camille, while a crowded house waited breathlessly for the next round of agony! Her matinées used to begin at one-thirty; and sometimes the play was not over until six-thirty—one long, unending river of tears. Yet it is not surprising when you come to think of it. Miss Morris absolutely set a fashion that night at Daly's Theater, when she appeared as the Woman in White, in Wilkie Collins' drama—I think. It was something novel. She had the power to capture the imagination of her auditors, to bring them into the situation as if they were interested participants in her trouble. The throng of women leaving the theater with three or four soaked handkerchiefs, and the men who had blown their noses until their handkerchiefs were almost in the same condition, were as deeply satisfied as any that today pile out from the batch of comic operas and farces with which our theaters abound.

I never saw Miss Morris at the height of her career. It was at the very end of it, and after I had some knowledge of acting, that I had the privilege of witnessing her New Magdalen in New York; but by this time the fashion in plays and acting had changed. Instead of the wild abandon and piercing tones that had made her performances so thrilling at an earlier date, another style of suffering lady had taken possession of the stage—a quiet, well-bred woman. She still used her handkerchief, but her sobs were all controlled, and her tones were fixed so as to be harmonious and pleasing to the ear. I was very much struck by the difference between her methods at this time and those ascribed to her earlier in her career. It was impossible to realize the effect she must have produced

Digitized by Google

The Same Persons Who Weep Copiously Will be Quite Indifferent in Real Life to the Same Sort of Boy

when audiences were not sensitive to style, but were simply captured by the truth and novelty of her work. There were no forty-minute waits, by the way, when I saw the performance; it was rather indecently hurried, in fact. The actress had so modified her performance that a great deal of it, except the climaxes, was done in a low tone, almost monotonous in its effect.

I suppose Eleanora Duse and Miss Morris might be taken as the two extremes in the difference of methods of producing tears. Twenty-five or thirty years ago we had the wonderfully gifted Morris using all her powers of interpretation, but through the outward expression of startling shrieks and moans, and restless, harrowing emotion. Judged by our present standard of feeling and behavior, such a method would now seem to have been rather unhealthful. Results just as powerful are produced by Duse as she stands calm, apparently unimpassioned, breathing forth her misery in tones that are almost musical in cadence, seeming to give us a typified figure of universal suffering rather than individual grief. The manners and methods of these two women are absolutely different.

Heartbreaking Lady Isabelle

HOW comparatively short a time ago it was regarded as natural for women to faint away every time anything happened in the drama that was unusual! How they sobbed and cried over what would now be considered the merest trifles. Whether women in real life in those days behaved in that way, we cannot very well know; but we do know that in books and plays it was the rule of conduct. Nowadays if any solution can be worked out in a situation that will avoid fainting by women it is eagerly substituted. As for sobbing and crying, unless it is for most excellent reasons, an actress indulging in that sort of thing would be considered a nuisance. The fainting away and the moaning have been thrown into the scrapheap along with the scream. This change has not been brought about solely by the actors. The manner of expressing feeling, of presenting human character, and the method of construction of plays have altered so completely that a new style of acting is inevitable. When it comes to the essential thing we find that dramatist and actor always hark back to the elementary conditions that generally can be relied on to touch the human heart.

The compelling of tears is a gift possessed very much more largely by women than by men; in fact, few men have this power. And the tear power of even these few men is very often due to the situation invented by the dramatist.

Some plays can almost stand on their own feet as tearcompellers. Take East Lynne, for instance, which had a tremendous popular appeal, first as a novel and then as a very badly constructed play. Every grade of actress, from the highest to the lowest, has essayed the leading rôle with almost equal success. Why? Because the gist of the emotional appeal is in the fact that the mother, who through a sin of her own has deprived herself of the companionship and bringing up of her children, enters the house of her former husband and his wife, disguised as a nurse, when Willie, her oldest boy, is dying. In his delirium the boy keeps calling for his mother and asking if he shall see her when he dies. At last the strain is too great for the woman—she pulls off the green spectacles and the wig which disguise her and, clasping the child to her breast in his dying agonies, screams to him that she is his mother.

For twenty-five years this play was the last word of all that was most touching in the weepy drama. Yet, when an engagement was offered me at the Girard Theater, in Philadelphia, to play Lady Isabelle—among other rôles—I was ashamed to say I had never seen East Lynne and was totally unfamiliar with the part. However, as every actress' name, from Lucille Western down the line, was associated with a personal triumph as Lady Isabelle, I felt that what so many others had done I could do. I was very conscientious. My training had been entirely modern. Therefore I was positively amazed at the cheap, tricky playing upon a simple, natural emotion in the play. Evident claptrap met one at every turn. The construction of the drama itself was loose—there was no sequence in it at all. The scenes were tacked on to one another, with no connection. The conduct of the characters was scarcely human—they belonged in essence to the old melodramatic types that were not required to be guided by any true motives. They did a thing because it would make an effective situation, not because any human being would do it naturally. Everybody abused Lady Isabelle from start to finish. No one seemed to have a spark of natural, human decency. The husband was a cold-blooded sentimentalist who listened to every bit of gossip that any one poured into his ears; and his sister—an impossible cat—sought all opportunities to humiliate and torture the wife of the brother whom she was supposed to love tenderly. The tempter, Sir Francis Levison, would not have deceived a baby in long clothes. His lovemaking was of the simplest, boldest style of the seducer. No woman with a grain of sense could have listened to it with any idea of sincerity back of it. The comedy was as fearful as the emotion. Compared with it, the horseplay in modern comic opera is artistic in delicacy and subtlety.

The grief-stricken husband, after his wife had eloped with Sir Francis Levison, marries another young woman in double-quick time. This extraordinary woman, when the erring wife comes, disguised, to get a position as nurse, instantly—on the first interview—tells to the stranger the entire story of the family in its minutest details. Like all the others, she pays her compliments to poor Lady Isabelle in the most scathing terms. There seemed to be no delicacy or sense of honor in these people, who were supposed to be moving in the best social circles in England.

I was simply appalled at the material I was supposed to make human; but, like a good soldier, I tackled it. It was a sad performance. I could not seem to find out "where I was at" during the first part of the play; but, ah, the good old scene—that sure old scene with Willie!

The only child available to play Willie was a long-legged girl of about thirteen or fourteen. Now Willie is supposed to be about five. The girl had a perfectly unimpressionable, high-pitched childish voice, and long curls that hung almost to her waist. Except under stress of great nervous excitement, I do not suppose I could have lifted her from the bed and carried her to the window and played an emotional scene with her in my arms. As a matter of fact, I told the stage manager that it was impossible; that I saw no reason why she could not die in bed. True to the traditions of the play, however, he insisted that she must be dragged to the light and look into the face of her mother. I shall never forget the physical struggle I had to lift this lanky girl, who was shrieking in unmoved tones: "Madam Vine, when shall I see my mother?"

I thought the scene would never be over and the curtain down. Wonder of wonders! When it rose for the call there was nothing visible in the house but a sea of handkerchiefs! Shade of Lucille Western! Was it possible that under such conditions one could bring out so much white linen? Lady Isabelle dies in bed in the last act. The scene is a long, draggy, weary rehash of all her troubles, mercifully ending in death. I had confessed to the stage manager that I was unfamiliar with the play and asked him if one could really hold the audience while the lady went on telling at such length the things they already knew by heart. He assured me that no one would leave the house, and that if the scene were cut in any way the audience would greatly resent it, as each one had probably seen East Lynne dozens of times and was counting on every line that was to come.

Pocket Handkerchief Preparations

IT proved to be exactly as the manager said. I do not know whether they had stopped weeping between the acts while a jolly set of waltzes was offered up; but, anyway, their handkerchiefs must have been near at hand, for, as the curtain rose and I propped myself on one elbow to begin the long, dreary recital, most of the battery of linen was in position. They knew what was coming, but that did not dim their emotion in the least. One would think, looking at it rationally, that death would have been the simplest and happiest solution of poor Lady Isabelle's existence—that it would have been a kind of spiritual joy to see her pass out; but her exit was as sincerely mourned by that Philadelphia audience as if she had been of some use in the world.

Surely this otherwise impossible play was swept into stupendous financial success on a flood of tears, which shows the box-office value of this quality of emotionalism. To this day in the popular stock companies, when all else fails, East Lynne can be hurriedly thrown out, to the financial advantage of everybody. It is an infallible meal ticket!

THE RECORDING ANGEL

By CORRA HARRIS

IV

ILLUSTRATED BY WALTER H. EVERETT

RUCKERSVILLE was a literary center. Most of its inhabitants over the age of sixteen were orphaned authors—that is to say, authors without publishers. It was a place where adolescence flowered naturally into little hexameters of love, and old age faded into long historical narratives. The South is the only section of the country that still produces this kind of serenely uncommercial genius. In other places, when an author cannot sell what he writes, he wrings the neck of his muse and hires himself to a business concern. But here he simply despises the "damned" publishers for fools and goes on writing his masterpieces. In 1845 a certain old cock-poet published, in The Southern Literary Messenger, a poem of fifty thousand words, under the title of Grouped Thoughts and Scattered Fancies. It was concluded only at his death. Had he lived, it would undoubtedly have been fifty thousand words longer. He enjoyed that pleasant lyrical inebriation of the faculties so common to Southerners. I am venturing to copy here the forty-second stanza of this remarkable production, which the skeptical reader may see for himself any day he takes the trouble to visit Ruckersville in search of it.

I saw it in my dream. Oh, could I task
My sense again to slumber, nor to wake
So long as the dear vision was in sight!
I will not do it so much wrong to make
My rude words show the picture thou dost ask.
Behold it in my passion! A delight
Trembles through all my utterance! Oh, I feel,
In the devoted beatings of my heart,
That I should look enjoyment, nor appeal
To vain resource of language to impart
This vision of most rare happiness—
That rapture it would madden to reveal,
Which song itself would render spiritless—
It was such sweet, heart-touching tenderness!

There still remained undimmed much of this divine fire in the hearts of his descendants. And the fact that not a line of prose or poetry had appeared in print since the publication of Grouped Thoughts and Scattered Fancies, was due to the decadence in the literary taste of editors rather than to any lack of merit in Ruckersville sonnets. At the time this story begins, there were not less than five hundred finished and voluminous manuscripts in the attic archives of the town, by which not a single author had been discouraged.

Captain Rucker-Martin, in fact, was engaged upon his fourth unpublished volume with as much ardor as if it were his first effort. This was a narrative of the Civil War and was entitled Around the Camp Fires. Elbert White was writing a history of Marches in Virginia, to say nothing of others equally inspired, some account of whose literary activities shall be found in these pages. And, when you come to think of it, after the cloud of dust we raise hurrying along in our times is settled into the sods that shall cover us at last, this unpublished literature of the South will be found to contain more material suited to the exalted glory of man than does the history of commercial enterprise in the North and East, where the stolen dollars often account for the last ten stories of the skyscraper. It was the kind of literature suited to monuments and tablets, and to the shining headboards of maidens' graves. Keats might have copied some of it beneath the immortal love scene upon his Grecian urn. Isaiah would have despised it, but Shakspere would have giggled over it and culled some of it for Ophelia, it was all so naïvely the pastoral of the spirit rather than the literature of life.

Thus you understand that the atmosphere of Ruckersville was naturally literary. It is for the purpose of getting you properly acclimated in it that I am forced to go more into particulars. If this were a novel, the next thousand words might be omitted, so little action is there in them. But this is a little history of life, and life is made up of digressions. The story of our insides is always much longer than the story of our outsides. The biography of humans is made up more of what they plan to do than of what they really achieve, if it is set down literally. You work hard with a certain aim in view. You purpose to arrive, with your collateral all properly arranged for the event. It is clear sailing. Then Fate takes the gripes and inadvertently kicks you under the fifth rib, and there you are, set back about ten years. Your grandmother died without leaving you the inheritance you had every reason to expect. You have to get up and make your own fortune. Or the ballots are counted and you are not elected. You have to run again. God sees to it that you do not butt the stars every time you fetch a surge. It is a providential precaution against your destruction of the solar system.

In a small way, the same things are true when it comes to telling a story. Unless you are writing mere fiction, you do not kick the climax goal in every chapter. You cannot keep the hero in sight all the time, going at full speed through the narrative, with his tail over a dashboard and the grandstand yelling at every jump. This is done only in a novel. In a transcript from life nobody recognizes the hero, and words take the place of unconscious observation. For example, if you lived in Ruckersville you would have known all about the Woman's Club. As it is, I must interrupt this narrative to explain, or you will not be in position to appreciate what follows and what does not follow.

The club was composed of the most enlightened and progressive women in town. They were ambitious. They conducted two or three little world-movements on the sly, of which the world never heard. They irritated the town council; struggled to "rise in the scale of things," and were determined to produce something that was not in the nature of cakes, pickles and infants. They studied parliamentary law and tried to practice it. They desired to appear in the magazines and, by way of being strictly modern, they showed a diabolical energy in meddling futilely with the men's affairs, such as petitioning for this, that, and the other, and for caterwauling year in and year out about the one open saloon in Ruckersville. It was useless to explain to them that one open saloon was less damaging to masculine morality than a dozen blind tigers.

"But why have the blind tigers either?" demanded Miss Mary Yancey, who was merely femininely logical. She was the spokesman of the last committee from the club that waited on Colonel Lark, the mayor of Ruckersville.

"I do not know why, Miss Mary," answered the colonel, wagging his old white head whimsically and blinking his little bead-blue eyes at her.

"If you don't give a man a chance to flop back into the savage now and then in the open, he'll do it anyhow behind the do'. Maybe it's the way he's made; maybe it's the way he grows. Adam knew he was doin' wrong when he eat that apple, but all the angels in heaven couldn't have kept him from tastin' it. And I reckon it's all for the best. We never would have amounted to anything if he'd kept on settin' around the garden behavin' himself. Don't you bother your dear heads about us men. We ain't really worth it. We are cut out of imperfections, just as you are fitted together out of perfections."

He was seated at his desk at his office in the town hall, his half-smoked cigar politely discarded in the presence of ladies; his fat, fiery-red wattles lay upon his wilted collar, and his short legs were crossed below his exceeding stomach. Miss Mary Yancey occupied the edge of her chair in an importunate attitude immediately in front of him, her tall thin knees pressed closely together, her body bent forward. In one hand she held a petition signed by every member of the Woman's Club, with the other hand she soothed the colonel with gentle gestures in midair, as she went on with her exhortation. Behind her, like the faint reserves of virtue and honor, sat Miss Leonora Bell and Miss Mildred Percey. They were looking their best for the good of the cause they represented. Women know that more than half of the success of it depends upon the way they look, if they have to deal with men. As a matter of fact, the colonel was a widower. And, though they were very far from suspecting such a thing, this was really the only way they had of courting him. But he understood it perfectly and was accustomed to wonder, after each committee visitation, which one would get him.

Men pass through three stages matrimonially. The first is when they fall in love, but struggle against the banns. The second is when they are caught and married. The third is when they reach an age so advanced that they do not fall in love at all, but are willing to marry anybody. The colonel had arrived at this "Barkis is willin'" stage, but he was too shrewd to show his hand to three women at once. Personally he had no preference; that is, he preferred any of them, and he more than half suspected all three of considering him. This was not his egotism, it was his nature. One thing a woman never dreams is that a man often knows that she is in love with him before she does. The trouble he has is in convincing her, inducing her to read her own heart to him properly. And he is usually very delicate about it, concealing his purpose beneath the adoring animation of his own love-making. Colonel Lark was not the man to put all this esoteric loveliness of woman into words, but he enjoyed the committee from the Woman's Club and merely bided his time when it should become bold and brave enough to come in the abridged form of one person. Then he purposed to end the whole question of Ruckersville reformation by proposing marriage to the lady this happened to be.

The Woman's Club always met with Mrs. Fanning-Rucker. She was the leading woman of the town. That is to say, she was the one who was most successful at keeping all the other women behind her, beneath her and under her. She was the creator of all the ruthless social discrimination suffered by others. Every circle of society has such a person in it, usually a female; just as every county has a sheriff, chosen and elected to office on condition that he is not opposed to capital punishment and will hang a man if there is one to be hanged. Mrs. Fanning-Rucker, then, was the social sheriff and the feminine lid of Ruckersville. Naturally she was vicious. Such women always are, no matter how many movements they have that look charitable and progressive. She entertained herself with mischief occasionally. For example, in the spring it amused her to entice a swarm of Captain Rucker-Martin's bees into her hives. With this in view she planted a bed of a rare and peculiarly pungent variety of sweet-williams near her own bee-gum, which were arranged in a circle about an immense horse-apple tree. It seemed that when the perfume of the sweet-williams mingled with the odor of the apple blossoms no young and hopeful bee could resist the combination, any more than the captain himself could resist a certain julep at Bilfire's saloon.

Thus every year, upon some fragrant April morning, it happened that there would be heard a tremendous zooming in her side yard. Immediately Mrs. Fanning-Rucker might be seen to thrust her preposterously ugly old head out of an upstairs window, where she could observe a blooming bough of her apple tree sagging, mildewed

Digitized by Google

almost black with a swarm of Captain Martin's youngest and most enterprising bees. She would smile, draw her head in, and call downstairs to the black houseboy.

"Thomas, put some comb and honey in that new bee-gum and set it under the horse-apple tree!"

After that she drew her chair to the back window of her room, which overlooked the captain's place, and sat down.

About eleven o'clock an awful figure might be seen emerging from the side door of the captain's residence. It had a pair of long thin legs, the trousers being wrapped and tied securely over the tops of the shoes with white strings. The head and trunk were incased in an old hoop-skirt that had been stretched up to its uttermost and covered with mosquito netting. The netting was drawn in at the bottom and tied in a gauzy, ruffled, shirt-tail effect about the thin loins. The top was also gathered up and tied above the head of whatever was inside. About the distance of four hoops from the summit the arms of a man extended. In one mitten-covered hand he held an old-fashioned cowbell by the clapper, in the other he carried a bee-gum smeared inside and out with honey. He moved furtively over his lawn, crossed into that of Mrs. Fanning-Rucker, and continued to advance even more furtively toward the white circle of gums, toward the apple-tree bough laden with his bees. The woman in the bedroom moved her chair back to the window overlooking the spot.

The captain—for the hoop-skirt concealed no other—set down his gum and began a rhythmic circle around the hissing, tightly clustered bees, clapping his bell furiously. The very air rocked and clamored with the fearful din; but not a bee budged. This might continue perhaps ten, fifteen, twenty minutes, and was designed to fascinate the insects and stupefy them so that they could be raked into his gum and carried back home. But it seems that a bee may sometimes dream he is mad and do quite as much damage as when he is awake. This is what invariably happened. The moment the captain lifted his hand to rake the swarm off into his hive, some little demon with a nightmare found a weak place in the armor, darted through it, and occupied the hoop-skirt with the captain. Then ensued wild confusion. The swarm changed into a whirlwind about the hoop-skirt, which became vocal, the legs of it leaped wildly and bore it at lightning speed across the two lawns that separated the captain from his home and from soothing applications for his swollen places. During this spirited dénouement Mrs. Fanning-Rucker sat in her chair, rocking to and fro and laughing till the tears ran down her long, sallow, horse-shaped face. When all was quiet an hour later, and the immigrant bees were properly pacified among the apple blossoms, she would again call down the stairs.

"Thomas, go and get that bee-gum the captain dropped on the lawn and put it in the cellar. We shall need it next year."

This was the kind of woman she was, with a humorous taste for cruelty. If she had been a man she would have been called "an old rascal." As it was, she enjoyed the fear and flattery of her inferior kind. She never visited in Ruckersville, but if a neighbor was ill she sent jelly or wine or flowers to the afflicted one. This was her way of expressing her ladyshipness.

She was also the patroness of art. Not that she knew much about any art, but you will have observed that in its infancy everywhere art is insulted by the encouragement and protection of fools. This was how she became the tutelary deity and president of the Woman's Club. It was the center of artistic activities, as well as of such economic and reformatory interests as I have already described. Nearly every member of it was engaged in some literary adventure. Mrs. Fanning-Rucker's office was to encourage every one of the adventurers to believe that she could write an immortal sonnet or story. This was a characteristic Mrs. Fanning-Rucker had in common with teachers of composition in girls' schools, and with that class of editors who reject manuscripts with so much flattery that the poor victims go on writing more.

V

ON THIS memorable afternoon of the fourteenth of June there was the usual semicircle of women in Mrs. Fanning-Rucker's elegant parlor. Miss Leonora Bell was about to call the roll when the Misses Yancey entered. They were late, having been detained by the necessity of locking up the house, to protect it from a disreputable looking person who had loitered openly about their front gate and had been seen deliberately staring up at their innocent Juliet window galleries. They felt as indignant about this as if the scamp had been detected in the act of peeping at their ankles. They moved quietly to the two nearest chairs, one behind the other. Both were very tall. Their clothes murmured starchily. Each had the freshly laundered appearance so many women achieve. They wore stiff white skirts, and white shirtwaists that showed their collar-bones through embroidered eyelets.

All this time Miss Bell stood, roll book in hand, with that polite patience that is so embarrassing to those who inadvertently give occasion for its exercise. She began:

"Mrs. Elizabeth Fanning-Rucker."

"Present."

"Mrs. Patricia Felton."

"Present," admitted a pale young woman with black hair, staccato eyes of the same color and a reed-flute mouth.

"Mrs. Clarinda Magnis."

"Present," answered a large blonde woman whose voice seemed to disturb her. She moved all over, rearranged her skirts, and flashed an indignant look around the room as if she felt conscious of having made some kind of break. She was a new member and nearly frightened out of her wits by the honor.

"Mrs. Frances Luster."

Miss Bell blushed and passed immediately to the next name. Mrs. Luster had given birth to an infant the night before and could not be present.

"Miss Mildred Percey."

"Present."

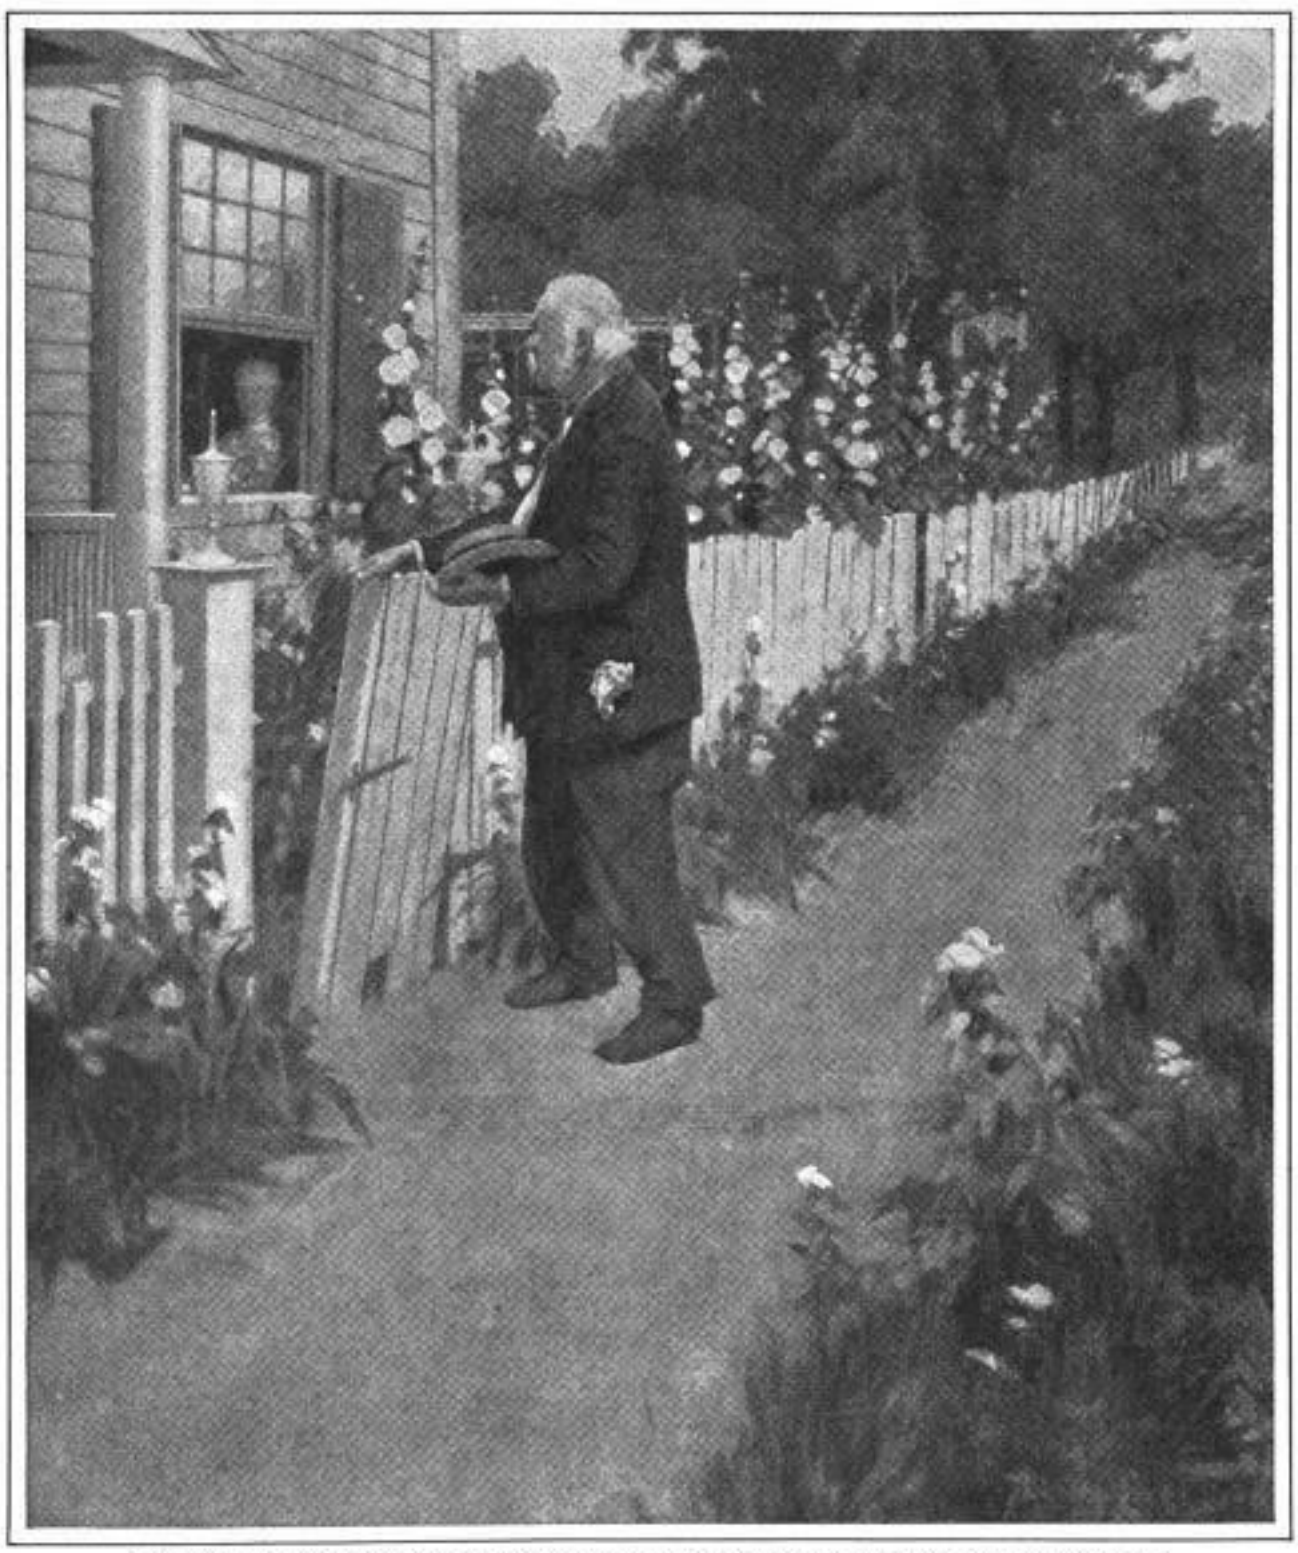
"Miss Mary Yancey."

"Present."

"Miss Agnes Yancey."

"Present."

Miss Bell closed the roll book, lifted her eyes, smiled, and pronounced with the intonation of a teacher who is calling the name of her favorite pupil:



"Mrs. Elbert White."

"Present," droned a deep, somnambulent voice.

Every face in the room turned instinctively in the direction from which the sound came.

Seated in one of Mrs. Fanning-Rucker's most expensive rosewood chairs was a very tall old woman. She was in the darkest corner of the room, and the most conspicuous figure in it. You could not have told why. Greatness in a human sometimes gets mixed with the grotesque in situation. This may have accounted for her prominence. She was out of drawing with the little occasion. She looked the grandmother of the stars, in a flowered petticoat. Her thin white hair was parted and drawn back from a brow as smooth as a tombstone, which, in spite of this smoothness, somehow gave the impression of having a beautiful verse of poetry inscribed upon it, setting forth the sweet virtue of the dead. She was blind, and had the ineffable look of the blind who have nothing to do, no worried unrest about duties unfulfilled, merely the serene patience of those who sit and wait. She wore a kind of smile like those who have been deprived of their sorrows and retain that angelic roundness of features that belongs to youth. One inferred that if she should live to be a hundred she would be amazingly beautiful. For more than twenty years cataracts had veiled the pupils of both eyes, and she had the habit of keeping the lids closed. This gave her the appearance in company of smiling and talking in her sleep. She wore an old calico gown with pink and blue morning-glories in it. They were connected by a curved stem to a vine that ran as straight as a bean pole from hem to neck; and the vine was one of those Burbank commercial wonders often seen in cheap prints, in that it was able to produce alternately pink and blue blossoms of enormous size and brilliance. She was queer about this with the artless queerness of the blind. She loved color and always wore gaily-hued frocks.

She did not really belong to the Woman's Club, never having done anything or written anything. But she was always present at the meetings and at every other social function in Ruckersville. She was the most silent, the most

The Open Street Was the Place Where He Made Up for Another Rôle in the Little Drama of Life

Digitized by Google

"But Why Have the Blind Tigers Either?"

cultured, the most entertained and the most beloved woman in the town. Nobody could have told what she was good for; yet no one knew how to spare her. If she did not enjoy her blindness, she enjoyed the benefits of it. And it extended as far as her affections. She bestowed these alike upon the deserving and the undeserving. She was that human least-common-denominator in society who fitted silently, sweetly, into every fraction of it.

If any one in Mrs. Fanning-Rucker's parlor could have dreamed that the old blind saint was unconsciously taking notes upon them, rather than upon their committees and programs and literature, they would have been horrified. But you cannot suspect the person of eavesdropping upon you who sits openly in your very presence. It is a psychic phenomenon common enough, but not understood.

The secretary read the minutes, from which one gathered that the preceding meeting had been an important one. A paper had been read upon the pearl fisheries of the coast of the Samoan Islands, from which it appeared that oysters were very crudely treated in that place. Another set forth conditions in Cuba, a subject of timely interest on account of the supervision of the United States. The thing that seemed to produce the deepest impression was the fact that moonlight was so bright in Cuba that it gave mules insomnia and caused them to die of nervous prostration. This sensitiveness of the mule excited much discussion, and the reason why you will readily understand if you have observed the recently awakened minds of women. To think is a new and delightful experience. Therefore they are not particular to grasp the important point in a discussion. They perform the most delightful mental variations upon any little reed of an idea. The delicious sensation of exercising the brain is what they are after. They see themselves in the fresh rôle of intellectuality. They have made the immense stride from personal gossip to the consideration of an idea. If the idea they choose is the least one suggested by the subject under consideration, it is amusing, but natural. A child is not equal to calculus. Thus, when the topic of Cuba was under consideration in the Ruckersville Woman's Club, interest centered, not upon the resources or the social and political conditions of that little mulatto country but upon the very queer circumstance that mules suffered there from moonlight insomnia. They cared nothing for the unsightly animals, but their humanitarian instinct, always highly developed, directed them to puzzle over the peculiar invalidism of the unfortunate beasts in Cuba, just as they failed to compute the value of pearls in the discussion of the pearl fisheries and devoted themselves to the frightful slaughter of innocent oysters. Every one must observe that the contribution of the modern woman to thought is almost entirely directed by her maternal instinct translated into a kind of sentimental humanitarianism. She is not practically intelligent, but merely mercifully excited mentally. And this is really fortunate, for the civilized male mind is scientific and commercial, and has resulted in some sad oversight of the need of human nature—to say nothing of mules and oysters.

Next followed a memorandum of business and the names of the committee appointed to draw up and to present to Mayor Lark resolutions against spitting on the streets.

"Delightful refreshments were served by the charming hostess, which were enjoyed by all," concluded Miss Yancey, folding her notes.

"Are the minutes correct?" demanded Mrs. Fanning-Rucker.

Apparently they were.

"Is the committee on spitting ready to report?"

Miss Yancey again rose to her feet.

"Madam President, we have found some difficulty in framing the resolutions. It is a delicate subject and we ask for extension of time."

A close observer might have seen the incandescent flash of humor in the blind woman's face as Miss Yancey resumed her seat.

"Is there news from editors and publishers?"

This question produced that state so often observed at a religious experience meeting when all are invited to talk. Every woman present assumed a self-conscious expression and remained silent. Then, as in the experience meeting the old bell-wether saint leads the way with the same old story of his divine relationship, Miss Mary Yancey opened her reticule and drew forth what appeared to be a wedding invitation. She took a thick, handsome sheet of linen paper from the envelope and read aloud:

Dear Miss Yancey: We are returning herewith your story. This does not mean that it may not be available for some other magazine, but we are overstocked at present with unpublished manuscripts and do not think it advisable to keep you waiting so long to see your story in print as we should have to do if we accepted it. We shall be glad, however, to have you submit others from time to time.

Faithfully yours, LIONEL U. U. BUNK.

There was a murmur of praise.

"That is encouraging, Mary," said Mrs. Fanning-Rucker. "What did you do?"

"I sent the story back to him," blithely explained Miss Yancey, "and told him I was willing to wait ever so long for its publication."

"You'll never see it in print," snapped Mrs. Felton. "I have no less than five letters from that editor, exact copies of the one you read. He is a fiend. He plays you like a trout on a line, but he'll never publish anything you write."

Mrs. Patricia Felton had a sort of briar-patch mind from which little cotton-tailed ideas leaped out and got away. If she could ever have caught one and set it down alive and kicking, she might have succeeded. The trouble was she destroyed them with her grapeshot vocabulary and mailed the remains to some leading magazine. Your amateur author will not consider any other kind of periodical.

Miss Yancey looked indignant, as much as to say she pitied any one who could be guilty of dashing cold water upon the helpless, upturned face of genius.

"Which story did you send, Mary?" inquired Mildred tenderly. She was a woman whose spirit was composed of healing salve. And she knew Mary's stories by heart, the two had labored over them together so often.

"It is a new one," the author admitted blushingly.

"Read it, Mary," exclaimed the Woman's Club.

"But I told you I sent it back to the editor."

"You must have a copy."

She did. Slowly, gently, as if it were a living thing, the manuscript was drawn from her reticule.

There are more authors alive out of print than ever do get into it. And every one of them takes this kind of consolation for their failures. They read their things aloud to their friends. They form clubs among themselves, the bravest, the most long-suffering institutions in this country for that purpose. And this kind of club survives, held together by a common misery, until some member actually does get into print. Then she becomes indifferent, disloyal to the others. The illusion is broken and the organization dies.

"The title," read Miss Yancey, "is The Uses of Adversity." She cleared her throat and began:

"'Fair, yes, more than fair was Nina Hamilton, and there was more than beauty in her bright, flower-like face. The daughter of a wealthy, aristocratic Southerner, she inherited the warm, impulsive feelings of our Southern land, while from her mother she derived the almost ethereal beauty of form and features and the clear marble complexion belonging to Northern climes. With her small, well-rounded figure she united grace and ease seldom to be met with, and her face—'twas one of Nature's masterpieces. Her features were delicately molded and of Grecian regularity. The bright blue eye, so speaking in its glances, when once seen was not soon forgotten; and the smile was one of those whose influence all must feel. In her the picture of Zuleika seemed realized, and as you gazed you thought,

"'The light of love, the purity of grace,
The mind, the music breathing from her face,
The heart whose softness harmonized the whole,—
And oh, that eye was in itself a soul!'"

One receives from this opening paragraph a veracious impression of literary ideals in Ruckersville. No ending could be good enough for such a beginning. And of course one can say that the thing was absurd. As a story, yes. Much of the literature of the South as literature borders upon absurdity; but as an expression of innocent-mindedness nothing in the Scriptures surpasses it. It is always as sexless as a hymn, whether written by an old maid or a drunken old man. Love is a lavender-sweet, poetry-headed experience, not the decadent, poisoned passion displayed disgracefully naked in modern fictions. I do not defend Miss Yancey's story, but I merely contend that worse things appear in the best magazines.

The reader will not be asked to attend another meeting of the Woman's Club. He has seen the vitals of the female mind—a queer pair of wings with no body.

The sun was gone. Nature had become the perfumed kissing lover that Nature always is in the summer twilight. Dusk was falling; or rather, it appeared to be rising from the earth—a soft shade, sod-brown, changing into the darkening green of overhanging trees. Very far off the stars were faintly singing; and under the doorstep, beneath the stones in the long tangled grass, the crickets were strumming away to answer them—a sort of clod chorus, strident, thin, but in perfect tune. A cricket never strikes a false note. And this is really the purpose for which they were created. You must have observed that no human ever heard the stars sing. But the moment the first star puts on her evening shine and trails out upon the fading, foot-lighted skyline, the early evening cricket also puts on his beetle-back dress coat, stands on his hindlegs, rakes his forelegs across his vocal chord and salutes her. He may be joined by a bullfrog cello; but this depends upon the depth of the frog's puddle and is not essential.

Not a bough stirred, not a blade of grass, yet a little round-bellied whirlwind came from somewhere, gathered up a straw, a few missing leaves from the June trees, a gnat or two, and went spinning, bobbing zigzag down the village street. Before a very old house, with one entry that divided it and gave it the appearance of an ancient pair of baggy trousers with threadbare places in the seat, where two square windows with broken panes showed, the little hoopskirt of nothingness passed, whirled round and round, then suddenly leaped into the air, shed its straws and leaves, and left the two gnats wondering where they were, and why. They went on wheeling over and under because there was nothing else to do, until they drifted in through one of the open windows and fell inanely, drunkenly against the face of Amy White, who had returned home an hour ago, led by Mildred Percey. She lifted one hand vaguely and brushed them away. This was the last of the gnats. You will not hear of them again in this story. They have served their purpose. They have introduced the heroine, who I could not be sure was recognized at the Woman's Club. No matter how many other women appear, there should be no occasion for confusion in the reader's mind. Amy will remain the heroine, and sustain the part even if some other woman shows more activity and gets into more trouble. It is not always the person who looks the best and does the most in the tale that should have the title rôle, but the one who is the most.

VI

FIVE minutes after the whirlwind passed the gnats lay among the morning-glories in Amy's lap, with their infinitesimal heels kicked up and their wings flattened out. A man might have been seen coming slowly along the

XXVII

THE arrival of Arnold accompanied by Mrs. Weatherley created a mild sensation in Tooley Street. Mr. Jarvis, fussier than ever and blinking continually behind his gold-rimmed spectacles, followed them into the private office.

"You have heard nothing of Mr. Weatherley?" Arnold asked.

"Not a word," the cashier answered. "We have rung up several more places and have tried the hospitals again. We were all hoping that Mrs. Weatherley had brought us some news."

She shook her head.

"Mr. Weatherley left home exceedingly early this morning," she announced. "I believe that it was before half-past seven. Except that he called at the house in Hampstead for the letters, I have not heard of him since."

"It is most mysterious," Mr. Jarvis declared. "The governor—I beg your pardon, Mr. Weatherley—is a gentleman of most punctual habits. There are several matters of business that he knew awaited his decision today. You will excuse me, madam, if I ask whether Mr. Weatherley seemed in his usual health when he left this morning."

Fenella smiled faintly.

"Have I not already told you," she said, "that he left the cottage in the country where we spent the week-end before half-past seven this morning? Naturally, therefore, I did not see him. The servants, however, noticed nothing unusual. Last night Mr. Chetwode here was with us, and he can tell you what was apparent to all of us. Mr. Weatherley seemed then in excellent health and spirits."

Mr. Jarvis had the air of a man hopelessly bewildered. Excellent servant though he was, Nature had not bestowed upon him those gifts that enable a man to meet a crisis firmly.

"Can you suggest anything that we ought to do, madam?" he asked Mrs. Weatherley.

"I think," she replied, "that Mr. Chetwode has something to tell you."

Arnold took the key of the safe from his pocket and turned to the cashier.

"A few days ago, Mr. Jarvis," he said slowly, "Mr. Weatherley placed certain documents in that safe and gave me the key. My instructions from him were to open and examine them with you if he should be for any unexplained cause absent from business."

Mr. Jarvis looked blankly incredulous.

"Goodness gracious!" he murmured weakly. "Why, that looks almost as though he expected something of the sort to happen."

"I think," Arnold continued, "that as it is now past three o'clock and Mr. Weatherley is still absent, we had better open the safe."

He crossed the room as he spoke, fitted the key in the lock and swung the door open. Mrs. Weatherley and the cashier looked over his shoulder. There were only the two letters there. One was addressed to Messrs. Turnbull & James, solicitors; the other jointly to Mr. Jarvis and Mr. Arnold Chetwode.

"There is nothing there for me?" Mrs. Weatherley asked incredulously.

"There is nothing at all," Arnold replied, "unless there may be an inclosure. Mr. Jarvis, will you open this envelope?"

Mr. Jarvis took it to the desk and broke the seal with trembling fingers. He smoothed out the letter, switched on the electric reading light and they all read it at the same time. It was written in Mr. Weatherley's familiar hand, every letter of which was perfectly distinct and legible:

To Jarvis and Chetwode: This is a record of certain instructions that I wish carried out in the event of my unexplained absence from business at any time.

Firstly—The business is to continue exactly as usual and my absence to be alluded to as little as possible. It can be understood that I am away on the Continent or elsewhere on a business voyage.

Secondly—I have deposited a power of attorney at my solicitors, made out in the joint names of Henry Jarvis and Arnold Chetwode. This will enable you both to make and receive contracts on behalf of the firm. As regards financial affairs, Messrs. Neville, the accountants, have already the authority to sign checks, and a representative from their firm will be in attendance each day, or according to your request. My letter to Messrs. Turnbull & James empowers them to make such payments as are necessary, on the joint application of you two, Henry Jarvis and Arnold Chetwode, to whom I address this letter.

Thirdly—I have the most implicit confidence in Henry Jarvis, who has been in my employ for so many years, and I beg him to understand that I associate with him one so much his junior for certain reasons into which I beg that he will not inquire.

Fourthly—I repeat that I desire as little publicity as possible to be given to my absence, and that no money be spent on advertisements or any other form of search. If within two years from the date of the opening of this letter I have not been heard from further, I desire that the usual steps be taken to presume my decease. My will and all further particulars are with Messrs. Turnbull & James.

Fifthly—I desire you to pay to my wife the sum of five hundred pounds monthly. All other matters concerning my private estate, etc., are embodied in the letter to Messrs. Turnbull & James.

They all finished reading the letter about the same time. Mr. Jarvis' bewilderment grew deeper and deeper.

"This is the most extraordinary document I ever read in my life!" he exclaimed. "Why, it seems as though he had gone away somewhere on his own accord. After all it can't be an accident or anything of that sort."

Neither Arnold nor Mrs. Weatherley made any immediate reply. She pointed to the letter.

"When did he write this?" she asked.

"Last Thursday," Arnold answered—"less than a week ago."

She sighed softly.

"Really it is most mysterious," she said. "I wonder whether he can have gone out of his mind suddenly or anything of that sort."

"I have never," Mr. Jarvis declared, "known Mr. Weatherley to display so much acumen and zest in business as during the last few days. Some of his transactions have been most profitable. Every one in the place has remarked upon it."

Mrs. Weatherley took up her lace parasol.

"It is all most bewildering," she pronounced. "I think that it is no use my staying here any longer. I will leave you two to talk of it together. You have doubtless much business to arrange."

"Are you going back to Bourne End or to Hampstead?" Arnold asked.

Mrs. Weatherley hesitated.

"Really I am not quite sure," she replied, meeting his gaze without flinching. "I am beginning to find the heat in town insufferable. I think, perhaps, that I shall go to Bourne End."

"In that case," Arnold said, "will you allow me to see you there tonight?"

"Tonight?" she repeated as though in surprise.

"Without a doubt."

She did not answer him for a moment. Meanwhile the telephone rang, and Mr. Jarvis was presently engrossed in a business conversation with a firm of customers. Arnold lowered his voice a little.

"Our discussion at luncheon was only postponed," he reminded her. "We have seen these documents. We know now that Mr. Weatherley had some reason to fear an interruption to his everyday life. Directly or indirectly that interruption is connected with certain things of which you and I have spoken together. Therefore I am going to ask you to keep your promise. I am going to ask you to tell me everything that you know."

"Are you not afraid," she asked, "that I shall consider you a very inquisitive young man?"

"I am afraid of nothing of the sort," Arnold replied. "Mr. Weatherley's disappearance is too serious a matter for me to take such trifles into account."

She pointed to the letter that still lay upon the table.

"Is it not his expressed wish that you should make no effort toward solving the reasons for his disappearance?"

"There is no reason," Arnold answered doggedly, "why one should not attempt to understand them."

Mr. Jarvis had finished his telephoning. Fenella went to him with outstretched hand.

"Mr. Jarvis," she said, "there is nothing more I can do here. I am very much upset. Will you take me out to my car, please? I know that you will do the very best you can without Mr. Weatherley, and I am glad that you have Mr. Chetwode to help you. I would come down myself sometimes," she added, "but I am sure that I should only be in the way. Good afternoon, Mr. Chetwode!"

"You have not answered my question," he persisted.

She looked at him as a great lady would look at a presuming servant.

"I see no necessity," she replied. "I am too much upset to receive visitors today. If you are ready, Mr. Jarvis."

She left the room without even a backward glance, closely followed by the cashier. Arnold stood looking after the retreating figures for a moment, then he turned away with a hard little laugh. Once more he read and reread Mr. Weatherley's letter. Before he had finished Mr. Jarvis came bustling back into the room.

"Well!" he exclaimed dramatically. "Well!"

Arnold looked across at him.

"It's a queer business, isn't it?" he remarked.

"Queer business, indeed!" Mr. Jarvis repeated, sitting down and wiping his forehead. "It's the most extraordinary thing I ever heard of in my life. One doesn't read about such things even in books. Mrs. Weatherley seems to take it quite calmly, but the more I think of it the more confused I become. What are we to do? Shall we go to the police or write to the newspapers? Can't you suggest something?"

Arnold finally laid down the letter, which he now knew pretty well by heart.

"It seems to me, Mr. Jarvis," he said, "that the thing for us to do is to obey orders. Mr. Weatherley expressly writes that he wishes us to take his absence, so far as possible, as a matter of course, and to look after the business. The very fact that he puts it like that makes it quite clear to me that he intends to return. My idea is that we should follow the lines of his letter strictly."

"You are quite right, Chetwode," Mr. Jarvis decided. "I feel exactly that way about the matter myself. We'll go right ahead with those orders now, and we can have

Digitized by Google

a chat about the matter again after business hours if you don't mind. It's hard to reconcile oneself to taking this so easily, but I suppose it's the only thing to do. I'll get out in the warehouse now. You had better send that note round to Turnbull's by express messenger and ring up Yardley's about the American contracts."

Mr. Jarvis bustled away. Arnold himself found plenty to do. The business of Samuel Weatherley & Co. must go on whatever happened. He set himself sedulously to make his mind a complete blank. It was not until the offices were closed and he turned at last westward that he permitted himself even to realize this strange thing that had happened. On that first walk was born an impulse that remained with him for many weeks afterward. He found himself always scanning the faces of the streams of people whom he was continually passing, on foot and in vehicles, half expecting that somewhere among them he would catch a glimpse of the features of the lost man.

XXVIII

IN THE twilight of the long spring evening Ruth sat waiting in the bare room that had been Arnold's habitation during the days of his struggle against poverty. She was sitting on the couch drawn up as usual to the window, her elbows upon her knees, her hands supporting her delicate, thoughtful face. Already the color that the sunshine had brought seemed to have been drained from her cheeks. Her eyes were unnaturally bright, her expression seemed to have borrowed something of that wistful earnestness of one of the earlier Madonnas, seeking with pathetic strenuousness to discover the germs of a truth that was as yet unborn. The clouds that hung low over the other side of the river were tinged with an unusual coloring, smoke-stained as they hovered over the chimneys. They grew clearer and more full of amber color as they floated slowly southward. Through the open window came the ceaseless roar of the city, the undernote of grinding, commonplace life, seeking always to stifle and enchain the thoughts that would escape. Before her was spread out a telegram. She had read it until every word was familiar to her. It was from Arnold, and she had received it several hours ago:

> Please be prepared to go out with me directly I return this evening. All well. Love. ARNOLD.

It was past eight o'clock before her vigil was at an end. She listened to his step upon the stairs and as he entered looked at him with all the eagerness of a wistful child tremulously anxious to read his expression. A little wave of tenderness swept in upon him. He forgot in a moment the anxieties and worries of the day and greeted her gayly.

"You got my telegram?"

"You extravagant person!" she answered. "Yes, I have been ready for quite a long time."

He laughed.

"To tell you the truth I didn't even pay for the telegram. As I had to stay late I took the liberty of sending it through the firm's accounts. You see I have become quite an important person in Tooley Street all of a sudden. I'll tell you about it presently. Now hold on tight to your stick. I'm much too impatient to go down the steps one by one. I'm going to carry you all the way."

"But where to?" she asked.

"Leave it to me," he laughed. "There are all sorts of surprises for you. The lady with the wand has been busy."

He carried her downstairs where, to her surprise, she found a taxicab waiting.

"But, Arnold," she exclaimed, "how could you think of such extravagance! You know I can walk quite easily a little distance if I take your arm."

"I'll tell you all about it at dinnertime," he replied.

"Dinnertime?" she cried. "Dinner at this hour?"

"Why not? It's quite the fashionable hour, I can assure you, and to tell you the truth I am half starved."

She resigned herself with a sigh of content. After all it was so delightful to drift like this with some one infinitely stronger to take the responsibility for everything. They drove to a large and popular restaurant close at hand, where Arnold ordered the dinner with frequent corrections from Ruth, who sat with a price-list in her hand. A band was playing the music of the moment. It was all very commonplace, but to Ruth it was like a living chapter out of her book of dreams. Even there, though, the shadow pursued. She could bear the silence no longer. She dropped her voice a little. The place was crowded and there were people at the next table.

"Before I touch anything, Arnold, tell me this: Is there any news of Isaac?"

"None at all," he replied. "It all seemed very alarming to us but it seems to be fizzling out. There is only quite a small paragraph in the evening paper. You can read it."

He drew the paper from his pocket and passed it to her. The paragraph to which he pointed was headed:

> ESCAPE OF AN ANARCHIST FROM ADAM STREET
>
> Up to the time of going to press the man Isaac Lalonde, whom the police failed to arrest last night on a charge not at present precisely stated, has not been apprehended. The police are reticent about the matter, but it is believed that the missing man was connected with a dangerous band of anarchists who have lately come to this country.

"Poor Isaac!" she murmured with a little shiver. "Do you know I remember him years ago when he was the kindest-hearted man breathing. He went to Russia to visit some of his mother's relatives and when he came back everything was changed. He saw injustice everywhere and it seemed almost to unbalance his mind. The very sight of the West End, the crowds coming out of the theaters, the shops in Bond Street, seemed to send him half mad. And it all started, Arnold, with real pity for the poor. It isn't a personal matter with him at any time."

Arnold nodded thoughtfully.

"Poor chap!" he remarked. "Just at first I really used to like talking to him. He was so earnest, and so many of his arguments were absolutely sound."

"It is only lately," Ruth said, "that he has changed so much."

"I think it is quite time that you and he were separated," Arnold declared. "It is evident, nowadays, that he isn't responsible for his actions."

"Separated!" she repeated bitterly. "You talk as though I had a choice of homes."

"You have," he assured her. "However, we won't say anything about that just now. I want to talk about myself."

"And I want to listen, dear!" she exclaimed. "You must tell me what has happened, Arnie. Has Mr. Weatherley taken you into partnership, or has some one of your disagreeable relatives found you out and been pouring money into your pockets?"

"Neither," he replied. "As a matter of fact, there is no Mr. Weatherley just at present."

"No Mr. Weatherley?" she repeated wonderingly. "I don't understand."

The slightly worn look came back to Arnold's face. Young and strong though he was, he was beginning to feel the strain of the last few days.

"A most extraordinary thing has happened, Ruth," he declared—"Mr. Weatherley has disappeared."

She looked at him blankly.

"Disappeared? I don't understand."

"He simply didn't turn up at business this morning," Arnold continued. "He left Bourne End about seven and no one has set eyes on him since."

She was bewildered.

"But how is it that that makes such a difference to you?" she asked. "What can have happened to him?"

"No one knows," he explained; "but in a little safe of which he had given me the key he left behind some letters with instructions that during his absence from business Mr. Jarvis and I should jointly take charge. I can't really imagine why I should have been put in such a position, but there it is. The solicitors have been down this afternoon, and I am drawing six pounds a week and a bonus."

She took his hand in hers and patted it gently.

"I am so very glad, Arnold," she said; "so very, very glad that the days of your loneliness are over. Now you will be able to go and take some comfortable rooms somewhere and make the sort of friends you ought to have. Didn't I always foretell it?" she went on. "I used to try to fancy sometimes that the ships we saw were bringing treasure for me, too, but I never really believed that. It wasn't quite likely."

He turned and looked at her. The first flush of excitement had left her cheeks. She was very pale and her soft gray eyes shone like stars. Her mouth was tremulous. It was the passing of a single impulse of self-pity.

"Foolish little girl!" he exclaimed under his breath. "You don't really suppose that the treasure that came for me wasn't yours too? But there, we'll talk about our plans later on. At present what you have to do is to eat and to drink that glass of Burgundy and to listen to me. I want to talk about myself."

It was the subtlest way to distract her thoughts. She listened to him with keen interest while he talked of his day's work. It was not until she mentioned Fenella's name that his face clouded over.

"Curiously enough Mrs. Weatherley is displeased with me. I should have thought it entirely through her influence and suggestions that Mr. Weatherley had been so kind to me, but today I asked her some questions that I felt I had a right to ask, and have been told to mind my own business. She left me at the office without even saying 'Good afternoon!'"

"What sort of questions?"

"I don't know that I can tell you exactly what the questions were," Arnold continued, "because they concerned some matters in which Mrs. Weatherley and her brother were chiefly concerned. To tell you the truth, ever since that night when I went to Hampstead to dine the oddest things seem to have happened to me. I have to pinch myself sometimes to realize that this is London and that I am a clerk in the office of a wholesale provision merchant. When I let myself go I seem to have been living in an unreal world full of strange excitements—a veritable Arabian Nights."

"There was that terrible murder," she murmured. "You saw that, didn't you?"

He nodded.

"Not only saw it," he agreed, "but I seem, somehow, to have been mixed up with people who know a great deal about it. However, I have been told to mind my own business and I am going to. I have plenty to occupy my thoughts in Tooley Street. I am going to close in my little world and live there. The rest I am going to forget."

"You are coming back!" she whispered with a joy in her tone that amazed him.

"I suppose I am," he admitted. "I like and admire Mrs. Weatherley's brother, Count Sabatini, and I have a genuine affection for Mrs. Weatherley, but I don't understand them. I don't understand these mysterious matters in which they seem mixed up."

"I do not believe," she declared, "that Count Sabatini would be mixed up in anything dishonorable. Women so seldom make a mistake, you know," she continued, "and I never met any one in my life who seemed so kind and gentle."

Arnold sighed.

"I wish I could tell you everything," he said; "then I think you would really be as bewildered as I am. Mr. Weatherley's disappearance coming on the top of it all simply makes my brain reel. I can't do anything to help straighten things out. Therefore I am going to do what I am told—I am going to mind my own business."

"To think only of Tooley Street," she murmured.

"I shall find it quite enough," he answered. "I want to understand all the details of the business, and it isn't easy at first. Mr. Jarvis is very sound and good, but he's a very small man moving in a very small way. Even Mr. Weatherley used to laugh at his methods."

She was silent for several moments. He studied her expression curiously.

"You don't believe that I shall be able to immerse myself in business?" he asked.

"It isn't exactly that," she replied. "I believe that you mean to try and I believe that to some extent you will succeed, but I think, Arnold, that before very long you will hear the voices calling again from the world where these strange things happened. You are not made of the clay, dear, that resists forever."

He moved uneasily in his seat. Her words sounded ominous. He was suddenly conscious that his present state of determination was the result of a battle, and that the war was not yet ended.

"She is so beautiful, that Mrs. Weatherley," Ruth continued, clasping her hands together and looking for a moment away from her surroundings. "No one could be blamed for climbing a little way out of the dull world if she held out her hands. I have seen so little of Mrs. Weatherley or Count Sabatini, Arnold, but I do know that they both of them have that curious gift—would you call it charm?—the gift of creating affection. No one has ever spoken to me more kindly and more graciously than Count Sabatini did when he sat by my side on the lawn. What is that gift, Arnold? Do you know that with every word he spoke I felt that he was not in the least a stranger? There was something familiar about his voice, his manner—everything."

"I think that they are both quite wonderful people," Arnold admitted.

"Mrs. Weatherley, too, was kind," Ruth went on, "but I felt that she did not like me very much. She has an interest in you and like all women she was a little jealous—not in the ordinary way, I don't mean," she corrected herself hastily, "but no woman likes any one in whom she takes an interest to be very kind to any one else."

They were drinking their coffee. The band was playing the latest waltz. It was all very commonplace, but they were both young and uncritical. The waltz was one that Fenella had played after dinner at Bourne End while they had sat out in the garden lingering over their dessert. A flood of memories stirred him. The soft sensuousness of that warm spring night, with its perfumed silence, its subtly luxurious setting, stole through his senses like a narcotic. Ruth was right. It was not going to be so easy! He called for his bill and paid it. Ruth laid her fingers upon his arm.

"Arnold," she began timidly, "there is something more. I scarcely know how to say it to you and yet it ought not to be difficult. You talk all the time as though you were my brother or as though it were your duty to help me. It isn't so, dear, really, is it? If you could manage to lend me your room for one week I think that I might be able to help myself a little. There is a place the clergyman told us of who came to see me once ——"

Arnold interrupted her almost roughly. A keen pang of remorse assailed him. He knew very well that if she had not been intuitively conscious of some change in him the thought that prompted her words would never have entered her brain.

"Don't let me hear you mention it!" he exclaimed. "I have made all the arrangements. It wouldn't do for me to live in an attic now that I am holding a responsible position in the city. Come along. Lean on my arm and mind the corner."

They had purposely chosen a table close to the door, so they had only a few steps to take. Arnold called a taxi and handed Ruth in before he told the man the address.

Digitized by Google

"Now close your eyes," Arnold insisted when they were finally comfortably settled together in the cab.

Ruth did as she was told.

"I feel that it is all wrong," she murmured, leaning back, "but it is like little bits out of a fairy book and tonight I feel so weak and you are so strong. It isn't any use my saying anything, Arnold, is it?"

"Not a bit," he said. "All you have to do is to wait."

In less than ten minutes the cab stopped. He hurried her into the entrance hall of a tall somewhat somber building. A man in uniform rang a bell and the lift came down. They went up, it seemed to Ruth, seven or eight flights. When they stepped out her knees were trembling. He caught her up and carried her down a corridor. Then he fitted a key from his pocket into a lock and threw open the door. There was a little hall inside with three doors. He pushed open the first; it was a small bedroom plainly but not unattractively furnished. He carried her a little way farther down the corridor and threw open another door—a tiny sitting room with a fire burning.

"Our new quarters!" he exclaimed cheerfully. "The room at the other end of the passage is mine. A pound a week and a woman to come in and light the fires! Mr. Jarvis let me have some money and I paid three months' rent in advance. What do you think of them?"

"I can't think," she whispered—"I can't!"

He picked her up and carried her to the window.

"This is my real surprise, dear," he announced in a tone of triumph. "Look!"

The blind flew up at his touch. On the other side of the street was a row of houses over which they looked. Beyond was the river, the dark waters of which were brightly gleaming in the moonlight.

On their left were the Houses of Parliament all illuminated; on their right the long double line of lights shining upon the water at which they had gazed so often.

"The lighted way, dear," he murmured, holding her a little more closely to him. "While I am down in the city you can sit here and watch, and you can see the ships much farther off than you could ever see them from Adam Street. You can see the bend too. It's always easier, isn't it, to fancy that something is coming into sight round the corner?"

She was not looking. Her head was buried upon his shoulder. Arnold was puzzled by her silence.

"Look up, Ruth dear," he begged. "I want you to look now—look along the lighted way and hold my hand very tightly. Don't you think that, after all, one of your ships has come home?"

She lifted her face, wet with tears, and looked in the direction where he pointed. Arnold, who felt nothing himself but a thrill of pleasure at his new quarters, was puzzled at a certain trouble that he seemed to see in her features, a faint hopelessness of expression. She looked where he pointed, but there was none of the eager expectancy of a few weeks ago.

"It is beautiful, Arnold," she murmured, "but I can't talk just now."

"I am going to leave you to get over it," he declared. "I am off now to fetch the luggage. You won't be afraid to be left here?"

She shook her head. A certain look of relief flashed across her face.

"No, I shall not be afraid," she answered.

He wheeled the easy chair up to the window which he had flung wide open. He placed a cushion at the back of her head and left her with a cheerful word. She heard his steps go down the corridor, the rattle of the lift as it descended. Then her lips began to tremble and the sobs to shake her shoulders. She held out her hands toward that line of lights at which he had pointed and her fingers were clenched.

"It is because—I am like this!" she cried half hysterically. "I don't count!"

XXIX

THERE was an air of subdued excitement about the offices of Messrs. Samuel Weatherley & Co. from nine until half-past on the following morning. For so many years his clerks had been accustomed to see Mr. Weatherley stroll in somewhere about that time, his cigar in his mouth, his silk hat always at the same angle, that it seemed hard for them to believe that this morning they would not hear the familiar footstep and greeting. Every time a shadow passed the window heads were eagerly raised. The sound of the bell on the outside door brought every one to their feet. They were all on tiptoe of expectation. The time, however, came and passed. The letters were all opened and Mr. Jarvis and Arnold were occupying the private office. Already invoices were being distributed and orders entered up. The disappearance of Mr. Weatherley was a thing established. Mr. Jarvis was starting the day in a pessimistic frame of mind.

"You may take my word for it, Chetwode," he said solemnly to his companion after he had finished going through the letters, "that we shall never see the governor again."

Arnold was startled.

"Have you heard anything?" he asked.

Mr. Jarvis admitted gloomily that he had heard nothing.

"It's my belief that nothing more will be heard," he added, "until his body's found."

"Rubbish!" Arnold declared. "Mr. Weatherley wasn't the sort of man to commit suicide."

Mr. Jarvis looked around the office as though he almost feared that the ghost of his late employer might be listening.

"It is my belief," he said impressively, "that we none of us knew the sort of man Mr. Weatherley was, or rather the sort of man he has become since his marriage."

"I don't see what his marriage with Mrs. Weatherley could have had to do with his disappearance," Arnold remarked.

Mr. Jarvis looked foolishly wise from behind his gold-rimmed spectacles.

"You haven't had the opportunity of watching the governor as I have since his marriage," he declared. "Take my advice, Chetwode. You are not married, I presume?"

Getting Action on the Tariff

THE House bill on iron and steel is a conservative tariff-reform measure. It takes off the duty of fifteen cents a ton on iron ore and moderately reduces the other duties in the metal schedule. The average of those duties under the Payne-Aldrich Act is thirty-four and a half per cent. Under this bill the average would be twenty-two and a half per cent—a moderate reduction, indeed, in view of conditions that have been proved by abundant evidence.

Standpat Republicans, however, meet this reasonable measure with the same dreary old patter about the pauper labor of Europe, the prostration of American industry, the impoverishment of American workmen. Taking twelve per cent off the Steel Trust's protection is equivalent in their minds to ruining the country.

We suppose our readers are as tired of the tariff as we are. For four years that subject has pretty constantly monopolized politics. In four successive sessions of Congress it has held the center of the stage. It has been endlessly debated from every angle. There is no question whatever that the country wants a reasonable reduction of tariff duties; but, as long as a standpat Republican is left in Washington, all tariff reduction, no matter how moderate, will be resisted to the last ditch. Another election—another and still more decisive defeat of that faction—may be necessary before we can get any downward tariff revision.

Murder and the Courts

THE annual report of New York's police commissioner shows that during 1911 one hundred and forty-eight murders were committed in that city, but only thirteen murderers were convicted—and not one was executed. For the three preceding years the annual average was one hundred and seventeen murders and twenty-five convictions. For the same three years the annual average in the metropolitan police district of London, containing a population of about seven millions, was twenty murders, while fifteen murderers were convicted or committed suicide.

Why does New York, in proportion to population, have nearly eight times as many murders as London? Principally, we believe, because murder involves less risk in New York than in London, where, three times out of four, the murderer suffers death or long imprisonment, and the punishment very swiftly follows the crime.

Responsibility for this scandalous American condition rests, first of all, upon the courts. They, quite as much as the legislatures, have made the administration of justice a protracted game in which any criminal with a capable lawyer stands a fine sporting chance to win. When we can hand even one murderer out of three over to punishment within a year after the commission of the crime our murder rate will begin to fall.

The Boom in Canada

SOME measure of the boom our Canadian neighbors are enjoying may be obtained from the record of building operations in the Dominion. Returns from thirty-five Canadian cities, compared with like returns from two hundred and six cities in the United States, show that, two years ago, Canada invested in new buildings only seven cents to our dollar; whereas last year she spent fourteen cents to our dollar. In two years her building operations have almost doubled.

The boom spirit is evidently in the air across the border. Governmental or government-aided projects are under way, or under discussion, that make our own little venture at Panama look quite modest. The government is building eighteen hundred miles of railroad from Winnipeg to New Brunswick, at a cost likely to reach a hundred and fifty million dollars, and is aiding by guaranty of bonds another line from Winnipeg to the Pacific Coast. It will also probably undertake a road to Hudson Bay, with steamships to Europe, involving fifty million dollars or so. It is proposed to deepen the Welland Canal at a cost of twenty millions; and there is even talk of a Georgian Bay Canal that will take a hundred millions. The government is expected also to aid liberally in improving country roads.

These things help to make booms—which sometimes come to unhappy ends. We hope Canada's boom, like the brook, will go on forever.

Dreadnoughts and Socialism

THE German government fared as badly in the recent general election as the most ardent revolutionist could reasonably have expected. The Socialists more than doubled their strength in the Reichstag and now have a larger number of seats than any other single party, while the Liberals and the Radicals together have nearly as many more. The conservative coalition upon which the government depended to rule the last Reichstag has been reduced to a minority.

Organs of the government recognize the gravity of the situation; but the most influential and "inspired" among them insist that this Socialist-Radical-Liberal Reichstag must adopt certain governmental measures that are vitally necessary to the empire. First among these measures is the "strengthening of the army and navy."

Ever since the general elections of 1907 the government has been engaged, first of all, in strengthening the army and navy, and levying new taxes to foot the bills. Its out-and-out supporters have now lost forty-seven seats to the Socialists, and its occasional supporters have lost ten more. Very likely the government will find means to force increased military appropriation bills through this Reichstag—thereby giving the Socialists another powerful boost at the next general election. Socialism on the Continent and its equivalent in England promise to become the means of stopping this vastly burdensome governmental game of outmatching one another in battalions and dreadnoughts.

Could New York Have Done Worse?

YEARS ago the city of New York built a passenger subway which has been immensely profitable. For a long time there has been agitation for additional subways. The old one is crowded. Sections of the city which it does not reach have become populous and are crying for better transportation. The profits of the present subway would furnish a basis for credit upon which all the capital necessary to build additional subways could be raised; but the city has never received a dollar of those profits. They have all gone to the private corporation that leased the subway.

Even without that basis of credit the city could raise money to build new subways; but to give satisfactory service all the subways, old and new, should be operated as a unit—and the private corporation, under its lease, has control of the old subway for more than half a century to come. The company proposes to coöperate with the city in building additional subways, furnishing seventy-odd million dollars of the necessary capital, while the city furnishes fifty-odd millions—upon the condition, however, that it shall receive eight and three-quarter per cent interest on its total investment for the next fifty years. That is the price it demands for coöperating.

When New York built the original subway people were mightily afraid of "municipal ownership"—or, in this case, municipal operation. They said such a proceeding was sure to be exceedingly extravagant; but we doubt if any extravagance in municipal operation would have cost the city as much as the price it is now required to pay to the leasing company.

Cautious British Radicalism

THE Lloyd George insurance bill is a very radical act. In providing state-aided compulsory insurance for workmen against loss from sickness it drew upon German experience; but in extending such insurance on a large scale to loss of wages through unemployment it entered virtually unbroken ground. The innovation, however, proceeds with characteristic British caution. Insurance against unemployment is limited to a few trades—shipbuilding, housebuilding, engineering, coachbuilding, iron-founding and sawmilling. Each workman in those trades contributes two and a half pence weekly to the fund, his employer also contributes two and a half pence, while the Government contributes whatever amount—up to three million pounds a year—may be found to be necessary.

The unemployed workman receives from the fund seven shillings a week for fifteen weeks, if he is out of work that long, provided he has made five contributions to the fund for every weekly allowance paid to him out of it. A workman who has made five hundred weekly contributions is entitled to receive back whatever amount he has paid in excess of the benefits he has received.

The step itself is radical, but in taking it great prudence is exercised, the result being probably a workable scheme which will yield a fund of experience by which future legislation in that line may be guided. England has never hesitated to take radical steps that seemed necessary—up to decapitating a king—but she has always gone about it in the most methodical, businesslike way, with an eye single to the actual conditions in hand and quite untroubled by anybody's general theories.

By creating labor exchanges that are charged with large public powers and responsibilities, this insurance law may lead to an important reorganization of the industrial situation—a reorganization that we would call socialistic. But what anybody calls it or theorizes about it will not bother Parliament if the new institutions meet a practical difficulty in a practical way.

Backward Children in School

NOWADAYS much thought is given to the backward child in school. Virtually every public school contains pupils brighter or more diligent than the average, who go ahead of the grades where they would normally be found; also it contains pupils who fall behind their grades. On the face of the returns, the latter greatly predominate. A report from one city shows that the schooltime lost by the backward compares with that gained by the forward as twenty-eight to one; in another city the ratio is one hundred and fifty to one.

A good authority calculates that the backward make up about one-third of the total school membership in the average city, "and are a great, if not the greatest, school problem."

Experts usually consider this subject from the point of view of the backward pupil; but what about the pupils constituting two-thirds of the whole, who are not backward? How much is their school progress retarded by the less apt or less studious? The tendency must be to fix the grades according to the average progress—an average that is pulled down by the backward pupil, even though he falls below the average and misses his grade.

There may be in a given school twenty-eight pupils who fall behind their grades and only one who goes ahead of his grade; but it is quite safe to assume that others could go ahead of their grades if the work were so cut out as to call forth their best efforts. Slowly the schools are breaking away from the old system of prescribing the same dose for every mind.

The Benefits of Party

WHY, asks the student, should a man be elected mayor of Chicago because he is a Democrat or a Republican? Why should a governor of New York be chosen on national party lines?

The best answer is found in such documents as the report of a gubernatorial commission on the management of state prisons in New York over a ten-year period. That management, the report finds, was a "riot of waste and wrongdoing."

With the free labor of forty-four hundred men and no overhead charges, prison industries produced less than a million dollars a year. The superintendent of industries at Sing Sing "uniformly violated the law by opening bids in private, communicating the contents to favored bidders and relaxing the specifications in their interest. He paid outlawed and unauthorized bills, and repeatedly used prison labor and material for private purposes"—and so on.

The point is that this commission was appointed by a Democratic governor and the management which it investigated was Republican. Usually, when control of a great city or state shifts from one party to the other, the first business of the new incumbents is to investigate and report upon the graft, waste and mismanagement of their predecessors.

Usually, also, they know exactly where to look for it—in the places, that is, which were characterized by graft, mismanagement and waste the last time they were in power.

This is the important benefit of national party control in state and local affairs. Periodically, as control shifts from one party to the other, citizens are officially advised as to how thoroughly they have been "done" by those who previously were supposed to be looking out for the public welfare.

WHO'S WHO—AND WHY

Serious and Frivolous Facts About the Great and the Near Great

Marcus Aurelius
Senator-Elect From Arizona

Hoke
Senator From Georgia

John W.
Senator From Maryland

Ellison D.
Senator From South Carolina

William A.
Senator From Michigan

The Smith Family Congress

WE LIVE in an age of classification. Gathering correlated concomitants into neat little bunches and filing them—the bunches—away is an occupation all and sundry are extremely keen about. Many a rising young business or professional man, enthusiastic about scientific management, has to spend so much time over his card indexes he has no opportunity to attend to the business and persons and what-not on the cards.

Still, we must have classification—we positively must! Where, may I ask, should we be if William James, for example, had not classified philosophy for us? Struggling along, I dare say, not knowing who the empiricists are, or who the positivists—to say nothing of being completely in the dark as to whether Hegel was a bird or a buccaneer, or Comte an actor or an acrobat. A sad state of affairs, I should remark!

Hitherto, it has been somewhat nugatory to classify United States senators, owing to the fact that there are some ninety-odd of them and that this entails some ninety-odd classifications—a labor distinctly not worth its pains. Now, however, has come a time when an apt classification can be made; to which pleasing task I shall address myself.

Proceeding in a broad and virile manner, I arbitrarily separate the United States Senate into two general divisions—Smiths and non-Smiths. Numerically the non-Smiths predominate in the ratio of about eighteen to one. As will be observed, if there were enough Smiths present in the Senate to reduce that ratio to sixteen to one the fact would be significant—provided it had any significance; but, letting it stand at eighteen to one, or thereabout, for the purposes of this discussion it will be timely to consider the Smiths first, to classify the Smiths, leaving the remainder of non-essential non-Smiths for future consideration.

There are at present four Smiths in the United States Senate, and another Smith presently will be wished on that deliberative, deliberate and desultory body. Thus, for all purposes, there are five senatorial Smiths—to wit: William Alden, of Michigan; John Walter, of Maryland; Ellison DuRant, of South Carolina; Hoke, of Georgia; and Marcus Aurelius, of Arizona. It will be observed instantly that, though the North has but one Smith, the South has three and the Southwest one. Hence it must be clear that in the production of statesmen named Smith, and smithistically, the South is much more fertile than the North, which is very important and is respectfully referred to the Bureau of Ethnology.

How to Know the Smiths

THIS point clearly determined, naught remains but the proper and judicious classification of the Smiths, the questions involved being entirely judicable and also justiciable, as Mr. Taft has frequently said in referring to the efforts of Mr. Andrew Carnegie to obtain international arbitration and keep his name in the papers at one and the same time. The statement cannot be controverted successfully that the mere fact that a man is named Smith confers on him no distinction over a man named Schnitzel; but—and here is the nubbin of the contention—the fact that a senator is named Smith does confer on him a certain prominence that demands and shall have investigation.

What, then, are the points of divergence from other Smiths that occur to the classifier when examining the senatorial Smiths, and what are the characteristics that are in common possessed? And how do these Smiths differ one from another? And what is the predominating characteristic of each? Volumes might be written in answer to these—apparently—simple questions; but it is snowing, and a single illuminating flash on each Smith must suffice, especially as the immutable identity of the ego is freely determined by the ultimate coördination of the inner consciousness with the outer circumstances, as somebody said just before they put him in a padded cell.

Bearing this in mind, we have five Smiths—five senatorial, significant Smiths—each of whom is preëminent in his own peculiar way and who may be thus differentiated:

Saccharous or Sugary Smith;
Silent Smith;
Sensitive Smith;
Slick Smith;
Sedulous Smith.

Sugary Smith is William A., of Michigan, than whom, I make bold to say, there is no greater living exponent of the glad hand in politics in a nation that has progressed for years—politically—through the salvey medium of shaking hands. A soft answer, with William Alden, may be collateral for a vote at some future time; and a warm handclasp may be remembered on the first Tuesday after the first Monday in some bleak but decisive November. When William Alden grabs your hand it is to have and to hold until he has given you seventeen lumps of conversational sugar, has dripped a round dozen of melting smiles on you, has affectionately clapped you on the shoulder and told you how highly he approves of you and your family and all your voting acquaintances—the warmth of his greeting is only excelled by the fervor of his parting.

Silent Smith is John Walter, of Maryland, who rarely speaks unless to deprecate the Russian position as regards passports for American citizens, there being a large Hebrew population in Baltimore. He is a handsome man and of great power in Democratic politics in his state; also, not without reward for his activity—for we find he has been successively in the Maryland state senate, in Congress, governor, and now is senator, which is progression if not progressiveness, and brings to mind the old saying that silence is golden—though, for the matter of that, they usually pay in checks for statesmen's services performed; but it is all one when it comes to being on the payroll of an appreciative state or nation. John Walter is a lumberman in a business way and knows how to roll logs, to hew to the line, to build foursquare and to collect his bills.

Sensitive Smith is Ellison DuRant, of South Carolina. And what makes him so sensitive? asks the curious party on my left. The woes of the common people, dear sir—the woes of the common people. Possessed of a tender and sympathetic spirit, it causes him great pain to observe the velvet-shod feet of the criminal rich treading on the bleeding hearts of the prostrate poor, as he once observed; though it is quite apparent the criminal rich would have achieved greater results had they worn hobnailed shoes. Still, the criminal rich down in South Carolina probably wear velvet on their aristocratic feet. Ellison DuRant weeps bitterly every time he thinks of the price of cotton and is esteemed an orator in his section of the country. Probably there is no more sensitive man in public life than Ellison DuRant—certainly no more sensitive Smith. He quivers like an aspen at the mere mention of any atrocity on the dear people that may be perpetrated anywhere—and especially in the cotton belt. His soul revolts. And when his soul revolts his vocabulary revolves.

Then there is Slick Smith—Hoke. The efforts of many Georgians for many years have been devoted to putting Hoke in a hole and filling the hole. The net result, at this writing, is that Hoke is a United States senator from Georgia and likely to be for some time to come. It has always so happened that, when the hole was ready for Hoke, Hoke was unready for the hole. The hole and Hoke were not in conjunction, so to speak. There never has been a minute, for years and years and years, when Hoke has not had accurate and exhaustive information as to his number; and every time they have had him pinned to the mat he has wriggled out. Slick Smith describes Hoke; for when you come to consider the intricacies of Georgia politics the man who can last as long as Hoke has—and get as much—certainly is slick, smooth, polished, and even glossy.

Which brings us to the Sedulous Smith—Mark, of Arizona. A true Smith is Mark. For twenty-five years he has had but one ambition, desire, preference—the same being to get into the United States Senate. Hence he is in the United States Senate—or will be; which may not mean that all sedulous Smiths can be senators, but does mean that one sedulous Smith can be—which is the proposition that most intimately concerns Mark.

Judicial Credit

ONCE when Chief Justice Waite, of the United States Supreme Court, was presiding, he received an urgent call to Baltimore. It was imperative that he should go at once.

He left the bench and hurried to the old Baltimore and Ohio station, then not far from the Capitol. As he stepped up to the ticket window he found he had no money with him.

"My friend," said the Chief Justice, "it is imperative that I shall go to Baltimore at once. I have no money with me. I am the Chief Justice. Will you kindly let me have a return ticket and I will reimburse you tomorrow?"

The ticket agent laughed. "You'll have to come stronger than that, old chap," he said. "Almost every day some chief justice or other tries to beat me out of a ticket."

The Chief Justice turned away. He approached several prosperous appearing persons in the waiting room and each time was scornfully refused a loan. He hurried across the street to a hotel and entered the barroom. "My dear sir," he said to the bartender, "do you know me?"

"Nope."

"I am Chief Justice Waite of the United States Supreme Court."

"What do you want—a drink?"

"No, sir, I want you to let me have twenty dollars. I have suddenly been called to Baltimore, a train leaves in a few minutes, and I discover I have no means on my person. Will you do it?"

"Sure!" said the bartender, and he took twenty dollars out of the drawer and handed it to the Chief Justice.

Straight to the Spot

STRAIGHT to the hungry spot that outdoors gives you, goes the taste of Underwood Deviled Ham—straighter than any other taste you know.

That's why kids can't get enough of fresh white bread sandwiches spread with Underwood Deviled Ham. Try it—

TASTE THE TASTE

And *why* does it reach the hungry spot? Listen. Because—it's good old-fashioned ham, salted, sugared, hickory smoked, boiled *en casserole*, ground fine, and mixed with a bland dressing of 42 spices. That's why!

Omelets for breakfast; croquettes for luncheon; salads for dinner; sandwiches for outdoor lunches or indoor ones; that's how you use it.

Our book, "Taste the Taste and Some Cookery News," is full of ways to taste this delectable taste—soufflés, canapes, timbales, turn-overs, dressings! A copy free if you send us your grocer's name. Or send 15c and your grocer's name for a can to try.

Just get out your grocery list and write down Underwood Deviled Ham to order *today*.

Made by the William Underwood Company, No. 52 Fulton Street, Boston, Mass.

UNDERWOOD DEVILED HAM

GOVERNMENT AND BUSINESS

(Continued from Page 10)

or more consists of foodstuffs—in which the Beef Trust plays no inconsiderable part. Analyze the remainder—consisting of "manufactures for further use in manufacturing" and "manufactures ready for use"—and you will find either a trust or some very powerful business concerns behind nearly every large item.

First, there are iron and steel manufactures, other than machinery, amounting to over a hundred million dollars. It is well known that the Steel Trust, though doing rather less than half of the total domestic business, does over three-fourths of the total export business. Only a little smaller are the exports of petroleum products, in which we recognize our old friend the Oil Trust. Copper that has passed through some stage of manufacture accounts for over ninety million dollars—and copper is hardly a small man's game. Exports of machinery and electrical apparatus come to about a hundred million dollars and are handled largely by concerns of trust size. Agricultural implements, railroad cars and carriages are exported in the main by the Harvester Trust and other concerns possessing capital that runs far into the millions. So you can go through the list and realize that our exporting, aside from raw materials, where we have a natural advantage, is done by Big Business.

Competitive exporting nowadays demands a big, expensive organization. In England and Belgium, to some extent in France and Italy, but especially in Germany, the Government itself supplies this organization, or at least a very important part of it. Quite recently our Government has begun to do something in that line; but as yet it is only a beginning. The Bureau of Manufactures—for which a more correct name would probably be the Bureau of Commerce—is the organ of our Government charged particularly with this work. A report by the Department of Commerce and Labor in 1907 contains the following:

"The office of the American consul-general at Berlin and that of the German consul-general at New York may be considered of equal importance to their respective countries. The staff of our consulate-general at Berlin consists of the consul-general, the deputy consul-general, drawing a salary of a thousand dollars a year—he being the acting consul-general in the absence of his chief and being charged with responsible work all the time—and three clerks drawing still smaller salaries; in all a staff of five persons."

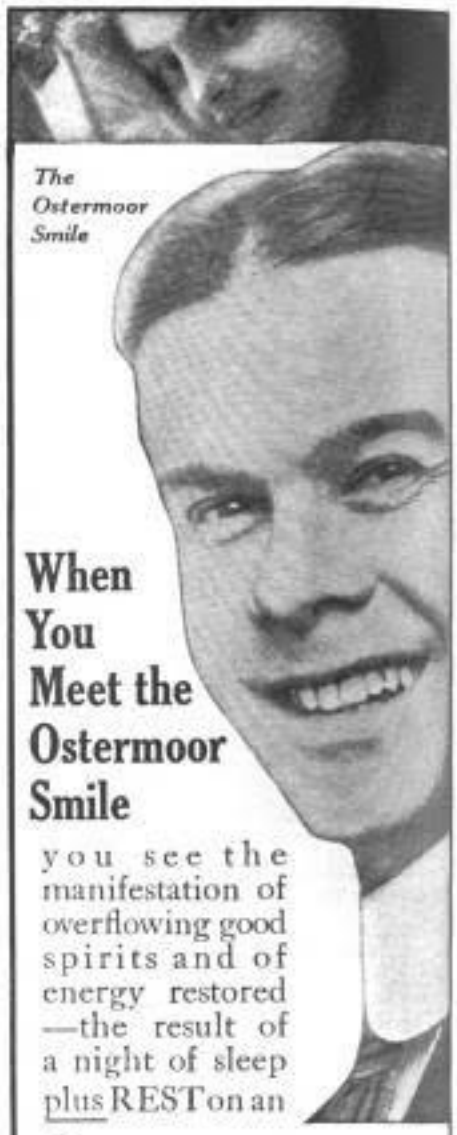
The Fruits of Organization

"The staff of the German consulate-general at New York consists of the consul-general, one consul, three vice-consuls, one commercial attaché, and a force of translators and clerks, making a total staff of about thirty persons—or more than that of our Bureau of Manufactures, which is charged with the promotion of the commerce of this country with the entire world.

"As a result of such equipment our consuls have not sufficient time for study and investigation, as most of their time is taken up with routine work; while the Foreign Office and the Department of Commerce in Germany are promptly supplied with up-to-date information on any matter which may have the remotest bearing upon German interests in the United States, or upon German-American relations anywhere in the world, because they have men with expert knowledge and free from routine work stationed in the principal centers of the world for that purpose."

We are doing a little better than that now; but the total appropriation for our Bureau of Manufactures last year was eighty-five thousand and one hundred dollars. Probably the Steel Trust alone spends as much for the purpose of keeping in touch with steel-trade conditions throughout the world. This comprehensive organization is necessary if one is to do a competitive export business nowadays. Our big exporters, of course, have such organizations, keeping them in intimate touch with trade conditions and changes. The difference is that the information and the promoting work done by the German Government are free to everybody; while the Steel Trust and Oil Trust naturally are not handing out their information to a would-be rival or advising him of such new openings for foreign trade as may turn up.

The industrial rise of Germany is the most remarkable business story of modern times—much more remarkable, in fact, than the coincidental rise of the United States. Rather less than two generations ago, Germany was in the rear of the procession industrially. From a business point of view she resembled the Middle Ages rather than modern Europe. She was an old country, of course, and had no such vast stores of untapped natural resources as the United States. At present her foreign trade about equals our own. The chief cause of this rise, no doubt, is found in comprehensive and efficient organization with the Government leading.



How the Germans Watch Trade

The empire now is divided into about one hundred and forty chamber-of-commerce districts, and the chambers of commerce are so intimately linked with the Government that they may be considered fairly a part of it. By undisputed practice the Minister of Commerce exercises a large measure of control over them, directing the establishment of a new chamber wherever one seems needed, and ordering the consolidation or even dissolution of old ones when that seems expedient. The secretary of each chamber of commerce is virtually a Government official, and other members are given the courtesies due Government officials. The chambers are required to make annual reports to the Government, dealing exhaustively with trade, labor and industrial conditions in their districts. The Government calls upon them at other times for reports and opinions. The chambers in certain cases appoint expert investigators. Incidentally they have certain powers to prevent business frauds, for they can stop the payment of postal-money orders to a questionable concern, or veto the organization of a new company that appears to be of the get-rich-quick order.

These semiofficial chambers of commerce are the primary means of communication between the Government and business of all sorts all over the empire. For example, any disadvantage that a German exporter encounters or any influence that works anywhere against him in foreign trade is at once brought to the notice of his chamber of commerce, which looks over the case and quickly gets the ear of the Government if the obstacle is of a sort that governmental action of any kind might remove. All sorts of trade questions go to the Government through the chamber of commerce in the district where they arise. On the other hand the Government works through the chambers of commerce in distributing information, and so on. The chambers of commerce also take a hand in promoting and supporting commercial schools, lectures on foreign trade, and the like. The chambers of commerce, in fact, supply the groundwork of a comprehensive organization that keeps the Government immediately in touch with trade. All this, you will say, sounds very "paternalistic." Probably it does; but it brings results, as any one can see by glancing at the imposing figures of German commerce.

Some time ago a convention was held in Prague for the purpose of considering the foreign trade of the dual empire. An imperial councilor pointed out that in twenty-five years exports from Germany had increased two hundred and twenty per cent, while exports from Austria-Hungary had increased only seventy per cent; and during the same period the annual emigration from Germany had declined from two hundred and ten thousand to thirty-one thousand, though emigration from Austria-Hungary had increased from seventy-four thousand to two hundred and sixty-two thousand. Austria-Hungary is larger than the German Empire, not much less populous and probably little inferior in natural resources; but its foreign trade is much less than one-third that of Germany, and in ten years more than two millions of its subjects have emigrated to the United States. The imperial councilor was of opinion that teamwork in promoting Austria-Hungary's trade would be beneficial.

For a long while business in this country has been hampered by conflicting state laws. For example, business is largely carried on by means of negotiable instruments, such as drafts and notes, and negotiable instruments used in business are

The Wee Girl and the Big Man both like

Post Toasties

—thin bits of corn, first cooked, then toasted to a golden brown.

Usually the liking extends to the whole family.

The housewife likes this food, not only for its appetizing goodness, but because of its convenience. It requires no cooking—ready to serve instantly from the package with cream.

For breakfast; for lunch when the hungry little folks come from school; or for supper when something particularly dainty is wanted.

Post Toasties

are deliciously good.

constantly crossing state lines; but each state has its own laws governing negotiable instruments and the laws of nearly every state differed at some point or other from the laws of nearly every other state. Almost thirty years ago a movement was started to remedy the useless and vexatious conflict in state laws concerning certain subjects where uniformity would benefit everybody and injure no one. In 1889 the American Bar Association appointed a committee, consisting of one representative from each state, to deal with the subject. Following that, various states, by legislation or act of the governor, appointed commissioners "for the promotion of uniformity of legislation in the United States," and the commissioners began holding annual conventions.

Getting commissioners appointed was far easier than getting their recommendations acted upon however. Fifteen years ago, after long deliberation in which legal talent representing nearly all the states took part, a uniform negotiable-instrument act was drawn up. In 1898 New York, Connecticut, Colorado and Florida adopted this uniform act. One by one other states fell into line, until in 1910, as a result of nearly fifteen years' work, thirty-six states had adopted it.

There was really no valid objection to this uniform act. It simply removed from the path of business certain obstructions from which nobody derived any honest benefit. The slowness with which the legislatures, on the whole, responded suggests that politics in this country takes comparatively little interest in business—by which I mean business in the mass and not certain particular businesses that make a business of taking an interest in politics.

The Privilege of Scrambling

We are doing decidedly better now, thanks to fifteen years of effort and agitation. Thus, in 1910, twenty states adopted the uniform warehouse-receipts act which was brought forward less than five years before; but it took a long, hard pull to get legislatures really interested in this subject of removing the obstacles to business that arise from senseless conflict between the laws of different states.

It is, of course, undeniable that politics and Government have very often been tenderly responsive to the wants of certain particular businesses—which could make it worth while. Perhaps that is one reason why there is in many quarters a superstitious dread of advocating anything that might be beneficial to business in its bigger forms. I am not speaking, however, of special favors to special businesses, but of the general attitude of the Government toward business as a whole. We are said to be the most commercial and businesslike of people, but it seems fair to say we have about the least commercial and businesslike of Governments. There is still, for one thing, too much hankering to pose as St. George slaying the dragon.

The old theory was that the Government should stand aside, leave a clear field and let everybody scramble for himself. That theory obviously is passing away. Some of us scrambled far too successfully. Along with the newer, restrictive policy, there should be a more intelligent and open-minded constructive policy.

A Professional Gossip

THERE is an elderly yet still active spinster in an Eastern city who long has supported herself by manicuring the city's highborn at their homes.

In addition, she has developed recently still another way of adding to her income—a fact, however, that is not generally known to her patrons.

One of these ladies, a well-known society woman, began a short time ago to be mystified and at the same time a good deal put out by the appearance in print of several extremely intimate happenings in her household. While she was still puzzling over the matter the elderly manicure arrived, and in a pause during the finger-trimming séance blandly inquired: "Say, you don't know any gossip, do you—any real live items?"

"Items?" gasped the astonished lady, with a sudden strong suspicion. "By any chance do you mean items for the newspapers?"

"Why, yes'm," the manicure mildly answered. "I get fifty cents apiece for plain items and a dollar if they're scandals."

"Yes. Now-a-days housekeeping means home-keeping."

"BUT doesn't it mean a lot of drudgery just the same—specially in the culinary department?"

"No, not if you manage right. I have all the handy contrivances that save more than they cost. And we never make our own soup. I use

Campbell's SOUPS

So do thousands of careful and capable housewives who are abreast of modern ideas. They find in Campbell's wholesome 21 kinds a refreshing variety for the daily menu, and a constant relief from one of its most troublesome items. Why wouldn't these perfect soups be of equal help and value to *you*? Try one *today* and see.

"Dear Soup! How sad these partings are!" But note my other cry. It shows I'm thinking "Au revoir!" Although I say "Good bye!"

INSTINCTIVE PLAYING Delightful Because Natural

WHEN YOU LISTEN to a player piano in the next room—or the next house—you can usually tell that mechanism, and not human fingers, is playing the keys. Isn't that so?

For years, manufacturers of player pianos have been trying to overcome this tendency toward lack of expression. It can now be practically eliminated, in two ways: By interpreting devices, or by *Instinctive Control*.

To get the greater pleasure of Instinctive Playing—the same pleasure that hand playing gives—a new invention in player pianos was necessary.

The Virtuolo gives you an instrument which you can play Instinctively with beautiful expression—which is *your own* expression. In other words, the Virtuolo enables you to bring out the music that lies hidden within you, like a crystal spring, waiting to be tapped—to bring it forth naturally, without effort.

Four sensitive buttons, which you find you press *Instinctively*, make the Virtuolo respond to every impulse for expression that you feel while playing.

The Virtuolo inspires you to express yourself Instinctively. Instead of having to use *Reason*—to make a mental and physical *effort*—you find you only have to follow your Instinct to put beauty into your playing.

In an advertisement we can't explain how the Virtuolo *coördinates* with the Instinct of the person whose fingers rest upon these buttons.

We want you *to play* the Virtuolo and know that Instinctive playing is a fact, a success so far as you are concerned. Most people find it more convenient and satisfactory to first inspect and play the Virtuolo at their dealer's. Then, if Instinct wins them to this new type of player piano, they have it sent home.

VIRTUOLO

THE NEW INSTINCTIVE PLAYER PIANO

PRICES AND TERMS
(East of the Rocky Mountains)

The Virtuolo in Hallet & Davis Piano, special mahogany case, Colonial design, complete, $700. In Hallet & Davis Piano, Arts-and-Crafts case, $775. In Conway Piano, mahogany or walnut, $575. Lexington Player Piano, $450 to $485. Terms: Three years in which to pay if you desire. Simple interest on deferred payments. Pianos and ordinary player pianos taken in exchange at fair valuation.

"THE INNER BEAUTY"
(Send for FREE copy)

Find out more about music in you. Send for "The Inner Beauty," a beautiful illustrated booklet which tells fully what we've told briefly in this advertisement.

It also gives you many extraordinary thoughts on music—the language of the composers. Beautifully illustrated with famous paintings inspired by music. Shall we send you a copy of this book? Fill out attached coupon and mail today.

PIANOS—MANY MAKES

Hallet & Davis Pianos—pre-eminent among artists since the immortal Franz Lisat praised them above all other pianos at the Paris Exposition, 1867. Price $365 up.

Conway Pianos $300 up. Lexington Pianos $250 up. Also fine pianos of all makes, accumulated in exchange for new Virtuolos. Terms: By our easy payments, you can have your piano to play on while saving to pay for it. Write for Special Bargain Bulletin, or tell us the make and price you're looking for.

THE BOX-OFFICE VALUE OF TEARS

(Concluded from Page 15)

A great change has taken place in audiences as to the rapidity with which they can pass from a comedy scene to a strong emotional scene. Formerly they seem to have been almost acrobatic in their mental and emotional nimbleness. Reading over some of the plays of thirty or forty years ago, the modern actor is surprised to see how quickly the moods must have changed. It is different now. The playwright must prepare for a weepy scene. Abrupt transition is almost always fatal to the effect. A bit of comedy in the middle of a serious scene excites only nervous laughter. Ibsen can bring the grimmest humor into the most terrible scene, but only the elect seem to be conscious of it. And if one yields to the temptation to laugh aloud, instead of being secretly relieved of the tension, the look of startled surprise on the face of the average auditor will be a great lesson to him.

Never have I heard a laugh from an audience at Ibsen's grim humor, although many of course have a perfectly clear sense of the dilemma; but there was too much power in the scene to allow of the relief of the tension.

The same rule holds good with tears as with laughter—the actress must not pity herself too much in emotional situations or she loses the best effects. She had better let the audience pity her while she simply gives those touches sufficient to excite in them feelings that will bring tears. She herself must not weep all over the place, or the audience will simply be fascinated watching her antics. This constitutes the great difference in the skill of emotional actresses and can be observed all the way from Sarah Bernhardt down to the merest novice. Speaking of Bernhardt—she absolutely made Sardou as a playwright through her successes in his plays at a time when the weepy drama was in fashion. The whole vogue of his plays and those of his imitators is flippantly referred to now as "Sardoudledum."

The Effect of Satire

There is great confusion in most minds as to whether a play is emotional drama or tragedy. Some think that any drama that ends unhappily is tragic. Many sad plays have not one tragic touch in them. The numerous weepy plays that any theatergoer can name will excite susceptible people to tears for the moment, but will have no lasting effect at all. A tragedy, however, rouses feelings of pity and fear in the very soul of the spectator, lingering on in the memory. Emotional drama, as we use the term, would have been classed under comedy in the days of the Greek drama. Tragedy includes all emotion as the whole includes the sum of its parts. We pity only when we fear the thing may happen to ourselves. When the fear of its happening grows to terror our pity deepens and broadens; but the process somehow dries our tears. That is why persons seldom weep at tragedies.

That is why the wonderful tragedies of Shakspere hold an audience through an entire evening without a tear. The one scene in Hamlet that can bring tears, though tragic in its import, has the susceptible element predominating in the fact that the beautiful young woman, having lost her reason, still joys in the flowers she is strewing about her. Even the moments when she becomes dimly conscious of the death of her father are rendered sweet and pathetic by her digging an imaginary grave and scattering upon it the beautiful wild flowers.

Many notions in regard to emotions in the theater are wrong. I should say that people do not suffer at representations of an emotional drama—unless they are bored by it. Except in a few cases, they do not suffer even in the contemplation of tragedy. For the emotion of deep pity is stimulating, uplifting and therefore beneficial. The only thing approaching suffering in any true sense in the theater is the effect produced by a strong, satirical comedy, such as Molière and Sheridan wrote in the past and George Bernard Shaw puts into dramatic form today.

Satirical dramas that lash audiences, and show them up to themselves as the bunglers or indifferent beings they are, really do more good in the long run than the much-lauded plays that drain the tearducts dry.

Gee! Tom, look at this

"You know I skun my shin like sixty when we banged into that bob last night. I just rubbed on a little "Vaseline" when I went to bed, and now it's all as clean and slick as ever. I'd hardly know I'd got a scratch."

Of course, you have "Vaseline" in your household, not only for the boys but for yourself and the whole family. It is just the thing for scratches and minor cuts and wounds, besides keeping the skin generally in a natural, healthy condition.

"Vaseline" is to the skin just what a good lubricant is to an automobile engine. It keeps the pores working smoothly; it softens roughnesses; it relieves irritations.

Particular men and women use "Vaseline" because they know there is nothing on earth that is more strictly pure. It is sterilized in the process of manufacture and contains no animal or vegetable fats.

Druggists everywhere carry our full "Vaseline" line—put up in bottles and in handy, cleanly tin tubes.

Our booklet, telling all about the uses of "Vaseline," contains all kinds of practical information for the home—suggestions just as serviceable to the bachelor (girl or man) as to the Mother. Postpaid on request.

The Senator's Secretary

IIS is the open season for the Re-ected Glory Boys. You can flush a y of them almost anywhere, and par-arly in any hotel lobby or head-ters where the political reporters are to congregate. They have shown al-y by the dozen and they will continue to by the hundred. The opportunity to nto the edge of the limelight was never od, and they have emerged from the grass in all parts of the country and naking the most of it.

ie Reflected Glory Boys have been out for a long time. There has been noth-the situation that gave them a chance arch to the front and air their opinions ie hope of getting a little space for selves in the papers. Now it so hap-we are in the midst of a particularly silly-season in politics, and the editors, e patter of the business, are "eating all the political stuff handed in. This s the Reflected Glory Boys of some ng importance. It gives them a ce to stand round and beat their chests exude opinions. Also it gives them a ce to tack themselves on to various inent personages in the political news, they are not only tacking themselves ut they are gluing themselves on and ing themselves on and using every known method of attachment.

eir methods are always the same. a Reflected Glory Boy sees a chance t himself into the papers he immedi-prepares a typewritten statement tell-hy, in his opinion—a very important on—it is impossible to elect Mr. Taft, why the nomination of Colonel Roose-is the salvation of the Republican , the country, the hemisphere and the y Way. They have typewritten state-s in each hand, in every pocket, in hats, shoes, hair, and they leave trails ese convincing and stirring documents id them wherever they go. They will r hours on the doorstep of any man even the remotest connection with any um of publicity, in the hope that they induce the publicist they are haunt-o put a little of their impassioned e for the regeneration of the nation in aper—combined, of course, with their for The Colonel, or for whomsoever have picked out as the purveyor of imelight in the edge of which they e to stand.

he Tactics of the Glory Boys

ey are marching and have marched to ront everywhere, from California to e. Some of them have had political and have been thrown out of them. of them had hoped to have political and didn't get them. Some of them to get political jobs if their man shall

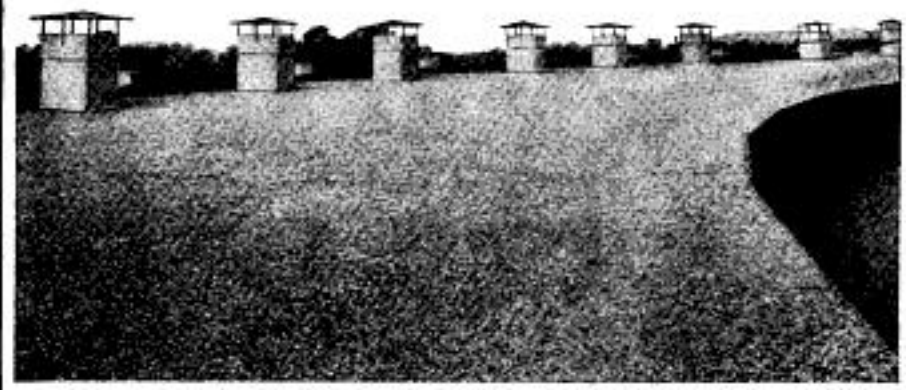
Some of them have no hopes at all the hope of deriving a little temporary iety and self-advertisement by hitch-n behind. The real motive of all of is self-advertising. They couldn't get the papers in a thousand years on their merits, so they tack on to some man inent in the current political situation et in that way. They are all as bogus upees.

ey operate in the same manner, by and , although some of them are important gh to get a first-hand crack at it, while s must be content with being away off e edge. Still any notice at all is better no notice, and they avidly impress opinions on all comers. It is the lest thing in the world. A governor, for iple, or an ex-governor, or somebody has had some political prominence, to the nearest center of population e there are daily papers. If he has gh money he goes to Washington or York. If he hasn't enough money hat the state capital or the nearest big will do.

position is taken in the lobby of the ng hotel. If the visitor's name carries weight the various city editors are d on the telephone and told that the orable So-and-So is in the city and has important political communication to e. The reporters come round. Then Reflected Glory Boy delivers himself of tatement. He shows how all the peo-n his part of the country are howling Roosevelt, or Wilson, or whomsoever Reflected Glory Boy has tacked on to, he gives elaborate reasons for his faith. Politics is boiling. It is the mission of all editors and all political reporters to make trouble. They all hate peace. Thus the situation, not the personality of the statement-maker, gives the statement-maker a little importance, and he gets his little advertisement in the paper. His name appears. Maybe a line or two of what he says is telegraphed to other papers. In some instances his name may get into the Associated Press report. He is a figure in the news, not because he is a figure in the news really, but because he has grabbed a big man's name and crept along under the influence of that.

Sometimes they work it a little harder. Many of them, by hook or by crook, get to Oyster Bay, or to Trenton, or to Washington, and break in on the meditations of the great men who are meditating at those points. This, if it can be done, means more space and more advertisement, and it is always resorted to in case there is any possible way of raising the railroad fare and enough to pay a hotel bill. Hence we have this long procession of inconsequential nobodies who are venting opinions as to the political situation by the yard, getting them printed by the inch and feeling extremely happy over the outcome.

Nor are all of the Reflected Glory Boys nobodies. Some of them have names of sufficient size to give weight to what they say, but that makes no difference in the general scheme. The mere fact that a man is well known does not make him averse to further advertisement. Indeed it makes him greedy for more advertisement. And the more familiar his name the greater the publicity he can get, which is a well-known truth in many parts of this country. So by hitching his name to a name that is even better known he constructs a combination sure to work.



Publicity as a Fad

The smartest publicity men in the world are supposed to live and operate in this country; but all of them, smart or not, overlooked a big bet a time ago. A certain distinguished but now retired captain of finance, who has a few tons of money and an itch to see his name in the paper in connection with large undertakings, and is willing to spend freely of his money to attain that end, suddenly bloomed forth in connection with a plausible and interesting political situation. His former connections and his medium for his particular kind of reflected glory made the story big, and it was played up for many days in the papers. This retired captain of finance, as soon as he discovered what was going on, had the shrewdness to push the game along. He pushed it hard. He maintained a mysterious attitude—a guarded attitude—and let the others do the guessing. Then at the proper time he landed heavily with a "typewritten statement," and stirred it all up again. He got a lot of notice and he enjoyed it, inasmuch as various other efforts of his along that line had not been entirely successful.

Now the point is this: That retired captain of finance is living nowadays, with his tons of money, for the exact purpose of getting recognition as an important person along lines he has chosen for personal exploitation. Like every other retired captain of finance he desires publicity. If any of our smart publicity men had had the smartness to think of this particular plan for getting the name of the retired captain of finance into the papers so prominently and in such an important association, the retired captain of finance would have paid liberally for the idea. And it was a cinch. All that was necessary was to meet a few political reporters and tell the story, and there it was. The editors grabbed it like hot cakes. So, as no smart publicity man had the smartness to think of it, a much smarter political reporter did think of it, and the retired captain of finance got his pleasant publicity for nothing—which probably made a hit with him—and the reporter got regular space rates for the story. As has been truly said: Of all sad words of tongue or pen, none are so sad as those that tell of an opportunity overlooked to milk a retired captain of finance who wants to see his name in the papers.

There have been dozens of them—dozens of the Reflected Glory Boys—who have emerged from obscurity hanging to the coattails of Colonel Roosevelt. The

Barrett Specification Roofs

Longest Wear for Lowest Cost

THE cost per year of service is the only true test of a roofing. It discloses the absolute superiority of Barrett Specification Roofs. That is why on large manufacturing plants, where costs are carefully computed, such roofs are almost invariably used.

Barrett Specification Roofs are inexpensive, costing much less than tin, for instance, and little more than the best grade of ready roofings.

Their cost of maintenance is nothing, for these roofs require no painting; they can't rust; they will give satisfactory protection for 20 years or more, and insurance underwriters classify them as "slow burning" construction acceptable on "fire-proof" buildings.

Barrett Specification Roofs are also immune from damage by acid fumes. That is why they are used extensively on railroad roundhouses.

On cotton mills, with their humid interiors, these roofs also give perfect satisfaction, for dampness does not affect them from below.

From the viewpoint of economy and satisfactory service, no other type of roof covering compares with Barrett Specification Roofs. That is why they have won almost universal approval for use on flat-roofed structures of all kinds.

The Barrett Specification Roof illustrated above is 50,000 square feet in area and covers the Roundhouse of the Vandalia Lines (Penna. System) at Terre Haute, Ind.

Special Note We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding. If any abbreviated form is desired, however, the following is suggested:

ROOFING—Shall be a Barrett Specification Roof laid as directed in printed Specification, revised August 15, 1911, using the materials specified, and subject to the inspection requirement.

Copy of The Barrett Specification, with diagrams, ready for incorporation into building specifications, free on request. Address our nearest office.

A Watch That's Unique

—Sold by Retail Jewelers Only

THE South Bend Watch is unique in America in the fact that it is sold only through retail jewelers. We will not allow these famous watches to be sold in any other way, for every *watch* needs the *jeweler's service—regulation to the buyer's personality.*

When you buy a *South Bend* Watch you get with it this perfect regulation which makes the watch keep accurate time for you. And because it is a *perfectly-made* watch it will then *continue* to be accurate as long as you or your children wear it.

No one but an expert watch man or jeweler can give a watch this service. That's why we see to it that the sale of the South Bend Watch is restricted to retail jewelers only. There are more than 15,000 such jewelers who sell the South Bend. One of these is probably your own jeweler. Ask him about the South Bend Watch—that famous watch which keeps perfect time even when frozen in a cake of ice, and which you can buy for as little as $7.50, or—in a solid gold case—up to $75.

"The South Bend Watch"

Here is a watch that is often a year in the course of construction—a watch that gets 411 inspections and must run seven hundred hours accurately before it is *ready* for the jeweler's regulation. You ought to know all about it. All is told in a free book which we will send you, called "How Good Watches Are Made." Write for it.

The South Bend Watch Company

2 State Street
South Bend, Ind.

(90)

Colonel seems to have more glory to reflect than any of the others and he has a bigger following. They have been hurrying into Washington and to New York for the past six weeks, these moribund statesmen, and seeking to revivify themselves by telling the gaping world how strong The Colonel is and why he must be nominated. Governors and ex-governors and exes and has-beens and never-wases in one long string have taken positions within easy hearing distance for the political reporters, and have yowled their yowls about the pressing necessity for the nomination of Roosevelt. If it so happens that Mr. Roosevelt is nominated he will have to contend with the greatest aggregation of Original Proposers the world has ever known. Most of them cannot get in anywhere else.

Presently—likely as not before this is printed—the tide will turn to some extent, and the Reflected Glory Boys will see that the crowd round the Roosevelt band-wagon is getting too thick. Then we shall observe the inspiring spectacle of some of the boys marching out in front and declaring for Taft. Indeed, if they have any sense of publicity some of them will do that immediately. It certainly would be worth a paragraph in any paper to have anybody declare for Taft nowadays. And, when you get it down to bedrock, the reason for all this hullabaloo on the part of the Reflected Glory Boys is not the salvation of the nation, or the salvage of the Republican party, but the paragraphs in the papers containing the names of the boys themselves.

The Honorable Woodrow Wilson undoubtedly realizes by this time that competing candidates love a shining mark. Having attained the proud position in the Democratic race of leading all other aspirants, he is discovering that all aspirants are tomahawking him while dwelling in peace and amity with one another. Scarcely a day passes that some opposition editor does not hand out a public utterance attributed to the Honorable Woodrow that alleges some pet and established institution of ours is no better than it should be. And we had a lovely time when Marse Henry Watterson blew into Washington and revealed, with tears in his dictation but not many in his eyes, the baseness of Mr. Wilson's ingratitude on that celebrated occasion when he told George Harvey to take back his support and cultivate the habit of silence, as far as the Wilson presidential boom was concerned.

During the course of this diversion it came about that Marse Henry and Senator Ben Tillman had an interchange of thoughts on the subject. In one of Marse Henry's letters he said that his friend Swagar Sherley would wait on the Senator, and we all yelled "A duel! A duel!" and yearned for it. However, the excitement soon died away, for when we came to put the acid test of logic on the situation it turned a bright green.

You see it would be very difficult to arrange a duel between Marse Henry and Senator Ben, unless they consented to fight with toothpicks or custard pies at half a pace.

The Little White Outlaw

By James Oliver Curwood

THEY say the beaver was a great maker of history; that it was he, as much as man, who had to do with the opening up of the Great West. One historian says that the Oregon Trail was paved with beaver pelts, and that if it had not been for the beaver and pursuing man the unknown West would have remained an unknown West for half a century longer. The beaver, in his days of extinction, is written down; but there is a smaller brother in the Far North that the Crees know as "the little white outlaw of the snows," who has never come into his own and possibly never will. For this little white brother, so small that you could hide him in the hollow of your two hands, did more than open a west—he opened a new world; he was the reason for the beginning of the earliest and the oldest industry on the American continent. It was because of him that there came into existence the world's oldest and for centuries its most powerful trust—the Hudson's Bay Company—which not so very long ago owned a quarter of all Canada.

Today, when this little outlaw's brother invades a henhouse down in civilization he is spoken of quite contemptuously as a weasel; but six hundred miles north, where his pelt grows as silky as a woman's hair and as white as driven snow, in a temperature of from forty to sixty degrees below zero, he is still known as the royal and ancient friend of kings and empresses—the ermine—"the savagest of all living creatures and the bravest," says Lord Strathcona who, in the days when he was plain Donald Smith, was one of the greatest hunters and trappers in the employ of the Hudson's Bay Company. Fur-buyers from Montreal, Ottawa and Winnipeg will now penetrate far into the forests and pay from one to two dollars for this pelt; but in those days, more than two and a half centuries ago, when Prince Rupert formed his "company of gentlemen adventurers" and secured a charter that he might "hunt the ermine in the wilds of the New World," thus founding what became the Hudson's Bay Company, the ermine was actually worth more than his weight in gold.

At that time the price of his little pelt went as high as one hundred dollars, and it is known that the Chevalier Grosselier, who came over with a number of other French gentlemen adventurers to get ermine, did "barter one black fox for the skins of twelve ermine," something over two and a quarter centuries ago.

Once I came upon the trail of a big northern rabbit and I knew by the trail that an ermine was fastened to the rabbit's throat. I found the dead animal—fifteen or twenty times the weight of its assailant—a rifle-shot distant, with its brains eaten out. At another time I came upon a spot in a balsam shelter where the little pirate of the snows had tackled a frigate too powerful for him. He had attacked a huge white snow owl—and lay mangled and dead on the scene of battle.

Last year, as nearly as can be estimated, about a hundred thousand ermine were caught in Canada, going mostly to London and Paris; and this is considered a big catch, in spite of the fact that one can travel scarcely a quarter of a mile over the snow without encountering fresh trails of the tiny animals. No other animal approaches them—unless it is the fox or the wolf—in the cleverness with which they evade the tricks and traps of the most artful fur-gatherer. In the snow their movements are so quick and elusive that it is impossible for human eyes to keep track of them for twenty consecutive seconds when they are in motion. I have fired at one of them, and from thirty or forty feet away he has been laughing at me, so to speak, by the time the shot reached the point where he was. He is the only animal in the North that is quicker than the jaws of a steel trap. Two years ago I had a twenty-mile trapline running through a deep swamp near Nipigon House, and on one of my rounds I came up quietly to find an ermine investigating the trap house. From behind a log I watched him. In a few moments he stepped on the pan of the trap; and simultaneously with the "give" of the pan he rose into the air like a flash, so that when the jaws came together he was safe—a foot above them. I reset the trap and he came back to the bait immediately. Three times he sprung the trap. It was with some regret that I shot him while he was nosing about the house, but it was an act necessitated by the fact that he would have spoiled my chances of getting the fisher cat I was after.

Of the same family, the mink and the ermine are the deadliest of enemies. The ermine is quicker and, were it not for his foolish courage, could always evade his more powerful foe. As it is, he often dies in the unequal fight; and after he is dead the mink tears his hide from his body and leaves him on the snow. Whenever one finds the other in a trap it means a profitless catch for the trapper, for the one that is free seldom leaves the other until he is torn and mangled. There is something of truth in the words of the factor at Nipigon House, who said to me: "The great Hudson's Bay Company may die, but the little devil who started it—the ermine—will go on living forever." He will.

Your Little Baby

DOES it smile and crow and clap its chubby hands, or does it gaze at you out of dull eyes? Health is baby's birthright, and your baby can have health if it is fed right. Cow's milk, usually thirty hours old and full of sickness, is not a baby's natural food and you can't make it so.

Cow's milk varies. It is rich this day and thin the next. You can't know if your baby is being overfed or starved on it. It may carry to your baby scarlet fever or some other dread disease.

All this is overcome in

Nestlé's Food

which is made with the knowledge that nature intended its young for a milk diet.

NESTLÉ'S FOOD is the best cow's milk from our own sanitary dairies, purified and modified until it is the nearest thing there is to mother's milk. That is why it suits the baby stomach so well.

A baby's stomach was made to digest its mother's milk, and any substitute for that mother's milk must be so like it that the baby won't notice the difference.

You can feed NESTLÉ'S while nursing and prepare your baby for weaning so that weaning time will be safe for baby and easy for you.

If you write us today we will send you a large sample can of NESTLÉ'S—enough for twelve feedings, together with our mother's book—"Infant Feeding and Hygiene," which every mother ought to have.

HENRI NESTLÉ

GAYNORIZING THE FINEST

(Continued from Page 9)

just as wisely have demanded that every dweller on Rivington Street—the most congested in the world—maintain in front of each tenement an acre of land devoted exclusively to the culture of orchids. As a matter of fact, on a busy day or night, the pushcarts are so close together on the average East Side street that an impoverished razorback couldn't run between them without scraping.

Have you ever watched a big policeman shooing pedlers off a block and wondered why? If you are a New Yorker maybe you haven't noticed it; but if you are an occasional visitor surely you have. It appears like persecution to the casual observer, but the cop is merely carrying out another one of those regulations—to wit, no pedler is allowed to remain on a block more than thirty minutes at a time. The police make them live up to this rule so far as is consistent; but another regulation, which provides that no merchant of the part may be interrupted while he is in the act of making a sale, injects into the situation a nice problem which, if settled justly each time, would require every policeman to carry a stop watch.

Moral again: Wink and Gaynorize.

Aside from the pushcart conundrum, policing the East Side has other phases worthy of a brass-buttoned Solomon's attention. However, Casey—not Solomon—is the man for the job. The old saying about the prophet and his own land holds true in police circles—the Jewish cop is not most successful among his own kind. They expect too much of him. This is so, to a less marked degree, as concerns the Italian cop among his people. The Italian detective is well suited to worry the criminals of his race, but as a diplomatist he is not so good. In this rôle, among the foreign element, the Irishman beats them all.

Just now the district is under the shield of a thirty-six-year-old Irishman who has charge, as inspector, of a wedge of Manhattan lying east of the Bowery and extending from the Brooklyn Bridge to Fourteenth Street. Roughly speaking there are eight hundred and fifty thousand souls in the district—Jews and Italians mostly, but with a plentiful sprinkling of Hungarians and the peoples that you think of when some one mentions Ellis Island.

Riots are frequent and tactics to quell them must be varied to suit the nationality of the participants. Italians, for instance, live indoors when there is trouble in the air; Jews usually congregate in the streets and huddle helplessly together. If there is a shooting affray on Hester Street you would expect all normal-minded citizens, following a good old American custom, to break for cover or dodge behind some convenient barrier. This is just what the East Side Jew does not do. Though he is no fighter he will swarm into the already congested streets at the first sign of trouble and will keep coming, as the tenements vomit their thousands, until the thoroughfare is jammed to the danger point. Then it is up to the police to herd them back indoors to avoid sacrifice of life and limb more serious than was threatened by the shooting which called them forth.

The Crusade Against Clubs

This brings me naturally to Gaynor's anticlub crusade which, as his hobby of lobbies as boss of the "Finest," deserves treatment by itself. Almost immediately after he assumed the mayoralty he issued a series of blunt, steel-riveted orders, framed in a few monosyllabic sentences for which he is famous, indicating that the clubbing of citizens of the five boroughs, as practiced among the police, would thereafter be considered *passé*. Any cop who evinced tendencies to the contrary was to be tried forthwith and—if the charges were sustained—was to be drawn and quartered, boiled in oil, or—if there were mitigating circumstances—dismissed summarily or banished to the wilds of Queens or among the proverbial goats of Harlem.

Various and varied accounts of the mayor's attitude were printed in the New York papers and throughout the country; and the burden of most of these accounts, including those published in New York, was that the New York policeman was to be deprived of his club. Some accounts went so far as to say the abolishing of billystols would likely follow. In other words, Casey on Broadway was to be as defenseless as a London Bobby who, I understand, in handling a Cockney ruffian, must depend on his wits and his fists.

It has been nearly two years now since the mayor took his stand, and the public is puzzled about it yet. The idea of a clubless New York cop, or—what is the same thing—a cop forbidden to use his club, prevails pretty generally today among the unobserving in the city. And there are lots of unobserving in the city. This notion is all nonsense. No order abolishing clubs was ever issued. What the mayor did put his foot down on was needless and brutal use of the club, with instructions that all cases of clubbing, brutal or otherwise, be reported to headquarters at once.

This created a great deal of confusion for a time soon after the mayor took office and many of us were afraid to use our clubs. Until it percolated under the helmet of the thick-skulled and the man-afraid-of-his-job that no cop was barred from defending himself with his club when his heart told him it was right to swing it, there was a spasm of uncertainty and demoralization and a period of bliss for the gangs. Many a poor cop, uncertain of the mayor's meaning, allowed himself to be unmercifully beaten; and the gangsters grew in boldness until last summer's strong-arm squad, making a specialty of subway rowdies and window-jumpers on Coney Island cars, put a crimp in this Manhattan Apacheism and broke it up. Hundreds of arrests were made, and the magistrates helped along the good work by sending most of the offenders to the Island for terms that jarred them.

Handling the Hoodlum

It was hard on the cop while it lasted, for many who escaped physical injury by the gangs were put to considerable expense buying new equipment. Their helmets had been smashed or their uniforms ruined in a scuffle with these rowdies who, if unable to break a cop's face, found great joy in spoiling his clothes, which they know he buys himself. Every man on the force today has a club and he knows that he can use it when justified in so doing, without fear of censure from any one, except perhaps the unruly gent upon whom it is descending. And, conceding that many of us were goats before we realized that we were not to be attacked without coming back at a mucker, I think that every one on the force feels that this first taste of Gaynorism was wholesome.

Seldom now does a husky bluecoat with a temper hit an argumentative citizen over the head just because he talks back; nor is there any of the old rough stuff in handling drunken men. Even fanning the feet of sleeping derelicts is taboo. Time was when many a policeman took keen pleasure in thwacking the thin soles of some shabby bum slumbering on a park bench.

Nowhere on the force do you find men more intelligent and more in sympathy with their work than the traffic-squad officers. From a spectacular standpoint at least, they are the finest of the "Finest"—and a dashing figure they cut, standing in the heart of the girl-violet and bulldog region on upper Fifth Avenue, raising a big arm now and then and twisting a tourniquet on the great artery of traffic that pulsates down from Central Park. Next time you walk down the avenue from the Plaza to the Flatiron Building, stop at the corners and watch them do it. Like a wader in a stream which his breast divides, the traffic cop regulates with a precision that is almost automatic the most famous daily procession of vehicles in the world.

To do this with consistent regularity, fair alike to the shabby open carriage of an old family gone to seed and to the thundering, high-powered motor car whose gritty shriek of warning shatters the air like a rock smashing on a cliff, requires that a man have his wits about him every moment he is on the job. And if you think there is any partiality shown to the rich and the fashionable you are mistaken. A month or so ago a traffic man handed a summons to a chauffeur whose automobile was smoking, contrary to a city ordinance. The chauffeur grew abusive and he was bundled off to court. The occupant of the machine was a relative of Rhinelander Waldo, Commissioner of Police. She took another vehicle to her destination.

CÆMENTIUM SALES CO.

offers you a new and improved liquid cement

QUIXO

Mends to stay

Air tight screw top easily opened

It will save you many a dollar

Easy to apply, does not stick to the fingers. Not a fish or animal glue. No odor to it.

With QUIXO you can stick wood to metal, metal to glass or steel to silver—stick any material to any material of the same or different kind, except celluloid, rubber and black lead. Sets like rock—mends to *stay mended*.

Always have QUIXO in the house. Economy, neatness and comfort demand its almost daily use for one or more of these purposes:

China, bowls, vases, cut glass, other glassware, and bric-à-brac.
Furniture, picture frames, letter files.
Marble table tops, mantels, tiles, refrigerator linings, umbrella stands.
Loose handles, backs of silver toilet sets, setting stones in jewelry.
Leaky gas pipes, sealing wines and spirits, sticking labels on bottles or jars.
And scores of others.

A glue, gum, cement, solder, liquid porcelain all in one.

Comes in air-tight bottle with screw top. Easily opened. Always ready to use.

It costs money to replace things—some things never can be replaced—a bottle of QUIXO will save them.

It Pays to be Particular About the Paint You Use

The selection of paint is a mighty important matter. Poor paint is dear at any price—neither looks right nor wears well. You can count on uniformly good results by giving preference to

ACME QUALITY

Paints, Enamels, Stains and Varnishes

They are easily applied and look the best. There is economy in their use, because they cover the maximum amount of surface and wear longest. Remember the name, Acme Quality. Insist upon having it. The outcome will more than repay you.

Acme Quality Furniture Varnish
Makes dull or scratched furniture like new. Flows readily under the brush and spreads to even thickness.

Acme Quality Interior Enamel
Imparts a beautiful, lasting finish. In snowy white, delicate tints or exquisite colors.

Acme Quality Floor Varnish
Remains hard and glossy, though subjected to rough usage. This because it is properly aged.

The Acme Quality Painting Guide Book

should be in the hands of everyone who has any sort of painting to do. It gives every detail worth knowing about the application of surface finishes. Contains handsome illustrations, in colors. Glad to mail you a copy free, on request. Send for yours today.

First-class dealers everywhere sell Acme Quality Paints, Enamels, Stains, Varnishes and Finishes. If yours cannot supply you, write to

ACME WHITE LEAD and COLOR WORKS
Dept. Q
Detroit, Mich.

All rules are made to be broken, however, and no one realizes this more than the policeman. Where he can't break them, he will try bending; for, though strict adherence to the regulations may be necessary as a general thing, every good cop, as I have said before, is at heart a diplomatist, who knows when to ease up the screws.

One of the most successful traffic men on the force—a handsome young daredevil now occupying a higher position in the department—used to stretch rules daily to fit the exigencies of the case. For several years he was stationed at various posts in the heavy wholesale trucking district from the Battery to Twenty-third Street.

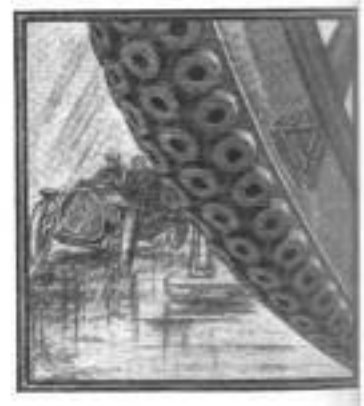
"I learned to know the drivers," says this chap, "and they learned to know me. Of course I had runs-in with the scrappers, but with most of them I got to be friends. I learned to know that the big redheaded driver, for instance, had to make a train with a shipment of goods three times a week. And when he would drive up I made it a point to see that he got through on time, even if I had to hold up a big racing car to do it. I never held a man up needlessly; and, though I was firm with the kickers and the soreheads, I never bullied anybody just because I was a cop.

"As long as I have been on the force, I never had anybody attempt to bribe me or slip me a piece of change for putting him ahead. Once, though, I got a Christmas present of a crisp five-dollar note. I was standing on lower Broadway, thinking about nothing in particular, except that it was Christmas Day and I wished I was home with the wife, when a big automobile stopped right in front of me and a hand reached out of the window. In the hand was a five-buck note. The hand beckoned and waved, and I stepped up and took the bill. 'Merry Christmas!' says a voice inside. Then I looked in and saw the man's face. It was John D. Rockefeller. On the floor of the car in front of him was a valise chock-full of bills, and he gave one to every cop he met, all the way up to the park."

Social Assignments Not Coveted

Mr. Rockefeller has made this a Christmas custom for several years. Either he or John D., Jr., distributes the money. It is against the rules of the department for an officer to accept gratuities of any sort, but there has never been a kick against Mr. Rockefeller's Christmas presents. However, this rule bars a general distribution of tips to policemen on duty at New York's fashionable weddings; and the father of the bride, if he would show his thanks, has to do so in the form of a donation to some police benevolent association. George Gould did so after his daughters were married.

These social assignments, by the way, are not coveted by the policeman as you might be led to believe. It is hard, exacting work, keeping a typical wedding-mad New York crowd from rushing the church, sweeping the bride off her feet and making the groom look like a "white hope" after a try-out with John Arthur Johnson; and the average cop considers it a bore. If there is any quiet handing out of appreciations for duty well done it is apt to go to the plain-clothes men inside or to some lieutenant in charge. I have been in many a wedding scrimmage myself and I have never been offered by the folks concerned a drop or a cent.



Notwithstanding their contact with crime and the sordid side of life, the policemen are not so cynical or so flint-hearted as many citizens engaged in gentler work. Instances of their spontaneous sympathy and generosity are frequent and recurring. Many a collection is taken up in the station house for an emaciated mother and children sheltered there pending removal to an institution, and many a foundling baby is supplied with clothes by a cop who is also a family man, with a kid about the same age as the little unfortunate. One old policeman, now retired, had no children of his own and he adopted half a dozen or so homeless, nameless youngsters, picked up on doorsteps or found abandoned in tenements. He was a traffic man; and when he left the department a few years ago he bought his faithful horse that had done duty with him. Today he lives quietly on a pretty little farm not far from New York, his declining years made happier by the children. And as he looks from his farmhouse window on a summer day he can see his old bay grazing in a near-by meadow. This may have the ring of sentimental

If your car skids on wet or greasy pavements with a set of VACUUM CUP TIRES we will bear the full expense of your tire equipment.

BUY a pair of VACUUM CUP TIRES for the rear wheels of your car from any of our branches or agents, and if, after a reasonable trial, the tires do not fulfill every claim we make regarding their anti-skid qualities, return them and receive back the full price you paid.

The above out-and-out guarantee against skidding is in addition to our exceptional guarantee of 4,000 miles *actual* service.

These guarantees are made on faith. They are unqualified in any way and they are justified.

PENNSYLVANIA VACUUM CUP TIRES

cannot skid, because the cup-shaped rubber knobs moulded into the tread grip the road with a suction hold. The rolling of the wheel automatically releases each cup by raising one side first, so no power is lost. Safer going makes faster going. Vacuum Cup Tires insure longer service, too, than any others on the market. Even when the rubber cups wear down, the tread, which is of regular thickness, comes into use with its full service still in reserve.

PENNSYLVANIA RUBBER COMPANY

fiction; but if you are doubtful go down to headquarters and they will tell you his name.

Requests for money from a policeman seldom come from the poor, never from the beggar, but often from the rich or well-to-do. The explanation is easy. Your professional panhandler, male or female, fearing arrest, gives the policeman a wide berth; and the worthy poor seek guidance to a charitable institution rather than immediate financial aid; but a respectable or well-to-do person, finding himself touched by a pickpocket, or, because of carelessness, bereft of funds in the heart of the city, turns, as a matter of course, for relief to the public servant—the police officer. Many a man and woman I have helped this way. Most of the times the money is returned, but sometimes I am stung. Once I loaned a well-dressed woman a dollar to enable her, she said, to get from the cleaners a dress that had been renovated. She had not correctly reckoned the amount due, had spent more than she calculated in shopping and found herself a little shy.

A dollar looked pretty big to me, but the woman was apparently a swell, and I handed her a bill. She insisted that I take her card, which I did. I have the card yet. If she reads this maybe I will get the dollar.

When You Get Your Money Back

Several years ago a friend of mine, then on night duty on the Bowery, was approached by what I would describe as a gentleman sport, much the worse for a spree. He walked up to the cop without fear or embarrassment and asked for a loan—not of a dime or a quarter—but of five dollars. My friend looked at him, standing there under those bleary Bowery lights, sized him up from muddy patent leathers to mussy tophat, and then said:

"What do you want the five for?"

"For a drink or two and a Turkish bath," said the sport.

The cop half-closed his eyes for a moment, as a man does when picking a bet; then, without another word, he handed him a five-dollar bill. He had decided to take a sporting chance.

The man bowed his thanks, took the bill first, then my friend's name and station, and beat it unsteadily up the Bowery.

Two days later there came in the mail addressed to this policeman a plain envelope inside of which was a money order for fifty dollars and two tickets to the baseball game at the Polo Grounds!

New policemen are the brunt of many jokes by the veterans. One favorite trick is to send a green man out from the station with a stray dog, with instructions to find the owner. Another bit of kidding involves stationing a youngster on the station-house roof with an old telescope, with orders to scan the rooftops as far as he can see and report instantly any fires he discovers. Still another trick is to leave a box, loaded with scrap-iron, outside of a store that has been closed for the night. The greenhorn, making his rounds, stumbles across the box and, not knowing what to do, he asks a brother officer for advice. This advice invariably is that he had better carry the box to the station house, as it has probably been dropped by burglars who have looted the store. The old hand, grinning to himself, volunteers to inspect the premises while the victim grunts off stationward with his load of scrap-iron.

Down at headquarters they have daily jokes—some of them pathetic, for they concern the cranks and near maniacs who pester the commissioner and his assistants with all sorts of complaints and queries. For several months past, one man has reported twice a week to one of the commissioner's aides what he has eaten since his last visit.

"Tell the commissioner I had for breakfast this morning," says the caller, "my usual two eggs, pancakes and a cup of coffee."

"Very well, sir, I will make the report instantly," says the aide with a twinkle in his Irish blue eyes. "Good day." And the man whose menu is on his mind departs contentedly.

"I have come," said a recent mysterious woman visitor, "to have the police commissioner disconnect the electric wires which are charging my body."

"Sorry, madam," said the aide with quick wit; "but I'll have to refer you to the Department of Water Supply, Gas and Electricity." With serious face he directed her to the department; and she left, beaming with satisfaction.

"Full-flavored, yet mild"

We pledge our honor to the truth of this

10 cents each

DID you suppose a cigar could be "full-flavored yet mild"? Doubtless you think a full-flavored cigar must be strong—and that a mild cigar cannot be wholly satisfying.

Here is a cigar which is rich and aromatic. It is made in all shades from *Claro* to *Maduro,* yet in every color it has a distinct mellow mildness which appeals to the most delicate taste and is "easy on nerves."

Such is the remarkable combination of qualities in the

GIRARD Cigar

It contains nothing but pure tobacco (no artificial flavor). The filler is entirely Cuban grown Havana leaf. By our old-fashioned method of slow natural seasoning all the fine flavor is retained; but there is no trace of over-strength. There is no hasty, artificial "sweating."

And our own special method of blending insures extraordinary quality and uniformity.

The Girard Cigar will appeal to your palate and to your physician.

The Girard Cigar is sold by dealers almost everywhere. If your dealer cannot supply the shape you want, fill out the coupon. We do not sell cigars by mail, but we want you to try the Girard and will send you direct the first box if necessary. This sample box contains 10 cigars and the price is $1. Please specify shape and color desired. Write a letter if you prefer instead of sending the coupon.

Antonio Roig & Langsdorf

THE GRIP OF THE LAW

(Continued from Page 7)

Jenkins Plumtaster for you, Slattery,' says I. 'Plumtaster is the best man you can get. He'll take the case to a court of record for you half a dozen times from the bottom up.' And, I tell you, Slattery showed his true colors all right. He went in regardless of expense. Plumtaster's fees amounted to nearly four thousand dollars."

"What did the lawsuit cost—us?" asked Paymaster, wiping his perspiring face with a handkerchief.

Mr. Joy swept his hand through the air as if to capture this question on the wing. He shut his little fist over it, squeezed it in his hand and tossed it lifeless into the air. Then he tapped Paymaster mysteriously on the knee.

"My good man," he said in the hoarse and impressive whisper of an orator, "we have made a new point of law in this case. A new precedent for future generations has been established. It is the sort of thing which makes a man feel the solemnity, the dignity, the terrible responsibility of his profession."

His voice faded away in his throat. Paymaster, in the awful contrast of silence, could hear the clock ticking mournfully in the outer office. Suddenly the clickety-clackety of a typewriter began and through the stuffy air of the office a whiff of bay rum reached his nose.

Mr. Joy spoke at last, casting his beady eyes toward the smoky ceiling.

"As a last straw," he whined, "the man I engaged for assistant counsel, old Henry Swett, has placed with me a very unreasonable bill for services. It has been referred to the probate officer for adjustment and award. Now there is an outrage! Swett ought to be ashamed—the old hamstringing coyote! A man like that would steal sheep—would steal sheep!"

"Sure thing!" exclaimed Paymaster fervently.

"I'll telephone him and stir him up on this!" roared the attorney.

Joy called his number.

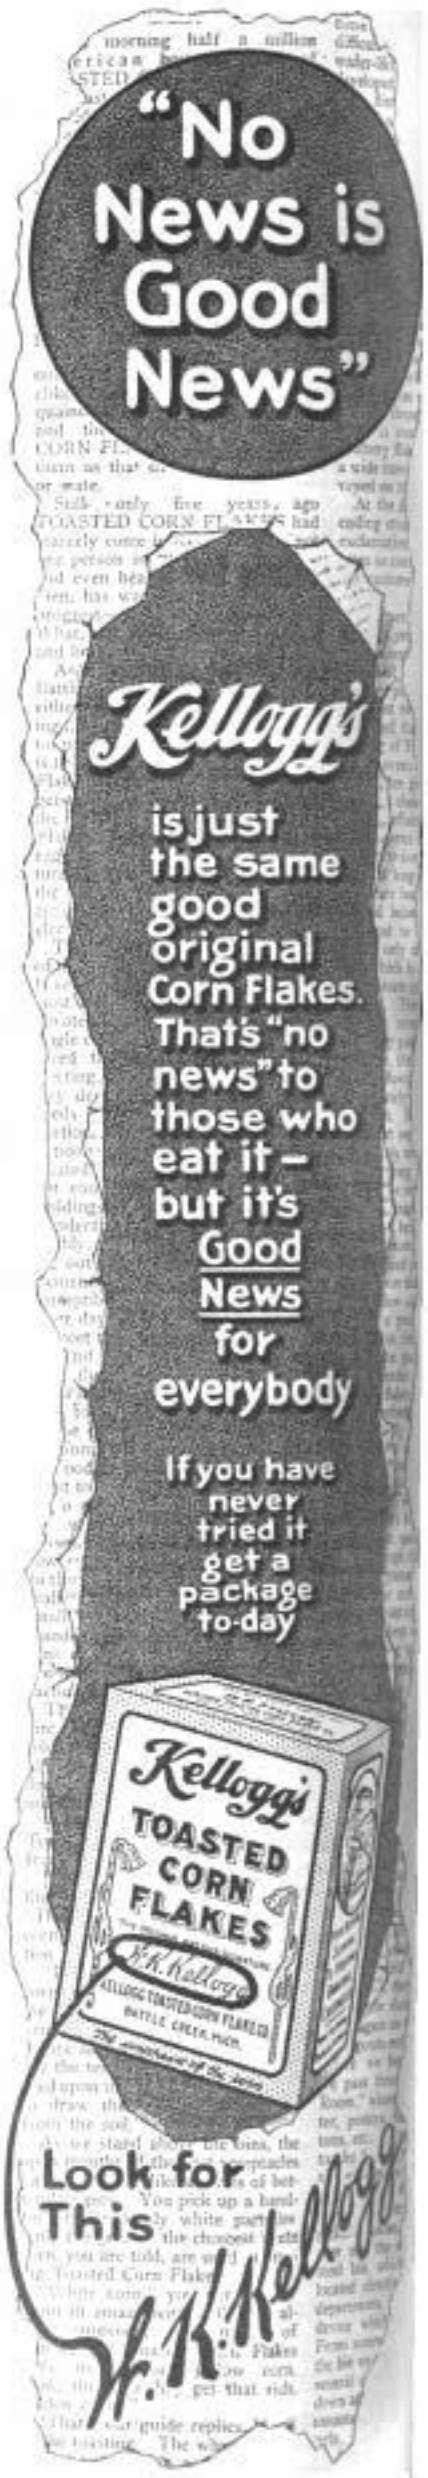
"Hello! This you, Hen?" he said into the instrument. "This is Amos. You old scout! How's your daughter? Yes; my wife said so. By the way, you're getting over the time of life when you can sit up so late. It was a good game, though, wasn't it? Great run of luck we had toward the last!—Oh, great! Seemed as if we had just the right cards to spoil Joe's and Zach's game. Tell your wife to come to the church supper, sure.—No; I'm not going. I've got a little real-estate deal. Well, goodby—No! Hold on! Hello! Wait a minute! Say, what about that probate? What! You don't say! Well, goodby."

He turned toward Paymaster.

"He says that Judge Twitchell set the fee at seven hundred dollars. The judge is my wife's cousin. So he favored us—that is, judicially—with proper regard for his high office, of course. He cut the claim all the way down from seven hundred and fifty. Then there was an allowance for the three appraisers—Joe Ball, Zach Eaton and Bill Zimmerman. Nice fellows."

"Lawyers?" asked Paymaster anxiously.

"No," replied Mr. Joy, holding up file six. "But they're good men to have friendly. Two of 'em are tax assessors and the third is county chairman. I throw little things like this their way."



Paymaster had opened his mouth to inquire what service this genial triumvirate could render the Abbott-Ewan interest when the door opened suddenly and Timmy, the secretary, entered.

"Gene Willey is here. He wants to buy life insurance," he chanted.

The effect was astonishing. Little Joy jumped up as if springs had propelled him.

"Bless my soul!" he said, grabbing Paymaster's limp hand. "Well, well. Let's see—tomorrow is Thursday. Can't see you tomorrow. Got a big mining case. Come in Saturday at five minutes past ten. I'm delighted you are satisfied with the conduct of the estate and sorry I had to question you so closely about your identity. Safeguarding your interests! Goodby. Don't forget—ten-five!"

Paymaster found himself, after the confusion was over, in the outer office alone with Timmy, with the ticking of the clock, with the smell of bay rum, and with the taste of dust in his mouth. After a moment of hesitation he walked out of the office.

How to Prove That a Fountain Pen *Won't Leak*

UNSCREW the pen before you buy it. Look at the feed tube. Examine it to see if it is straight. If it is crooked, like the Parker Lucky Curve Feed Tube, the pen will *surely* leak. This is why:

In an ordinary fountain pen, with straight feed tube, ink always *stays in the feed tube*, even when pen is point up. It doesn't like to run down.

When the body heat—98 degrees—gets to heating the pen in the vest pocket, the air in the pen expands like heated gas, and forces up through the inky feed tube. It forces the ink there out under the pen point, splattering the writing end of pen, and smearing your fingers when you remove cap.

Now the Parker Lucky Curve Feed Tube touches the barrel, inside. That touch causes Capillary Attraction, which *sucks the ink down* before the expanding air goes up. Capillary Attraction, by the way, is that queer trait in Physics which makes lamp wicks suck oil, etc.

If, before you buy a pen, you always look for the Lucky Curve, you will *never have a finger-smearing pen.*

14k gold pens, with points of polished Iridium, make Parker Pens write smooth and easy.

Parker Spear Head Ink Controller keeps the ink flowing evenly, without blot or skip.

Standard style Parker Lucky Curve Pens $1.50 to $150.00, according to size and ornamentation.

New Parker Jack Knife Safety Pen

You can carry it *point down*, if you wish, without its leaking. Also *pen knife* size for ladies. Prices $2.50 up.

New Parker Disappearing Clip

holds on to your pocket like a snapping turtle, and disappears into its shell when you want to write.

Money refunded if any Parker Pen doesn't please. We protect dealer. If your dealer doesn't keep Parkers, send us his name. We'll send you catalog and sell to you direct.

Get a Parker Pen into your pocket before tonight.

Make this "touch" test yourself, and prove it won't leak.

Parker Pen Company
90 Mill St., Janesville, Wis.
New York Retail Store
31 Park Row, Opposite Post Office

Thursday and Friday were the longest days the adventurer had ever spent in his life.

Saturday, Paymaster, having smoked the last of his English cigarettes, appeared again in his counselor's office.

"Well, well!" said Mr. Joy. "We have file three now and everything in shape."

Paymaster leveled all four fingers of his right hand at the little man.

"File three to blazes!" he shouted. "When do we settle up? How much of the estate is left?"

"Left?" said the attorney. "Why, there's thirty dollars left and—and—of course—the personal effects. I say thirty dollars, because I speak hastily. Now wait. You are a layman. You do not understand the intricacies of the law. I said thirty dollars; but I had forgotten our conference on Wednesday, my dear fellow. Timmy, how long was Mr. Ewan here on Wednesday?"

A whisper came from the outer office.

"Fifty-five minutes."

"There! You see?" said Joy, opening his tight little fists in a gesture of weariness. "I can't just say offhand, but my charge for that conference will be in the neighborhood of ten dollars. Then the inheritance tax of some fifty dollars on the property outside the state is still unpaid. Perhaps you had better go over the whole account."

Paymaster went to the window and for several minutes looked down the street to the railroad station and the smelter beyond. The wind was blowing the dry snow across the open sweeps of country in trailing veils of winter. The train came in; the engine stopped, panting like a beast. Two discharged passengers walked up the street arm in arm. One was a man in a checked ulster; the other a dainty little creature, who might have been sixteen or who might have been forty, but whose hair shone golden in the sunlight.

Paymaster, always captain of his own body, made no start, uttered no ejaculation. He looked upward, as was his custom, and softly whistled. Then he returned across the room to the attorney.

"Don't mistake me in what I say now, Mr. Joy," he cautioned. "There ain't any sarcasm in this. I mean it. I want to tell you that you are all-ll-ll right!—Catch the sound?—All-ll-ll right! Have you one of your cards—one of your business cards? Thanks! I may see you later in the day."

With these words and a parting affectionate glance at the huge Insignificance in the outer office, Paymaster went down the stairs and across the street to the hotel.

The clerk had taken Mr. Rutherford Abbott-Ewan upstairs to show him accommodations; Natalie was alone in the office. She looked very pretty, and when she saw Paymaster she turned very red, which made her even more attractive.

"Well," said Paymaster, "here we are!"

The girl turned on him like a little tigress.

"You got the money?"

Paymaster shook his head.

"No," said he. "Would I be likely to come and speak to you—who gave me the double cross—if I had? Oh, no. I couldn't find it in my heart to take it."

She wilted immediately.

"Oh, Paymaster," she cried. "I hardly know how to tell you. I had a feeling I'd get into trouble. I was so lonesome! I never meant to have harm come to you. But when you know Ruthy—he's so different! He isn't what I thought. He's so much better than any man I ever knew! And he certainly had such a way with him! And of course the money's his really. We was married the evening we left New York."

Feet sounded on the stairs above. The girl's face lit up with recognition. Paymaster in that second sensed the true meaning of the little parting of Natalie's lips and the look of joy in her blue eyes.

"Good for you!" he said under his breath. "I'm glad you done it."

"Wait!" she begged.

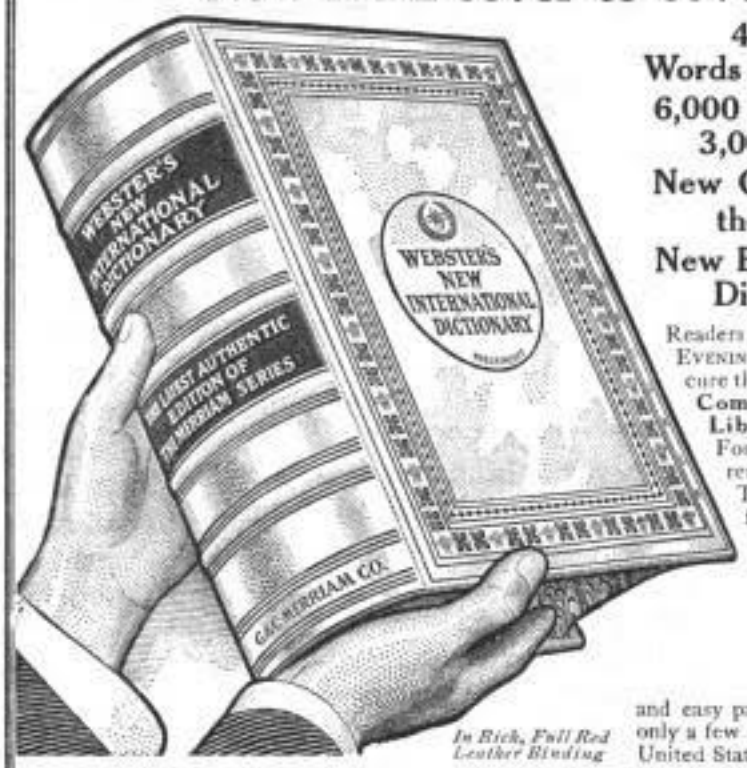
He shook his head.

"Out of town on the next train," he whispered. "Goodby. Here—take this! That's the name of the lawyer."

"On the level?" asked Natalie, with a flick of doubt showing in the little scowl on her white forehead.

"On the level!" said Paymaster.

An hour later the adventurer was bound for New York again. He lit a cigarette as he peered through the frosted pane to catch a last look at the town of Whiffletree.



"Why didn't I study law?" he mused. "That's what gets my goat!"

1912 Atlas WITH NEW CENSUS GIVEN

To the readers of THE SATURDAY EVENING POST who take advantage of this **Offer** now made in connection with

Webster's NEW International

New from cover to cover

In Rich, Full Red Leather Binding

400,000 Words and Phrases
6,000 Illustrations
3,000 Pages
New Gazetteer of the World
New Biographical Dictionary

Readers of THE SATURDAY EVENING POST can now secure this **Newest** and **Most Complete Reference Library** in Dictionary Form on the following remarkably easy terms: The entire work in full leather (with Atlas)

Delivered for $1.00

and easy payment thereafter of only a few cents a week in the United States or Canada.

WHAT EMINENT AUTHORITIES SAY

United States Court of Claims: "We consider the work a distinct advance over other dictionaries which have come under our observation."

Nicholas Murray Butler, President Columbia University: "Marks new advances even upon its excellent predecessor."

Dr. C. H. Parkhurst, New York City: "It is a marvel of completeness and an indispensable feature of the library of every man who either reads or writes."

New York Sun: "Not a word or a definition in which some change for improvement has not been made."

"To have this work in the home is like sending the whole family to college."

To those who respond at once we will send a copy of an amusing "Test in Pronunciation" (with key), entitled "The Americanization of Carver," and also a "Red Fac-simile Booklet" of interesting questions, with references to their answers.

The ATLAS
(Published to sell at $3.00)

is the New Census 1912 "New Reference Atlas of the World," containing 128 pages of maps beautifully printed in colors with marginal reference indexes, besides illustrated description of **PANAMA CANAL**, all handsomely bound in red cloth, size 10¾ x 13¾. Mail this coupon at once to

Walls May be Plain or Paneled

Compo-Board Walls and Ceilings have a smooth non-porous surface that may be stenciled, decorated in oil or water colors, or papered. Or you can have pretty paneled walls and beamed ceilings.

You can make your home a "home beautiful" at small cost by simply nailing Compo-Board onto the old plaster. There will be no dirt or muss to clean up, and it will take much less time and annoyance than a replastering job, cost less, and last much longer.

Compo-Board is practical as well as artistic. It is made of five of the best air tight, moisture proof materials, pressed into a stiff, strong, durable sheet ¼ inch thick, under terrific pressure and intense heat. It cannot warp, is not affected by dampness, and cold or heat can't get through. It keeps your rooms comfortable in winter and summer. It will wear longer than the building, and the bangs and knocks it gets from furniture will not even dent it.

Compo-Board is sold by dealers in most every town. It can be bought in sheets 4 feet wide and length in even feet up to 18 feet. Write us if you can't find a dealer in your town.

Send for our Illustrated booklet and samples. The booklet will tell you of some of the many uses for Compo-Board; the sample will give you an idea of what it is. Write today.

Northwestern Compo-Board Co., 4303 Lyndale Ave., N., Minneapolis, Minn.

National Advertising

The Wholesaler's Opportunity

TO MANY wholesalers the increase of national advertising looks more like a menace than an opportunity.

There has been among advertising men too much ill-considered talk of "doing away with the jobber." The phrase has so plausible, so mouth-filling a sound and has been so jauntily bandied about, that there is small wonder that many wholesalers have the impression that advertising is inimical to their prosperity and even to their very existence.

That impression is wrong. More than that, it is the opposite of the truth. Only two things can ever eliminate the wholesaler: (a) A natural evolution of business. (b) The wholesaler himself.

A Useful Service

A large proportion of the goods which the public buys goes first to the wholesaler, who distributes them to multitudes of retail merchants. The wholesaler renders as true a service as the raiser of crops or the weaver of cloth. He does necessary work and does it generally in the cheapest way. He is a helpful and necessary part in the machinery of business.

Nevertheless, in certain lines of trade, and in relation to certain large manufacturers, the wholesaler is obviously holding a less and less important place. This partial elimination of the wholesaler, however, has been due to causes quite apart from advertising—usually to a lack of appreciation of real conditions or to personal misunderstandings.

Earn or Quit

Of course, in the last analysis, the existence of the jobber depends, as it does with all others, upon his proving himself worthy of his hire. In business no men or methods can survive in a struggle with other men and other methods that do the work more cheaply and efficiently.

We believe, however, that the enormous increase in the importance of advertising as a sales-making method promises to wholesalers, who will take a rational view of the new developments, an opportunity for greatly increasing their prosperity. We believe that the consideration of a few typical instances will help to bring the truth to light.

As long as a territory is sparsely settled its business does not justify manufacturers in sending out their own salesmen. The trade is handled by wholesalers. As soon as the territory becomes populous and prosperous, the manufacturer naturally begins to consider whether or not it is more to his advantage to deal direct with the retailer or through the medium of a jobber. This sort of situation is continually recurring, and the manufacturer's decision is made in terms of *cheapness* and *efficiency* of *service*, whether he advertises or not. In a situation like this, if the wholesaler cannot prove himself worthy of his hire, he loses his customers.

The Quick Temper Waste

On the other hand, wholesalers sometimes eliminate themselves by refusing to work in harmony with the manufacturers' settled business policies. Usually the split is not unavoidable, and is often a loss to both parties. Neither shows a reasonable willingness to accept the other's viewpoint. Perhaps a letter is written, which the writer intended to be a bluff, but worded a trifle too strongly. It is accepted at face value and answered as such. Then personal pride steps in, and a mutually advantageous trade relation is needlessly severed.

We do not deny that the manufacturer himself is often at fault; but it is equally true that wholesalers have in many instances worked to their own loss. Their conflicts, it should be noted, have been quite as often with non-advertisers as with advertisers.

Imaginary Oppositions

There are two most fruitful causes of friction in the attitude of the wholesaler toward advertising and advertised goods. He commonly sets too high a mark on the value to him of selling goods under his own brand, or otherwise, as he puts it, "owning his own trade." Unless his private brands are of good quality and well advertised they are seldom as profitable to him as the well advertised manufacturers' brands. They are harder for him to sell to the retailer, because the retailer's customers want the brands that are convincingly advertised. Many a wholesaler has forced manufacturers to eliminate him solely because he obstinately refused to do justice to the demand in his territory for standardized goods. No matter how hard the wholesaler fights, the brands that eventually will

Digitized by Google

dominate his territory are chosen by the demand of the consumer. If he doesn't distribute them efficiently someone else will, and he is the sole loser.

Again, many wholesalers not only will not coöperate with, but actually hamper, the execution of a national and aggressive advertising campaign which offers them splendid opportunities of profit. They jealously withhold from the advertiser names of their customers or of prospective customers to whom the manufacturer would gladly present his arguments and selling points. They accept large shipments of booklets, circulars, showcards, etc., and keep them unopened in a damp cellar. They neglect inquiries from interested dealers which the manufacturer forwards to them. They instruct salesmen to favor the private brand at the cost of the advertiser's brand.

Where Two Just Men Think Each Other Unjust

While such opposition as this is naturally intolerable to the aggressive and ambitious advertiser, yet, on the other hand, it is due to no hostility on the part of the wholesaler. It arises rather from a mistaken notion on the part of the wholesaler as to where his profit really lies. Both he and the manufacturer have suspicions of the other's intention. The advertiser looks upon the wholesaler who adopts such a course as an obstacle to progress, whereas the wholesaler looks upon the advertiser as an interloper who would take away his birthright. Both opinions are generally wrong. Each of the two parties is honestly seeking to work out his own business welfare. Nevertheless, because so many wholesalers fail to see the opportunity that national advertising brings them, there is frequent clashing and friction.

Occasionally, there may be a real conflict of interest between the manufacturer and the wholesaler; but we believe that the "elimination of the jobber" is as far away as the millennium, if he will recognize the modern business trend toward advertising and put himself in line with it and profit by it.

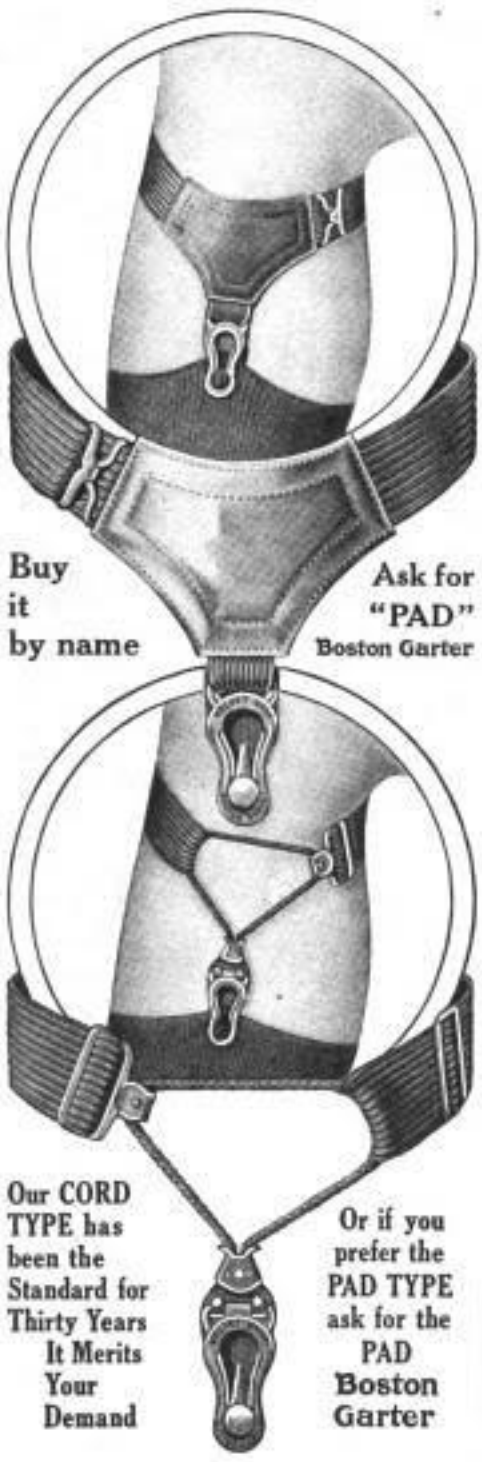
Catching Tartars

The manufacturer who wants to do away with the wholesaler has a man's job in front of him. Suppose, for example, he decides to do away with jobbers in the Middle West. The first thing that he can count on is a loss of anywhere from 10% to 50% of the trade—no very alluring prospect. Next, he must take upon himself the expense of a big selling force, of a vastly complicated shipping problem, of new storage warehouse facilities, of much increased bookkeeping and credit departments, and he must accept in the place of three or four large ledger accounts, which are as good as gold, several thousand petty accounts in which the risk of loss is problematical. Furthermore, he must induce the retailers to accept all the troublesome complications which come from buying from many concerns instead of from one.

Few manufacturers are willing, with their eyes open, to assume such an increase of the expense and trouble of doing business, and practically none would willingly displace a jobber that is doing fairly adequate justice to the probable demand from his territory. If, to all these advantages, the wholesaler will add a willingness to coöperate with the aggressive manufacturer's efforts to help him build sales by advertising, and to stop deceiving himself as to the comparative value of handling small quantities of hard-selling private brands as against large and easy sales of standardized brands, he can gain, what is really his due, the impregnable monopoly of specialized experience and equipment.

Read This Slowly

It is time for wholesalers and manufacturers to stop their unnecessary and costly squabbles and to recognize that each is an advantage to the other. By just as much as the manufacturer is cumbered with the details of distribution, by just so much is he less efficient as a manufacturer and a merchandiser. By just as much as the wholesaler assumes the position of the manufacturer, by just so much is he less efficient in his proper sphere of improving the quality and economy of distribution; and by just as much as he studies the questions "What does the public want?" and "Why do they want it?" by just so much is he approaching the door of opportunity and expansion.



Our new 40-page booklet on Modern Merchandising is worth any jobber's and retailer's reading. It is sent free on request.

THREE YEARS OF PROGRESS

(Continued from Page 5)

This creation of a public-utility commission was an issue in Iowa, Missouri, Colorado, Wyoming, Minnesota and Montana, and will be prominently before the legislatures of these states in 1912 and 1913; for the rights of the states to control purely local utilities will hardly be denied by the courts. And as civilization broadens these utilities will touch more and more intimately the lives of all the people. The sale of these commodities does not require great skill in trading; their management calls for no more extraordinary talent than is developed by a colonel in a regular army regiment. It is not fair that great profits should be taken by capitalists and promoters in conducting these enterprises. What is more to the point, the people, through their cities and states, are beginning to take the matter in hand; and, unless the tendencies that have begun within the three years last past and have overspread a dozen of the great American commonwealths are checked, within half a decade exorbitant profits on watered stock in local public utilities will begin to see their declining days.

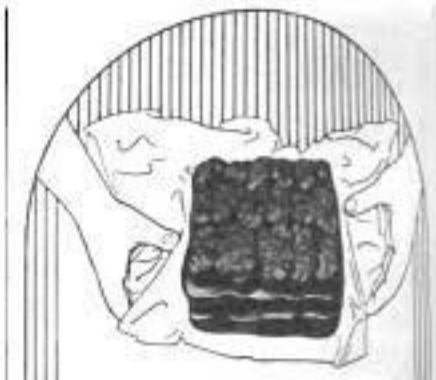
Of course control by the state or nation in the realm of public utilities is no new thing. For nearly a generation public control of railroads has been common, and the extension of control to other utilities is merely broadening the application of an old idea; but the introduction of workingmen's compensation laws and the removal from the shoulders of labor of liability for accidents and disease arising in a trade, and putting that liability upon capital—these are new things in our politics.

Fairer Liability Laws

Until within the last half-decade labor bore the burden of the wear and tear of men; capital bore the burden of the wear and tear of machinery. In Europe for a generation capital has borne both burdens; but here in America the employer of labor was allowed to defend himself against the claim of his employee by claiming contributory negligence or the negligence of a fellow servant, or by setting up the claim that when the laborer went to work in the factory or upon the railroad or in the mine, or what-not, he knew the risks of the employment and took them with his eyes open and could not claim damages for accidents occurring in the ordinary run of the business. Today sentiment in America is changing rapidly upon the question of the assumed risk, and it is changing also as to the broader question of the responsibility of capital for the wear and tear of men in any trade, whether the wear and tear comes from accidents peculiar to the trade or from diseases peculiar to the trade.

This change of sentiment is evidenced by enactment in ten states widely separated as to conditions and sectional viewpoint. These states have recently secured laws providing for definite compensations for different accidents to workingmen. At the same time, these states have removed the defenses that capital heretofore has set up that have made it difficult for employees to recover damages for the common run of accidents in any trade. These states are California, Kansas, Washington, New Jersey, Massachusetts; Ohio—where an insurance fund is provided; New York—where the state court of appeals set aside the workingmen's compensation law as unconstitutional; New Hampshire; Oregon—where the people initiated the law after the legislature refused to pass it; and Illinois. Nebraska and Iowa have appointed commissions to draw up laws conforming to their constitutions and submit them to the next session of their respective legislatures. In addition to this, Indiana, Maine, Montana and South Dakota have removed the old defenses that placed the liability for accidents upon labor and have left to juries the amount of damages to be assessed.

Here are sixteen states wherein, during three years, public sentiment has expressed itself definitely in legislation against the barbarous doctrine of the assumed risk. The sentiment is too widely diffused among the people to be a mere local cataclysm of sentiment. When, for instance, Ohio, Indiana and Wisconsin think alike upon a subject there is no reason to believe that their neighbors, Minnesota, Michigan and West Virginia, will lag far behind their sister states in expressing in laws the same sentiment. And it is highly grotesque for wise gentlemen with mechanical views of the law to sit in judgment upon the matter and say that the Constitution will check the legalization of this sentiment. The Constitution is a good and great document, but when public sentiment in this country has become thoroughly set the Constitution never affords a serious impediment to the legal expression of this sentiment; or when majorities are for a proposition courts may always be depended upon to find excellent law to support the majorities in interpreting the Constitution. The Constitution is merely a coffer-dam to prevent the legalization of temporary clamor.



In the case of the liability of capital for the accidents of the trades public sentiment in this country is becoming fairly well crystallized.

In the matter of the conditions of labor public sentiment is changing rapidly all over the country. A dozen states made laws last winter limiting the hours of service of women and children. These states are Illinois, Indiana, California, Michigan, New Hampshire, Missouri, Montana, Nebraska, New York, Ohio, Wisconsin and Washington. Oregon, the first state to secure a law that passed muster in the United States Supreme Court, got her law by the initiative and has materially strengthened it since. Laws regulating the hours of service in certain trades—as for instance railroading—are so common that the fact that seven states have recently come up with the majority in enacting such laws is worth scarcely a comment. These states are Kansas, Indiana, Iowa, Montana, Nebraska, Ohio and North Carolina. Massachusetts—which is the most progressive of American commonwealths in the matter of economic legislation and is moving forward in the matter of political and institutional development—has supplemented her savings-bank substitute for old-age pensions by a law providing for a retirement allowance for employees. This law provides for a fund to which both employer and employee contribute. It is invested under control and supervision of the state and it becomes a pension for the employee after a certain number of years of service, when he is ready to retire.

Kansas Pension Acts

Kansas passed two laws providing for pensioning citizens: the first, providing that school-teachers, under a mutually collected fund in first-class cities, may be pensioned; and the second, providing that the county commissioners may pension indigent persons instead of sending them to the poorhouse. Legislation of this kind, though at present sporadic, is occurring too frequently in different sections of the country for the entire comfort of those persons who believe that the wave of reform has spent itself, and that soon we shall go back to the good old days when labor was a commodity like hoop-poles, and every man had a right to do as he pleased with his own money, his own employees and his own business. Public control of capital invested in necessary industries is slowly but steadily extending. And, with the fundamental institutional changes that are remaking the states—the primary, direct legislation, the recall, the direct election of senators and the direct nomination of presidents, all hedged about by rigid corrupt-practices acts—the power of capital in American political affairs is not likely to enjoy a renaissance for a long and possibly a weary time.

Of course the political and economic activities hereinbefore enumerated are not the only national movements evidenced by state legislation. The establishment of a state tax commission, with powers to demand a full valuation of all property, is one of the important tendencies of the time. Two states, Missouri and Oregon, will vote for the adoption of what is known as the single tax. The enactment in a dozen states of laws putting many state employees upon the merit system, and putting all state institutions—except the educational and penal—under one board, is characteristic of the political spirit of the times. As the convention system is abolished, the need for political jobs for political camp-followers falls off; and the ideal state government, wherein every man pays his equitable share of the taxes and every dollar's worth of taxes brings a dollar's worth

Try Some Really Fresh Dates

Such dates are different from those you buy from a large open box where exposure to air and dust makes the fruit dry, hard and dirty. Really fresh dates are soft, moist and full of wholesome richness. They delight as candy, yet are nourishing as bread.

Dromedary Dates

come to you as fresh as though just picked from the palms. They are carefully packed in layers, separated by sheets of waxed paper, wrapped in parchment, and enclosed in dust-proof cartons. Thus packed you get dates as they should be and seldom are. Sold at most grocery and fruit stores. *Sample Size Package Sent for 10 Cents.*

A Novel Recipe Book FREE

It suggests a surprising number of new and nourishing dishes that can be made with dates. In requesting book mention dealer's name.

Don't Wait

for "Building Weather"

Applying Wall Board to Studding

Send for Illustrated Free Book and
Big Sample of Bishopric Wall Board

USE Bishopric Wall Board in place of plaster, and you can finish your building in winter as well as summer, and save a month's time.

Bishopric Wall Board goes right on, rigid, solid, ready for paper, paint, burlap or wood panels in finest residences or cottages. Fire-resisting; proof against cold, wind, dampness, rats or other vermin. Ceil your attic. Ceil your cellar. Finish your porch with this Wall Board.

BISHOPRIC WALL BOARD

Better than plaster — costs far less to put on

Bishopric Wall Board is made with asphalt mastic, which does not burn. Imbedded laths make it solid, rigid and flat, for all time. Cannot warp, swell or crack. Lath is the only thing that gives wall board the rigidity, and Bishopric Wall Board is the only wall board made with lath.

Bishopric Sheathing Saves 75 Per Cent

Bishopic Sheathing is made of the same materials as Bishopric Wall Board, but finished surface is not so smooth. It saves by actual figures 75 per cent of the cost of applying lumber and building paper.

Make Air-Tight, Rat-Proof Farm Buildings

Make your stable, corn crib, bins, poultry house, milk house rain-proof, frost-proof, rat-proof, with Bishopric Sheathing.

Price of Bishopric Wall Board: Each crate contains sixteen sheets 4x4 feet, making a total of 256 square feet. Price, $6.40 per crate of 256 square feet, or $2.50 per square of 100 square feet, f. o. b. Cincinnati.

Price of Bishopric Sheathing: Each crate contains sixteen sheets, 4x4 feet, making a total of 256 square feet. Price, $6.00 per crate of 256 square feet, or $2.35 per square of 100 square feet, f. o. b. Cincinnati.

of service, is more and more nearly approached as the professional politician is further and further eliminated in state affairs.

The tax commission and the central bipartisan board of control of state institutions are putting state affairs nearer to a scientific standard of management than they ever were; and it is a significant fact that these institutions have made most effective headway in the primary states; for the primary brings state officers and members of the legislature into office without entangling trades and promises—to be paid for out of the public treasury by supernumerary officers. Whatever else may be charged to the new movement in politics, as far as it touches state affairs, it has not been convicted of loading the tax rolls with useless offices; for under the new rule the public officials are responsible not to the politicians but directly to the voters and taxpayers. When a new office is created it must be such an office as the people approve, even if the politicians sniff at it.

The rise in importance of the state university and agricultural college in a state runs parallel with its advance in those political and economic changes that are remaking our American state institutions. The leading commonwealths in the progressive movement are Wisconsin, California, Oregon, Nebraska, Kansas, Washington, Illinois, Ohio, Iowa, New Jersey, Minnesota, the two Dakotas, Michigan, Maine, Massachusetts and New Hampshire. With the exception of Massachusetts, New Jersey and New Hampshire, each of these states spends more money for higher education than for any other single item in its state budget. And the influence of Harvard upon Massachusetts and of Princeton upon New Jersey, of course, must not be discounted.

The rule seems to work well backward; and one may account for the conservatism of the South, which today is the most reactionary section of the country, by the fact that during the past generation the South had other problems and could not afford to spend lavish sums for higher education. The hope of the South is in the fact that during the last decade the Southern state universities and industrial schools have been striding into their proper places in the social schemes of their respective states.

The Overthrow of Cannon

So much for the work of the states as states. The work of the states as the United States is worthy of consideration. In the main the Federal activities of the people are along lines exactly parallel to their activities in the states; and the three years' progress they have made in the Federal Government is just as satisfactory, when one remembers the size of the political body that is to be moved, as the progress in the several commonwealths. In the Federal Government, as in the states, we find the activities of the people both political and economic. The overthrow of Cannon and Cannonism, which made the House of Representatives more truly representative, was purely political—in the sense that its economic significance was negligible, except indirectly; but the greater freedom with which the House has moved since the changed rules have broken the autocratic power of the Committee on Rules, and since the power of the Speaker to name house committees has been taken from him, has justified the bitterness of that contest.

In the Senate the chief contest upon the purely political side of the activities of progress was in the two affirmative votes taken for the direct election of United States senators. The second important political contest in the Senate was the prolonged struggle to unseat Senator Lorimer. A third political contest of importance was developed in the refusal of the Senate to elect any president pro tem. rather than to elect a pronounced reactionary who would direct the course of the Senate, as far as he was able, along reactionary lines. The victory of the Progressives in these three contests is the direct result of the primaries in the states. The Republican senators who accomplished these three results, with but one exception, came from primary states. That one exception, Dixon, of Montana, came from a state that requires a direct advisory vote on senators. In the fight in the House of Representatives on Cannonism the Insurgents, with few exceptions, also came from districts which nominated their candidates for Congress by a direct vote; and

What is it that is selling 75,000 Ford cars in 1912?
What is behind this enormous demand?
Is it unusually clever advertising?

NO! Ford advertising never attempts to be "clever"—never aims at the spectacular—never dallies with the English language—merely states the facts of the case so that he who runs may read, and, reading, stop running and buy a FORD. Yet that is not the big factor.

Is it unusually clever dealers? No! Ford dealers rank at the top—are all wideawake, keen, obliging, proud of the car and the good name of firm. But there are many clever dealers trying to sell other automobiles.

WHAT IS IT?

Nothing but this—*the guarantee of accomplishment.* What sells these 75,000 is the 100,000 Ford cars already in use (one out of every five on the street). Satisfied buyers are the backbone of the Ford success.

Ford Distributors and Branches in all the principal cities and towns in this country are at your very elbow to give you the service we maintain.

A BIG INCOME

As high as eight to ten thousand dollars yearly has been made by a number of purchasers of our Merry-Go-Rounds. It is a big-paying, healthful business. Just the thing for the man who can't stand indoor work, or is not fit for heavy work and has some money to invest in a money-maker. We make everything in the Riding-Gallery line from a hand-power Merry-Go-Round to the highest grade Carousels. They are simple in construction and require no special knowledge to operate. Write to-day for catalogue and particulars.

HERSCHELL-SPILLMAN CO.
Park Amusement Outfitters

The William Campbell Co.
Dept. 214, Detroit, Michigan

the indorsement of those congressmen by the primary and the defeat of a score of their reactionary colleagues at the primaries seems to give direct evidence of the political power of the movement that has grown for the past ten years.

In thirty-six states congressmen are now nominated by a direct primary vote, and the last Congress has convened that will deliberately defy the people as the members of the Sixtieth Congress defied it. Within three years the United States has seen the entire spirit of Congress change; the control upon big basic matters has passed from the great property interests to the people. It is true that Mr. Roosevelt time and again compe led Congress to stand for human rights against the unfair demands of property; but then Congress moved under the lash and grudgingly. Now, with no great leader, but under the force of sheer public sentiment unmistakably expressed in the primaries, Congress takes its stand without a whimper. The gain is evolutional; the contrast is revolutionary!

New Fields of Federal Activity

The passage of the railroad law broadening the powers of the Government in the control of the railroads, along the lines of control that the most progressive states have adopted with respect to their local utilities, marks the most important step taken by the Government for a generation. The bill is not all that its best friends hope for, but it is far in advance of the Hepburn law and points a way to the control of other interstate corporations—the so-called trusts—that may prove a solution of our greatest economic problem. That solution would seem to be the conservation of the benefits of monopoly, by regulation and control, under the strictest Federal supervision. The postal savings-bank law—another compromise—is an entering wedge, and probably marks the beginning of a number of lines of Federal activity, for banking leads to insurance; and it must not be forgotten that Wisconsin has established a state insurance company and now furnishes life insurance at cost to the people of Wisconsin.

Now all this progress is the result of a healthy, insistent demonstration of sane, unselfish public sentiment. In the states and in the nation, through the legislatures and through Congress, and through the courts, the people of the United States have demonstrated that they not only know what they desire but they can make their wants felt calmly and without clamor, yet with great force and emphasis. What the people seriously desire and ask for, this they get; and courts are as ready as legislatures to follow public sentiment—across the Constitution, if necessary. It is only raw clamor that goes to pot in this country. Wise progress never before has had such a successful triennium in America as has just passed. The Taft Administration has been anything but a period of waiting. It has been a period of effective action; and the action has been promoted by the rank and file of citizenship. Mr. Roosevelt, Mr. La Follette, Mr. Taft, Mr. Wilson, Mr. Bryan, Mr. Harmon, and a score of colonels, captains, sergeants and privates, have done their part—not all an equal part, but their part as they saw it. Either or all of the officers might have died or deserted and still the fight would have been waged without abatement and with success—for it has been a fight of the folks. The faith is amply justified of those who believed that the people would stand up and fight their own battles, even without the leader who roused them. Those who believed the country had been fattening on spoon-fed reform must see their folly. Those who have been predicting that the wave of agitation would recede may as well come aboard the ark. The American mind is beginning to apply itself to problems of concrete justice. It is an active mind—that American mind; and what it has done in a material way during the last century will be paralleled in a spiritual way in this century. We have come far in ten years. Those who think they can lock the spokes of progress by defeating this or the other radical leader should realize that radical leaders do not make a radical people. Radicalism in the people develops radical leaders. This is the one big fact that the departure of Mr. Roosevelt from the White House, the eclipse of President Taft, and the rise of La Follette, Wilson, and the Progressive Insurgent group in Congress, prove beyond any reasonable doubt.

The man with a few tools

should be careful to get a *good* sharpening stone—one that cuts fast and gives a smooth, keen edge, yet does not groove or glaze.

PIKE SHARPENING STONES

The only line that includes every sharpening substance—natural or artificial—each the best for some sharpening purpose.

A sharpening stone that should be in every home, as well as in every shop, is the PIKE INDIA Oil Stone—the only stone in the world that rapidly cuts the hardest tool steel, yet *holds its shape* almost indefinitely *without grooving* or wearing down, and that when properly oiled, positively *will not glaze.*

Made of Alundum, a wonderful substance whose hard, sharp, diamond-like crystals can be produced only by the intense heat of great electric furnaces.

All shapes and sizes—and in coarse, medium and fine grits of absolutely uniform texture in each and every stone.

Pike India Automobile Stone

Cleans contact points without scratching. Every owner, chauffeur and repairman should carry one. Can be used where a file is impossible. Price, 35 cents; in durable leather case, 60 cents.

Pike India Combination Bench Stone, 7x2x1, one side coarse, the other fine, $1.00.

Sold by dealers everywhere, or sent direct.

THE LIGHTED WAY

(Continued from Page 21)

"I am not," Arnold assured him.

"Nor thinking of it?"

"Nor thinking of it," Arnold repeated.

"When the time comes," Mr. Jarvis said, "don't you go poking about in any foreign islands or places. If only the governor had left those smelly European cheeses to take care of themselves he'd be sitting here in his chair at this moment, smoking a cigar and handing me out the orders. You and I are, so to speak, in a confidential position now, Chetwode, and I am able to say things to you that I might have hesitated to say before. Do you know how much the governor has spent during the last year?"

"No idea," Arnold replied. "Does it matter?"

"He has spent," the cashier solemnly announced, "close upon ten thousand pounds."

"It sounds a good deal," Arnold admitted, "but I expect he had saved it."

"Of course he had saved it," Mr. Jarvis replied, "but what has that to do with it? One doesn't save money for the pleasure of spending it. Never since my connection with the firm has Mr. Weatherley attempted to spend anything like one half of his income."

"Then I should think it was quite time he began," Arnold declared. "You are not going to suggest, I suppose, that financial embarrassments had anything to do with Mr. Weatherley's disappearance?"

Mr. Jarvis started. To him the suggestion sounded sacrilegious.

"My dear Chetwode," he said, "you must indeed be ignorant of the resources of the firm when you make such a suggestion! I simply wished to point out that after his marriage Mr. Weatherley completely changed all his habits. It is not well for a man of his age to change his habits—God bless my soul, here is an automobile stopping outside! If it should be Mr. Weatherley come back!"

They both hurried eagerly to the window. The automobile, however, that had drawn up outside was larger and more luxurious than Mr. Weatherley's. Count Sabatini, folding up his newspaper, made a leisurely descent. The cashier looked at him curiously.

"Wonder who it is," he remarked. "Looks like some sort of a foreigner."

"It is Mrs. Weatherley's brother," Arnold told him.

Mr. Jarvis was deeply interested. A moment later a card was brought in.

"Gentleman wishes to see Mr. Chetwode."

"You can show him in," Arnold directed.

Sabatini was already upon the threshold. He carried his gray Homburg hat in his hand; he seemed to bring with him a subtle atmosphere of refinement. The perfection of his clothes, the faint perfume from his handkerchief, his unusual yet unnoticeable tie—these things were peculiar to himself. The little array of clerks through whose ranks he had passed stared after him in wonder.

"How are you, my young friend?" he asked, smiling at Arnold. "Immersed in business, I suppose?"

"Naturally we are very busy," Arnold answered. "Please come in and sit down."

Sabatini laid his hat and stick upon the table and commenced leisurely to draw off his gloves.

"This is Mr. Jarvis, who has been Mr. Weatherley's right-hand man for a great many years," Arnold said, introducing him—"Count Sabatini, Mr. Weatherley's brother-in-law."

Mr. Jarvis shook hands solemnly.

"I am glad to know you, sir," he declared. "I have not had the pleasure of seeing much of Mrs. Weatherley, but my connection with the firm is a very old one."

"Is there any news," Sabatini asked, "of our esteemed friend?"

Mr. Jarvis shook his head mournfully.

"There is no news," he announced. "I am afraid, sir," he continued, "that it will be a long time before we do hear any news. If your business is with Mr. Chetwode, Count Sabatini," he added, "I will ask you to excuse me. I have plenty to do in the warehouse. If there is any information I can give you on behalf of your sister or yourself I shall be very happy to come back if you will send for me."

He bustled out, closing the door after him. Sabatini looked round with a faint smile, as though his surroundings amused

The Story of Welsbach Service

Second:—Durability

The fabric of Welsbach mantles is woven in our own factory—and is purified in three separate chemical baths. Finally it is rinsed in a bath of distilled water. Ten thousand gallons of distilled water are used in this process each day, and when it is finished the mantle webbing is purer than the absorbent cotton used by surgeons.

As a result of this extreme care the Welsbach mantle is produced without flaws and imperfections—a mantle that you can rely upon for strength and durability.

Buy the Welsbach. Be sure to look for the "Shield of Quality" on the box.

Between Man and Man, at the last, there is but one law—the Law of Self-Defense

When life hangs on its instantaneous response—it is for that balanced instant that you buy a revolver. Will a dollar saved seem worth while then, if a spring fails; if bad alignment clips the bullet and poor rifling twists it far from the mark? The Iver Johnson barrel and cylinder are held in positive alignment. It is the only revolver with a full equipment of permanent tension, unbreakable springs; it shoots true and hard; above all it is made absolutely safe from accidental discharge by the famous Hammer the Hammer safety firing device.

ELKHART CARRIAGE & HARNESS MFG. CO., ELKHART, INDIANA

him. He then carefully deposited his gloves with his hat, selected the most comfortable chair and seated himself.

"So this is where the money is coined, eh?" he remarked. "It is fortunate that I have discovered the place, for I need some."

Arnold smiled.

"We haven't had time to do much coining yet."

"Supposing I want five hundred pounds, could I have it?" Sabatini asked.

Arnold shook his head.

"Certainly not," he replied, "unless you had cheeses to sell us for it, or bacon. Samuel Weatherley & Co. are provision merchants, not money-lenders."

"You have the control of the finances, haven't you?"

"To a certain extent I have," Arnold admitted.

"Now how much is there in that safe, I wonder?" Sabatini asked.

"About thirteen hundred pounds—perhaps even more than that," Arnold told him.

Sabatini withdrew the hand that had been fumbling in his pocket. Arnold looked suddenly into the muzzle of a small shining revolver.

"It was very foolish of you to give me that information," Sabatini said. "You have not forgotten our long conversation, I trust? I expounded to you most carefully the creed of my life. Five hundred pounds, if you please," he added politely.

"Not one ha'penny," Arnold answered, seating himself upon the table and folding his arms.

"I'll give you until I count three," Sabatini announced in a still, cold voice.

"You can give me as long as you like," Arnold retorted pleasantly.

Sabatini very deliberately counted three and pulled the trigger of his revolver. There was a slight click. He looked down the muzzle of the weapon and, with a little sigh, thrust it back into his pocket.

"This appears to be one of my failures," he declared. "Lend me five shillings then," he added. "I really came out without any silver and I must keep up my reputation. I positively cannot leave this office without loot of some sort."

Arnold handed his visitor two half-crowns, which the latter put gravely into his pocket.

"Come and lunch with me today at my rooms," he invited. "Lady Blennington and Fenella will be there. If you bring with you a sufficient appetite you may get value for your five shillings. It is the only way you will ever get it back."

"Then I must resign myself to being robbed," Arnold answered. "We haven't time nowadays for luncheon parties. On the whole I think I should be justified in putting the amount down to petty cash, I might even debit Mrs. Weatherley's account with it."

Sabatini took out his cigarette case.

"You will forgive me?" he said. "In your offices, I believe, it is not the custom, but I must confess that I find your atmosphere abominable. Last night I saw Fenella. She told me of your disagreement with her and of your baseless suspicions. Really, Chetwode, I am surprised at you."

"'Suspicions' seems scarcely the word," Arnold murmured.

Sabatini sighed.

"You are such a hideously matter-of-fact person," he declared. "Fenella should have seen your attitude from the humorous point of view. It would have appealed to me very much indeed."

"I am sorry if your sister misunderstood anything that I said," Arnold remarked a little awkwardly.

"My dear fellow," Sabatini continued, "there seems to have been very little ground for misunderstanding. Fenella was positively hurt. She says that you seem to look upon us as a sort of adventurer and adventuress—people who live by their wits, you understand, from hour to hour, without character or reputation. She is quite sure in her own mind that you believe Mr. Weatherley's absence to be due to our secret and criminal machinations."

"I am sorry," Arnold replied, "if anything I said to your sister has given her that impression. The fact remains, however, that Mrs. Weatherley has declined to give me any explanation of various incidents that were certainly more than bewildering. One cannot help feeling," he went on after a moment's hesitation, "that if my friendship were of any account to your sister—which, of course, it isn't—she would look at the matter differently."

My best customers are those who originally doubted my claims.

Nowadays magazine readers are well aware that the publishers of the paper take care to protect them from advertisers who claim too much.

They accept my statements about my cigars because they know that if they were not true I could not get them published month after month.

But ten years ago, about the time I started the mail order cigar business, things were a bit different.

I had to *prove* my claims about my cigars and then guarantee them.

Thus I showed that by importing my Havana tobacco from Cuba and making the cigars in my Philadelphia factory and then selling direct to the smoker, I was able to offer for $5.00 per 100 the cigar that is the regular 10c goods of the trade.

In addition to my arguments I made my unique offer. Here it is. I will, upon request, send 50 Shivers' Panatelas on approval to a reader of *The Saturday Evening Post*, express prepaid. He may smoke ten cigars and return the remaining forty at my expense, and no charge for the ten smoked, if he is not pleased with them; if he is pleased and keeps them, he agrees to remit the price, $2.50, within ten days.

In nearly ten years I have seen no reason for changing the terms of this offer. I sell cigars by it now. If you believe I am telling the truth I ask you to accept it. If you doubt me, I challenge you to accept it. Either way, you are like to become one of my regular customers. I figure that you will, because I make no profit on initial orders. It is constant re-orders that I depend on for profits.

Shivers' Panatela

The panatela shown here has a genuine Cuban grown Havana filler and an imported Sumatra wrapper. It is hand made by adult cigarmakers, and is the cigar referred to in my offer above.

In ordering state whether you prefer mild, medium or strong cigars and inclose business card or give reference.

Sales quickly made by throwing it on the floor, or rolled down stairs or heated or plunged into water without breaking. Almost every house a sale. 25 cents today for sample, or $1.00 for four, by express U. S. A., and begin at once. Exclusive territory.

or Plate Glass Company, Pittsburgh, Pa.

"My dear Chetwode," declared the Count, "my sympathies are entirely with you. The trouble of it is, of course, that the explanations that you demand will probably leave you only the more bewildered."

"You talk to me always in parables," Arnold protested. "How am I to understand what you mean?"

"You have reason, my young friend," Sabatini admitted. "Ask your questions."

"First of all, then, You know where Mr. Weatherley is?"

Sabatini made a wry face.

"Let us leave this respectable Weatherley out of the case for a moment," he said. "To tell you the truth I am weary of him. I would speak of ourselves—of my sister and myself and those others. You cannot deny that, however wicked you may think us, we are at least interesting."

"Have you come here to make fun of me?" Arnold asked quietly.

"Not in the least," Sabatini assured him. "On the contrary, I have come to make friends. My sister is penitent. We have decided to take your discretion for granted. I am here to explain. You want to understand all these things that seem to you so mysterious. Well, ask your questions. What is it that you wish to know?"

"Nothing," Arnold replied. "I have come to the conclusion that I was wrong to speak to your sister as I did. I have a great responsibility here that will occupy all my thoughts. I am going to devote myself to work. The other things do not interest me."

Sabatini smiled.

"My young friend," he murmured, "you may say that to yourself, but it is not true. It is not life for you to buy these articles of food at one price and sell them for another; to hold the profit in your hand and smile. That is what life means in Tooley Street. You could do it for a little time, perhaps, but not for very long."

"It may seem absurd to you," Arnold protested, "but it's my duty for the present anyhow, and I am going to do it. I shall have to work ten hours a day, and I shall have no time for dreams. I am going to stay in the atmosphere I have to live in."

Sabatini shook his head.

"You must have relaxation."

"I can find it," Arnold replied. "I can find it without going so far afield."

Sabatini was silent for a moment. He was a man of few expressions, but he seemed a little disappointed.

"Will you do your duty any the less zealously, do you think," he asked, "because you have friends who take an interest in you?"

Arnold was suddenly conscious of the ungraciousness of his attitude.

"You don't understand!" he exclaimed a little desperately. "Your world wasn't made for me. I haven't any place in it. My work is here. I can't allow myself always to be distracted. Your sister is the most wonderful person I ever met and it is one of the greatest pleasures I have ever known to talk to her, even for a few minutes, but I am more at peace with myself and with the world when I am away from her."

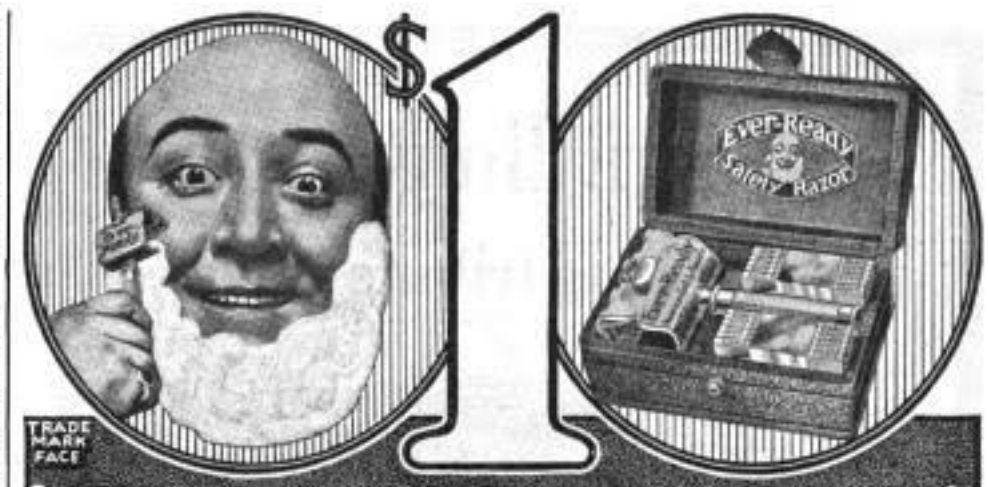
There was a gleam of approval in Sabatini's dark eyes. He nodded thoughtfully.

"It is well spoken. My sister chose to marry Samuel Weatherley, and the women of our race have been famous throughout history for their constancy. Must you, my dear young friend, go and hide your head in the sand because a woman is beautiful and chooses to be kind to you? Fenella values your friendship. You have done her a service and you have done me a service. A few nights ago it amused me to feed your suspicions. This morning I feel otherwise. We do not choose, either of us, that you should think of us quite in the way you are thinking now."

Arnold hesitated no longer.

"Since you insist, then," he declared, "I will ask you the questions that I should have asked your sister. That is what you desire?"

"Assuredly," Sabatini assented.



"First, then, Who killed Rosario?"

"There is a certain directness about your methods," Sabatini said suavely, "that commends itself to me. No one could mistake you for anything but an Englishman."

"Tell me, Who killed Rosario?" Arnold repeated.

"As you will," Sabatini replied. "Rosario was murdered by a Portuguese Jew—a man of the name of Isaac Lalonde."

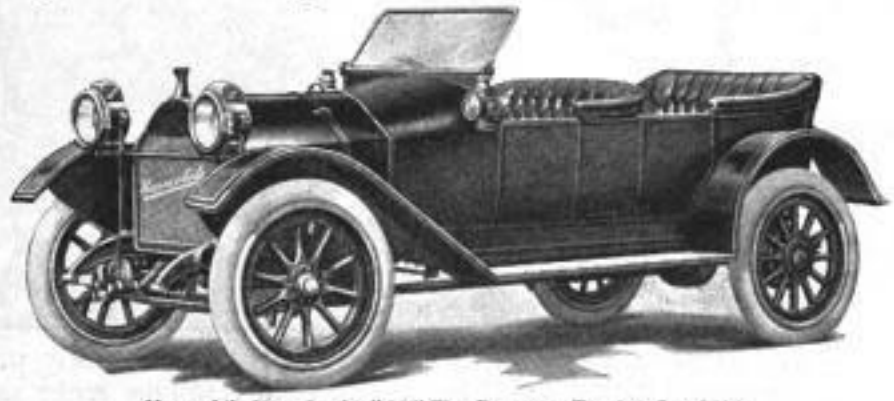
Can You Ask for Better Reasons for Using
US CARTRIDGES



In U. S. Army tests, they have taken first place more often than any other brand.
Our *Non-Mercuric Primer* has several vitally important points of superiority.
It contains no powdered glass to be ground into and rip away the lands, thus spoiling the rifling. It is vastly cleaner and has much less tendency to foul the barrel than any other primer. It is wholly without the inevitable tendency of mercury fulminate to make brass brittle.
After the superiority of U. S. Ammunition was demonstrated by the severe tests of the U. S. Ordnance officers, the Government abandoned, several years ago, the use of old-fashioned ground glass and mercury primers in its service ammunition.
The list of matches in which U. S. Cartridges have won the highest honors would be monotonously long. If you want to learn the character and standing of U. S. Cartridges, ASK ANY EXPERT.

Globe-girdling *Hupmobile* completes tour;

pays striking tribute to the staunchness of its splendid successor

Hupmobile Long-Stroke "32" Five-Passenger Touring Car, $900
F. O. B. Detroit, including equipment of windshield, gas lamps and generator, oil lamps, tools and horn. Three speeds forward and reverse; sliding gears. Four cylinder motor, 3¼-inch bore x 5½-inch stroke, Bosch magneto. 106-inch wheel-base. 32x3½-inch tires. Color—Standard Hupmobile blue. Roadster $900.

Standard 20 h. p. Runabout, $750
F. O. B. Detroit, with same power plant that took the World-Touring car around the world—4 cylinders, 20 h. p., sliding gears, Bosch Magneto. Equipped with top, windshield, gas lamps and generator, oil lamps, tools and horn. Roadster—$850. Coupé—$1100.

New York's eyes were opened during Show Week to the splendid "staying powers" of Hupmobile construction by the triumphant return of the World-Touring car.

The amazing achievements of this car, in its 40,000 mile trip, conferred additional distinction upon the new Hupmobile Long-Stroke "32"—first publicly shown at New York—because both are the fruits of the same skilled organization and the engineering leadership of E. A. Nelson.

Hupmobile sturdiness, so strikingly exemplified in the World-Touring car, receives new and more impressive expression in the Long-Stroke "32," with its distinctive features of construction and its generous power—found heretofore only in cars costing a great deal more than $900.

Hupp Motor Car Company, 1229 Jefferson Ave., Detroit, Mich.

The accompanying views are reproduced from photographs taken during the Hupmobile's world-tour.

Get Off the Drudge Trail NOW

The drudge trail is the road the untrained working man trudges over every morning and every night

Don't Keep On The Drudge Trail

But, from the drudge trail there are so many branch roads leading to prosperity, and every day many trudgers turn into one of these roads and find success.

On these roads the sign-board reads "I. C. S. Training."

The International Correspondence Schools are maintained to help poorly-paid workers. They give such workers the training necessary to success in any occupation.

As proof of this, there are on record thousands of testimonials voluntarily sent in by I. C. S. men who have risen to high salaried positions.

Every worker who would like to be benefited in salary and position by I. C. S. training should at once mark and mail this coupon as directed. In return he will receive free of charge invaluable information.

INSIDE BALL IN THE CHURCH LEAGUE

(Continued from Page 18)

"Sure, we will," said Carroll cheerfully, "if you'll play it out without these apochryphal pewfillers here!"

"What's that?" yelled the shortstop, rushing up. "Say, you ——" And then he went out of the park too.

That made four—and the world got a million candlepower brighter for us; but it wasn't enough by five! Franklin and Shucks, the battery, were still in the game and so were most of the infield. More profanity was needed and needed desperately. I don't know when in the world's history there was another band of tolerably good and reputable young men to whom profanity would have been such sweet music! As for the audience, it was one big crater—all except the little band of Congregationalist men, who were too shocked and otherwise affected by the blasphemous events to do anything but grin. We resumed the game and Alexander of the regulars came up and knocked the ball one-quarter mile. We conversed with him busily as he raced round the bases, but he was going too fast to be affected. A real Baptist came next and we curled him up at the plate. Then Shucks, the catcher, tore off a two-bagger, and scored when Franklin poked one over short. Franklin stole second and third, and we had some hopes—for we were relying on Pang's companionship; but some timberhead threw the ball to third while Franklin was sliding, and it almost hit Pang. He managed to dodge, highly indignant, and Franklin trotted in.

That was two runs. We went out on six strikes and a dribble to short, while in the Baptists' half of the second two more regulars fell on the ball and spurned it to the tall grass for another run.

Things looked black. We couldn't get the real ballplayers to stand still on bases long enough to talk to them. When we began on one he promptly started off for the next base, and he generally got two in the confusion that followed. However, in the fifth, after we had been blanked again, Liever, the shortstop, landed on third, and James, after transfixing him to the bag with a malevolent glare, began to rub the ball in the dirt and make unusually long preparations for a masterly pitch.

"So you're one of those thirty-day Baptists I've heard about, are you?" Pang Byers inquired. "Say, I'd just like to see you in a church pew. I'll bet you look like a horned toad in a feather bed!"

"Shut up!" said Liever, who had been instructed not to talk.

"I'm glad you're agetting along in the baseball profession," said Byers, smiling beatifically. "You're in good fast company now, Liever. This church league is no slouch. You stick with it and you'll not only get some of the soot soaked out of your soul, but you'll learn to play the game. Why, the team we've had to own up to for the Homeburg regulars has been a disgrace!"

"Shut up!" said Liever menacingly.

"How a gang of human clotheshorses who have to chloroform a ball before they can hold it could get up the nerve to strut out on a baseball field and call themselves the Homeburg regulars is more than I can see!" said Pang, rambling on relentlessly. "Why, that team of yours would make an ordinary baseball die of loneliness. You never got near enough to the ball to talk to it. I saw your last game—and, honest, I thought you long-eared frauds were chasing butterflies——"

That got Liever—and while he was about it he made a good job of it. He smashed the rule and then he jumped on the fragments—after which he offered to lick Pang and the whole Congregational team. He was still frothing when he was led away—and quite a number of the audience went too. They wanted to see the game; but, their ears being a little out of practice and not hardened up, the conversation was proving too hot to handle.

Five! We counted 'em grimly, like the old women counting at the guillotine; and when Randall three-baggered and landed at Byers' corner Pang talked to him so feelingly about the time he played "Button-button, who's got the button?" with the ball during a critical stage in one of the regular games and let two runs go over the plate, that Randall exploded violently and was hurled forth. That made six—and only three were left; but, pshaw! we weren't

Kipling said, "A woman's only a woman but a good cigar's a smoke."

We say, "A woman's only a woman but **Queen Quality's** *the* smoke."

Your girl may go back on you but **Queen Quality** is always the same, tastes just right, burns just right and you can buy the ***Big Blue Bag*** for a nickel.

It's *granulated* tobacco—the kind good old Sir Walter Raleigh smoked, and it tasted so good to him that he took it back to Europe. We can't tell you in words how good it tastes, you'll have to try it to find out.

Now then, Comrades, on to the nearest tobacco store, Forward—March!

5c for the Big Blue Bag

The Secret of Good Dressing for Men - A Tailor's Skill and "Shackamaxon" TRADE MARK REG. U.S. PAT. OFF. Guaranteed Fabrics

"Ask a Merchant Tailor"

any better off than before—for two of the three were Franklin and Shucks! The Baptists had seven runs and we had five beautiful, symmetrical goose eggs. We simply had to get Shucks or Franklin.

Fat chance we had! Franklin was about the only man of the regulars who didn't cuss chronically and automatically, while Shucks was a phlegmatic German who caught an idea after the other fellow had forgotten what he said, but who caught any ball that happened to be passing through that part of the township. We worried and sputtered and took long-distance jabs at both of them without the slightest success, and at the end of the seventh inning we had two more large, oval goose eggs—almost enough for a setting—with Franklin working even better and more good-naturedly.

Even Achilles had his vulnerable spot, however, and Shucks was no exception. He was keeping steady company with a German girl who composed the pastry at the Homeburg House; and when Carroll noticed her sitting in the front seat of the grandstand, with an apparently endless smile on her face, he turned to Shucks as he came to bat in the eighth.

"Your girl's up there in the grandstand laughing at you, Shucks," he said pleasantly.

"Aw, shut up!" said Shucks, getting red, but scooping in the first strike without even looking at it.

"They say you look so funny from behind when you're catching that even a stone dog would laugh."

"You better not get gay!" said Shucks, beginning to bubble and fizz in a dozen places.

"Is it true she says she picked you out because you're too homely to get jealous of?" persisted Carroll.

"Say!" roared Shucks, straightening up just as Franklin unfolded himself. Carroll pecked at the ball and ran. He ran partly because it was the third strike and partly because Shucks was reaching for him instead of the ball. He stopped at second, and when Sim Bone came to bat Shucks was leaking rage at every pore.

"Teasing you, was he, Shucky?" grinned Bone, wagging feebly at a horsehide meteor. "You ought not to tease so easily. You're blushing just like a girl! Everybody knows about that little affair of yours; and you had better watch out too—Carroll is jealous of you! He said yesterday you were a superimposed —— Huh?"

Bone stopped to smite at a place where he roughly calculated an indrop might be. It was an out and Shucks dropped it while Carroll went to third.

"What's that he said?" frothed Shucks.

"He said"—the ball was coming—"he said you were a superimposed parallelepiped!" said Bone, turning squarely round to Shucks.

"Three strikes!" said the umpire. The ball hit Shucks on the chest mattress and bounded away. Bone scooted for first, and the crowd, waiting to see him thrown out, were amazed to see Shucks dancing up and down and beckoning Carroll in from third.

"Come on, you—you—you polecat!" he yelled at Carroll. "I'll show you how to cut me out! I'll fix you, you ——"

The authorities intervened, however, and in the midst of a mob that smothered the whole diamond they led Shucks outside of the park for disturbing the peace, attempting assault, threatening arson and breaking Rule One in fourteen places.

I thought we should never get the field cleared; but finally the game started again, with Franklin still pitching and an amiable young martyr named Lansing behind the bat. Lansing, who was president of the Young People's League, had never caught a ball behind the plate and he didn't mar his record that afternoon. In the next two innings he had twenty-one passed balls, and in the ninth he got excited and threw to first in an attempt to catch James trotting home with the winning run. After that the crowd went home in knots of nine and fifteen, talking with hands, feet and mouths all the way.

We Congregational players slipped away quietly and went home by going round the town and entering from the east, thereby grieving the ex-Baptists deeply. They were waiting for us at the gate. We made up with them singly and with difficulty in the following week; and after we had flown the pennant once from the church spire at the risk of our necks we rolled it up and put it away. We were satisfied—more than satisfied! We were satiated! As I said before, I get as much fun reading the baseball scores as I do from playing, and it really isn't half so hard on the constitution.

To relieve the smarting and discomfort of a dry chapped skin, use

Daggett & Ramsdell's Perfect Cold Cream

It opens up the inactive and contracted pores, soothing the irritated skin.

Apply with a wet cloth, and note what a feeling of freshness and comfort it imparts. Daggett & Ramsdell's Perfect Cold Cream is the "comfort clean-up." It keeps the pores free from impurities, cleansing the skin thoroughly without the slightest tendency to irritate.

For the shaver it is particularly beneficial as it relieves that drawn, taut feeling and makes the skin immune from chapping. Motorists, travellers, business men, all find it an ideal "clean up"—just the thing to "Freshen up" with after a long ride, or a hard day at the office.

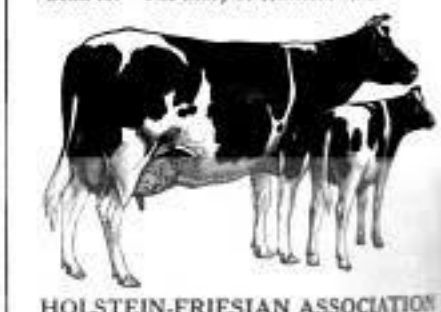
Try it yourself, and you'll know what real skin comfort is.

Free Sample and instructive little book on the care of the skin, entitled "An Aid to Personal Beauty," sent on request.

Address Dept. 18
DAGGETT & RAMSDELL
314 West 14th St., New York

Holstein Cows' Milk Is Baby's Birth-Right

If you cannot nurse your baby, of course you are eager to be absolutely sure that Baby is receiving the best possible substitute.



Look over our free booklet, "The Story of Holstein Milk." You will find that the great specialists use Pure Bred Holstein Milk for Infant Feeding because it differs greatly from ordinary milk.

1. It has no excess of butter fat to congest the immature digestive system.
2. Its normal amount of butter fat is in the form of tiny globules that yield easily to the digestive fluids instead of forming hard, greasy curds in Baby's little stomach.

This milk corresponds closely to mother's milk and you will not be surprised to find the milk of these splendid, vigorous Holsteins vitalizing. It will give your baby the vitality needed for all the growth a normal baby makes during the first few months of life.

Holstein Milk costs no more than common milk. Let us know if your milkman cannot supply you.

Send for "The Story of Holstein Milk."

OUT-OF-DOORS

Your Dog—Has He a Sixth Sense?

? WE are to believe the records of the Pyramids the ancient Egyptians were ustomed to use cats rather than dogs as rievers when they went hunting. The yptians always were rather odd. Most ople have preferred dogs. Indeed, with- the dog more than half of the sport ich men find in the pursuit of birds or mals might as well be wiped off the rt. We could not get along without the , whether as assistant, friend or asso- te. He is the one known creature that l love you, no matter what you do; and will work all his life for his board and even ask for clothes, let alone a salary pin-money.

The hunting dog has been the right hand nan's attempt to assume dominion over the creatures of the earth. It is gen- lly understood that the pointing dog's d attitude when pointing game is ply the arrested spring of the wolf, efinitely developed. In the dog's mind re is some surviving tradition of an ant of pause just before jumping upon prey. After a time the dog learned t his friend, man, armed with a gun able of reaching game which the dog ld not reach, is safer to bring meat into p than the dog is alone. Hence, as the dog gets for his work is what he can , he throws in his lot with his master; l he contributes his speed, cunning, lligence, power of scent and many other gs in a partnership which pays him board—and sometimes not that.

Ve value the dog in the hunting field re especially by reason of his power of it; but, as to that power, faculty or se of the dog, it is quite possible that we it by the wrong name—and certainly do not fully understand it. There are e few savage races, like the blacks of tralia, who retain a certain keenness cent; but the human understanding of t sense does not tally with the results rings to our canine friend. We ought all it the sense of scent plus something —something mysterious, which we do understand. We call it scent because do not know any better name for it, we do not understand it much better n we do the fourth dimension.

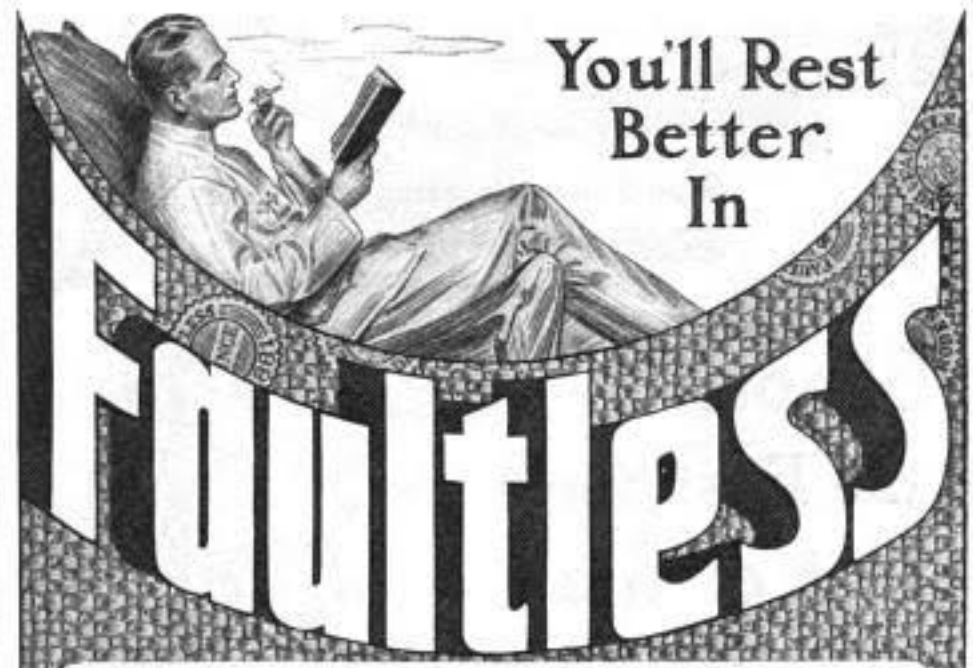
f you will notice a dog at his work in the l you will observe easily enough that scent or odor which he follows does lie in a definite plane, but seems to rregularly diffused in the air. I have etimes noticed a dog in the late evening, n the air was moist and the scenting d, eagerly working up on a dead bird : he had been ordered to find. He ld work in a definite direction toward bird, but his progress would be like a fence—a clearly defined zigzag—now nd now out of the zone of scent. You ld see nothing and the dog could see ing; but the positiveness of his actions g that zigzag course was the result of emotion or conclusion which no odor, matter how strong, can produce in a an being. There was something there cannot see and cannot understand—e sort of picture which comes into a 's mind, but not into a man's.

His Sense of Scent

onnected with this mental impression, dog seems to have some sort of reason- power. Often you have seen your dog, n birds are running ahead of him or n they are feeding, scattered, make a e circle and come in ahead to cut the l or to get the body scent direct. His ted and positive actions show impres- s unknown to our mind. He believes nows where the birds are and we believe nows—and we let it go at that.

dog has been known to follow the trail is master to a point where his master a street car, and then to follow the without ever being at a loss to know in ch direction it went. When his master's ts went up on the platform of the car he trail was removed from the ground. was then one of many other passengers he car. How did the dog know which his master went? It is stated that experiment did not fail and that the , in determining the direction, was not owing an earlier experience or habit.

Dogs associating much with human beings attain an astonishing insight as to human words and human intentions. They certainly seem to reason at times. A setter in my home—where an honored hunting dog was always made a member of the family—was allowed to lie on the floor until the family chose to retire. Just before the lights were turned out for the night the dog was taken out into the kitchen and given a drink of water in a basin, a tincup which hung on a certain nail on the wall being used to dip the water from a pail into the pan. This was one of the fixed habits of the dog and part of the simple family routine; and it existed for a long time. One night, for some reason or other, everybody started to leave without giving the dog his regular drink. He had no notion of being put out-of-doors thirsty, and therefore gravely walked out into the kitchen, reached up on the wall, took down the tincup, returned to the living room and stood gravely and with dignity wagging his tail, the tincup in his mouth—indicating that somebody had forgotten something. This incident happened once and only once, and the account of it is absolutely true, though it sounds like drawing the long bow. Any man can multiply instances in which intelligent dogs have seemed almost to understand human speech, even when it is pronounced without certain customary inflections; though of course there must be some habit associated with the proceeding.



Bird Dogs at Work

The truth is that the average man is not a close observer of anything outside of his own immediate necessities. If you take a dog into your confidence, as well as into your company, you will find him not only an interesting companion but an interesting study—but with this qualification, that the more you study him the less you will know about him. I remember to have seen in print some time ago an account of some experiments made by an English sportsman as to the scenting power of a dog. He went about the matter in a methodical manner. His record of the experiments was about the best and most luminous study of this fifth—or sixth—sense of the dog I remember ever to have seen.

This gentleman experimented really with two dogs, the first one being a terrier of good nose. If you are familiar with Regent's Park, London, you will know that the sidewalks there are usually quite crowded. The master purposely zigzagged from one side to the other among the crowd at a time when the dog was not watching him. He then sat down on a park seat and waited to see what the dog would do, the walk at that time not being crowded, though it had been trodden recently by thousands of feet. The terrier ran his zigzag trail unfalteringly and at once came up to his master as he sat on the bench.

You yourself may have seen your bird dog, if he is much attached to you personally, taking your trail in much the same way, running it eagerly and refusing to speak to anybody until he has found you. He did not confuse your trail with that of anybody else. Your dog no doubt has shown you that he can run even the trail of your horse and not confuse it with those of other horses. Does the mere sense of scent, as we understand it, account for this uncanny ability? Does it account for the manner in which the cold-nosed foxhound will follow the faint trail of an animal hours after it has been made? To this English sportsman a deeper answer than the usual one seemed desirable, and he went into the matter yet more thoroughly, making in all perhaps a couple of dozen different experiments. He tried out the nose of the dog at following the trail when the master was wearing his ordinary shooting boots, new boots, no boots at all, or merely stockings.

The first experiment was on an ordinary meadow, the gentleman wearing the ordinary boots he used in his shooting trips. He started out ahead, the dog being kept back of him and not being released until some place was agreed upon, always to the leeward of the animal. The dog followed the trail from the starting point at full speed and ran up to its master without hesitating.

You'll Rest Better In Faultless

NIGHT SHIRTS and PAJAMAS

The COZYDOZY Kind

You are missing one of the real joys of living if you are not taking your rest in FAULTLESS Night Shirts or Pajamas.

Their soft-surfaced materials, roomy fit and carefully flattened seams make their comfort *absolute*. Besides, they have shapeliness and distinctive touches in finish which give them real style. You'll find them *best* in every particular, yet they cost no more than the ordinary. At the best dealers' everywhere, in all desirable fabrics, and distinguished by this label.

Faultless SINCE 1881

Ridge's Food

THE CORRECT MILK MODIFIER

Pure, fresh cow's milk is a good food.

Ridge's Food makes it a perfect one, suitable for quick, easy digestion by both babies and adults. Many healthy men and women who were reared from infancy on Ridge's Food continue to use it, because fresh cow's milk modified by Ridge's Food not only tastes better, but it becomes a whole food—one that affords complete nourishment for bone, brain and flesh tissue.

For fifty years Ridge's Food has made babies grow strong and healthy.

For fifty years nervous folks with overworked digestions have found that it permits them to sleep better since it digests without distress.

Easy to prepare, and less expensive than you think.

Druggists everywhere sell Ridge's Food.

If you know a druggist who does not, send us his name and we will mail you free a large trial package of Ridge's Food.

RIDGE'S FOOD CO.
3 State St., Boston, Mass.

TEN SHOTS QUICK

AIMS EASY AS POINTING YOUR FINGER

Shoot the First Shots Out of the Window!

THAT is the very best thing to do when you find a burglar in the house, says Wm. P. Sheridan, famous detective, in the Woman's World Magazine. Arouse the whole neighborhood with shots! These first two or three shots will cause neighbors to jump to the 'phone and call the police.

Save the rest of your shots in case the burglar attacks you.

If your gun is a Savage Automatic, you will still have 8 or 9 shots in its magazine for defense, after alarming the neighborhood. That's enough. Other self-loading pistols haven't any more shots than that *to begin with*, while the best "revolvers" made only have six shots to begin with.

Any Savage can be loaded with 11 shots, and when empty a fresh magazine of 10 shots can be inserted in less than a second. The Savage Automatic shoots one shot to each and every trigger pull. Any woman who shoots it once loses her fear of firearms forever.

MORE ADVICE: "THE TENDERFOOT'S TURN"

Send 6c in stamps for books telling just what to do if you wake up and find a burglar in your room—advice by best authorities, taken from magazines, etc. Savage Arms Company, 72 Savage Avenue, Utica, New York.

THE NEVER FAIL COMPANY, 1287 Colton Bldg., Toledo, Ohio

The same experiment was tried with a stranger, but the dog would not run the trail at all, though it was in the same country where he had run the master's trail—the two coinciding pretty well.

The master next showed the dog preparations for shooting and then had the animal removed to a different room while the master started into yet another room. Then, by arrangement, the gamekeeper was sent out of the house unseen by the dog and ordered to walk in a certain direction, toward some partridge country where the dog was used to hunting. When released the dog ran the gamekeeper's trail for a little way, but, missing that of his master, came back to the house after hunting thoroughly to find the trail of its master.

The gentleman then got together from his household a party of twelve; and, taking the head of the procession, he requested them to walk in Indian file, each man putting his feet into the footprints of the man ahead of him. After going some distance in this way, the master turned to the right, his footprints being covered by those of five men following him. The two divided parties now continued in divergent directions for quite a while. The dog was then put on the original trail and ran it without hesitation. When the dog came to the fork of the trail he overran, but only for a short time; then he came back and without hesitation followed to the right—and found his master. Yet there had been thirteen pairs of feet part of the way and six pairs the rest of the way—and all the time the gamekeeper, with whose scent the dog was familiar, was the last man in the party and so not of the party that had turned off with the master to the right. The dog made no mistake as to any of these matters. Very likely your own dog would do as well if you took pains to make such thorough experiments.

A Setter's Power of Perception

The master now gave his shooting boots to a stranger and asked him to walk out into the country. The dog followed the trail of the boots as eagerly as though the master had worn them. The master wore the stranger's boots instead, but the dog would not follow that trail; nor would he follow the trail of the stranger when he walked with feet bare. This would seem to indicate that the scent of the boots was what the dog noted.

To test this out, the master now walked out into the open with feet bare. The dog was put on this trail—understand this was only a setter, not a foxhound. It followed the trail, but not so eagerly as usual, and seemed uncertain whether it was made by its master. And when the master put on a brand-new pair of shooting boots, that had never been worn at all, the dog refused altogether to follow the trail.

As another experiment, the master glued a layer of brown paper to the soles and sides of his old boots. The dog would not pay any attention to this trail until it got to a point where they later found that the leather had worn off a small piece of the brown paper at the heel. Then the trail was recognized and run eagerly without hesitation, though the amount of leather touching the ground was "not much more than a few millimeters."

The master now tried walking in cotton stockings and then in woolen stockings; but in neither case did the dog trail very eagerly. Then he wore his boots for a little distance, took them off and carried them with him and walked three hundred yards in his stockings; then took off his stockings and walked three hundred yards with his feet bare. In this case the dog ran the entire trail without any hesitation or slacking of speed. The dog had figured out that the trail started right and must have been made by the same man. Did the animal remember the faint trail of stockinged feet and bare feet, and at last relate these to the familiar scent of the old shooting boots? This experiment was made yet harder by the master, who got into a carriage and was driven quite a distance from the house; whereupon he alighted in his shooting boots, walked for fifty yards and again entered the carriage. This did not deceive the dog in the least.

The master then tried to see whether there was such a thing as a personal aura or odor which the dog recognized—and not merely the scent of the footwear. In this case he walked across a field where his men were digging potatoes, following a bare strip of ground for a quarter-mile, where many feet had been trampling. Zigzagging across this to the end of the field, the trail left the field and ran up the other side of the stone wall, which was about breast-high and a hundred yards to windward of the trail down the field. The dog was put on the trail at the top of the potato field, ran the zigzag promptly until he got opposite the place where the master was hid, with just his eyes showing over the wall. Then the dog threw up his head and went straight to his master. This showed an ability to distinguish the master at two hundred yards, when only the top of his head was exposed and when the dog was among a number of laborers. At another time the master hid in a ditch; but at two hundred yards the dog took the body scent and ran to him at once. It was evident that in calm weather the odor was diffused generally, but could be discerned at a distance of two hundred yards.

These experiments satisfied the maker of them that his dog preferred to run his foot-trail in its most familiar form. He was sure that if he had been accustomed to shooting in his bare feet that would have been the trail the dog preferred. It seemed that not even the familiar scent of the boots would go through paper; but if the paper were once broken a sufficient trail was made. The master concluded also that, though following the trail, his dog was ready to be guided by inference as well as perception. He concluded also that the whole body of a man exhaled an individual odor which a dog will recognize, even in a crowd of other men and at great distances. These distances during calm weather are great in any direction. He even concluded that the odor of aniseed oil would not overcome this individual scent and that it was not affected by many other footprints of other individuals.

Now, to the wisest man in all the world, in full possession of all his faculties, the trail of this man across the grass lands would have been as though never made. The dog made no mistake about it in any of these confusing tests. Perhaps we could understand this keen faculty of scent; but, so far as we can reason from any knowledge actually in our possession, what made the dog a winner in these tests was his power of scent plus something his master was willing to call "inference or perception." We human beings have no such sense as that—nothing which can be so described. With the dog, it is one operation. With us it is the empirical application of a feeble sense, pieced out by a second and supplementary act of reason. Yet we are accustomed to call ourselves superior to the dog—which brings up the old saw that the more you see of men the more you ought to admire dogs!

Woodsmen's Tricks

ALMOST every sportsman has been annoyed while wearing the ordinary canvas shooting legging, which has a strap that goes under the foot. Such a legging is all right to wear in the house; but in a muddy field the strap under the foot accumulates a ball of mud, much to the discomfort of the wearer. The best thing to do is to cut this strap off when you first get your leggings. Take a harness punch and make a hole on each side of your legging through the leather edge; then knot a narrow leather thong, to go under the foot instead of the strap. It will pick up much less mud and hold the legging down just as well.

Men who have to camp out in the wintertime may get a good hint from the Finns, who are about as good woodsmen and out-of-door people as the world produces. When a Finn finds himself out in very cold weather he secures two logs, each a little longer than himself, of some dry wood that will burn with fair readiness. He splits each of these logs and then separates the halves by a thin stick at each end, so that there will be a crack in the middle of the log not more than an inch or two wide. The woodsman will have one of these split logs on each side of his sleeping place. Before he goes to bed he will take a paddle or slab of wood and, using it as a shovel, will take live coals and fill the space in the log on each side of him with these hot coals. The logs, thus prepared, will burn very slowly, but will keep warm, so that he will not have to get up often—if at all—during the night to replenish his fire. The split-log idea is something one has never seen tried in this country; but it ought to be worth remembering at least.

THE RECORDING ANGEL

(Continued from Page 18)

ame street. He was old and fat, not very all. He wore trousers too long in the tride, which caused the bottom of each leg f them to hitch up and then drop down gain as he stepped along. He was in his hirt sleeves and carried a thin, black lpaca coat folded over one arm. A very uch worn and narrow brimmed straw hat as tilted moodily over his face. And what ould be seen of this was mournful. His nderlip was thick and pendulous; his in frosted with a gray stubble and over- ung with a drooping, tobacco-stained ustache that would otherwise have been hite. A pink bald spot, about the shape d size of half a small saucer, showed etween the brim of his hat behind and the in, untrimmed gray hair that fringed the wer part of his head. He was wingfooted, d his legs rubbed so close together as he alked that—as some writer puts it—one ee seemed to say to the other: "If you ill let me by this time, I'll let you by xt time!"

The remarkable thing about his figure as that it lacked so many of the angles of e human frame. His shoulders drooped, s neck was so short and fat that his head me literally next to his trunk. His legs in pose might have appeared as one leg. His ms were mere antennæ—futile, listless. ne had the feeling that if he had not been man he would have been a worm; that case he had a soul it must be a cocoon, ith the chrysalis of a dead butterfly side; and that, being a man, he must ve lost his guardian angel long ago in ttle for him. Nothing more forlorn or peless in the very nature of things could imagined than this man who followed wly in the wake of the little whirlwind. He also paused before the old house, od for a moment studying the serene e of Amy, his wife, in the darkening me of the window. Now for the first ne you understand that he was drunk—t very drunk, merely sadly, hopelessly . This was revealed by his little furtive eparations. He put on his coat, made an ortive attempt to lift himself and square shoulders. He took off his hat entirely, e a feeble senile gallant getting ready to urish a bow to the ladies. He was a poor d actor changing his costume for the next ne. The neighborhood was his dress- g room; the open street was the place ere he made up for another rôle in the tle drama of life.

And he never lost interest in this last act. e risk that quickened every sodden ulty more than the most enthusiastic dience can animate and inspire a favorite tor was this—whether for two hours he, e village vagabond and drunkard, could the rôle of hero in a blind woman's ncy without once missing his cue or getting his lines.

"Elbert," said Amy a moment later, "I ve had such a pleasant day."

"I know it, Amy. For the rest of us a day esn't care whether it's pleasant or not; t whenever the Maker of Light creates a or little runt of a day He encourages it giving it permission to spend the whole itself with you. Then the darned little ng brushes its teeth, combs its sunrise, rfumes its air with ten thousand flowers, ars its skies, and comes and shines like a er outside your window, from dawn to sk!"

Amy laughed. Fortunately she could t see her husband. He sat humped in his air, his head poked forward terrapin hion, his prominent blood-shot blue es walled up, his knees braced one ainst the other. He was really only the mpter behind the scene to the eloquent ntleman who complimented God with authorship of a runty day in a certain man's honor. Amy's laugh, like her tures, was wonderful, and for the same son neither sorrow nor anxiety had ded those flat notes so often heard in men's ha-has. It came deep, mezzo- ned, golden, from the Arcady of her ndness. To preserve it Elbert would ve suffered himself to be quartered, but could not have remained sober even for lay.

"But this has been an unusually happy y," she went on. "I have an idea. I ve been to the Woman's Club and I have ought home with me an idea."

"I do not doubt it," retorted Elbert. never go out of this house in the morn- looking for an idea, I never spend the day downtown trying to swap history and tradition for one, that I do not come in the evening to find you sitting here with the Holy Grail in your hands, drinking poetry out of it."

"But I am troubled about this one. I'm afraid it's blasphemous."

"I hope so. If I were going to find fault with you, Amy, it would be that. You have always seemed to me fatally lacking in this natural ingredient of the human—blasphemy—that egotism of man which sasses the Creator."

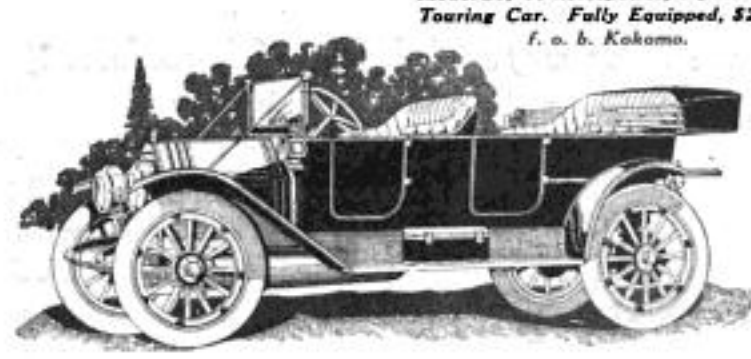
Elbert never said a good thing nor a bright one anywhere but in the presence of his wife. Her blindness was her faith and, therefore, his inspiration. I do not recommend it, but I say if more wives had cataracts over their eyes more husbands would become great. And it is not my fault that the moral inanition of Elbert White does not prove this conviction. The fact remains that the way so many wives get their eyes opened about the men they marry, and keep them coldly observant, often prevents these poor Saturn souls from collecting and congealing their rings of immortality more creditably.

Amy had laid aside her work—a purse she was beading. It glistened now in the moonlight among the other beads, put together like a little sample of the many-colored foundation stones of the New Jerusalem. Finished, it would have been the very pocket for a young angel's Christmas present; but carried by any woman yet in the flesh and gowned in a cheap print, it was destined to become one of those ornamental absurdities that none of the sex knows how to resist. She sat with the palms and fingers of her hands folded together and held closely under her chin. This was one of her favorite attitudes, contracted through the character of her thinking. And now it gave her the appearance of a holy figure in a stained-glass window. The closed eyelids prevented any animation of her features and heightened this effect. No one would have supposed—what was really a fact—that she was a saint in whom the human predominated like a rosy light in a tomb, that she had a brilliant mortal intelligence, and a sense of humor which she must have inherited from that wink in God's eye, somewhere mentioned in the New Testament—it was so divinely illuminating, so omnisciently astute, so smilingly patient. All of which her natural sight might have obstructed if she had retained it. There is nothing so blinding to the average person as his eyes. They furnish the short-sighted angle of vision by which his thoughts are measured.

"You know," she began in her deep, recitative monotone of the blind, "the Recording Angel is the only biographer in Heaven of whom we have any information, and this is very meager."

"Naturally," interpolated Elbert. He took occasion of the rest between his lines to insert his thumb and forefinger into his waistband pocket, from which he drew two little red breath pills and a clove, which he slipped between his lips.

"If we knew more about its character we should know better what to expect from the Book of Life," Amy went on. "But aside from the description of an almost superfluous number of wings, written by Isaiah, little is known about any angel in Heaven. It's a terrible thing, Elbert, for a human without wings to have his peripatetic, penguin character added up and subtracted from perfection by an unimaginable being who may be innocent of having any character at all, but who may possess an argus-eyed faculty for noting and tabulating all our temptations and transgressions."



"Well, what's to be done about it?" Elbert demanded, humoring her.

"That's it. That is the idea I have come upon. I am thinking of writing a little Book of Life myself, not of competing, you understand, with him, the original multifarious biographer, but just a meager one of the men and women in this town that I know. It would be in the nature of supplementary footnotes on the humans we are in spite of divine grace. And the notes might help to soften the angelic exaggerations of our faults and frailties. And they would count, for the angel would be obliged to set them down as one of my deeds done in the body."

Elbert said nothing. He was stirring, however, and getting upon his elbow mentally

HAYNES

Model 21, 40 horsepower, 5-passenger Touring Car. Fully Equipped, $2100 f. o. b. Kokomo.

Full Efficiency at Minimum Cost

WHEN considering the Haynes Car, please lay aside all question of price for a moment and think of what you buy when you buy a Haynes. Cars for which you are asked to *pay more*, offer—at best—only *more* of what the Haynes gives, *more* perhaps but not *better*. They are *not built better* than the Haynes; they are not built more *carefully*.

And cars which you can buy for less than the Haynes cannot possibly give you as much. If they are as *big* as the Haynes they must be *cheapened* somewhere. Maybe in parts and places that you *can't see*, but *cheapened just the same*. They may be excellent cars *for the price*, but you face this single question: whether their price buys *enough* of what you demand in an automobile.

Without any desire to belittle those cars which sell for more, or decry those which sell for less, we want to *insist*—and *prove its truth* at your convenience—*that the Haynes Car at the Haynes price represents full efficiency at the minimum cost.*

The Haynes line for 1912 offers a wide choice of body types built on the two standard Haynes chassis: Model 21, 4½ x 5½ motor, 120 in. wheel base, 36 in. x 4 in. tires, and Model Y, 50-60 horsepower, 5 x 5½ motor, 37 in. x 5 in. tires, 127½ in. wheel base. Touring, Suburban, Coupé and Limousine types, $2100 to $3900.

Catalog and address of Haynes dealer nearest you, sent on request.

American Woolen Company

Wm. M. Wood, President.

Largest Producers of Style Fabrics of Dependable Quality

For Men's and Women's Wear

Whether that suit of yours be custom-made or ready-to-wear, it will be enhanced in value and will give you added satisfaction if made of **PURITAN SERGE** 1620, a strictly pure all wool fabric of fourteen-ounce weight—for spring and summer wear: a distinctive blue, noticeably rich in tone: comes 58 to 60 in. wide—London shrunk.

This cloth possesses that characteristic look, feel and hang of well bred serge, firm and close—resisting wrinkles.

If unable to obtain **PURITAN SERGE** 1620 send us the name of your tailor or clothier, accompanied by money-order or check for quantity desired at $3.00 per yard, and we will see that you are supplied through regular channels, as we do not sell at retail. (3½ yards to a suit.)

is sufficient for the front of a post card. If you will write your own address plainly on the other side we shall be pleased to send THE LEADING AMERICAN SEED CATALOG. An elegant book of 178 pages, it tells the plain truth, and should be read by all who would have the best garden possible and who are willing to pay a fair price for seeds of the **Burpee-Quality**

to stare at Amy. He felt a vague alarm. She went on, serenely unconscious:

"This town is full of fiction that never gets published. Rachel tells me the captain has nearly finished his fourth romance of the Civil War. Mildred Percey has seventy-two original poems in her portfolio; and Leonora Bell has written a blistering paper on 'Man, the Orang-Utan,' which has been refused by eight editors. I have been wondering if there is not beginning to be a demand for just the truth. Suppose some one wrote about the men and women in Ruckersville as they are, and put in all the mitigating circumstances that the old angel leaves out. I was thinking I might do a little of this, not to be published now, you know, but to go along with the captain's romances and Mildred's poetry. Long after we are dead posterity might be as much interested in facts about us as it is in the fiction we have written and laid away. Maybe it would read like the best fiction then. All I should ask of you, dear, would be to copy my notes in the evening when you come home."

Elbert was aghast. He feared the awakening of Amy's recording angel more than he did that of any other angels. Her tentative proposition had the effect of turning off the light on his stage and of leaving him in the dark. From being the star performer in a blind woman's fancy, he perceived that he was about to become the amanuensis for an occult intelligence, and probably be called upon to write out a memorandum of his own feelings. He never could tell how much his wife knew about him.

"I'd be particular who I laid out in such a tale, Amy. You never can tell when the truth will tear the shirt off of a man, nor when it will lame a woman for life. Who do you think of putting into the first chapter?"
